The Nation.

NEW YORK, THURSDAY, FEBRUARY 27, 1890.

The Week.

THE "World's Fair in New York" has been killed so many times during the past sixty days that one killing more or less does not signify. The mourners must now be very much in the mood of an undertaker's hired man: they have mourned so often that they can relish a pipe and a good glass of beer after the funeral. The only ones to be really pitied are the winners of the World's Fair. These are the Chicago men. They have now got to shoulder an expenditure of at least $10,000,000. They have a subscription in hand of about four millions, not more than one-half of which is collectible. The State Constitution forbids them to incur any city indebtedness beyond 5 per cent. of the valuation for State taxes. This limit is already reached. If they raise the valuation for World's-Fair purposes, they raise it for State-taxing purposes also. The Constitution also forbids any city in Illinois to give any pecuniary aid to any private corporation for any purpose. In fact, the city of Chicago is tied up much tighter in this regard than the city of New York. Whatever money is raised must be subscribed by individuals as a donation or a speculation. We wish Chicago every kind of success. We think, however, that she will sicken of her prize before the end of a week, unless she resolutely cuts the Fair down to the size of her purse. This she can do and must do, but the result will be much inferior to the Paris Exposition of last year.

That national politics had much to do with the defeat of New York in the House of Representatives we have no doubt. But it is unfair to put all the blame on Platt, or on Platt and Quay. The Republican party are naturally shy of any job having money in it when they cannot see clearly how it is to be spent. The two-thirds amendment adopted at Albany did not entirely satisfy them. After all is said and done, the city officers of New York are Democrats, and the city's money must go through Democratic hands first. Ten millions is a large sum. A small percentage of it would go a great way in a campaign. An active imagination would magnify the dangers in the eyes of Republican Congressmen, and an active imagination is what they are much blessed with at the present time. New York's Democratic majority is the great bugbear of the party. They cannot endure the thought of its having any more pabulum and means of subsistence, lest it should grow larger in 1892. While they cannot see clearly the channels of disbursement of the ten millions, they say to themselves that it is safer to have the Fair somewhere else than in New York. It is not likely that the result would have been different if Platt and Quay had kept hands off, or if they had never been born. Of course in all this the Republicans were looking at the small sides of the next Presidential campaign, but only the small sides are visible to them now.

Why did the drafters of the World's Fair Bill try to conceal its principal motive? The practice of concealing the object of bills, a favorite one with jobbers and speculators, has been forbidden, or reprobated, at least, by section 16 of article iii. of the Constitution, which says: "No private or *local* bill which may be passed by the Legislature *shall embrace more than one subject, and that shall be expressed in the title*"; and by section 20 of the same article, which says "every law which imposes, continues, or revives a tax shall distinctly state the tax and the object to which it is to be applied, and it *shall not be sufficient to refer to any other law to fix such tax or object.*" Now, any one who had heard nothing of the agitation about the Columbus Fair might, we affirm, read this Fair Bill from beginning to end without a suspicion that it was meant simply to provide for the holding of a six months' fair on a certain portion of Manhattan Island. What does this concealment mean? Why did the preamble to the bill not say boldly that, for the purpose of holding a Columbus Fair in 1892, the city was to issue $10,000,000 in bonds, and have power to condemn an indeterminate area of private property? Was it not because the drafters doubted the constitutionality of their scheme if set out in plain terms, and therefore felt the necessity of evading the constitutional restrictions by indirection, vagueness, and obscurity?

These are the questions which the sober and sensible portion of the public wishes to have answered. They are questions which the newspapers, had they done their duty to the public, would have pressed home at the outset. Any answer to them would explain why it is the bill was never allowed to see the light before it was presented to the Legislature; why its passage was asked for without debate; why no discussion of it has been attempted or permitted by its supporters in or out of doors during its passage; why its journalistic advocates have not ventured on any manly examination of its provisions during the past four weeks; why Mr. Carter's criticism cut so deeply into its vitals; and why it has gone down to Washington a disgrace to the city and to the State and to the newspaper press. No man who cares for his reputation, either personal or professional, likes, if he can help it, to get up openly and defend a subterfuge, a make-believe, a sham, a pretence, or an evasion. This is why it has been passed, not by discussion, but by hullabaloo. Happily there are courts in New York which will do for this shameful measure what the Legislature and the newspaper press ought to have done. We do not profess to know whether it is constitutional or not, but we do know that appearances are against it; that it has been passed under circumstances which make it a discredit to free government. No tribe of barbarians would enact a law of such importance with so little attempt at deliberation or persuasion. It is only despots and mobs who reach decisions affecting public and private rights in this fashion. A State which made a practice of such legislation should have for its coat-of-arms fifty old hats in the air, and "Let her rip" for its motto.

In his memorandum of reasons for approving the World's Fair Bill, Gov. Hill took occasion to establish a precedent for himself for use in vetoing the Fassett Rapid-Transit Bill in case that ever reaches him. He did it, in a decidedly characteristic manner, in the following passage:

> "The measure does not violate the principle of 'home rule,' nor is it inconsistent with correct principles of legislation. The Commissioners designated in the bill are expressly declared therein to be those 'heretofore selected by the Mayor of the city of New York.' (See section 4.) This is a proper recognition of the principle that commissioners to carry out local improvements, or to disburse moneys of a municipality, should be selected by the local authorities themselves, and not by the Legislature. I have for several years uniformly refused my approval of measures in which this principle has been ignored."

The Governor was perfectly well aware when he wrote this that, in selecting the Fair Commissioners, the Mayor was not acting in his official capacity, but as chairman of an informal meeting of a body of citizens who had no existence known to the law. To say of Commissioners so named that their selection is a recognition of the principle of home rule, is a kind of legal reasoning peculiar to our unique Governor.

Nearly a fortnight has passed since the following remarkable confession appeared in a leading editorial article of the New York *Tribune*:

> "Many people fancy, because Gov. Hill carried New York when President Cleveland was defeated, that a plurality of the voters in the State would support him again. *But in that contest, as people here well know, Hill succeeded only because he was able to sell a Presidency for a Governorship.* If he ever puts himself where the other people have a chance to do the selling, he will get a measure of his popularity."

Such a statement from such a source naturally attracted national attention. It was nothing less than a confession that the Republicans had bought the Presidency for Harrison by selling the Governorship to Hill. The language is so explicit as to leave no doubt of the writer's meaning. It says that "Hill succeeded *only* because *he was able* to sell a Presidency for a Governorship." That means that the sale was consummated, with equal guilt on both sides. The statement was not made in an off-hand paragraph, but in the leading editorial article of the day, which is understood to give expression to the paper's most well-considered views. It appeared on Friday, February 14, and though it has been commented upon

since from one end of the country to the other, no attempt to explain or modify or retract it has been made by the *Tribune*. Another newspaper has volunteered the opinion that the statement was "nothing more than an empty phrase tossed off from the point of an inconsiderate and irresponsible pen," but the *Tribune* is the only authority competent to make that explanation, and it has refrained from offering it. So long as it remains silent, explanations of any sort from outside sources are of no value.

The Joint Committee on High License of this city, which has led in the agitation for a high-license law during the past three years, has submitted a bill for the consideration of the Governor and the Legislature which was introduced by Senator Hendricks on Thursday. It places the minimum fee for full liquor license at $300 and the maximum at $500 in cities, and at $100 and $200 respectively in towns. The beer and wine fee is placed at not less than $60 nor more than $150 in cities, and not less than $40 nor more than $100 in towns. Hotel licenses are from $100 to $500 in cities and from $75 to $250 in towns. Store licenses for sales in packages, and not to be drunk on the premises, are graded from $75 to $250 in cities and from $50 to $150 in towns. The druggist fee is placed at $20. This is very moderate high license, and there is no reason save "politics" why the State should not be given the benefit of it. There is, however, slight prospect of this or any other bill becoming a law.

The Joint Committee give, in their memorial, the following reason for New York's failure to secure wise restrictive temperance legislation:

> "It is now clear enough that New York remains behind the other States of the Union in salutary legislation on this great and vital subject, not because a majority of her citizens are not wise and virtuous enough to favor it, but because the pride and jealousy of parties, bad leadership, or discordant factions, prevent the true friends of good laws from coming together and giving effective expression to their common wishes. This state of things cannot long continue, but, so long as it remains, the best citizenship of New York will be both misrepresented and dishonored, and corruption, arising from the liquor traffic, will more degrade the party politics of the State."

No, that is not the real explanation of the condition of affairs. The true explanation was much more tersely given by the New York *Tribune* on the 14th of February, when it said of the election of 1888, when Warner Miller was running on the high-license issue: "In that contest, as people here well know, Hill succeeded only because he was able to sell a Presidency for a Governorship." There can be no high-license or other restrictive temperance legislation hoped for in this State so long as Gov. Hill is in office, and he was put into office by the Republican managers because, in the language of the *Tribune*, "he was able to sell a Presidency for a Governorship." It was not "pride and jealousy of parties" which prompted that sale, but greed of office which impelled the Republican managers to buy the Presidency at any price.

The Democratic managers have concluded to carry to the Supreme Court, at the earliest possible opportunity, the question whether the new rule allowing the Speaker to count a quorum, and thus permitting the passage of a bill by the votes of less than a majority, is in accordance with the Constitution. Such a question could not be submitted to the courts in New York, or New Jersey, or Pennsylvania, or Illinois, or California, or many other States which have adopted new constitutions or amended old ones during the last quarter of a century, because the constitutions of those States require the affirmative votes of a majority in each house to pass a bill. The Constitution of the United States does not contain this provision, but the practice during the first century of Congress was such that the minority could always enforce the principle if they chose to insist upon it. The wisdom of the plan has been abundantly demonstrated in all of the States which have adopted it, and it will be most unfortunate if the Supreme Court decides that the nation can no longer have this needed check upon party legislation.

The Philadelphia *Press* and other high-tariff organs are trying to make a great tariff victory out of the defeat of Mr. Ayres in the late Judge Kelley's district in Philadelphia on Tuesday week. But what are the facts? Mr. Ayres ran as an out-and-out tariff-reformer, with free wool as the foremost plank of his platform. He ran in a district which had for years chosen to Congress a leader among the protectionists, and in a city in which the Republican organization is perfect, while the Democrats are so disorganized that, through local disaffection, their vote at the election last November fell off nearly 50,000 as compared with the vote of the year before. In the face of all this the Republican plurality last Tuesday was kept down to 8,384, as compared with 9,639 in 1888 and 11,509 in 1886, and Mr. Ayres polled 1,400 votes beyond his party strength. The *Press* itself testifies to the discouraging circumstances under which the Democratic campaign was conducted when it says, "The 33,000 votes cast for William J. Eagan for Magistrate show how serious is the split in the Democratic party in this city." When an out-and-out tariff-reformer can make a campaign like this in such a stronghold of protection as Philadelphia, the vitality of the reform cannot be doubted.

No one thing has more disturbed the subsidy-hunters than the publication and extensive circulation by the New York Reform Club of Mr. Wells's address on "The Decline of our Mercantile Marine—Its Cause and its Cure." The *American Economist* has been particularly anxious to break the force of Mr. Wells's arguments and figures, and has recently made a labored effort to refute his statement that, notwithstanding a large increase since 1883 in the facilities for trading with the West Indies, Mexico, Central and South America, through the establishment of new lines of steamers, our exports to these countries declined in the six years from 1883 to 1888 to the extent of 12½ per cent. The New York *Commercial Bulletin* has, however, made a careful investigation of this matter, and, as a result, says that Mr. Wells is entirely right in his conclusions, and that the *Economist* has either "blunderingly compiled its figures or failed to examine the statements it undertook to criticise." The *Bulletin* backs up its assertions by abundant evidence from the latest reports of the Bureau of Statistics.

Assistant Postmaster-General Clarkson says he is going to retire in a few days, because he will then have made practically a "clean sweep" of the Democratic postmasters, and there will be nothing left for a statesman of his school to do. This is the shameless way in which this Iowa spoilsman talks: "I have very nearly served out my sentence. I was sent up for a year against my own protest, but I agreed to serve that time to help the Administration. I think if I had been treated in the same way as ordinary prisoners I should have got some reduction on account of good behavior, don't you? Here I have changed 31,000 out of 55,000 fourth-class postmasters, and I expect to change 10,000 more before I finally quit. I expect before the end of the month to see five-sixths of the Presidential postmasters changed. Then I can paraphrase old Simeon, and say: 'Let thy servant depart in peace.'" The Administration which Clarkson agreed to "help" by thus making a clean sweep, is the Administration constituted by the President who, as candidate, gave the people his solemn pledge that fidelity and efficiency should be the sure tenure of office, and that only the interests of the public service should suggest removals from office.

In the course of his three weeks' speech in favor of the "Bill to Promote Mendicancy," Mr. Blair made an appeal to Southern Senators to vote for the scheme, on the ground that they could thus get some money out of the Federal Treasury as an offset to the large amount they pay into the Treasury to be distributed among pensioners in the North. The Southern press indignantly repels this open attempt to bribe the Southern people into supporting a measure. "This argument," says the Savannah *News*, "will not make friends for his bill in the South. The bill must be considered on its merits. Will it be helpful or harmful to the South? That is the question which the Southern people ask with regard to it. If they believed that it would be harmful, they would not favor it, though the amount which it proposed to distribute in the Southern States each year were ten times $7,000,000."

The deadlock in the Iowa Legislature, which has lasted nearly six weeks, was ended last week by an arrangement under which the Democrats get the Speakership, and the Republicans the control of the most important committees. For the first time, therefore, in over thirty years this old-time "banner Republican State" has a Democratic

Speaker, and a Democratic Governor will immediately be inaugurated. The Republicans must now make up their minds what they will do about prohibition. They can maintain the existing law if they choose, or they can allow the substitution of a local-option-law system. Whichever they do, they are pretty sure to get beaten in the next election, for the State will declare against prohibition again if it gets a chance; and, on the other hand, many Republicans will desert the party unless it maintains prohibition.

President Eliot of Harvard gave utterance to some very sound observations upon journalism and schools of journalism in a recent speech in Philadelphia. Because he observed that newspapers were occasionally careless about the character of the men whom they employed as reporters, he was made the victim of a distorted and false report of his remarks, in which he was charged with having made a "bitter attack on the press," and upon the "personal character of reporters employed upon the Boston newspapers." He was compelled to make public denial that he had done anything of the kind, and to explain what he had really said as follows:

"I remember saying that, from my personal experience, I knew that insufficient care was exercised in that respect, and that I thought it was a great injury to the press and to the profession of newspaper men as a class. Then I illustrated that by saying that in one year four men who were dismissed from Harvard for disgraceful offences, not for college pranks, were immediately employed upon newspapers. That was the moral of my remarks—that more care was needed on the part of the managers in the selection of their younger men. Everything that I said tended to the dignifying and elevating of the journalistic profession and not to its lowering."

The treatment to which some reporter in Philadelphia subjected this moderate and accurate statement was the best possible evidence of its truth. He sent to the Boston *Herald* a report in which he represented President Eliot as saying that "the men who are employed as reporters in Boston were drunkards, thieves, deadbeats, and bummers," and as being roundly rebuked for his utterance by one of his own graduates. It is very evident that the *Herald* has been careless in regard to the character of its correspondent in Philadelphia.

What President Eliot said about "Schools of Journalism" is in entire harmony with what has frequently been expressed in these columns. As restated by himself in his enforced explanation, it was:

"My first point was, that I believed the right training for an editorial writer was a thorough training in writing English, and in history, political economy, and modern languages, and that this training could be had in any college with an elective system. Therefore, I thought that the degree of B.A. was better for a journalist than the degree of a special school. Some of the colleges, as you know, have started schools of journalism. I do not believe in them. I believe the right training for a journalist is a thorough training on the lines I have mentioned above."

Here are some interesting facts from the correspondence of the *Evening Post* for legislators who are constantly seeking to check "speculation" by the enactment of laws, showing as they do how certain speculation is to check itself when it is overdone, or when it is conducted in violation of sound business methods. Seats in the Chicago 'Change have fallen in value $3,700 since 1882, and grain speculation is so dull there that many firms are talking of retiring. In the Pittsburgh Oil Exchange, where a few years ago the excitement ran as high as it does in the liveliest times in Wall Street, a day passed recently without a sale; and the fine Exchange Building is to be sold, that the members may find more modest and less expensive quarters. The correspondents give some of the reasons for all this, which all point in one direction, viz., the control of the markets by vast concentrated capital, which can so determine the immediate supply as to eliminate that other factor which was once worth considering—the genuine demand. The ruinous results of vast wheat and oil "deals" in recent years have been much more potent to check "speculation" than any legislation could be, no matter how cunningly devised.

A report comes from the Panama Canal Commission, by way of Paris, that the Commissioners find that only three-tenths of the work has been done, that it is impossible to make a sea-level canal at that place at all, that a canal with two locks only will cost $140,000,000 in addition to what has been spent already, and that it will be best to construct it with six to eight locks. As these facts were over and over again proclaimed by American engineers who visited the works during the lifetime of the Lesseps enterprise, it is probable that the report published by the *Gaulois* is authentic. There was a sudden fall in Panama shares on the Paris Bourse about the time that the Canal Commission arrived in this country on their return, and this may be taken as another sign of authenticity.

It is becoming a very serious question in European politics whether France and England will accede to the German Emperor's suggestion for a joint conference on the labor question. According to the Paris *Temps*, the French Cabinet will not take part in it unless England does. It is tolerably plain that England will not do so, because England, by virtue of her free-trade policy, now has the whip-hand of Europe in the contest for industrial supremacy. The *Economist* discusses the question from the business man's point of view, and shows that what Germany wants is some foreign aid to help her out of difficulties that her protectionist policy has plunged her into. She has fenced out foreign competition from her own borders, but has crippled herself in foreign markets at the same time. The Emperor wants to lessen the hours of labor and otherwise improve the condition of factory operatives, but the owners tell him that they cannot. If any new expenses are put upon them, they must shut up their shops. Then the benevolent and rather soft idea occurs to him that if Germany's competitors would agree to work fewer hours and charge more for their goods, the matter might be easily arranged. Hence the invitation to the labor conference. But, says the *Economist*, each country wants nothing so much as to get an advantage over the others.

"When the rival Powers understand that they are being asked to lighten the weight of toil from German shoulders and to give their fighting opponent a little breathing space, they are certain to say No—'You ask us to assist you to win the race by altering conditions which disturb you worse than they do us, but that is what we cannot and will not do. We want to beat you, not to help you to beat us.'"

The German Emperor's first step in the walks of independence has not been such as to encourage him. The elections for members of the Reichstag have resulted in a large increase of the Socialist vote and of the Socialist membership. Whatever may have been the Emperor's motives for the recent rescripts on the labor question, they have not led the Socialists to transfer any of their political strength to the side of conservatism. On the contrary, they have rallied with greater confidence than ever to the support of Bebel and Liebknecht. What thoughts are uppermost in the mind of Prince Bismarck at this juncture we may perhaps faintly conceive. The Chancellor has ruled Prussia and Germany for a quarter of a century upon the principles of personal government as distinguished from parliamentary government. A wise despotism has been his ideal of political greatness and social security. Arbitrary power, lodged in the hands of the strong man whose sole aim is the prosperity and elevation of his country, is the keystone of his system. It is a system which requires a continued succession of strong men in the right place. It requires not only a succession of Bismarcks, but a succession of Williams. The strong man must always have the support of the wise and confiding Emperor. If one or the other of these fails to appear in due time, the system is in instant peril, and when such peril comes, the consequences are enormous. But Bismarcks are among the rarest products of this world. Not more than one or two in a century are to be looked for among all civilized nations. A wise and confiding Emperor is a much more frequent phenomenon; but the system itself is exactly calculated to produce self-confidence in Emperors, and to cripple or eliminate the strong man even when he appears.

Opposed to this system is the one which teaches a nation to rely upon itself. Parliamentary government does not necessarily dispense with Emperors and Kings; still less does it dispense with the strong man. On the contrary, it supplies means by which the strong man, when Providence sends us one, shall be in his right place, at the head of public affairs. Imperialism in Germany is on trial. Most people have believed that the trial would not come till Bismarck should have passed away. It is fitting that it should come before.

THE WINNING ISSUES OF 1890.

THE turning-point of the politics and the prosperity of the United States, near the close of the nineteenth century, is the present control of the House of Representatives by the Republican party for the first time, with the exception of one Congress, since 1875. Beginning with the election of 1860, to provide for the expiration of Buchanan's term, the Republicans have inaugurated seven Presidents and the Democrats only one; but from the assembling of the House on July 4, 1861, to March 4, 1889, the Democrats have controlled the House during six Congresses of twelve years, and the Republicans during eight Congresses of sixteen years. Since July 4, 1861, Grow, Colfax, Blaine, Keifer, and Reed have been the Republican, Kerr, Randall (six years), and Carlisle (six years) the Democratic Speakers of the House. From the assembling of Congress in 1875 to its assembling in 1889, a period of fourteen years, the Democrats controlled the House during all except two years.

During the Forty-fifth Congress, 1877-79, the Democrats had forty-two Senators, the Republicans thirty-three, and the Independents one. In the next Congress, the relative numbers were the same, but in the next thereafter, 1881-83, the Democrats and Republicans were equal; there were outside of them one Readjuster Democrat and one Independent. In the Forty-ninth Congress, the Republican Senators were forty-two, the Democrats only thirty-four, and now, there being eighty-four Senators (two seats from Montana to be filled), the Republicans have forty-five and the Democrats thirty-seven. In 1891 the terms of twenty-eight Senators (twelve Democrats and sixteen Republicans) will expire, and in 1893 the terms of twelve Democrats and fifteen Republicans. The term of Mr. Evarts will expire in 1891, and that of Mr. Hiscock two years afterwards. Mr. Sherman's term in Ohio will expire in 1893. The terms of the two Republican Senators from Connecticut will end, one in 1891 and one in 1893. Not till the changes in 1895 can Democrats hope to control the Senate, even with the most favorable and winning issues.

During no year since 1860 have Democrats controlled executive and legislative power as Republicans now control, and during no year since 1875 have the Republicans had the power they now have over Federal laws and the Federal Treasury—currency, finance, taxation, surplus, and debt. All the while, excepting one Congress, since the last-named year have Democrats in the House been able, by good rules and good tactics, to prevent bad and plundering legislation coming from the Senate or from anywhere else; but now the barrier has been effectually removed. There is nothing between the taxpayers and the deep sea of extravagant expenditure and extravagant taxation.

To the present House were elected 169 Republicans and 161 Democrats. The last House had 153 Republicans, 169 Democrats, 2 Independents, and 1 vacancy. Nothing can be expected to change the character of the present Congress. The country must lie in the bed it made last November. But the voting for a new House will be next autumn.

Are Democrats, and especially such Democratic leaders in the House (where taxation must originate) as Mr. Carlisle and Mr. Mills, thinking of that, and the issues on which victory can be had? Why did Democrats lose, in November, 1888, the present House? In which States did the loss or gain occur? The changes were in the following States:

States.	Fifty-first Congress.		Fiftieth Congress.	
	Rep.	Dem.	Rep.	Dem.
Connecticut	3	1	1	3
Illinois	13	7	14	6
Indiana	3	10	7	6
Iowa	10	1	8	3
Kentucky	2	9	3	8
Louisiana	1	5	..	6
Maryland	2	4	1	5
Massachusetts	10	2	8	4
Michigan	9	2	6	5

What is the significance of that tabular statement? Why did not the Democratic party, having the executive department in its hands, increase very largely last November its majority in the House? Why did it, on the contrary, lose two members in Connecticut, two in Iowa, one in Louisiana, one in Maryland, two in Massachusetts, three in Michigan, three in Minnesota, two in Missouri, one in Nebraska, one in New Hampshire, one in New Jersey, one in North Carolina, one in Ohio, one in Pennsylvania, and one in Tennessee? All signs now indicate that the conduct of Harrison and of the Treasury, and the doings of the House, if kept up during the present session, will easily give to the *outs* power over the next House; but will the *outs* carry the Presidential election? That will largely depend on the issues formulated by the Democratic leaders during the present session? In politics, as in war, the successful assault on an enemy in position is easiest at the point of least resistance. In the tariff struggle, as an illustration, have Mr. Carlisle and Mr. Mills, and the other Democratic leaders in Congress, selected *that* point, and are they organizing a vigorous onset? Are they, leaving all minor things and minor phases of the tariff to take care of themselves, thinking of the McKinley bill, and free raw materials for our manufacturers, the taxation of which materials tends to strangle manufactures at their birth?

NEW YORK'S CHANCES FOR ELECTORAL REFORM.

IF it were not for Gov. Hill's obstruction, there would be no doubt whatever that the State of New York would secure this winter the enactment of two laws which would bring about the most thorough reform in election methods enjoyed by any American State. Both measures have been introduced in the Legislature by Senator Saxton, and they are both the most carefully drawn of their kind known as yet to American Legislatures. The first is the Ballot Bill, which, while similar in its main principles to the bills vetoed by Gov. Hill in previous years, has been revised and strengthened in the light of experience afforded by the practical operation of a similar law in Massachusetts. This bill was passed by the Senate on Wednesday week under such circumstances as to give hope of its passage in that body over a veto in case the Governor persists in his antagonism. It received the solid Republican vote and also the vote of two Democratic Senators. A third Democratic Senator, who has heretofore fathered Gov. Hill's bogus opposition measure, refrained from voting, on the ground that, as a believer in ballot reform, he did not wish to go on record in opposition even to a measure whose provisions he did not entirely approve. The entire Republican vote together with that of the two Democratic Senators makes a total only one short of the necessary two-thirds required for passage over a veto. There is good reason for believing that the popular demand for the reform will impel at least one other Democratic Senator to favor the Saxton bill when the issue is squarely made between that and no legislation.

The principal changes which Senator Saxton has made in his bill are, first, the grouping of all candidates by parties; and second, requiring the voter to erase the names of all candidates save those for whom he wishes to vote. A separate blank column is provided in which the voter can write the names of such candidates as he chooses in case none of those in the printed lists meet his approbation. Objection has been made to these changes that in various ways they will facilitate strict party voting. It is said that when a voter can indicate his choice by merely striking out all columns of names save those of his own party, the brief time required for this operation will be a sufficient indication that he has voted "straight." It is also said that the blank column affords opportunity for the use of "blanket pasters" which may be got up in the interest of "deals" and other corrupt combinations, and which voters may use instead of voting any of the regular tickets. To both these objections the best answer that can be made is that given by Mr. Henry A. Richmond, in an excellent address upon the scope and need of the reform which he delivered recently in Buffalo. "This reform," he said, "is not instituted for the purpose of encouraging any particular kind of

voting, but for the purpose of enabling the voter to cast his vote uninfluenced either by intimidation or by corruption; and when this result is obtained, how he votes—whether a straight ticket or for independent candidates—is his own matter, and the ticket should be so arranged that he will be able to select the names of the persons for whom he desires to vote with as little trouble as possible."

The great ends aimed at by the ballot-reform movement are the isolation of the voter while preparing his ballot, and the use of no ballots save those provided by the State and distributed in the polling-place on the day of election. When these are attained, no briber can follow a voter to the polls to see how he votes. If he takes note of his time in marking his ballot, he may infer that he has voted a straight ticket, but he cannot tell whether it is the ticket of one party or another. If he gives him a paster, he can have no proof that he has used it. When no ballots can be used save those provided at the public expense, there will no longer be excuse for "assessments" upon candidates or requests for contributions from the rich men of the party for campaign funds. These are the primary objects of ballot reform, and they will have been accomplished in this State when the Saxton Ballot Bill has become a law.

Mr. Saxton's second bill, which is modelled upon the English Corrupt Practices Act, will give us another and no less important reform, but it cannot be of service till the official secret ballot is secured. When the excuse for assessments and campaign funds has been removed, we can then forbid by law the corrupt use of money in elections and can enforce the law. That is what Mr. Saxton's second bill is designed to do, and it seems to be admirably adapted for the purpose. It is in the form of an amendment to the Penal Code, and makes it unlawful for any person, directly or indirectly, by himself or through any other person, to influence in any possible manner, either by bribery, loan, persuasion, promise of money, or office, or any thing of value, the vote of another It also makes it unlawful for a voter to submit to such influence, either in voting or refraining from voting. The specifications are drawn with great minuteness, and cover every possible form of bribery or influence—betting, intimidation, coercion, or restraint, or threats of reduced wages by employers, and all the other familiar methods. After election every candidate is required to file a sworn account of all moneys expended by him, or for him by any one else, in the election. The provision on this point is one of the strongest that have been put in any bill of the kind yet drawn in this country. It reads:

"Every candidate who is voted for at any public election held within this State shall, within ten days after such election, file as hereinafter provided an itemized statement, showing in detail all the moneys contributed or expended by him, directly or indirectly, by himself or through any other person, in aid of his election. Such statement shall give the names of the various persons who received such moneys, the specific nature of each item, and the purpose for which it was expended or contributed. There shall be attached to such statement an affidavit subscribed and sworn to by such candidate, setting forth in substance that the statement thus made is in all respects true, and that the same is a full and detailed statement of all moneys so contributed or expended by him directly or indirectly, by himself or through any other person in aid of his election. Candidates for offices to be filled by the electors of the entire State, or any division or district thereof greater than a county, shall file their statements in the office of the Secretary of State. Candidates for all other offices shall file their statements in the office of the Clerk of the county wherein the election occurs."

The penalties are very severe, as it is most important they should be:

"Whosoever shall violate any provision of this title, upon conviction thereof shall be punished by imprisonment in a county jail for not less than three months nor more than one year. The offences described in this act are hereby declared to be infamous crimes. When a person is convicted of any offence mentioned in section forty-one of this act [all forms of bribery or influence] he shall, in addition to the punishment above prescribed, forfeit any office to which he may have been elected at the election with reference to which such offence was committed; and when a person is convicted of any offence mentioned in section forty-one a [being bribed] of this act, he shall, in addition to the punishment above prescribed, be excluded from the right of suffrage for a period of five years after such conviction. Any candidate for office who refuses or neglects to file a statement, as prescribed, shall be deemed guilty of a misdemeanor, punishable as above provided. And, if such candidate be elected, he shall, in addition to such punishment, be suspended from the duties and deprived of the emoluments of his office until the proper statement shall be filed."

There is not, as in the English act, a limitation fixed for campaign expenditures, above which no candidate can go; but while this was considered of importance when put into the English act, practical experience has shown that sworn publication of all expenditures has made it unnecessary. The limit has seldom been reached by any candidate, being on an average one-third higher than actual expenditures.

The unanimous passage of this bill by the Senate on Thursday foreshadows its equally easy passage by the Assembly. The Governor is also committed in its favor, and even if he were to invent excuses to veto it, the prospect appears to be good for its passage over a veto. It is, of course, a far more formidable measure for Gov. Hill and his Tammany allies than the Ballot Bill.

THE NEBRASKA RATE PROBLEM.

JUST what results the Senate expects from its recent resolution on Western corn rates is not very clear. After alleging that the great region east of the Rocky Mountains is unable to obtain actual cost of production for its food products on account of excessive freight rates, it is resolved that the Inter-State Commission investigate whether this allegation is true or not, whether any section of the Inter-State Law is responsible for the situation, and whether a more stringent enforcement of the law would remedy the evil. That opens the whole question of the public regulation of railroad tariffs. Should the law be modified or more stringently enforced? Not a small part of the difficulties of the Inter-State Commission consists in formulating opinions on such a problem as is here presented.

The confusion in the public mind is illustrated by the fact that the petitions presented to the Senate from Nebraska are directly opposed to each other. One asks that the long-and-short-haul prohibition be repealed, as responsible for much of the present trouble in Nebraska. Another petition, from a jobbing city in the same State, remonstrates against any alteration of the law; for in its rigorous enforcement lies the city's hope of competitive sales as against other cities favored by position and by the rail carriers. The Granger sentiment was largely responsible for the Inter-State Act, because it was thought, in part justly, that cities and concentrated traffic in general were too much favored by the railroads. In the present emergency the Nebraska farmer finds the Inter-State Act a hindrance to the low rates which he thinks the railroads ought to grant upon his corn, so that his overproduction may reach an Eastern market at a price high enough to give him a small profit.

If we inquire whether the Nebraska farmer has any ground for his demand, we are met by one great preliminary difficulty. Either the rates upon the different articles carried by the railroads should bear a certain reasonable relation to each other, or they need not. As far as the Inter-State Law goes, it decides this question in favor of an equitable relationship. This is the contention of all interior towns that wish to control the jobbing trade of their section or State—Lincoln, Nebraska, as against Chicago, for example. This contention, applied to the carriage of corn, means that if unusually low rates are granted upon that commodity, every industry, agricultural or manufacturing, in that and other States will insist upon a like reduction because of discrimination. The usual argument is, "If the railroads can carry corn at that rate and make money, they can carry my goods at a corresponding price. Am I not as much in need of help as the farmer of Nebraska?" And under our present laws the argument has force.

One point about the long-and-short-haul discussion is not often referred to. If the famous fourth section should be struck from the law, the question of "undue preference or advantage" would still remain to be decided, and this would involve the rightfulness of a proportionately greater charge for a shorter distance. It is possible that the fact of the presence of a specific section in the Inter-State Act is itself at times a hindrance to justice. Naturally the Inter-State Commission, in interpreting the law, lays stress upon the necessity of conforming to this specific rule. It is also possible that the Commission's respect for the supposed wishes of Congress and the nation has led it a little too far. The Commission is quoted as saying, for instance, that a local rate between two points must bear a certain relation to the proportion of a through rate accruing between the same points on a distant shipment. This, it will be noticed, goes beyond the letter of the fourth section, which deals with aggregate charges only. Many of our disputes about this long-and-short-haul matter could,

on grounds of equity, be settled better by a repeal of the section entirely, thus leaving the question of discrimination to be determined by the general prohibition of undue preference. One objection to this might be that the law is now too vague, and that we ought not to take out the only specific clause. But is the law too vague? Is it not thus rather conforming to other statutes?

Under our laws a house must be habitable if rent is to be collected by suit. We are nowhere told exactly what habitable means. Cases have been tried in times past which furnish a large number of precedents governing the relations between landlord and tenant. Under these precedents it is a matter of fact to be determined by the evidence whether a certain damage releases the tenant or not. Consider the confusion which would ensue should our statutes attempt to define exactly the things necessary for a habitable home. The vagueness may seem unsatisfactory, but it works towards a fairer measure of justice for all concerned. In like manner the vagueness of the prohibition of unjust discrimination in transportation is faulty, mainly through a lack of precedents, though the whole law needs better machinery for its enforcement. The body of men who begin the work of establishing such precedents have a difficult and delicate task. In this respect the community is fortunate in the present Commission. As a means of meting out justice, the Anglo-Saxon mind has not yet invented a better method than by having each side in a dispute state its case as strongly as possible before some impartial tribunal, this deciding between the disputants upon the facts and in accordance with some general principle. The differences of circumstances and of conditions in transportation are endless. No law could possibly cover them all in detail. The statement of a principle should be the only requirement, leaving the application to the Commission, according to the facts in each case. In the Nebraska matter the railroads think that a great reduction in the corn rate would benefit the consumer more than the producer; but, more than all else, they fear that, under the theory of relationship of rates such a reduction would be made the ground for a general demand for similar favors on other articles. At the same time, if we argue that one rate should not be used as a criterion for another rate, we precipitate upon the country all the evils which the Inter-State Act was intended to cure.

Going back to the resolution again, the Commission should have the sympathy of the community. How the "more stringent enforcement" of the law would help the corn-producer is hard to see. If all are agreed upon the correctness of the main principles of the Inter-State Act, it is equally difficult to see how the railroad rates on corn can be pronounced relatively unreasonable; while a pronounced change in any important provision of the act—such as the short-haul rule—would ruin many important business interests established throughout the very corn belt whose products now do not realize the "actual cost of production."

THE ENGLISH LABOR LESSON.

THE results of the strike of the dock laborers in London last year, as told from day to day in the English press, are extremely interesting to those who occupy themselves with what is called "the labor problem." Nothing in the story is more interesting than the closeness with which the whole affair has followed the American experience of four years ago. Here is a passage from the last *Spectator*, containing the lesson of the late English strikes, which might, barring the phraseology, have been found in these columns at almost any time during the spring of 1886·

"The issue thus raised is more serious than any of those on which trade quarrels used formerly to turn. Workmen have a right to give or withhold their labor. It is their own—theirs to sell if they wish to sell it; theirs to keep if they do not wish to sell it. But the very same principle of individual freedom which sustains this claim of the workmen, equally sustains the corresponding claim of the employers. They have a right to give or withhold employment. It is their own—theirs to sell if they wish to sell it; theirs to keep if they do not wish to sell it. The new dock strike directly contravenes this principle. The dock-laborers are endeavoring to prevent the employment of non-unionist men belonging to another trade. As regards their own labor, they are free to do as they please. They need not load any carts if they are minded to stand idle, nor need the unionist carmen bring any carts to be loaded if they prefer to stay at home. But when the members of either union seek, directly or indirectly, to prevent employers from getting other men to do the work which they refuse to do, they are openly attacking individual liberty. They are trying to stamp out non-unionist labor. No union standing by itself can attempt this with any chance of success. It can only be done by violent picketing, and as soon as picketing becomes unmistakably violent, the police interfere. But if unions combine, their power of interfering with non-unionists becomes very much greater. There is no need to use violence to the non-unionists themselves; they have the chance of attaining their end by the quieter method of making the employment of non-unionists inconvenient. In the present case, supposing the laborers' union have their way, any owner of goods employing non-unionist carmen will not get his goods delivered to him. He will send in vain to the dock or wharf where they are stored; the unionist laborers employed there will refuse to load his carts."

What has happened to bring home to the English mind these to us now familiar truths is this: When the casual laborers employed by the Dock Companies struck for higher wages and more regular work, the Dock Companies answered: "We cannot pay you higher wages, because our business will not allow us to do so. We are making no profits now, and some of us are almost insolvent. Nor can we give you regular work, because our business is irregular in its very nature. We sometimes need more labor than we can get, but most of the time do not need one-half of what offers. The fact is, that there are too many of you. It is your frantic competition here in East London which keeps you so poor and miserable. You ought either to go back to the country, where you are sorely needed, or emigrate to some new country. Our stockholders cannot take care of you, because a large proportion of them are very poor themselves."

There is much reason for believing that these words of soberness and truth would have produced the desired effect; that something would have been done to lessen the oversupply of labor in the dock district, and to arrest the drift into London of "casuals" tired of farm labor in the country districts, but for the interference at this point of a body of philanthropists, headed by Cardinal Manning and supported, with curious fatuity, by a portion of the daily press and of the charitable public. These friends of Labor furiously attacked the Dock Companies for their cruelty and injustice, on two grounds: one was that the dock-laborers were very poor and miserable, and the other was, in effect, that anybody who once employs a man is bound to see, ever after, that he has regular employment at good wages. In support of these theses, the strikers, led by a certain labor agitator and Socialist named Burns, were encouraged in every possible way to hold out. Subscriptions for their support poured in from all parts of the country; meetings were held to express sympathy with them; the companies were overwhelmed with abuse; sympathetic strikes among other trades were fomented and set on foot. The working-classes all over the country were plunged in a fever of vague expectation of the great labor millennium. No proper examination of the nature of the problem raised by the strike, or of the probable effect on business of their theory of the rights of labor, was made by any of the dockmen's advocates. The air was filled, among the well-to-do classes, with that curious fear that something revolutionary and tremendous was going to happen to the social organization which some of us experienced here when Powderly began to convert us all (except bankers and brokers) into "Knights of Labor," and threatened to do away with the State and Federal Governments.

The companies at last made some concessions, both as regards money and hours, which they could not really afford to make, but which they felt compelled to make in order to put an end to popular clamor and prevent the ruin of London as a port. The negotiations were conducted on behalf of the laborers by Cardinal Manning, Sir J. Whitehead, and Mr. Sidney Buxton, and an agreement in due form was finally reached, and the men went back to work. Did peace and content then reign? Not a bit of it. The companies have never had a quiet week since. The leaders of the union thought they had discovered that they possessed great power, and felt the need of continually showing it. The trouble began with an attempt to compel the discharge of all the non-unionists employed by the companies during the strike, and every few days have revealed a new grievance, to be redressed by a strike. Moreover, their success fired the imagination of the other London trades-unions. The gasmen struck because the companies tried to make them share in the profits. The carmen and truckmen struck in order to help the dockmen, refusing to deliver goods to be handled by non-union men at the docks, and so on through various connected trades. The loss of money has been very great, and so has the interruption to business and the inconvenience to the public.

Although the strikers are being defeated,

there is not much sign as yet of returning sense and moderation. Minute description of the situation is not needed for American readers. We have here passed through every phase of the crisis. We know all about the right of a laborer to stay permanently, on wages fixed by himself or by his union, in the employment of any one who once chances to employ him. We know all about the right to frighten, maim, mutilate, or murder non-union men if they, in their greater poverty, seek to fill places which union men have voluntarily vacated. We know all about the right to damage an employer's property and hinder his business, if he accepts peaceably the laborer's own decision to leave his service; we know all about the notion that everybody who employs labor must be a rich man, with plenty of money in some secluded spot, which he is bound to produce or divide with Labor whenever Labor asks for it. We are also very familiar with the duty of "society" to guarantee every man against the consequences of his own vice, or folly, or impudence, or laziness, or extravagance. And we are well acquainted with the labor agitator who thunders against capital at labor meetings, and dreads nothing more than cordial relations between employer and employed, because they ruin his business. There is something odd, however, in these days of steam and electricity, in seeing the English public slowly learning their lesson with as much patience and confession of ignorance as if they had never heard of our own recent experience.

THE AIM OF THE GERMAN SOCIALISTS.

THE importance of the victories the Socialists have won in Germany can hardly be appreciated without remembering that they have been denied the use of the ordinary electoral machinery; that is to say, they cannot hold public meetings or publicly distribute documents, and many of their leading men are in exile under police orders. They have, therefore, been obliged to resort to such odd means of canvassing as writing the names of their candidates in chalk on the walls of houses and on the sidewalks, and distributing hand-bills surreptitiously—in many cases through their school-children. They are for the most part poor men, and as no salaries are paid to members of the Reichstag, compensation for their members has to be provided by voluntary contributions. The Paris *Figaro* tells a story of one of their candidates named Viereck, an illegitimate son of the old Emperor William, whose name in German means "Square," and whose supporters, therefore, covered the walls in his district with squares of all sizes on election day, with the single word "elect" written underneath. Among their candidates at the late election, there were twelve carpenters, ten machinists, eight compositors, eight shoemakers, six merchants, four cigar-makers, three tavern-keepers, three masons, three moulders, two gilders, two druggists, eight journalists—a very fair representation of what are called the working-classes of the community. They have displayed such activity that they are said to have held 107 meetings in Berlin, in spite of the police, during the last week of their canvass. It was directed by a central committee sitting in the capital and composed of Bebel, Grillenberger, Liebknecht, Meister, and Singer. They distributed the funds and supplied the speakers. These funds come from all parts of the world, Belgium, Holland, Switzerland, Denmark, France, Austria, and England; but, strangely enough, by far the largest amounts come from the United States. Between the French and German Socialists there has, ever since 1884, been much fraternization. In that year the French made considerable contributions to the German campaign fund, and the Germans reciprocated in 1885.

In view of the rapid growth of the movement in Germany, of course greatly increased attention is being given to the aims of the Socialists. On this point they take every pains to make their meaning clear. At their Congress in Copenhagen, in 1883, they declared distinctly that what they sought was a radical social and economical revolution. They repeated this declaration at Bruggen in 1887. To make assurance doubly sure in the late canvass, they made every candidate sign the following declaration:

> "In the existing state of society all the means or instruments of labor have been monopolized by the capitalistic class; hence the dependence of the working class, the cause of all misery and of all slavery. As political parties act only for the purpose of guaranteeing their privileges to those who are already possessed of them, the working class ought to organize itself in a distinct party, having for its object its own economic emancipation. Every movement should have this end in view."

The Congress at Bruggen also put down, among the things to be striven for, "the expropriation of the soil and of other means of production."

So much for the programme. Its execution is, of course, a long way off. It will, even at the present rate of progress, be ages before the Socialists can in Germany or any other country set up a legislature strong enough to put the State in possession of all the land machinery of the country. The Socialists will win a good many victories in all countries, as long as the owners of property are not seriously alarmed. Wherever they are, Socialists of all shades will be astounded, and, it may be, appalled, by finding how deeply rooted in human nature property is, and what a tremendous resistance it can make to its enemies. So that the danger to it from the present movement in Germany has but little practical interest. What gives this its importance and attracts to it the attention of the world just now, is the exposure it makes of the futility and failure of the economical policy started by Bismarck and taken up by the present Emperor. It shows that not only have the high tariff and the workingmen's-insurance plan proved a complete failure as measures of pacification for the working classes, but that they have strengthened the working classes in their belief that their schemes of social reorganization are feasible. This is where the mischief of the Bismarck policy is now showing itself. A high tariff for the benefit of the workingman is the first step in his conversion to the notion that Government may properly take entire control of the national industry. As soon as this notion has taken a firm lodgment in his brain, the second step, by which he becomes convinced that to make the new system a success the Government should be entirely taken away from the capitalists, is very easy. This step the Germans are now taking. They are beginning to say: If it be true, as these emperors, and princes, and diplomats, and bankers, and other bigwigs say, that it is the duty of Government, and is in its power, to raise the wages of the workingman and make provision for him in his old age, surely the workingman himself is the fittest person to take charge of the matter. Why should it be left any longer in the hands of these gorgeous creatures in fine uniforms, who have never done a day's work in their lives, are living on the earnings of the poor, and have not a particle of real sympathy with them?

A JAPANESE STATE LEGISLATURE.

MITO, January 10, 1890.

JAPAN, like France, has a two-fold division of the country, the one geographical, and the other political. The former, or ancient, division is into *kuni*, of which there are now eighty-four; the latter, or modern division, is into *ken*, of which there are forty-two, besides three *fu*. (The three large cities of Tokio, Osaka, and Kioto, are part of no *ken*, but constitute each a political district, called *fu*). In 1878 the Emperor, in accordance with his pledge that "all measures [should] be decided by public opinion," as the first step towards local self-government, instituted assemblies in the various *ken* and *fu*. These assemblies meet annually in the capital city of each *ken*, and in each *fu*, and are called *kenkwai*, or *fukwai*. The city in which I live is the capital of a *ken*; therefore, I had an opportunity to visit the *kenkwai*, and to investigate the extent and limit of its authority.

In this *ken* the assembly is not provided with a chamber of its own for its meetings, but holds its sessions in the examination room of the High School. Ordinarily, visitors are allowed to be present at the sessions; but the chairman of the assembly is empowered to dismiss or keep out the audience at his discretion. It must, of course, be added, that the audience are expected to preserve proper order; in fact, only recently more stringent regulations have been issued to the police by the Government for the control of the outsiders. The man who expects to become a spectator leaves his card with the outer door-keepers, by whom his name is registered, and from whom a ticket of admission is received, to be given to the inner door-keeper.

At the further end of the room from the entrance on the higher platform is the Chairman's seat. On the lower platform, at his right and left, sit the two clerks, one a long hand recorder and the other a shorthand reporter. On the ground floor, the desks of the members are arranged on the three sides of a rectangle. Beginning on the Chairman's left, the members from No. 1 to No. 21 are on one of the long sides of the rectangle; directly in front of the Chairman, but near the doorway, the members from No. 22 to No. 30 fill the short side; and on the Chairman's left, the remainder, up to No. 50, occupy the other long side. In front of each desk hangs a paper label inscribed with the name and the number of the member. On each desk are an ink-box,

soroban (abacus), and such books and documents as may be needed. In the interior of the rectangle are several *hibachi*, large boxes which contain a charcoal fire. Back of the members on the Chairman's left, sit the audience. There are, of course, also servants to run on errands for the members. Among the representatives are a few old men; but almost all are middle-aged or young. About half of them have discarded the Japanese *kimono* for European dress. The room lacks ornaments altogether, and is far from being pretty according to Occidental ideas. Although the Japanese are very fond of tobacco and saki, no smoking or drinking is allowed in the assembly-room. The members do not lounge about, or sit with their feet on the desks, or envelope themselves in a cloud of smoke, or disgrace themselves by boisterous conduct. During the session they are very orderly; and, however spirited the debate may become, personal rudeness and violence are lacking.

According to the printed rules governing these bodies, they are "to counsel about the budget of expenses to be met by local taxation, and about the manner of collecting such taxes." The members are elected in each *gun* (county) or *ku* (ward) according to the population, at the rate of one member for each 20,000 people; but the number of representatives in one county or ward cannot exceed five. Each legislative district may also select *yobi-in* (reserve members), not to exceed ten, but always twice the number of the regular members. For instance, in this *kenkwai* there are altogether forty-eight representatives; therefore, the districts of this *ken* must elect in all ninety-six "reserve members." As their name indicates, they are to take the places of any regular members who may for any reason be unable to serve. It is thus very unlikely that there would ever be a vacancy to be filled by a special election, except in case the entire body is prorogued. Can any one mention another country where each member of a legislative body has two "reserve" substitutes ready to step into his vacant place?

A candidate for representative must be over twenty-five years of age, a permanent resident of that *ken*, and have lived there for more than three years. He must also be paying an annual land-tax of more than ten *yen*. Idiots, convicts of more than one year's confinement, bankrupts, civil officers, priests and ministers, soldiers and sailors in actual service, are all ineligible. Political offenders are not eligible till five years from the time of release; and those who have retired from public service are ineligible under four years. The qualifications of voters differ from the above in only four respects: electors must be over twenty years of age, permanent residents of that *gun* or *ku*, and be paying annual land-taxes of more than five *yen*, and priests and ministers have the right of suffrage. The term of service covers four years; but the system of rotation prevails, so that the terms of half of the members expire every two years.

From among the members the assembly elects a "standing committee of from five to seven persons," who serve for a period of two years. This committee remains in the capital city throughout the year, and gives its opinion when the Governor asks about the manner and order of carrying out the enactments of the assembly, and about the payment of extraordinary expense. In this committee a majority make a quorum and decide a vote; and at its meetings no spectators are allowed. A member of this committee receives "from 30 *yen* to 80 *yen* per month and travelling expenses"; while an ordinary member of the assembly receives "1 *yen* per diem during the session and travelling expenses." These salaries are all included in the budget of local taxation.

The ordinary annual session opens some time in November, and continues for not more than thirty days. If within that time the public business is unfinished, or if for any reason it seems necessary, the Governor is empowered to call a special session to continue for not more than seven days. In any case the Governor must state his reasons therefor to the Department of State for Home Affairs at Tokio. Likewise, if there is a disagreement between the Governor and the assembly, then both parties, stating the reasons for their opinions, must appeal for a decision to the Department of Home Affairs. In this case the Governor may suspend the assembly; and, if the decision from the central Government comes too late, he may call a special meeting. If the debates of the assembly disturb the public peace, or violate any laws or regulations, the Governor may suspend the assembly, but must notify the Department of Home Affairs. The latter, moreover, has the power at any time to suspend a *kenkwai* or a *fukwai*, but must call a new one within ninety days.

Every session of an assembly is formally "opened" by the Governor of that *fu* or *ken*. The business to come before the assembly is presented in a bill originating with the Governor. At the first reading of the bill, or even at any time, if a member wishes explanations concerning any of the receipts or disbursements, the Governor or his representative must explain. As a matter of fact, the Governor is rarely present to make such explanations in person, but the First Secretary of the *fu* or *ken* is present as his representative throughout the session. Besides him, the chief officer of the particular department whose affairs are under discussion at the time is also present, to answer any questions or make any explanations. These two officials may speak at any time, provided they do not interrupt the speech of a member; but they have no vote.

The discussion of disputed subjects usually comes with the first and the second readings. The third reading is generally a matter of form, though often a final tussle will come then if the contest is close. For instance, at the last session of this legislature, at first an appropriation for the local newspaper was rejected, but on the third reading it was passed by amendment to the original bill. In a debate each member has the right to speak if he does not use improper language concerning others. When a member wishes to address the assembly, he rises, calls out "*Gichō*" (chairman), and gives his number. When the chairman has recognized him by repeating that number, he "has the floor." A majority vote of all the members present is necessary for the passage of a motion.

After the "original bill" has been presented to an ordinary meeting of an assembly, if there are two members who wish to make a petition about other important matters of that *fu* or *ken*, they must first obtain the permission of the assembly, after which the petition will be presented, like a bill, for discussion. If this bill is passed, then it can be presented, as the opinion of the assembly, either to the Governor or to the Department of Home Affairs. No bill becomes a law until it has been signed by the Governor. If the latter does not agree with a bill, he may appeal to the Department of Home Affairs, where it will be finally decided.

If we sum up the extent and limit of the powers of a Japanese local assembly, we may say that in theory a *kenkwai* or a *fukwai* is by no means entirely independent of the central Government, and does not possess absolute control of the matters of its own *ken* or *fu*. It will be noticed that in all cases the final ratification or decision rests with the Governor or the Department of Home Affairs. The latter also has the power in its own hands of suspending an assembly at its discretion. It would seem, then, that theoretically a *fukwai* or a *kenkwai* is pretty much under the control of the central Government, and has very little real power of its own. Its nature appears more like that of an elective advisory board than of a legislative body, so that in one sense the title of this contribution is a misnomer. But in practice and in fact, a wise Governor, though he is an appointive officer of the central Government, does not often put himself in opposition to public opinion unless it be a case of the greatest importance; and the Department of Home Affairs is loath to exercise its authority unless it is absolutely necessary. The central Government holds the power to control these assemblies if it should be necessary, but it also respects public opinion, and allows local self-government as far as possible. Likewise, in the Constitution which goes into effect this year, the Imperial Government, giving up much of its legislative power, also retains sufficient authority not to become entirely subject to the Diet.

It seems necessary, in the present stage of political development in this Empire, that too much authority and prestige should not be suddenly taken away from the central Government and intrusted to the inexperienced and irresponsible people. But we feel assured that, as the people show themselves capable of exercising power, their privileges will be gradually extended. We should not find fault with Japan because in a few years she has not leaped into the enjoyment of political privileges which the English and American people obtained only after centuries of slow and often bloody development; but we should congratulate her because, by peaceful proclamation, she has gradually taken herself entirely out of the pale of Oriental absolutism, beyond even despotic Russia, and may from this year be classed with Bismarckian Germany. C.

MEILHAC'S "MARGOT."

PARIS, February 6, 1890.

THERE is perhaps no more popular writer in Paris, in the circle of journalistic writers, than M. Meilhac, who was for so many years the literary companion of Ludovic Halévy. They both had the good fortune, while they were young, full of gayety and of spirits, of finding in Offenbach a musical collaborator. Their operettas are world-famous; who has not heard of "La Belle Hélène," "Barbe-bleue," etc.? Offenbach had something in him of the genius of Mozart; he was of course but a small reduction of this great man, but he always reminds me of him by the grace, the ease, the loveliness of his melodies. Without Offenbach, Halévy and Meilhac would probably have had only the transient popularity of so many others whose names are now completely forgotten. Thanks to him, they have risen higher; they are still before the public, and they have both become members of the French Academy—somewhat, it must be confessed, to the surprise of those who have continued to regard the Academy with the reverence of the past.

The collaboration of the two operatic writers came to an end after the war of 1870; for what reason? Nobody knows, probably, except themselves and their most intimate friends. Halévy

abandoned the stage completely and gave himself up to novel-writing. He made himself a second reputation, so to speak, by the light stories of 'Madame et Monsieur Cardinal' and the 'Filles de M. Cardinal,' and by the novel 'L'Abbé Constantin,' which opened for him the doors of the French Academy. Meilhac continued to work for the stage. He too soon showed new ambition; he grew more serious, and aimed visibly at becoming a writer of comedies instead of operettas or vaudevilles. An old bachelor, a true Parisian, knowing nothing outside of his dear boulevard, he made his special study of the world which has for its limits the Bastille and the Arc de Triomphe. The moralist can find several worlds in this small universe—all the extremes of vice and of virtue, all the refinements of civilization, with all the permanent instincts of the natural man. To be sure, man always remains the same, in a certain sense; but the modern *coquette*, the modern *ingénue*, are not exactly the coquette, the ingénue of the time of Molière—and the *Célimène*, the *Agnès*, of Paris are not exactly the Célimène, the Agnès, of Chicago or New York—not even those of London, though London is geographically very near us.

Meilhac makes no pretension of being a dramatic creator, he does not undertake to model new types; he contents himself with the old types of French comedy, but he tries to give them their modern look, and he excels in observing the small traits which give these types their present character. He belongs to the new school of realists. Our painters, our sculptors only copy what they see with their own eyes; they do not pretend to invent anything. Meilhac's field of observation has been limited—it has been limited even in Paris; but he has seen well what he has seen; he is a good observer. In the comedy which has recently been produced on the stage of the French Theatre, he has aimed at higher objects than heretofore; he has evidently intended to modernize (if the word may be employed) a subject which had tempted Molière, and which was treated by him in one of his best plays.

"L'Ecole des Femmes" was represented for the first time in Paris on December 26, 1662, at the theatre of the Palais Royal, and played by the troupe of Monsieur, the brother of the King. The printed comedy was dedicated to the famous Madame, so well known by her letters. *Arnolphe* is an old man who keeps an innocent girl in confinement, and tries to protect her against all the seductions of the world. He intends to marry her himself, and he educates her for himself; but Nature has her rights, and the innocent *Agnès* falls in love with a handsome young man, *Horace*. The innocence of *Agnès* is stronger than the experience of *Arnolphe*, youth is stronger than old age; and when the aged *Arnolphe* speaks eloquently of his passion, little *Agnès* tells him quietly,

"Tenez, tous vos discours ne me touchent point l'âme;
Horace avec deux mots en ferait plus que vous."

The subject treated by Molière in the "École des Femmes" is as old as humanity itself. He showed in some parts of his play a boldness which scandalized a portion of the society of his time, and he was so much criticised that he took the trouble to write another play, called "La Critique de l'École des Femmes," which was represented for the first time on the 1st of June, 1663.

Let us see how M. Meilhac has developed this same drama, the competition of old age and of youth. The folly of the old man and the girl's innocence are the cardinal points of "Margot" as well as of the "École des Femmes." But how different *M. de Boisvillette*, an old Parisian bachelor, a club man, a roué, who has nothing to learn in life, is from Molière's *Arnolphe;* and how different is *Margot* from *Agnès*. *Margot* has been charitably brought up by a person who belongs to what Dumas has called the "Demi-monde." She has never seen anybody but women belonging to a perverse society, irregular men and more irregular women. She is innocent when the play opens, but her mind had no purity to lose; the conversation she has heard, the lessons which she has indirectly received, have not prepared her for a virtuous life.

The first act begins in the house of *M. de Boisvillette*. He has been dining with some friends and their lady friends; the company is gone to end the evening at some theatre. *Margot* has been dining there, too, but she has disappeared, she has probably gone home. *Boisvillette* is preparing to go to bed when suddenly, behind a great screen, he sees *Margot* profoundly asleep. He wakes her up, and then begins a very pretty scene. *Boisvillette* is a gentleman, and, accustomed as he is to light society, he treats the young girl with a sort of respect; she takes the opportunity to make him a sort of confession. She begins to understand thoroughly her situation; she is not happy, she feels no inclination for the life of the dissolute woman who has brought her up. She sees no choice; either she must throw herself into the river, or else she must live as the people around her live. *Boisvillette* is moved; he says to her that there is a better thing to do—he will send her somewhere to the country, for two or three years, and he will find her some good, honest, modest husband.

This conversation between an old sceptic, who becomes by degrees sentimental, and the girl, who clings to the hope of saving her innocence, is a model of grace and delicacy. Of course *Boisvillette* feels himself by degrees falling in love with *Margot*. In her new life *Margot* finds herself in contact with a nice young man, the nephew of *Boisvillette;* she falls in love, not with her saviour, but with this young man. They both become more and more miserable. *Margot* has the most tender regard for her protector, but she cannot return his sentiments. *Boisvillette* finds himself ridiculous, absurd: he is too much a man of the world to behave like Molière's *Arnolphe*, but he suffers, he is tortured, and all the more because he knows that his nephew does not care for *Margot*. She, too, learns that her dear *Georges* is going to be married, and becomes desperate; she leaves *Boisvillette's* château, hardly knowing what she will do. She fortunately meets *François*, the keeper of *Boisvillette's* domain, the man whom *Boisvillette* originally intended to give her for a husband. This *François* receives the confidence of her misfortune, and tells her substantially: "After what has happened, since you cannot marry *Boisvillette's* nephew, since you will not marry *Boisvillette* himself, you must look for a protector, for an energetic man, and accept his guidance."

The voice of this *François*, of this "man of the woods," is the voice of stern reality. But it is hardly the voice which *Margot* would have been likely to submit to if she had had a real existence. M. Meilhac has represented *Margot* to us as rather too romantic a person; we cannot admit that she will accept easily a solution which has a sort of brutality about it. *Margot* has been too much spoiled from her earliest youth, her intellect has been refined, even to corruption, by the brilliant conversation of Parisian rakes, of witty, handsome, and unscrupulous women; her heart has been mellowed and softened by the delicate adoration of *Boisvillette;* the incense which he has been burning before her has been of the choicest kind; and the transformation which the gradual progress of his passion has made in him could not but have touched the most tender fibres of her nature. She did not return love for love, but she has been living in an atmosphere of gratitude, of affection, of friendship; she has afterwards herself felt what love is, she has desired to become the wife of her benefactor's nephew. Under such circumstances, we are rather shocked to find her suddenly offering her hand to the coarse "man of the woods," to the man who, good and virtuous as he may be, is, however, in an almost menial position in *Boisvillette's* house. She humbles herself too much; she has not the excuse of feeling that she loves *François*; she marries him merely in order to make an end, to screen herself against the temptations of a vicious life. She is determined to be a virtuous woman, and she sees no other way than this marriage. Well, perhaps there was no other way; perhaps *Margot* has done the best thing she could do; but this end proved a sort of disappointment to the spectators. They all expected *Margot* to marry *Boisvillette* himself, notwithstanding his age. Meilhac has not dared to unite them; he has left *Boisvillette* alone, unhappy; conscious, however, of having done some good and saved a soul. He has left *Margot* united to a strong man who is determined to make her walk straight. Not a very romantic end, you see. The beauty of the first act, and the incoherence of the second and the third, remind one of the Latin verse,

"Desinit in piscem mulier formosa superne."

Correspondence.

THE RIGHTS OF COLOR AT THE SOUTH.

To the Editor of The Nation:

Sir: Your editorial in your issue of the 13th stating the aims of the Afro-American League was incorrect, as you will see by the enclosed "Address to the People of the United States" which was issued by the League. As a matter of fact, the Afro-American does not desire any class legislation. Both conventions declared against it. The native-born American of African descent does, however, wish the civil rights which are freely accorded naturalized Americans, but denied to him.

Theoretically the Afro-American is a citizen, endowed with a citizen's rights, but practically he is not allowed to exercise the rights guaranteed him by the Constitution. You, as a Caucasian (I presume you are), can have no proper conception of the indignities heaped upon refined ladies and gentlemen in the South simply because they are of African descent. Educated Afro-Americans 7-8 Caucasian, 1-8 negro, receive the same treatment at the hands of brutal Southerners that illiterate negro field hands get. In the South the negro attends a separate and usually inferior school, he must ride in a separate and filthy railroad car or in the smoking car, he must sit in a separate gallery at the theatre. The hotels refuse to receive him at all. The prejudice against the negro does not even stop at the grave, for his dead must be buried in a separate graveyard. The Southern people have always endeavored to show the negro that he is an inferior, that he belongs to a separate and distinct class.

The Afro-American does not wish to be separated from other American citizens, but he is forced away by the treatment he receives. As a class the colored people have been wronged; they have been prevented from exercising the

right of suffrage; as a class they have been denied their civil rights; they have been murdered in cold blood, without any effort being made to punish the murderers; when suspected of crime, they have been lynched. Having been wronged as a class, as a class they are endeavoring to right those wrongs. Would they be worthy of citizenship if they did less? Suppose the Irish, the Germans, the Italians, or any other class of people were treated as the Afro-Americans have been treated in the South; would they not as a class resent it? Southern legislatures have passed infamous laws aimed at negroes as a class. A week or so ago the Mississippi Legislature resolved to memorialize Congress to repeal the Fifteenth Amendment. In view of these facts, the Afro-American has aroused from his past lethargy, and has determined to demand all the rights to which he is entitled as an American citizen.—Respectfully,

C. F. Adams.

Chicago, February 18, 1890.

[We believe Mr. Adams to be in error as regards the Mississippi Legislature. It took no action in the premises—and it would have made no difference if it had done so.—Ed. Nation.]

THE RACE PROBLEM.

To the Editor of The Nation:

Sir: As a solution of the "race problem" in the Southern States, I have a remedy not nearly as heroic as that of Senators Butler and Morgan, who wish to remove six millions of negroes, more or less, to Africa, which every one knows can and will never be done; less trenchant than that of the legislators at Jackson, Mississippi, who are petitioning for the repeal of the Fifteenth Amendment, which is almost as hopeless of accomplishment as the other; and one differing widely from the propositions of Senators Sherman, Ingalls, and Chandler, who hope by a Federal election law to restore the days of reconstruction, and to carry the Gulf States, by the negro vote, for the Republican ticket.

Unlike Senators Butler and Morgan, I maintain that the negroes, even in their unavoidable inferiority to the white men surrounding them, and while they have no chance to become bank presidents or railroad magnates, or to enter fashionable society, are vastly better off than they could be in Africa for the next one hundred years to come. Unlike the Democrats at Jackson, I neither hope nor wish to see the Fifteenth Amendment repealed. Unlike Senators Sherman, Ingalls, and Chandler, though I do wish that all the negroes should freely vote, I do not wish them to vote solidly for the one party supposed to be most favorable to them.

The suppression of the negro vote in five or six of the Gulf States is certainly a great evil; but its free exercise in the days following upon 1868, with the resulting corrupt governments, State and local, was undoubtedly a much greater evil. There is one other alternative left. It is this, that the negro vote should be divided, as the vote of the poorest laboring class in the Northern States is, in varying proportions, between the two great parties, while the lead in each party, as everywhere in the world, would be taken by men of some wealth, some education, some standing in the community—by men, in short, who have something to lose by bad government. The government of South Carolina under Robert K. Scott and Frank Moses was more intolerable than that of New York city under Tweed, Oakey Hall, and Connolly. With the negroes all voting, but following in two opposing hosts the lead of those white men who would come forward naturally, without aid from outside of the State, South Carolina would enjoy a much better government than the large cities of the North, if only for the reason that its poverty renders politics there less attractive to the most dangerous boodlers.

How, then, is this condition of affairs—a division of the negro vote—to be brought about? Is it at all within the range of possibility?

Answering the latter question first, I say, with proper efforts, it is possible. In two States at least, large numbers of negroes have, within the last year or two, freely and openly voted the Democratic ticket—in Louisiana, many of those who are engaged in growing sugar, on account of the free-trade tendency of the Republican party on the sugar duties; in Virginia, on account of a personal quarrel with Mahone.

Then, how shall the individual Southern negro be emancipated from the domination of his race; and what motive shall he have to separate himself from the Republican party, of which he has so long been the docile follower, rather than a member? The Australian ballot, while protecting the Republican colored voter from the shotgun of the white-liner, will also protect the colored Democrat from the jibes and anathemas of his kinsfolk and his church. The motive and reason why an intelligent negro in the Gulf States should vote for Democratic Congressmen and Presidential electors is not far to seek—not, at least, if the Democratic party plants itself, under the lead of Cleveland, on the one great principle of its existence, viz.: upon free trade, casting aside the quirks, evasions, and straddles of the platform of 1884. Din it in the ears of every colored grower of cotton and corn, to the exclusion of all other political questions, that the Republicans want to cheat him out of his slender income, to make money for the wool-grower, the iron-miner, and the manufacturer, and he will soon understand the tariff. Tell him openly, "It is quite proper for those fellows who work in the furnaces at Birmingham to vote the Republican ticket—and for the white furnace-owners too; it is not a question of North and South, of white or black, but of free trade on one side and robbery on the other," and you are bound to make enough impression on the black Republican phalanx to split it wide open; and when that is done, the race problem is half solved.

Are there Democratic leaders with the needful courage to undertake the task?

L. N. D.

Louisville, Ky., February 14, 1890.

A HINT TO STEAMSHIP COMPANIES.

To the Editor of The Nation:

Sir: Your correspondent "G. M. L.," in your last issue, deserves the thanks of the foreign-travelling public. Perhaps nowhere in the world is there so much competition and eagerness to be the fittest to survive as among the rival steamship companies between Europe and America. Steamers which, ten or even five years ago, were regarded as "ocean greyhounds," are now contemptuously ranked among "old tubs" by the typical American tourist, who always wants the latest, the best, and the most comfortable, at any cost. To meet this want, one floating palace after another is put on the ocean, with ever more comfortable decks, saloons, and cabins. The best steamers have hitherto been usually filled at certain seasons of the year weeks or even months ahead of the date of sailing; but in a year or two more, at the present rate of building, all the competing lines will have nothing but "best" steamers, and then it will be necessary to find some other mode of competitive advertising than increased size of decks, saloons, and cabins, and greater speed.

Now, during the past few weeks steamer after steamer has come in with reports of "terrific weather," "davits broken like pipe-stems," "life-boats carried away," etc. Only five that I have read of report the use of oil, and all with success. It is acknowledged to be so effective, and yet so cheap and so simple, that I wonder it has not yet occurred to any of the companies to advertise the regular use of oil in stormy weather, as a means of safety. I am convinced that the line which should advertise this innovation would soon become the most popular, even if its steamers were not of the record-breaking kind.

Then as to the *free seat* on deck. It is a most extraordinary and outrageous fact that if the first-class passengers on these floating palaces want a movable and comfortable seat, they must bring it along! Were it not that custom blunts the perceptions, this fact would seem so idiotic to every passenger that he would laugh aloud the first moment, and the second indignantly demand of the companies what right they have to treat him like a steerage passenger. It is the steerage principle to ask passengers to bring their tin plates and mattresses and camp-stools, and it is high time that this venerable absurdity and last relic of the steerage principle should be abolished in the first cabin. If any company should decide to introduce free steamer-chairs, I am sure the *Nation* and many other papers would gladly give it a handsome "reading notice." F. H. T.

HOW THE GERMANS TEACH "SEWING."

To the Editor of The Nation:

Sir: Your readers were recently told of the state of female education in Germany, and in your review of Dr. Klemm's work ('European Schools') they learned of the general method of instruction in that country; perhaps they may be interested to complete the cycle in hearing how sewing is there taught.

Cassel prides itself upon its schools, and reminds each stranger within its gates that the present Emperor and his brother were sent thither to be prepared for the University. The Hohenzollerns had until then been privately educated. In view of the vaunted housewifely qualities of the German women, I thought to gain some useful hints from the way in which sewing, an integral part of the female curriculum, is taught in that town. The Germans have a verb, to sew, but the equivalent of our noun is *Handarbeit*, handwork, and I found that it is handiwork rather than sewing which is taught.

The German schools are all under Government supervision, a few sporadic private ones excepted, and are thus public, but not free, for a fee is exacted. The fees are so graded that the poor are of necessity in one class of schools, called Volksschulen—people's schools—while the higher-priced schools receive the children of the middle class. *Handarbeit* forms part of the instruction of each school year, six hours weekly in the Volksschulen and four hours in the Tochterschulen—daughter-schools—as the better classed ones are oddly called, as if the members of the former only "growed."

When it is remembered that seven years' school attendance is compulsory, one would expect the girl, even when the instruction ceases at fourteen, to be able, not merely to

take the stitches, but, what is equally important, to put together neatly and firmly the parts of her garment; to be, in short, a satisfactory, if not a beautiful, plain sewer. Skilled in that necessary branch, the bright ones could be trusted to "pick up" the simple dressmaking they will need, while the dull would be at least rendered capable in one direction. Perhaps I should concede to the national prejudice instruction in knitting; but one would think that one year out of the seven might be enough for that branch, and that a girl could face life even if she knew but one way of knitting a heel. In fact, the first four school years are given up to knitting four pairs of stockings; to learning that crocheting which forms for the German women the concealed indolence that Hamerton says knitting does for the French around his house; and to stitching in their samplers letters to mark the garments which are still in the air. The poorer girls have thus only three years remaining in which to learn the real sewing so important to them; but even in that time, with the defter fingers and quicker brains resulting from the preceding four years' training, much might be done by a judicious method of teaching. Instead of this the annual pair of stockings is knit, with every possible and impossible heel, and a sampler of all the fancy stitches; crocheting practised in all its intricacies; hemstitching and canvas embroidery—this last presumably to enable them to make the slippers of the Herren, for whose behoof alone they are educated.

Of actual sewing, different seams are practised on a sampler, a couple of dust cloths are hemmed, a girl's and a woman's chemise made, and a half-dozen of the latter cut out in paper one-fifth the natural size. With this the instruction of the poor, to whom skill with the needle is so essential, ceases. The middle class attend school a year or two longer, but their instruction continues of the same varied nature. One year is given to embroidery, another to patching and darning in every possible material, and to making a doll set of house linen.

The result is that they are not a nation of needle-women. I do not know that any part of Germany furnishes ready-made undercloth-ing or hand-embroidery for the export trade. It comes from France and Switzerland. Having vainly sought in Hanover for well-made undergarments, I showed one of mine to the head of the largest establishment for that work in town. "Ah! that is French. May I ask what the gracious lady paid for it?" It was French, but bought at home for the equivalent of 6 marks. "It must have been done in a convent. Now I should have to pay 5 marks simply to get that tucking done by hand. I can furnish the gracious lady a similar one made by machine for 7 marks." The model was hand-made.

As the women sit in the shop doorways or in the public squares, watching their children at play in the sand-piles provided for them by an admirable municipal regulation, they are knitting or crocheting, but so often the latter that one comes to regard them as homely Penelopes who do not wish to finish their task. After a prolonged sojourn in Germany, the sight of women sewing in the gardens of Paris came upon me as a novelty.

The landlady of my German pension and her friends occupied themselves in the same way, and seldom did even their plain sewing, cramped and frugal as their mode of living was. I had for a time a German lady's maid. She wrote a good letter, knew a little French, crocheted me a pair of slippers, but could not do my sew ing. A friend of mine, in the same plight, sent hers for three months to a Schneider Akademie, or school devoted entirely to sewing; yet these girls had had seven and eight years' school instruction in sewing. J. C. N.

CINCINNATI.

"JACKAHICK."

TO THE EDITOR OF THE NATION:

SIR: I should be glad to learn the meaning of this Indian word. It occurs in a letter from Peter Sayer to Charles, Lord Baltimore, in 1689: "They said the Indians would not come out [to an interview] except Col. Coursey came. I told 'em a Jackahick from him would do; and I would frame one and send Mr. John Hawkins with it." WM. HAND BROWNE.

Notes.

ROBERTS BROTHERS will publish next month 'The House of the Wolfings,' by William Morris, and Balzac's 'Sons of the Soil' ('Les Paysans') in Miss Wormeley's translation.

T. Y. Crowell & Co. have in preparation 'Recollections of a Private,' by Warren Lee Goss.

'Afloat in the Forest,' by Mayne Reid, with a life of the author by R. H. Stoddard, is in the press of Worthington Co.

The National University of Chicago announces a Spanish grammar on a novel plan by Prof. Schele de Vere, of the University of Virginia. The former institution has also arranged for a national circulating library of 20,000 volumes, which will be sent anywhere by mail. Catalogues can be procured for ten cents by addressing 147 Throop Street, Chicago.

Prof. Woodrow Wilson has extracted a chapter from his work 'The State,' and publishes it, through D. C. Heath & Co., as a manual for schools and colleges, under the title of 'The State and Federal Governments of the United States.' It is furnished with a full topical analysis, a bibliography, and an index.

A collection of 'Vaterlandslieder' (Leipzig: F. W. Grunow; New York: B. Westermann & Co.), affords an interesting comparison of the pæans of Freiligrath, Geibel, etc., with those of Körner, Uhland, and Rückert, who voiced the Teutonic enthusiasm in the wars against the greater Napoleon. In its outer dress a most tasteful book, it revives many a battle-song in which the uprising of a united people against the "hereditary enemy" finds most poetic expression.

The *Transatlantic* (Boston) for February 15 gives an unusual portrait of Turgeneff on its first page—a weekly gallery, by the way. In the letterpress we find Francisque Sarcey's defence of his Russian friend's play, "Bread of Another," whose production at the Théâtre Libre evoked laughter and hisses. "I was tempted to rise and shout, Imbeciles!" says Sarcey.

The competition of mechanical with artistic engraving is observable in the numerous magazine ventures in which the dependence for illustrations is almost wholly upon "process." An ambitious attempt in the domain of weekly papers must now be recorded. On February 22 appeared the first number of the *Illustrated American* (New York: Bible House; Chicago: 142 Dearborn Street). It is a small folio of twenty-four pages, in triple columns, on highly glazed paper, of rather elegant typography. With the exception of a separate colored cartoon ("Comrades of the Desert," after Detaille), all the pictorial features have been reproduced by "process," with varying degrees of excellence. These have mostly a timely interest, as, *e. g.*, scenes on our new cruisers, in the Chicago Post-office, at the bench show, at the theatre, etc.; but there is a page given up to Bordentown, N. J., in a series called "Historic America," and a large number of views illustrate a letter from a flippant correspondent who has been sent off to rediscover Brazil. The literary and news departments are not deficient in number or scope, and there is evidence of experience on the part of the management.

The *Round Table* is the name of a weekly journal of sixteen pages to be published at Nashville, Tenn., beginning about March 1. The sample number already issued contains the announcement that discussion of all living issues will be encouraged; that the woman question and prohibition will be freely considered; and that "progress as contradistinguished from Bourbonism in either church or state" will be its general aim. Such a liberal spirit in a Southern journal is very gratifying. This first number contains contributions by H. M. Doak on "Jefferson Davis," by Prof. Charles Forster Smith on "Why Has Georgia a Literature and Tennessee Not?" by Edward W. Bemis on "Progress of Prison Reform," and by W. P. Trent on "The Study of Southern History." Both Maurice Thompson and George W. Cable furnish a short story.

Mr. Spofford, the Librarian of Congress, testifies, as we learn from the Washington *Herald*, that a large number of colored men and women nowadays read instructive books. This reading, he says, is of a serious character—chiefly works on history, travels, government, and politics. Some devote their attention to tales of adventure and to popular scientific works. They are indifferent to treatises on political economy or finance. The remarkable thing is that they do not care for fiction, or, as Mr. Spofford avers, that they are less fond of novel-reading than are white people of the same class. Most of those who come under his observation are the students in attendance upon the local schools and colleges, or ambitious politicians who drift to Washington seeking positions.

Dr. G. E. Manigault contributes to the January number of the *Magazine of American History* a sketch of the life of "Ralph Izard, the South Carolina Statesman" (1742-1804). His particular aim is to refute Mr. Parton's adverse judgment in consequence of Izard's disagreement with Franklin in Paris, and incidentally he seeks to rectify the military reputation of a son of the South Carolinian, who participated in the war of 1812. In both these instances more room would be needed to make the matters in dispute quite intelligible at this day. Dr. Manigault does not adopt a polemic tone, and his sketch gives a pleasant impression of its subject.

In the Providence *Book Notes* for February 15, Mr. Rider discusses the origin of the name of Rhode Island, and concludes to stand by Roger Williams in connecting it with the Isle of Rhodes and the signification of "Island of Roses" in opposition to the view that the name is Dutch and means "Red Island." We ought, by the way, some time ago to have noticed the first number in Mr. Rider's series of "Rhode Island Historical Tracts," issued last year. It is from the pen of the editor himself, and consists of 'An Inquiry Concerning the Origin of the Clause in the Laws of Rhode Island (1719-1783) Disfranchising Roman Catholics.' This disability was an obvious infringement on that "soul liberty" on which the colony was based, as Rhode Islanders maintain with pride; but Mr. Rider persuades himself that, while members of no

other sect were debarred from becoming freemen (*i. e.*, voters), the Catholics were in the same category with disfranchised non-landowners, women, and second sons. It is true that as Roman Catholics they were permitted the free exercise of their religion, but a penalty was certainly laid on their belief, and on theirs alone.

As we spoke, a fortnight ago, of the paper in the Essex Institute Historical Collections concerning the settlement of the Northwest Territory, we may also call attention to Mr. Frederick D. Stone's paper on "The Ordinance of 1787," which comes to us as a reprint from the *Pennsylvania Magazine of History and Biography*. It is a singularly dispassionate marshalling of the incidents leading up to the Northwest Ordinance of 1787, an apportionment of the several parts in the construction of that famous statute to the great men who severally contributed to its contents and language, and an explanation of the readiness of the South to prohibit slavery in the Territory. It shows conclusively that the Ordinance was a truly national expression, gratifying divers interests, selfish and philanthropic. Dr. Cutler's pretensions suffer most at Mr. Stone's hands, but enough glory is left to Massachusetts and Essex County, even if it has to be shared by Jefferson and Grayson.

The latest report of the Executive Committee of the State Historical Society of Wisconsin makes the customary exhibition of steady growth. Its newspaper files, a special feature of its collections, now number nearly 6,000 volumes. In connection with the University, an inquiry has been made into the organized groups of foreign nationalities for which Wisconsin is preëminent as respects number and variety. Some hint is given of these, and we see the Irish giving way before the Germans, and the Americans before the Danes. The results of this inquiry will probably be published by the University. The Society has lost its able and efficient cataloguer, Miss Isabel Durrie, a graduate of the University, and one of its curators in the person of Prof. W. F. Allen, of whom an excellent memorial sketch accompanies the report.

The dawnings of the national "Zoo" at Washington perhaps possess the widest interest in Prof. Langley's report on the Smithsonian Institution for the year 1889. But also there is a lamentable passage about the deposit long ago of the Smithsonian's valuable library with that of Congress, and of the utter neglect and inaccessibility of it caused by the shameful delay of the national Legislature to provide a fitting receptacle for the nation's books.

The first annual report of the Director of the Missouri Botanical Garden—the foundation of the late Henry Shaw—is on our table. The School of Botany established in connection with it and Washington University has had as yet but a small attendance, but no extravagant expectations were indulged in on this score.

The forty-fourth annual report of the Director of Harvard College Observatory shows succinctly the amount of work which that institution has accomplished along the lines of its various activities, in addition to the valuable work done at home with the observatory instruments during the past year. By the continued aid of Mrs. Draper and the Boyden fund, an expedition has been sent to Peru, by means of which the southern stars can be included in the most important investigations. Maintaining thus two stations, one in the northern and the other in the southern hemisphere, a greater completeness in the researches is rendered possible than in any other way. Another expedition, to southern California, gives a mountain station under clearer skies than generally prevail at the East, and promises to fulfil the conditions of Mr. Boyden's will. Through a gift of $50,000 from Miss Bruce of New York (who has recently been elected a member of the Astronomical Society of the Pacific), a photographic telescope has been ordered of Messrs. Alvan Clark & Sons, having an aperture of twenty-four inches and a focal length of eleven feet. The library has been increased by 484 volumes and 336 pamphlets. The telegraphic distribution of astronomical intelligence has been continued. In addition to the customary "Annals," twenty-three other publications have appeared during the year.

A very complete and useful 'Account of the Progress in Astronomy in the Year 1886,' by William C. Winlock, taken from the Smithsonian Report for 1886–'87, has recently been issued in separate form.

The Isthmus of Corinth forms the subject of a paper, from a geologic-geographical point of view, by Dr. Alfred Philippson, which fills the entire No. 145 of the *Zeitschrift* of the Berlin Geographical Society, and is accompanied by maps. No. 144, the regular bibliographical close of Vol. 24, is delayed till March 1 for the sake of completeness.

A national "Beatrice Exposition" of feminine arts and industries is to be held in Florence during the months of May and June. Count Angelo De Gubernatis is President of the Executive Committee. The name has been selected with reference to the sixth centenary of the death of Beatrice, who is to be honored by "omaggio alla Donna Italiana, nelle opere del suo ingegno e della sua mano." For the coöperation of natives and resident foreigners a series of fêtes is contemplated—during the first nine days of May to celebrate Dante's falling in love with Beatrice, and on June 9 to commemorate her death. A *Calendimaggio* in costume is named, and *tableaux vivants* illustrating the 'Vita Nuova,' with intermezzos of appropriate song and dance; and an *accademia letteraria* on June 9. The sections of the Exposition will be painting, miniatures, designs, and tapestry; sculpture and engraving; literature; needle-work and embroidery; womanly ornaments; apparatus for instruction (*didattica*); domestic hygiene and food; divers industries.

Lithography was one of the graphic arts which suffered extremely by the rise of photography. It has almost ceased to be thought of as an original art medium, and one needs to be reminded of its past glories, to which the greatest artists of Europe contributed with their own hands. Such a reminder is a catalogue like that of the French, Dutch, German, English, and Russian schools, which Frederick Muller & Co. offer for sale in Amsterdam. It fills seventy-eight octavo pages.

The Johns Hopkins University celebrated on the 22d of February the twelfth anniversary of its opening. In the course of the speeches a letter was read from President Gilman, which was written in a ruined theatre in Taormina, Sicily, and in which he imagined the University assembled in that spot for its annual celebration, and cleverly hit off the characteristic speeches which would be drawn from the several members of the Faculty by the inspiring surroundings. It was announced that, of the various pressing needs of the University for expansion, that of the Chemical Laboratory was to be met by turning over to it for reconstruction the ill-ventilated Hopkins Hall. It was also announced that Mr. Lowell had been obliged, much against his will, to decline to be the first incumbent of the Lectureship of Poetry which was founded last year by the generosity of Mr. and Mrs. Lawrence Turnbull, and that it would be inaugurated next year by Mr. Edmund C. Stedman.

—The *Dedham Historical Register*, a birth of the new year, has one article which every graduate of Harvard will laugh over. It consists of the diary of Nathaniel Ames, the oldest brother of Fisher Ames, and a Harvard Freshman in the year 1758. The extract given covers the whole of that year, and was originally written on an interleaved copy of an almanac which his father had published. The boy entered college at seventeen from Dedham. Wood was brought him from home by Cato (his father's negro), and also his washed linen. He taught school in winter at Dedham some five weeks. The first class-book he mentions is Watts's 'Logic.' He began Homer in September, and Euclid in October of the second year, but did not reach the third book till Christmas. "May 23 the class began Gordan." What was *Gordan?* Probably a tutor. It would seem that the students performed certain services for the head of the institution, for we read: "June 26. President's grass mowed. July 1. Finished the President's hay." Our Freshman wore a wig, for on June 23 he writes: "Left off my wig." His bills were 29*s.* 5*d.* a quarter. In 1754 a college committee had been appointed "to project a new method to promote oratory." Accordingly, declamations are mentioned several times. With the same view plays were acted by the students, but whether publicly is not clear. Entries are of this sort: "July 3. Cato, a play [Addison's], acted at Warren's cham." At that time there were two Warrens in college, Joseph, '59, No. 29, and John, of '60, No. 10. July 6, the entry is, "Cato to perfection." Again, July 14, "Cato more perfect than before." On June 22 the only note is, "Roman father, a play." This play was by William Whitehead, an English dramatist then in high repute, and it was published in 1750. These college dramatic performances are the more noteworthy because they were acted three years before the first theatre was opened in New York, and when Boston would have shrunk in holy horror from such an institution. In the College histories of Prof. Benjamin Pierce and of President Quincy, one can discover no allusion to anything more theatrical than reading the Latin 'Colloquies' of Erasmus.

—But it is in regard to college amusements, pranks, hazing, and indignities to tutors that the old almanac of Ames is at its best. Thus: "April 20. Went a gunning after robins with Hooper." Hooper was head of the class, Ames No. 20. "May 22. Went a fishing with thirteen of my classmates." Thirty-nine was the whole number. The notice of this excursion down the harbor is the longest entry in all the year. Class quarrels were not unknown. The freshman writes: "March 18. Fit with the Sophomores about Cust." What was Cust? "March 20. Had another fight with the Sophomores." "Sept. 12. Hooper [who had sat in the Sophomores' seat ever since July 16] shook a Freshman cu." The meaning of cu is doubtful. In college commons it meant a half-pint of beer, which was allowed per head at breakfast. Or can it have been the cue of the Freshman's periwig? "June 6. Fleeced Mr. Hancock." Hancock was a classmate, and stood No. 6. "June 8. Hoisting of Palmer and Browne." Palmer was No. 6 and Browne No. 27 in Class of '61. In dog-days the boys could not allay their skipping spirits: "Aug. 11. Hedly, Eaton, Dana, Daniel took off the doors." 15th, Hedly and Daniel went to Providence;

16th, Dana ran off; Eaton paid ten dollars. On the whole, the most curious line is this: "October 9 some examined about Bulraging (*sic*) Monis." Bulraging is a word not found in the *omnium-gatherum* of Dr. Murray except as *bully-rag*, and his earliest citation is 1807. It seems also to have eluded all collectors of Americanisms. Yet it is so used by Ames as to show that it was as current in 1758 as its synonyms bull-doze or haze are in 1890. Dr. Murray will thank Ames for usage three score years older than he and all his colaborers could find. Monis, an Italian Jew convert, was teacher of Hebrew. Four times a week the students must all meet him to copy or construe, or parse, or compose, or read without points his sacred gibberish. They or their forerunners had been in this bondage to him forty years when they *bullragged* him. The ultimate result was his resignation. The immediate result is thus described: "October 18, Palmer ['61, No. 6] and Emerson ['61, No. 9] admonished." The next words are hard to interpret, namely: "Monis Hobs and Fuller degraded Dunbar." "Degraded" meant put down to the foot of the class, and there were students of all the above names then in college. Other gleanings as to Calabogus Club, etc., etc., might be added, each affording new evidence that no future historian of Harvard can be equipped for his work without thorough study of Ames's almanac annotations.

—The January number of the *Nord und Süd* contains an article by Dr. Wolfgang Golther of Munich, one of the most promising of the younger generation of Germanists, which is a significant evidence of the growing influence in Germany of the Norwegian school of mythologists. Dr. Golther openly embraces the creed of that school in supporting the thesis that a large (if not the largest) part of the Edda sagas originated from a mixture of Græco-Roman and Christian with native Norse elements. It will be remembered that this hypothesis, when it was first advanced by Prof. Bugge of Christiania in 1881, called forth a storm of opposition from almost every quarter of the Germanistic world. The very sanctum of Teutonic mythology was proclaimed to have been violated, and no other way of expiation seemed to be left but to shower contempt and indignation on the profane intruder. It now appears that Prof. Bugge has emerged hale and hearty from this critical thunder storm; and if his theory, like most new theories, is not free from extravagance and exaggeration, the fact that the Edda reflects the age of the Viking expeditions, of a time when the Norsemen were in constant and close contact with the Irish, Saxon, and Frankish nations, and continually imbibing foreign conceptions and traditions, can no longer be disputed. A German translation of Bugge's chief work has just appeared, under the title 'Studien über die Nordischen Götter- und Heldensagen' (Munich, 1889; New York: Westermann).

—In a pamphlet on 'The Supreme Court of the United States, and the Schemes for Relieving It,' by Mr. Richard C. McMurtrie of the Philadelphia bar, the author speaks with earnestness, and looks in the right direction—towards certainty in law through uniformity in judicial decisions. He deprecates what has seemed to others an inevitable evil, that of the Federal courts interpreting the law in one way and the State courts in another, so that at the present time the responsibility of common carriers in New York or Pennsylvania may depend entirely upon the jurisdiction into which they are brought; and he resolutely protests against the $5,000 limitation on the right of appeal, which in many cases will practically make one law for the appealable and another for the non-appealable cases. The real trouble with the administration of justice in the Federal courts, as in many of the State courts, is that we have not judges enough to do the work of jurisprudence promptly and thoroughly. To relieve the Supreme Court by cutting off from its jurisdiction all cases below $5,000 is to relieve the cook by going without one's dinner. It can also be carried to any extent, just as a humane master of the house might relieve his cook by dispensing entirely with cooked food. The scheme for making intermediate appellate courts out of the present circuit and district judges is but another attempt to evade the necessity of having judges enough. The evil is indeed of legislative responsibility, and an abiding witness to the incapacity of numerous judiciary committees either to construct a scheme or to carry one through Congress. Mr. McMurtrie's pamphlet goes far beyond this evil, and looks to legislation which will bring both Federal and State courts into one harmonious whole. It is a reprint of a newspaper article, and depends too much upon other articles to which it is a reply, but which are not before the present reader. It is unfortunate that he did not recast it, and make it a complete argument of his case instead of leaving it a fraction of a controversy. Still, those lawyers who have given attention to the subject will do well to heed this contribution to it.

—The writers born of the decade 1840–1850 have the floor in the tenth volume of Stedman and Hutchinson's 'Library of American Literature' (New York: Chas. L. Webster & Co.). The most famous name of all on the list, that of Henry M. Stanley, finds a place in this collection by virtue of literary production rather than distinction. The next most famous personage, Henry George, enters by a double right. Bret Harte is the third, and perhaps Henry James the fourth. As in the previous volume, journalists occupy a large space, if somewhat less prominent than before. To that class the humorists belong exclusively—Bret Harte once more (born in 1839), George Alfred Townsend, George T. Lanigan (a Canadian), Philip H. Welch, and Joel Chandler Harris; the South bearing off the palm as in no other period of our country's history. The Southern renaissance is also marked by George W. Cable in fiction, by Sidney Lanier in poetry. Henry George and Edward Bellamy represent the Socialistic stirrings of the time, and the former, with Profs. W. G. Sumner and Francis A. Walker, the economic movement to which machine politics have offered such a sturdy resistance ever since the war. Another noticeable tendency has been towards the revival of historic studies, and here we have John T. Morse, Henry Cabot Lodge, John Fiske, and Eugene Schuyler. The fiction of the decade has a certain brilliancy; A. S. Hardy, Julian Hawthorne, W. H. Bishop, Mrs. F. H. Burnett, Constance F. Woolson, Sarah O. Jewett, Mary Hallock Foote, Elizabeth S. Phelps, and Blanche Willis Howard being added to the novelists already mentioned. In the poetical column the average is pretty low, and the best could not presume to cast lots for the mantles of the surviving peers of Longfellow and Emerson. That the selections in this volume, in which a great many utterly obscure writers occur, are as readable on the whole as in the preceding volumes, we should hardly affirm.

—In our recent review of Ten Brink's 'History of English Literature,' we neglected to state, in speaking of Chaucer, that the author had already treated exhaustively Chaucer from the linguistic and metrical side, in his 'Chaucers Sprache u. Verskunst' (Leipzig: Weigel, 1884). This monograph is of course indispensable to all who wish to master the subject. We need only add here that not a few of the finer points in Ten Brink's general estimate of Chaucer rest upon data embodied in the monograph. And this leads us to speak of another monograph by Ten Brink, although in a very different field, viz., his 'Beowulf-Untersuchungen' (Strassburg: Trübner, 1888). Not being a *Fachzeitschrift*, the *Nation* cannot possibly do justice to the author's erudition. What is involved in the treatment of such a monograph may be inferred from the circumstance that Möller's review (*Engl. Stud.*, xiii.) fills sixty-eight closely printed pages! We can scarcely hope to give even the main points of Ten Brink's theory. In general we may perhaps say that it is a continuation of the so-called destructive school of Müllenhoff, but with a difference. Whereas Müllenhoff assumed one original with successive interpolations, Ten Brink assumes two independent versions or stories, an amalgamation, and a late interpolation. According to Ten Brink, each one of the districts of early England had a hand in the shaping of the Beowulf poem as we now read it in the Cotton MS. Our advice to our readers is to begin the book at the end, with chap. xv, *Ergebnisse*. As for the theory, whether it will stand or fall, in whole or in part, we are not yet ready with an opinion. Unquestionably our knowledge will be promoted by the investigation; but in general we hesitate. We are almost tempted to repay our author his passing compliment to Sievers, p. 211, and designate his critique as "subtle." Ten Brink has striven conscientiously to account for everything, or nearly everything. And this we are inclined to look upon as a foregone impossibility. It was Lessing who held that the search for truth was more productive than the possession of truth.

BANCROFT'S UTAH.—I.

History of Utah. By Hubert Howe Bancroft. 1540–1887. San Francisco: The History Company. 8vo, pp. xlvii., 808.

THE readers of the *Nation* will hardly need to be reminded that we have appreciated the greatness of the task which Mr. H. H. Bancroft has undertaken (and in great part accomplished) in his histories of the Pacific Coast. A plan which aimed at the preparation of more than forty stout volumes was hardly within the possible compass of one man's life work, and the employment of a bureau of assistants was a recognized necessity. Mr. Bancroft had a fair right to say that so long as the books bearing his name were subjected to such revision and editing that he was willing to be responsible for them, the world had little cause to complain. It should rather be grateful for the library of information it received, and for the unlimited application of wealth and labor to make available to the English reader a great mass of historical material of which much might otherwise be lost. Here was no question of literary reputation in the ordinary sense of the word. There was no claim to a diction that might rival a Gibbon, a Macaulay, or the New England Bancroft. The task was confessedly the more modest one of compilation and editing; and, when so understood, it had an honest and useful place among the notable literary performances of the day.

It seems necessary to take this retrospective view of Mr. Bancroft's labors because the new

volume on Utah goes beyond the latitude which, even under the liberal rule above stated, an author-editor may use. We doubt if another instance can be found in literature not avowedly fictitious, where the putative author disclaims responsibility for the text which he presents to the world in the first person. Yet this is what Mr. H. H. Bancroft does in his 'History of Utah.'

The book is divided into twenty-eight chapters. The first two, containing thirty-five pages, give a clear and interesting account of the early explorations of the Great Salt Lake basin from Vasquez de Coronado to Frémont. The last three, containing ninety-four pages, give a fair synopsis of the growth of the Territory in population and wealth, and of its agriculture, mining industries, commerce, and social progress. The other twenty-three chapters, containing six hundred and fifty-five pages (and, of course, the great bulk of the book), give us the story of Mormonism, both in its rise in the older States and its transfer and progress in Utah. The history of Utah would be a meagre thing apart from Mormonism, and it was right enough to trace the strange delusion, in doctrine and in development, in the United States and in its missionary propagandism in Europe. The result, however, is that the book is first and chiefly an extended history of Mormonism.

It is this which gives point and significance to the remarkable declaration of the author, in the preface, that

"the story of Mormonism, therefore, beginning with chapter iii., as told in the text, is from the Mormon standpoint, and based entirely on Mormon authorities; while in the notes, and running side by side with the subject matter in the text, I give in full all anti-Mormon arguments and counter-statements."

In defence of this method Mr. Bancroft adds:

"In following this plan I only apply to the history of Utah the same principles employed in all my historical efforts, namely, to give all the facts on every side pertinent to the subject."

In spite of this plea, we must stick to our assertion that the method is unique in historical literature. It is no new thing for a writer to give at length the claims of a party or a sect, either directly by quotation or indirectly by a condensation of statement or argument attributed to them; but Mr. Bancroft does nothing of the sort. In his own proper person he adopts the rôle of bigoted and partisan Mormons, thinking their thoughts, speaking their words, asserting their incredible nonsense, uttering their fanatical enthusiasms, making their absurd criticisms of received forms of the Christian religion and of modern civilization, exalting their champions as saints and martyrs, and vilifying those who oppose them or abandon them.

There are some brief exceptions to the continuous playing of the part, which every rule of literary criticism would declare to be short interpolations, inserted in a previously complete text, and for which the critical reader naturally seeks a motive and an explanation. Of these insertions, two are of considerable extent. In chapter xv., on Mormonism and Polygamy, there is, contrary to the announced rule, an attempt to give in the text and at some length the "attitude and arguments of civilization" respecting polygamy, and "polygamy's reply." In chapter xx., the story of the Mountain Meadows Massacre is told from quite another than the "Mormon standpoint," though it gives the Scotch verdict "not proven" as to Brigham Young's responsibility for that barbarous crime.

When the character of an extended composition is the subject of criticism, it is difficult to illustrate it by extracts sufficiently brief for quotation in a notice like this. Three or four may help to understand the author's "standpoint." In the beginning of chapter iii., when he is introducing the Story of Mormonism, and is enlarging upon the reasonableness of the purpose already quoted from the preface, there is an effort to picture the religious condition of Western New York about the time of the origin of Mormonism. Speaking of the sects of that day, the author says:

"There was among them much true religion, whatever that may be, yet they were all superstitious—Baptists, Methodists, and Presbyterians—there was little to choose between them. Each sect was an abomination to the others; the others were of the devil, doomed to eternal torment, and deservedly so" (p. 37).

In a description of the Mormons celebrating the 4th of July, 1838, at Far West in Missouri, the author says of them:

"They are hated and despised, though they break not the laws of God; they are hunted down and killed, though they break not the laws of the land. . . . They are not idlers, or drunkards, or thieves, or murderers; they are diligent in business, as well as fervent in spirit, yet they are devils; they worship what they choose and in their own way, like the Dissenters in Germany, the Quakers in Pennsylvania, and the Pilgrims from England, yet their spiritual father is Satan" (p. 119).

After telling the story of the murder of Joseph Smith by the mob in Illinois, the author moralizes in this way:

"Whatever else may be said of Joseph Smith, it must be admitted that he was a remarkable man. His course in life was by no means along a flowery path; his death was like that which too often comes to the founder of a religion. What a commentary on the human mind and the human heart, the deeds of those who live for the love of God and man, who die for the love of God and man, who severally and collectively profess the highest holiness, the highest charity, justice, and humanity, higher far than any held by other sect or nation, now or since the world began—how lovely to behold, to write and meditate upon, their disputings and disruptions, their cruelties and injustice, their persecutions for opinion's sake, their ravenous hate and bloody butcheries" (p. 184).

In summing up the character of Brigham Young, and defending him from the charge of enriching himself, through his autocratic power and by questionable means, the author concludes:

"That with all his opportunities for making money honestly and safely, he should put in peril his opportunities and his high position by stooping to such fraud as was commonly practised among United States officials of exalted rank, is a charge that needs no comment" (p. 674).

These quotations are simply fair samples of the tone and spirit of the whole body of the book. There is nothing to absolve the ostensible author from responsibility for the whole as his personal opinion, unless it be the general purpose declared in the preface. He does not even adhere to any form of literary impersonality, but uses the pronoun "I" with rather more than usual frequency. It is inconceivable that any man not himself a Mormon could have adopted the style and tone of the body of the work. If it is quotation, the whole is one unacknowledged quotation. A hypothesis which will naturally account for all the phenomena is, that the chapters under consideration were prepared by a Mormon writer, and that an editor has occasionally inserted a sentence or a paragraph wholly at variance with the continuity of the text, and contradictory of the "standpoint" professedly assumed.

But how about the footnotes which were to give us, side by side with the text, "all anti-Mormon arguments and counter-statements"? No doubt the footnotes contain a considerable mass of quotations from anti-Mormon books, and numerous references by volume and page; but they by no means make up anything like an adequate or connected presentation of "arguments and counter-statements." They are sufficient, however, to display the anomalous and composite character of the book. A writer's footnotes are presumably references to his authorities and the original materials on which the text is based. Here, on the other hand, we have a professed array of notes to offset and rebut the text. It is something like the arguments between *Diabolos* and *Paraclete* found in old sermons, except that here *Diabolos* is given the place of honor and the fair, easy-reading page in small pica, while the exposure is hidden in the minion notes at the bottom, where only industrious students will work their way through the mass of scraps and references which are there collected. Nor is this all, for the footnotes are not consistently written from one standpoint, but contain, here and there, some of the character usual in other books, *i. e.*, enlarging, explaining, or supporting the text.

One of the most notable of these, beginning on p. 250, is an elaborate argument that exposures of Mormonism are of little weight. It begins with saying: "The rôle of traitor is not one which in any wise brings credit to the performer, either from one side or the other. However great the service he may render us, we cannot but feel that he is false-hearted and vile." We do not find "side by side" with this lengthy note any equally full presentation of the diminishing effect upon the credit of Mormon advocates of the indisputable fact that they have practised the dishonest rule of denying whatever they thought might injure their cause. The flagrant example of this was the sweeping and public denial of polygamy by all their leading men for years after the pretended official "revelation" of it to Smith, and culminating in a solemn denunciation of the charge as a libel, by Taylor, afterward Brigham Young's successor, in Europe at a time when he himself had five polygamous wives in Salt Lake City.

The question is one of the comparative weight and value of testimony, and the Mormon leaders have impeached their own by such systematic dishonesty as is above mentioned. As to the "apostates," every man who changes his creed is in one sense an apostate, whether he is a converted Buddhist or Mohammedan, whether, like Cardinal Newman, he has passed from Anglicanism to Romanism, or to agnosticism like Darwin. In such cases, and in the present age of the world, to call them "traitors" and "vile" is empty railing. There are recognized methods of testing the personal credibility and honesty of each witness, and the influence of good or bad motives under which he speaks. Tested in any such way, the exposures of Mormonism do not suffer by comparison with the apologies for it.

A really valuable feature of the work is its bibliography. Both in his prefatory list of "authorities consulted" and in footnotes made up of uncommonly full tables of references, the author has done much to open the way for any competent student of this singular episode in our history. The more's the pity that he has not given us a judicial and impartial summing up of fair conclusions from the enormous mass of material at his command.

A VICE-QUEEN OF INDIA.

Our Viceregal Life in India: Selections from My Journal, 1884–1888. By the Marchioness of Dufferin and Ava. 2 vols. London: John Murray. 1889.

One who should look at England on a map, and then at India, reflecting that the former rules the latter—five times its own numbers in a region larger than Europe (omitting Russia)—will find in these facts an exemplification of the power of mind over matter. The Indian Army is about the size of ours in the United States, and has as little to do with government. That this governmental phenomenon excites so little interest or study in other countries is explicable by its success. The Government is potentially autocratic. The Viceroy is a more powerful personage than his sovereign, or than any European monarch. As his title implies, "The Viceroy and Governor-General of India" combines the majesty of a monarch with gubernatorial functions long detached from the English crown. He also possesses ministerial powers. As Governor he is a member of the Executive Council of Seven, who each represent a department (finance, war, etc.), and have seats in the Legislative Council, which consists of thirteen English and six Hindu members appointed in England. The Executive Council, appointed in England, may be overruled by its chief member, the Viceroy; and though they may appeal to the Secretary of State, the Viceroy is not bound to await a decision from London if he believes the call for action urgent. It is only by travelling some centuries back that any English monarch can be found with equal powers. We need hardly say that most of the viceregal powers lie hidden in the constitutional armory, from which they are not likely to be withdrawn. Under the long peace which has elapsed since the Sepoy rebellion, there may be observed in the Viceroyalty developments corresponding to those of English royalty. The separation in England of the decorative from the political institutions—one power reigning, another governing—has been a tendency in India also. It has only awaited furtherance by ladies competent to relieve their viceregal lords of the social and ornamental functions of their office, to enable the latter to rest more on their ministerial functions. It has long been realized in England that only a wise and gracious man can be trusted with the viceregal sceptre, and it is beginning to be realized that one of his most essential qualifications is to have at his side a wife able to bear worthily the title "her Excellency."

Those acquainted with Indian affairs need not be informed that by their administration the Marquess and Marchioness of Dufferin and Ava have left the viceregal standard higher than they found it. It was this Viceroy's lot to end the bloody tyranny of Theebaw in Burmah almost without bloodshed, and to be welcomed there as a deliverer. It was the glory of the Marchioness to receive the benedictions of the women of India for having founded—collecting the money herself—a national association for supplying female medical aid to the suffering women of India, who cannot receive male doctors. The "Lady Dufferin Association" is now an established institution whose benefits are felt in every part of the vast empire. The Marchioness travelled with her husband to his official durbars in every part of India, establishing branches of her Association, and was alternately brought in contact with the humble and the splendid aspects of Indian life, with the zenana and the court. All hearts and homes, Moslem and Brahman, were open to her—indeed, she has the reputation in Calcutta of having brought about pleasanter social relations between classes, notably by her reception of Mohammedan ladies at the house of Judge Ameer Ali, whose English wife had been frowned on for her alliance by "mercantile" society. These varied experiences were carefully preserved in "her Excellency's" journal, sent regularly to her mother, and are now published in two handsome volumes.

Even were this book less brilliant than it is, it would be welcome. It may be said that there was but one work on India needed—one dealing with the India of to-day—and Lady Dufferin has written it. The ancient literatures opened by the discovery of the Sanskrit, the rich mythology and wonderful history of India, have so absorbed scholars, its economic and political problems so engaged another class of writers, that the every-day life of those millions has received too little attention. Lady Dufferin might have adopted as her motto Emerson's apostrophe to the botanist:

> "Go thou to thy learned task,
> I stay with the flowers of spring;
> Do thou of the ages ask
> What to me the hours will bring."

Four years of viceregal life made a fair springtime, and she has not allowed many of its flowers to pass by her. She tells just what she sees, whether the shaven outcast widow in her weeds, or the gorgeous princes. Some of her pages may appear burdened with gorgeousness, but on careful examination it will be found that, though the costumes and ceremonials alike glitter, they possess symbolical variations.

The distinct value of the book is in its detailed descriptions of the viceregal round, ceremonial and practical, of native customs and costumes, and contrasts of life, Indian and English. "Her Excellency" cared little for the pomp and luxuries of her place compared with its opportunities for observation. She courageously allows her gown to be removed by a native hostess, and a Hindu dress substituted, and squats on the floor "like a Buddha," and dines on unknowables picked out of bowls with her fingers, and even likes it. She is resolute in breaking down barriers between herself and those around her. Government House, Calcutta, was reached by the new Viceroy on December 14, 1884, and on February 10 following his wife writes home:

"The ball was very nice indeed, and I enjoyed it, for at last I do believe I am making a few acquaintances. Hitherto it has been most uphill work. I may talk all through dinner on Monday to some persons, but when I see them on Tuesday, they not only don't speak to me, but I can't feel sure that a gleam of recognition passes over their faces. Well, last night I saw a glimmer of improvement, and at any rate a few of the great lords and ladies (Burra Sahib and Burra Mem Sahib) did speak to me without being driven to it."

Towards the native religions Lady Dufferin's catholicity is not merely of the perfunctory sort due from a representative of her Majesty, who is an official patroness of Protestantism, Romanism, Brahmanism, and Mohammedanism. She really sympathizes with all sincere worshippers. At Chinsurah, where she delivers prizes to school children, she regrets that some gods should be removed to give her an exalted seat: for "gods, so long as they are objects of faith, should be disturbed for no one" (i., p. 71). In the mosque Jumma Masjid, Delhi, she remarks: "I always do think that a number of Mahometans saying their prayers together is the most devotional sight one can imagine; I don't know any service that can compare with it as an expression of religious fervor" (i., p. 204). The equality of religions which Akbar initiated, but which was followed on his death by an era of strife, has been so firmly reëstablished by England that something like friendliness is appearing between the native temples. Even the banished Buddha has appeared in Hindu temples, as Vishnu has been adopted in some Buddhist temples. To the Christain missionary this may seem chaotic, but Lady Dufferin makes it, rather, kaleidoscopic. At the same time her characteristic humor does not omit the occasional drollness arising out of the singular religious situation:

"I had an afternoon visit from Mr. Broughton, Administrator-General. . . . He mentioned casually that he was trustee for an idol, to which he paid 250 rupees a month. This 'idol' is a sacred stone, and can perhaps scarcely be dignified with the name of 'god,' but the account of it was rather interesting. A deputation was sent to look for two sacred stones in some river, and when they were brought back a meeting was held to decide whether they were really sacred or not. Mr. Broughton had to be present, while a Fakir and some other learned personages squatted on the floor, with a book and the stones before them, and compared them with a real, old, undoubted 'idol' which was brought in for the purpose. This jury gave it against the new candidates, but I suppose the stones appealed, for the verdict was somehow or other reversed, and a suitable throne was procured, upon which the three now sit and receive their monthly stipend." (i., p. 55.)

The extent to which walls of partition that seem adamantine before propagandism are melting before English catholicity, is suggested by the following incident, which is also otherwise notable:

"A native gentleman sent me what they call a 'Dolly,' which is really a tray full of little presents. It was a very interesting one, and he wrote a nice letter with it, saying that we had 'evinced a kindly feeling towards our Eastern customs and the welfare of our women; therefore I venture to send these presents at the earnest request of my wife. The greater part are held auspicious by our women as conducing to the success and long life of their husbands.' One tray contained bouquets and wreaths of flowers, and then there were a quantity of puzzle-boxes, bangles cut in bone, two toilet-baskets covered with cowrie shells, and containing small mirrors, combs, red powder, etc. Mothers present these to their daughters on the occasion of marriage; two large conch shells, one of them a sacred blowing instrument used at marriages, births, etc., and one used at the time of coronation by pouring water from it on the head of the king. 'It dispels all evils where water is drunk out of it or poured on the head.' The red powder is used by Hindu women from the day of their marriage. The bridegroom with his own hand puts this powder on his bride's forehead where the hair is parted, and she always wears it until she becomes a widow. With these things were some models of fish, frogs, serpents, etc., made in clay."

It may be hoped that the words of one who got so near the native heart will weigh when they deplore the evils of Hindu society. In one prize-giving experience, "several of the dolls had to be kept back, as the girls for whom they were destined were being married." She finds it "sad to give a doll as a prize to some poor little creature who, young as she is, is probably on the very verge of matrimony, who may any moment leave her own parents for the tender mercies of a mother-in-law or of an elderly husband, or who, as a child-widow, may be condemned to a sort of outcast existence all the rest of her days." Infant-marriage is the tap-root of a banyan growth of evils; from it results an overpopulation (700 or 800 to the square mile), which is perilously increasing under the civilization that suppresses the wars, diseases, famines, which brought relief in their rough way; and it seems that the offspring of children remain children all their lives, even their deities being dolls. The Government, fol-

lowing its principle of interfering with religion only so far as humanity demands, finds every mitigation turned to an injury. It has rescued the widow from the flames only to see her made an outcast, and in many cases a compulsory family prostitute. It will pretty surely be compelled to prohibit the marriage of children, and one would say that the better Hindu opinion itself demands that the legal age should be raised somewhat. The sorrows of the little married martyrs themselves were chiefly impressed upon Lady Dufferin in the schools with which she had much to do. And we are glad to note her protest against the addition to those sorrows of European clothing:

"I went to give prizes at a zenana mission. . . . The little Hindu girls are most attractive! They do look such miniature women, with their coil of hair (for ribbon), the jewels on their heads, necklaces, bracelets, and anklets; and then their drapery of different-colored muslins, variously put on. It was most amusing to see them come up for their prizes, but I grieve to say that symptoms of European costume are to be seen among them. I had just dealt out a reward or a bribe to a real little Oriental picture when a horrid calico frock, of a purely English pattern, appeared before me! And, alas, even some who began well ended in patent-leather shoes, over which seven or eight silver anklets fell in the most incongruous manner. . . . I was made a most unwilling accomplice, for I had to give out English cotton jackets, and dolls dressed in the 'height of fashion,' and well calculated to spoil the taste of the rising generation."

"These atrocities," adds Lady Dufferin, "are sent out by kind people at home." It is unfortunate that kindness should sometimes kill people, as the Tasmanians were killed off by European clothing. It is to be feared that the repeated protests in this work will hardly reach the rotund Briton who regards the race as having a hat-and-boot destiny, or the matron who would drape the statue of Innocence with Manchester wool. But the Hindus themselves—their literary men, who wrote the 1,300 books published in India in 1889—will be encouraged by this timely aid in their war against the Philistines. We should be glad to quote many of Lady Dufferin's descriptions of native costumes, and must find room for some dancers:

"The [Bhil] women are good-looking, and are most picturesquely dressed, with large red veils covering their heads and skirts, the latter being generally dark blue, a *very* short jacket just over the bosom, and then a hiatus between it and the petticoat. Their arms are laden with bangles of all colors, and their legs are equally covered with brass ornaments. They held each other around the shoulders with one arm, and moved in lines of twenty, the lines overlapping each other and forming a circle. They sang a wild ditty as they danced, and the step, and the song, and their movements went together most beautifully. The step was like our 'chassé' after which they beat time with their feet, and bowed down, the one at the end clapping her hands, and the others making a sweeping motion with the arm that was disengaged. Their dusky faces and their red garments, and their wild music and the perfect time and grace of their movements, made this a most striking sight." (I., p. 227.)

It is but just to remark that Lady Dufferin's attention is not entirely devoted to human beings, there being some striking descriptions of curious fruits, birds, and monkeys. We do not feel sure that our few extracts, selected rather for the points touched than for the treatment, have done justice to the wit and charm of the book, and have less care to criticise it. Now and then, especially at Delhi and Agra, where every mosque has its romance, we have felt the need of some historic or legendary perspective to give the descriptions touches in relief. But our guide is resolute against quotation. We verily believe she would write about California without alluding to the Argonauts, or of Australia without mentioning the Golden Fleece. She does, indeed, give an account of Indian conjurers, of which no doubt the cleverest came before her, without indulging marvel-mongers with one improbable story; nor is Madame Blavatsky even mentioned! A book so without pretension, with no moral or political "mission," aiming only to include us all in the home circle which enjoyed the narratives, may fairly be judged by its adequacy for its own modest and friendly ends. For ourselves we have found it entertaining, suggestive, sparkling, and are content to be without space to find fault.

The Story of an Old Farm; or, Life in New Jersey in the Eighteenth Century. By Andrew D. Mellick, jr. With a Genealogical Appendix. Somerville, New Jersey. 8vo, pp. 743. 1889.

THERE is a small and scattered colony whose members, oppressed by the importance and pseudo-dignity of the society found in the great city below the Harlem, prefer to be known as living near New York rather than in New Jersey. They are chiefly youthful as well as foolish, and to those of them who chance to inhabit Somerset County we commend this volume, in the hope, if not the immediate expectation, that they will appreciate the history and the scenery, interesting and frequently striking, of their country homes. To the majority, inheritors by birth or participants by preference of that attractive region, the volume commends itself.

Through the development of a double motive, this is a double book. The author's original intention was to trace the American history of his own and collateral families more particularly as they swarmed from an old stone house and its surrounding acres. Around this central figure as a core has accumulated an interesting and valuable growth of last-century information, which to the general reader is the book. Starting with his landing at Philadelphia in 1735, there is traced the career, actual and probable, of a native of the Palatinate who established himself in 1751 as a tanner and, by necessity, a farmer on this Somerset slope; and his children and those of his immigrant kinsfolk have part in the tale. The attached genealogy shows that of the thousand or so descendants of those Lutheran settlers all have maintained respectability, many have acquired honor, and some have reached distinction, so that their fertile and exemplary ancestors deserve well of the country. Conscious that the public of to-day is less interested in Johannes Moelich as an individual than as a type, the true historical spirit, blossoming from the filial interest that rehabilitated the pioneer, has also restored much of what might have been seen around his and his children's haunts. And using the old farm as an after-dinner speaker does a toast, as a starting point for a ramble in all directions, a sympathetic pen has reproduced so much of colonial life that no reasonable limits will suffice to outline it. Much of it is important, and nearly all is interesting: of the former, for instance, a discussion of the condition of the German masses and the reasons and methods of their emigration in the eighteenth century (chaps. iii, iv.); of the latter, for example, the explanation that the floors of farm-houses were inclined so that the sand, substituted for carpets, might be more easily swept into the hall (p. 17), and the mention of the "Twenty-four Proprietors" who formerly owned and governed East Jersey, as having "a corporate and active existence to this day" (p. 112). It would be of still further interest to know their present function, and where the association can now be addressed.

The ground covered is so enormous that no discussion of any considerable part is possible, and many topics we marked for comment are perforce abandoned. Intemperance, morals, churches, local slavery, the various phases of German immigration, must be passed by without a word. One may wonder at what is meant by a "gun" fence (p. 236), and be tempted to add the tradition of the spurs to Col. Tilghman's appearance as a bearer of despatches (p. 541); but there is no space.

As warranted by the importance of the subject and the conspicuous part therein borne by New Jersey, the Revolution fills many pages, and nearly every scene of that oft-told drama receives some new and attractive comment in this rehearsal. For instance, we learn that the historical blue and buff was not the Continental uniform, except for Washington, his guard, and some of the generals, but that the line, when uniformed at all, wore colors and facings as diverse as their colonels' fancies. During much of that period Somerset was filled with troops, as the armies watched each other; and the author has well painted the gay reviews and dreary camps, the stirring and the trying life that went on within its borders. It was patriotic service to revive the forgotten skirmishes of Springfield, Plainfield, and Bound Brook, along with the better-remembered affair of Connecticut Farms, where Mrs. Caldwell was slain. Perhaps the most unexpected of these chapters is that wherein the Hessians have lifted from their memory some of the blackness that is so sombre in New Jersey, where, as Mr. Mellick truly states (p. 355), "the very name is still spoken by many with a prolonged hiss-s." He makes a good plea in behalf of those unwilling soldiers, whose odium was first acquired, at the battle of Long Island, by conduct into which they were led by British misrepresentation, and it is very well that a Jerseyman should relieve them of part of their stigma.

This book is so interesting and valuable to the general reader and the local historian that we sincerely hope it will attain, as it deserves, a second edition. With that in view, and not in an offensively critical spirit, the following suggestions are offered. Omit the Moelich genealogy, which may properly be printed separately for those directly interested. Cite, by reference to the copious bibliography, direct authorities for the various statements, giving title, page, and edition. Footnotes would be cumbrous, but references would be acceptable. The author offers to corroborate exactly every statement, but that might involve wearisome correspondence.

A very few further suggestions in the same spirit are offered. The revolt of the Pennsylvania line is described (pp. 528–30) so as to give the impression that the New Jersey troops were also engaged. The incipient mutiny of some of the New Jersey troops later was a very different affair. The statement (p. 533) that Lafayette's command embarked at Trenton on the 1st and reached the Head of Elk on the 3d of March is true, but it is misleading in that it implies that the expedition thither was entirely by water, which was not the case. An odd misprint, due doubtless to an amanuensis, makes (p. 39) the Elector John William as of the House of Newburgh, a hardly allowable Anglicising of Neuburg. One actual error must have followed carelessness of compilation, as where (p. 291) the repulse of Clinton and Parker before Charleston is given as June, 1775, although later (p. 312) it is correctly noted as

1776. It will interest the author to be assured that the "ewe lamb" *did* die in 1854, as he had heard (p. 403), on the 30th of November. The hint is offered that research will probably show that female suffrage prevailed, at least within certain limits, in the region under discussion in the latter part of the last century. This has escaped record here. With one geographical point, we are done. Did not the province line run from Little Egg Harbor to a point on the Delaware in 41° N. lat., in what is now Warren County, instead of approaching Minisink Island in Sussex? In that case it could not cross the Raritan in Somerset, and the surveyor's stone just west of Somerville (p. 111) must have some other significance.

This excellent book is clearly printed, and has a copious table of contents and a full index.

Mountaineering in Colorado: The Peaks about Estes Park. By Frederick H. Chapin. Boston: W. B. Clarke & Co. 1890.

THE first view of the parks of the Rocky Mountains is rather disappointing to many travellers. To most Americans, especially those who inhabit our larger cities, the name park suggests an expanse of greensward covered with a somewhat open growth of trees, while the Englishman looks upon a park as an enclosure stocked with game. In the great enclosed valleys of the Rocky Mountains, however, tree growth is generally confined to the steep slopes of the surrounding mountains, while the game which once abounded in them has long since disappeared, so that the only characteristic of a park they retain is that they are natural enclosures.

Estes Park in northern Colorado is exceptional in possessing an open growth of yellow pine which dots the grassy slopes of the valley, and a few individuals of the larger varieties of game which still roam through the mountains that surround it, while its streams are well stocked with trout. It is the smallest and at the same time the most picturesque and varied of all the Colorado parks, and to ardent lovers of nature possesses the additional attraction that it has not yet been invaded by miners or railroads, but must be reached by twenty-five miles' staging over steep, though by no means dangerous, mountain roads. The fact that a large portion of the valley is controlled by an English company, whose possession of a few thousand acres of land (of little value for agricultural purposes) has served as a text for Congressional declaimers upon the dangers our country runs from being bought up by British land-grabbers, has contributed in no small measure to the preservation of its natural beauty. The little hotel built by this company in full view of the imposing mass of Long's Peak, and a few outlying ranches provided with log houses and tents, afford adequate and reasonable accommodation for the summer boarder from the East, while the frugal-minded farmers from the adjoining agricultural districts of Colorado camp out in the open air along the mountain brooks that run through the valley.

The praises of Estes Park were sung some fifteen years ago by that enthusiastic Englishwoman, Miss Bird, whose imagination clothed with attributes of the most elevated nature the rude mountaineer who guided her in her not very extensive explorations among its mountains. Few visitors penetrate very far into the mountain masses that surround the valley, contenting themselves for the most part with the many excursions to valleys and cañons which radiate out from it, while the more ambitious make the ascent of Long's Peak, which, though not dangerous, is sufficiently difficult and exciting. Mr. F. H. Chapin, an enthusiastic member of the Appalachian Mountain Club, and who had already had some Alpine experience in Switzerland, recently spent the better part of two summers in Estes Park, and made a systematic exploration of all the mountain peaks surrounding it, many of which had probably never been climbed since the early days when this region was surveyed by Government geologists.

Accounts of some of these ascents were contributed from time to time to the journal of the Appalachian Club. They are now written out in more complete form, illustrated by excellent process reproductions of photographs, over fifty in number, taken by the author's own camera and printed in a most charming little volume of 160-odd pages under the auspices of the Club. Mr. Chapin's account of his various ascents is written in a simple and unaffected narrative form, which is perhaps less dignified than if more impersonal; but, as he tells us in his preface, this style is customary in the literature of moutaineering, and it carries with it the impress of truth by its simplicity, and by the absence of blood-curdling adventures that are apt to cast a certain shadow of doubt upon the absolute accuracy of many older travellers' tales. Nevertheless, his ascents were by no means barren of incident, hardship, and even danger.

It is particularly interesting to note how the Rocky Mountains and the Swiss Alps compare in grandeur and attractiveness in the mind of a mountaineer who is equally familiar with either. The charm of contrast between the brilliant verdure of the Alpine pastures and the dazzling whiteness of the névés and glaciers is naturally wanting in the drier climate of the Rocky Mountains, but it appears from Mr. Chapin's account that the vertical face of granite which surrounds Long's Peak on all sides but one, reaching a maximum altitude of 2,000 feet, and "as smooth as the side of Bunker Hill Monument," is unequalled in Switzerland, even in the neighborhood of the famous Matterhorn, whose general slopes, though appearing so nearly perpendicular from below, really stand at an angle of 40°, while the greatest extent of nearly perpendicular cliffs on its sides is only 500 feet.

Mr. Chapin's observations are not confined, however, to inanimate nature, but include many interesting facts with regard to the animal and plant life of the region. His greatest feat, and one of which he is justly proud, was the photographing a band of Rocky Mountain sheep, one of the shyest of wild animals, while facing him at a distance of about a hundred feet. He also took a photograph of a huge silver-tipped grizzly bear at about two hundred yards distance. The volume closes with a list of the flowers of Estes Park collected during the months of July, August, and September by his wife, to whose memory this little volume is dedicated.

Such narrations fulfil a useful purpose, not only in revealing truthfully the natural beauties of our land, but in teaching many, who otherwise might not know, how best to appreciate them.

The Lily Among Thorns: A Study of the Biblical Drama entitled the Song of Songs. By William Elliot Griffis, D.D., Pastor of the Shawmut Avenue Congregational Church, Boston, Mass., and author of 'The Mikado's Empire.' Boston: Houghton, Mifflin & Co. 1890.

To write a popular exposition of the Song of Songs from the standpoint of the modern scholar—this was a good thing to do if it could be done well. Dr. Griffis has felt himself under the necessity of expanding his criticism as much as possible, as if he had set out to write a sizable book; and, as if lacking confidence in the intrinsic merits of the natural interpretation of the poem, he has heaped on them extravagant praises, fearing, apparently, that otherwise they could not successfully rival the attractions of the allegorical interpretations of the past. Far too much stress is laid on the character and career of Solomon, which are of the least imaginable significance: he is simply the typically magnificent and sensual king. Yet a whole chapter is given to him and a good part of another, "Historic Characters in the Poem," one of whom is Abishag! It is quite possible that the relation of this Shunammite to Solomon in the first book of Kings may have suggested the situation in the Song of Songs, but this hardly justifies calling Abishag an historical character in the poem. Dr. Griffis's account of Abishag's "nursing" of King David is unwittingly humorous; and so in general is his treatment of the moralities of David and Solomon. He is in a strait betwixt two—the plain meaning of the narratives, and the conventionally pious reverence for those Hebrew kings. He lets "I dare not" wait upon "I would" with a perplexity that appeals to our sympathies. At one time he brings a railing accusation against Solomon; at another he argues that his harem was an ornamental show, and that he was perhaps not really much more married than the Sultan of Turkey or the late Brigham Young. We are expected to believe that in his youth he was a model of all the virtues, no allowance being made for the *tendency* of the Old Testament histories. His general praise of David does not perfectly agree with his specific statements, and still less with the estimate of Renan in the second volume of the 'History of the People of Israel.'

There are six chapters introductory to the text of the poem, which is given in the Revised Version. Of these the most valuable is that on the dramatic structure of the poem, in which Dr. Griffis is substantially at one with Renan, Réville, Dr. Noyes, and the run of modern critics. The chapter on the "History of the Book" is unsatisfying. Dr. Griffis seems to stand in dread of any plain, straightforward statement of his matter. On page 119 there is a serious mistake: "Theodoret of Syria, who died A. D. 457," is represented as denying the allegorical theory of the book, whereas he was one of the most ardent defenders of this theory. He is apparently confounded with Theodore of Mopsuestia, against whom and other naturalist critics Theodoret projected his defence. Dr. Griffis's statement that, since the time of Theodoret, there have not been wanting Christian scholars to deny the allegorical character of the poem, will hardly bear examination. There was no denial of the allegory from the fifth century to the sixteenth, when it was made by Castellio, one of several heretics whom John Calvin took in hand; but the real beginning of the modern appreciation of the poem was with Grotius in the next century. In the looseness of Dr. Griffis's phrasing, his admirable interpretation has a more orthodox appearance than it can rightly wear.

By far the most valuable part of Dr. Griffis's book is Part II., which contains the text of the poem, without the misleading chapter-heads and glosses of the King James translation, but with explanatory footnotes and indications of the parts belonging to the *dramatis personæ*. Dr. Griffis does not claim for these indications more than a

fair degree of certainty. His arrangement does not differ substantially from that of Réville or that of Dr. W. R. Smith in the 'Encyclopædia Britannica.' One of the most doubtful parts is the address to the Shulamite at the beginning of the seventh chapter, which is attributed to Solomon by Réville and other critics, to the court ladies by Dr. Griffis. In his commentary further on he suggests certain changes in the translation which have much ingenuity, but are too evidently the result of a desire to conform the wording of the poem to the exigencies of the modern prurient prude.

Part III. is a commentary on the text. It is long drawn out and much too florid and fantastical, but it contains much valuable and interesting matter. Of the book as a whole it is to be regretted that it was not made simpler and more brief. Its general purpose is worthy of all commendation, for it is to rescue the Song of Songs alike from the absurdities of the allegorists and the importations of sensuality, when, in fact, its *motif* is singularly high and pure—the praise of a country maiden for resisting the blandishments of the most magnificent of kings. Dr. Griffis does not discuss the date of the poem, but incidentally he thrusts it back nearly to Solomon's time. Wide is the range of critical opinion; Dr. W. R. Smith assigning it to the tenth century B. C., Kuenen to the ninth. The opinion of Graef that it was written about 230 B. C. is "ingenious," says Dr. Smith, "but nothing more." But this was the opinion of the late Michael Heilprin, whose judgment of the philological considerations which are most insisted on was not likely to be fanciful or unsound.

The Science of Metrology; or, Natural Weights and Measures. A Challenge to the Metric System. By the Hon. E. Noel, Captain Rifle Brigade. London: Edward Stanford. 1889.

THE metric system is now supposed to be taught in the arithmetic course in every school. If it were well taught—say, if a quarter of an hour twice a week for half a school year were intelligently devoted to it—the pupils would for ever after be more familiar with millimetres, centimetres, metres, and kilometres, with grammes and kilogrammes, with ares and hectares, and with litres, than they are ever likely to be with the English units. Who, except an occasional grocer, can guess at a pound within two ounces; or how many, besides engineers and carpenters, can distinguish seven-eighths of an inch from an inch at sight? Yet these are things easily taught. But schools will gradually get better conducted, and foreign intercourse seems destined before very long to receive an almost sudden augmentation; so that the metric system will pretty certainly become more and more familiar, and there may be expected to be some practical movement towards its use in trade. It is quite within the bounds of possibility that, even in a country with as little governmental initiative as ours, fashion may lead to the partial superseding of the old weights and measures, just as the avoirdupois pound superseded the Troy and merchants' pounds, as ells and nails have given place to yards and inches, as lasts and stones, firlots, kilderkins, long tons, great hundreds, and innumerable other units have disappeared within this century. If the litre, the half-kilo, and the metre were only not all severally greater than the quart, the pound, and the yard, there might be shops to-day where the keepers would affect to be unacquainted with English weights and measures.

There is little real difficulty in changing units of weight and bulk, were there any positive motive for it, for the things they weigh and measure are mostly used up within a twelvemonth. But with linear and square measure it is otherwise. The whole country having been measured and parcelled in quarter sections, acres, and house-lots, it would be most inconvenient to change the numerical measures of the pieces. Then we have to consider the immense treasures of machinery with which the country is filled, every piece of which is liable to break or wear out, and must be replaced by another of the same gauge almost to a thousandth of an inch. Every measure in all this apparatus, every diameter of a roll or wheel, every bearing, every screw-thread, is some multiple or aliquot part of an English inch, and this must hold that inch with us, at least until the Socialists, in the course of another century or two, shall, perhaps, have given us a strong-handed government.

We can thus make a reasonable prognosis of our metrological destinies. The metric system must make considerable advances, but it cannot entirely supplant the old units. These things being so, to "challenge" the metric system is like challenging the rising tide. Nothing more futile can well be proposed, unless it be a change in the length of the inch. Nevertheless, there is a goodly company of writers to keep the Hon. Capt. Noel in countenance in conjoining these two sapient projects. None of these gentlemen supports the constructive parts of the other's propositions; but they are unanimous against the metric system and the existing inch.

Mr. Noel's system is nearly as complicated and hard to learn as our present one, with which it would be fearfully confused, owing to its retaining the old names of measures while altering their ratios. Thus we should have to learn that 2⅓ feet would make a yard, 4 miles a league, 5 feet a fathom, 625 acres a square mile, 1.953125 cubic ells a cubic yard, 216 cubic inches a gallon, 24 ounces a pound, etc. But it is not intended that this complication shall last for ever, for this lesson, once digested, is to be followed by a clean sweeping away of the decimal numeration and the substitution of duodecimals. Mr. Noel enumerates sixty-eight advantages of his proposal, among them the following: "Mile, one-quarter hour's walk, better than kilometre"; "cubic foot worthier base than cubic decimetre"; "old London mile restored." The scheme is not without merit, and might have been useful to Edward I. Even at this day it must at least have afforded some agreeable occupation to its ingenious and noble author, not to speak of the arithmetical practice.

The Industrial Progress of the Nation. By Edward Atkinson, LL.D., Ph.D. G. P. Putnam's Sons. 1890.

THIS volume is a reprint, with some additions, of the striking series of articles recently contributed by Mr. Atkinson to the *Century Magazine* and the *Forum*. Upon this account it is hardly necessary to do more than call attention to the fact that they may be obtained in book form. Unfortunately the shape of the volume is excessively awkward; and the frequent repetitions of facts and conclusions, unobjectionable in a series of magazine articles, becomes here offensively conspicuous. But if these blemishes are overlooked, the reader will be rewarded by a rich store of information ingeniously arranged and forcibly stated. To us the most interesting feature of the collection is the manner in which Mr. Atkinson has reached his conclusions. We cannot but regard both his premises and his reasoning as frequently wrong, and yet his conclusions are in the main unassailable. This remarkable result is due chiefly to the fact that he is not led astray by materialistic influences, but recognizes the fact that the supreme purpose of human life is the development of individual capacity and character through the struggle for existence. This truth is, of course, incompatible with the pseudo-democratic dogma of the equal desert of all men, and, when supplemented by the economic law that the increase of capital tends, through modern command of natural forces, to the relative increase of wages and decrease of interest, furnishes a skeleton key with which many formidable bolts may be turned. The key may not always fit the lock with logical precision, but it nevertheless opens the door.

The position of Mr. Atkinson is that of reasoned optimism. He has "come to the definite conclusion that, while the power of mankind to consume the products of the earth is limited, the source from which man may draw satisfaction for his material wants is practically unlimited." Not only is this true, but there is also a higher law leading towards an equitable distribution of these products. It is impossible for us to consider the elaborate argument with which Mr. Atkinson supports his position, but we may say that to a material extent it rests upon a rather shadowy basis in assuming that we are about to succeed in supplying ourselves, from the unlimited reservoir of nitrogen contained in the atmosphere, with an abundance of the most expensive and most important element in our food. On the other hand, his demonstration of the misuse of our present blessings in the injudicious selection and wasteful preparation of the principal articles of our diet is extremely practical as well as convincing. Altogether fascinating is the account of his ingenious invention, the "Aladdin cooker," whereby the people of the United States may economize in the preparation of their food to the extent of five cents apiece per day, or about one billion dollars annually. Here, certainly, is "wealth beyond the dreams of avarice."

The conclusions of Mr. Atkinson must be peculiarly exasperating to the "Christian Socialists," so called. He is as good a Christian as any of them, and a strong spirit of benevolence pervades his writings, but he defends the institution of property, even in land. He rejects Ricardo and repudiates Malthus, but he deprecates the interference of Government with individual freedom. Of what avail is it, the professional philanthropist may sadly cry, to have escaped from the logical trammels of the gloomy science of political economy, only to proclaim the effete doctrine that men must take care of themselves instead of being taken care of by the State! The vision of the world revealed by Mr. Atkinson is more magnificent than aught conceived by the Anarchists of Chicago or the Nationalists of Boston, but it is a world fitted for the habitation of human nature as we know it, somewhat improved and developed, to be sure, but still the same, and not the abode either of licentious demons or sensualized angels.

Die Begründung des deutschen Reiches durch Wilhelm I. Vornehmlich nach den preussischen Staatsacten. Von Heinrich von Sybel. Munich: R. Oldenburg; New York: B. Westermann & Co. 2 vols., 8vo, pp. xiv., 428; xi., 545. 1889.

OF the first two volumes of Sybel's 'Founding of the German Empire,' which appeared in

November last, already fifty thousand have been sold. This success, which is quite unparalleled in the annals of the German book-trade, and has been rarely achieved in Europe except by a popular French novel, shows the eagerness with which the work of the distinguished historian was anticipated and the general interest which it has excited. This lively anticipation was due to two causes: first, to the author's preëminent fitness for the task which he had undertaken, and, secondly, to the fact that he was known to have access to original sources in the archives of Prussia, Hanover, Hesse Cassel, and Nassau, as well as in the state papers and diplomatic correspondence of the Foreign Office at Berlin, thus enabling him to follow from day to day, and often from hour to hour, every movement of Prussian politics and every counter-movement of its adversaries, and to give an absolutely authentic narration of the course of events.

But still more important in accounting for the impetus which carried the work in so short a time into the highest popular favor, is the fact that when it was published it did not disappoint, but rather exceeded, the public expectation. Sybel nowhere endeavors to conceal his Prussian and National Liberal convictions and sympathies; at the same time, he never permits them to warp his judgment or to obscure his vision. He is neither blind to the faults and follies of his political friends, nor incapable of seeing and recognizing honorable and patriotic motives in the actions of his political foes. As an historian he is superior to all party affiliations. He is also free from every taint of chauvinistic prejudice and vanity, and distinguishes himself in this respect very advantageously from Heinrich von Treitschke, who, in the fourth volume of his 'Deutsche Geschichte' (Leipzig: Hirzel, 1889), covering the period from 1830 to 1840, confesses that he writes exclusively for Germans, and really thinks that this narrow point of view is something to be proud of. Since the war of 1870 and the rapid advancement of Germany to a foremost place among the great Powers of Europe, such aberrations of patriotism have become endemic among German authors and publicists, who find it almost impossible to speak peaceably of other peoples. Their national sentiment is like new wine in the first stages of fermentation, which, not having yet worked itself clear and mellow and settled upon the lees, goes to the head. It is highly creditable to Sybel that his strong love of country and sincere enthusiasm for the fatherland never degenerate into this craze. While writing as a German and from a German point of view, he never panders to these passing whims and conceits, but is keen to detect and expose the inherent defects and weaknesses of the German character which have hitherto stood in the way of national unity and strength. In his judgment of public affairs, he combines the profound erudition of the scholar with the practical experience of the politician, and thus realizes the conditions essential to the ideal historian.

The first volume begins with more than a hundred pages of "Retrospects," divided into six sections, entitled respectively "Oldest Time," "Austria and Prussia," "Foreign Domination and War of Emancipation," "First Years of the Federal Diet," "Effects of the July Revolution," and "Frederick William IV." This introduction is a model of clearness, comprehensiveness, and condensation. One can affirm with justness (and there is no higher reach of praise) that it is fully equal to similar summaries by Ranke, who was an acknowledged master in this sort of general survey and succinct description and delineation. Especially admirable is the sketch of that bundle of heterogeneous and contradictory qualities, the brilliant, bungling, personally fascinating, politically fatuous monarch, the mediæval romanticist on a modern throne—Frederick William IV.

The first attempt to achieve German unity was the revolution of March, 1848, and with this event Sybel's history, properly speaking, begins. The effort was, of course, an utter failure, so far as the realization of this object was concerned, and the chief cause of the failure was the political immaturity of the German people. But it is no disgrace either to an institution or to an individual to be in advance of the age; and the National Assembly of Frankfort holds this honorable position in history. The second volume closes with the Diet of Princes which convened at Frankfort, August 17, 1863, under the presidency of the Emperor of Austria. That the King of Prussia held himself aloof from this august assembly was due solely to the energetic opposition of Bismarck, whose conduct on this occasion distinctly foreshadowed the far-sighted policy which led to the expulsion of Austria from Germany and the final establishment of the German Empire.

It is foreign to our present purpose to enter into a detailed discussion of the two volumes now before us. The third volume is already in type, and the remaining fourth and fifth volumes will appear during the course of the current year. We shall then take occasion to give a more extended review of the entire work, which concludes with the opening of the first German Parliament, March 21, 1871, and the promulgation of the Constitution of the German Empire. We close our present remarks with this excerpt, embodying Sybel's estimate of the Emperor William:

"He was a confessing Christian who, with simple-minded conviction, accepted the creed of his ancestors. Neither a doubting philosopher, like Frederick the Great, nor a liturgist or theosophist, like Frederick William IV., he never aspired to become a church reformer. His piety was in accord with Gospel teaching, without sound of trumpets, neither of sorry countenance; without arrogant positiveness and intolerance. But it was the staff of his life, the solace of his sufferings, the compass of his conduct. His faith gave him an unconditional trust in God, which filled his whole being and upheld him in all his troubles. . . . He was thus conscientious to timidity in every deliberation, absolutely fearless in danger. Nor was his the chivalric courage of excited nerves or ambition: the word fear or danger had absolutely no meaning for him. He strode through life never despairing, never vaunting, always in a perfect equipoise. He was not of the men of genius or of a demoniac nature who either by their superior equipment trace new paths for their century, or with irresistible passion thrust themselves and their peoples into fearful abysses. Not even bright in the sense that his elder brother was bright, can one call him. But he was, what a contemporary says of Rudolph of Hapsburg, an efficient (*ausrichtiger*) man. His whole being was centred in, and fitted for, practical work; he had by nature the gift to conceive the attainable, and an unbiassed clearness of comprehension which asserted itself more particularly in an almost unerring judgment of men. Add to this a rare combination of firmness and flexibility of mind which characterizes the practical statesman as contrasted with the doctrinaire. To the end of his days he remained unswerving in his conservative principles, but without reluctance recognized that, with changing circumstances, the means of preserving power must likewise change, and that progressive reform is the enduring condition of such preservation. As was natural, he was convinced of the necessity of strong kingly power in a commonwealth founded by its rulers, composed of heterogeneous provinces, and surrounded by jealous neighbors."

La Passione di Gesù Cristo: Rappresentazione sacra in Piemonte nel secolo XV. Edita da Vincenzo Promis. Turin: Fratelli Bocca. 4to, pp. xxv., 532.

THE early development of the drama in Italy does not present as much interest as it does in some other countries. Documents relating to the liturgical origin of the drama are almost wholly wanting; and while in France, for example, it is possible to trace with reasonable completeness the growth of the drama from the simple service of the church to the complicated mysteries and the secular drama evolved from them, in Italy such process cannot be traced, and no such regular organic development took place. It is true that in Italy, as elsewhere, the origin of the drama was in the service of the Church, but it does not seem to have developed early (as in France) into a religious drama in the vernacular. There are vague notices of a religious drama performed at Padua in 1243, and a more detailed account of another at Cividale (Friuli) in 1298. This latter was a representation of the Passion, Resurrection, Ascension, Advent of the Holy Ghost, and Last Judgment, and until lately was the only instance known in Italy of the cyclical drama so common in France under the name of mystery.

In Italy from the church service was developed in Umbria in the thirteenth century the dramatic *lauda* (hymn), or *divozione*, which spread into Tuscany, where, in the fifteenth century, it assumed the form of the *sacra rappresentazione*. These may be compared to the French miracle plays which they resemble in many points.

It has always seemed strange that the influence of France, which was so profound during the Middle Ages, did not produce in Italy any imitation of the *mystères* of the fifteenth century. The recent discovery of such an imitation is therefore of great literary interest, and fills a gap hitherto existing in the history of the Italian drama. The work in question, "La Passione di Gesù Cristo," was discovered among the Ashburnham manuscripts recently acquired by the Italian Government, and was purchased by Lord Ashburnham from the notorious G. Libri. The drama contained in the MS. was written by an anonymous author (perhaps the Frate Simone, some sermons by whom appear at the beginning and end of the acts), and performed in 1490 at Revello, a town belonging to the Marquisate of Saluzzo in Piedmont. The enormous length of the play (it fills 542 large quarto pages of print) required three days for its performance, as was the case also with the French *mystère de la Passion*, from which the Italian drama does not differ materially in contents. It opens with the Council in Heaven in which the redemption of man is determined upon, and closes with the appearance of Christ, after his resurrection, to Mary Magdalene. The usual sources (apocryphal gospels, legends, etc.) are employed to supplement the Gospel narrative; and certain episodes, the raising of Lazarus (arranged for acting as a separate play if desired), etc., are treated in great detail. The most interesting of these apocryphal interpolations is that containing the debate between Christ and Satan concerning the redemption of man (p. 226).

The drama is in verse of irregular metre—seven to fifteen syllables, with rhyme in couplets and with occasional lyrical passages. To assist the memory of the performers, the couplet is always divided at the end of a speech. A similar proceeding is found in the French 'Miracles de Nostre Dame,' recently published by

the Société des Anciens Textes Français. The language of the drama is Italian, but mingled with it are many dialectic forms. The author confesses at the end of the work that he has written his play in a language little used by him, and says it is not strange if he has not been able to do his work well. Why he should have felt it necessary to write in Italian for an uncultivated audience accustomed to their own dialect, it is not easy to see. It was probably a concession to the court of the Marquis Louis II., before whom it was performed, and to the crowd of strangers expected from other parts of Italy. At all events, it is an interesting proof of the prevalence of the literary language among the people at that early date.

The intrinsic value of the play is not great, although some of the lyrical passages are not devoid of beauty. The same realistic treatment is observed as in the French *mystères*. For example, Christ is called upon to sing when mocked by his captors, and various popular songs of the sixteenth century are suggested to him (one is a French song, "Matre doxa sor de bon ayre.")

After long remaining unknown, this precious work has recently been published in the most sumptuous manner, which unfortunately will place it beyond the reach of the ordinary student. The firm of Bocca Bros., booksellers to the Queen, wishing to present her Majesty with a proof of their devotion, chose this unique monument of Piedmontese literature, and reproduced it in an *édition de luxe* of 200 copies. The volume is magnificently printed upon hand-made paper, with wide margins, and a facsimile of two folios of the MS. is given. A too brief introduction by the editor, who is librarian of the Royal Library at Turin, gives an account of the MS. and the circumstances of the performance of the drama. The questions raised by the language of the work are passed over in silence, and no glossary of dialectic forms has been given. In spite of these deficiencies, all students of Italian literature will be grateful to the publishers for a work which reflects great honor upon the Italian press.

Great Cities of the Republic. The Story of Boston: A Study of Independency. By Arthur Gilman. G. P. Putnam's Sons. 1889. Pp. viii, 507. 8vo.

Two only of the three periods into which the history of Boston may be naturally divided have an adequate treatment in this work. In respect to these two, moreover, Mr. Gilman has told the political history of the colony and Province of Massachusetts Bay, rather than that of its principal town. But it should be acknowledged that to separate the one from the other is a difficulty which confronts all historians of Boston. During the first century and a half of its existence the town exerted a controlling influence throughout New England, while, in the latter part of this time, measures of the first importance to the thirteen colonies were initiated in its town meetings. This part of its history, however, has been so fully told and is so familiar that it might well have been treated very briefly in a work of this kind, and the space gained might have been devoted to portraying the various changing phases of the social, intellectual, and religious life of the town, and especially to telling the story of its commerce and its industries. This, we readily grant, would have been by far the more difficult task; but if it had been done, Mr. Gilman's book would have had a value which it does not now possess. As it is, he simply rehearses the well-worn narrative of the formation of the Massachusetts Company, and the struggles of the people first for their rights under the charter and finally for independence. There is, of course, interspersed some account of the peninsula and its changes with the growth of the town, and there are occasional references to the social life.

With the siege of Boston Mr. Gilman's "story" practically closes, for he has barely touched upon the history of the third period, the last hundred years. The only topics of this time treated, except in the most general way, are the change of the form of government and the mayoralty of Josiah Quincy. The book wears a very attractive appearance, with numerous well-chosen illustrations and maps, and has an excellent index. It is written in an easy, flowing style, which at times has a quaint and Scriptural flavor that lends itself very agreeably to an account of the doings of men in the seventeenth century. There is a lack of life and picturesque incidents, however, which might easily have been supplied. It would, of course, be unjust to expect absolute accuracy, and the author is unusually accurate and painstaking. Still, a few errors have crept into his pages. He repeats, for instance, the old statement that Sir Richard Saltonstall was descended from a Lord Mayor of London who was, in fact, his uncle. The Concord philosopher, A. Bronson Alcott, is called Olcott, in text and index. Joshua Bates gave a hundred, not fifty, thousand dollars to the Public Library, and surely it is an anachronism to call the Salem of Revolutionary days "the sleepy town."

Death No Bane. London: Sampson Low & Co. 1889.

Under this disguising title appears a new translation of the first book of Cicero's 'Tusculan Disputations.' The translator, Mr. Robert Black, late of Pembroke College, presents as an excuse for his work his belief that he has had but one predecessor (anonymous, 1840) in this particular field. We can name three others: G. A. Otis, Boston, 1839; P. A. Nuttall, London, 1841; Dr. A. P. Peabody, Boston, 1886. The newest thing in Mr. Black's version is, perhaps, his rendering of *judices*, in Socrates's speech, by the phrase "my lords," but this is typical of his whole work. It is disfigured by modern slang and colloquialisms, which are entirely out of place in a book of this serious nature, whatever may be their value in the interpretation of ancient writings of a different sort. The sentences, also, although in the main faithfully rendered, are frequently so long as to be wearisome and obscure. Mr. Black should have remembered that the English language is not richly enough inflected to bear the burden of sentences of equal length with those in Latin and Greek. The translation is not divided into the chapters of the original, and is accordingly nearly useless as a work of reference. It is followed by about seventy pages of notes, which are mainly the commonplaces of old-fashioned dictionaries of biography.

For instance, on the state of Lacedæmon we have little but the valuable information that Lacedæmon was the son of Zeus and Taygete, married Sparta, and gave his name to the country. There is scarcely a word upon the subject of philosophy, but we are told that Pembroke College has an orrery similar to the *sphæra* of Archimedes. We hear also that Demosthenes was the "easy first" of Athenian orators, that Socrates performed the "happy despatch" upon himself, and that Æacus was raised to the "judicial bench" in Hades by a "job" perpetrated by his father Zeus. Mr. Black insinuates here and there that he himself is a cold-hearted cynic; we should hardly have believed it of the writer of these words: "In 1795 (and not before) a heartless, cold-blooded attempt was made to deprive 'the blind old man of Scio's rocky isle' of the posthumous fame he had earned over all the world as the author of both *Iliad* and *Odyssey;* and a pundit named F. A. Wolf issued his *Prolegomena* to discredit a belief and a fame which had endured for nine centuries or more." On another page we read that Lycurgus "is said to have had the honor of becoming acquainted with Homer." Mr. Black kindly states that his book "is not intended to be merely of assistance to students of Latin, but also—and chiefly—of use to English readers innocent" of that language. It seems scarcely right to offer to defenceless innocents such lore as these notes present without a warning against its traditionary nature.

The book is printed on heavy paper with wide margins and white cover, and the typework is very creditable to the Chiswick Press.

A Japanese Boy. By Shiukichi Shigemi. New Haven: E. B. Sheldon & Co.

In a neatly printed and bound volume of 128 pages, bearing the above title, a student in Yale College tells the story of his early life in Japan. It is a cleverly conceived and well-written book. Numerous as are descriptions of Japan, and even of the social life of the people, there are very few natives who have attempted, in a foreign language, to lift the veil of private life and let the people speak for themselves. The charm of this unassuming little book is its utter freedom from anything stilted or pretentious. It is noticeable that though the author is not of the old samurai (or gentry) class, but the son of a merchant, it never occurs to him to pass himself for anything else than what he is. In other words, he realizes fully that the day of democracy has come to Japan—as well as that Americans have slight regard for mere rank or pretensions that have no basis in personal merit. In his fourteen chapters he pictures vividly school and home life, diet, punishment, bath-houses, evenings at home with dancing and music, actors and theatres, the old castle, angling, New Year's day, kite-flying, holidays, religious festivals and ceremonies, and many other matters of interest. His style is bright and lively, though showing the water-marks (as indeed does that of almost all Japanese who write English) of Peter Parley. His command of a vocabulary at once copious and exact is extraordinary, and is even better attained, we imagine, by an alien who has mastered English by long and patient book-translation than by a native. We have looked for Japanese idioms in Mr. Shigemi's English, but, except the use of "fishes" where we should use "fish," we do not find any. On page 68 he speaks of seeing a "stork"—in this, possibly, following the great crowd of foreign writers; for of the 365 birds common in, and the sixteen species peculiar to, Japan, the only stork known in Japan is a rare bird which few persons, even ornithologists, have seen. Yet it may be that Mr. Shigemi's stork was the real bird, *Ciconia Boyciana* Swinh., called by the Japanese *kodzuru* (little crane), though most probably it was the egret, or *sagi*. In other words, as a rule, Mr. Shigemi, though writing in a chatty, delightful way his boyhood's memories, is extremely accurate. Though some of the customs portrayed are local and not national, his book may be safely recommended as the best picture of home life

among the middle classes in Japan yet produced, and well worthy of a place in all our libraries. In this respect it has a value out of proportion to its modest size and claims.

The Scotch-Irish in America. First Congress, 1889. Cincinnati: Robert Clarke & Co.

It is surprising that so little has hitherto been done to trace the history of that remarkable race which established its institutions throughout the great upland region of Pennsylvania and the Southern States. It has been to this region what the Puritans were to New England and the West. Its great men and its great achievements are numberless, and the purity and vigor of the strain seem yet undiminished. For the purpose of recalling a glorious past and encouraging an honorable pride, a congress of the race was called in May, 1889, at Columbia, Tenn., resulting in the formation of a Scotch-Irish Society. The proceedings of this congress and the addresses delivered before it are now presented in the volume before us, which we commend to all who are interested in the study of neglected portions of our history. It is of course only a beginning, but the vein is so rich that its further working is certain. The New England branch of the race is barely mentioned, but its annals alone would furnish an abundance of valuable material.

The permanency of the Scotch-Irish type is strikingly proved by the testimony of the Rev. John Hall of this city. When in this country as a delegate in 1867, he pointed out a man in the audience whom he had never seen before, and declared—correctly as it proved—that he was of the McKee family of Ulster. In his address at this congress he said: "As I looked over the faces of the people here yesterday, I could hardly keep the tears from my eyes as they rested upon so many heads and faces and figures like those with which I had been familiar in Ulster." The fighting qualities of this race have never been questioned, but its terrible courage was never more brilliantly displayed than in the battles of the late war. According to the figures given in one of these addresses, the States of Pennsylvania and North Carolina are those in which the Scotch-Irish element is the largest, and those among whose soldiers the losses in battle were the greatest. Strictly speaking, the losses of South Carolina were greater in proportion than those of North Carolina, but those of the latter State were enormous. Its fighting population in 1861 was 115,000, but it furnished to the Confederate Army 125,000 men, of whom 14,522 were killed, 5,155 died of wounds—not including the wounded who did not die in service—and 20,602 died of disease. Pennsylvania had the highest percentage of killed, on the Union side, viz. 7.1 per cent. of enrolled troops. The Twenty-sixth North Carolina Regiment was pitted at Gettysburg against the One Hundred and Fifty-first Pennsylvania and Cooper's Battery, and out of over 800 men lost all but 216 in the first day's battle, and after the third day mustered only 80 men. The Pennsylvania Regiment lost 335 men. The loss of the Light Brigade at Balaklava is stated to have been about 32 per cent.

Falling in Love; with Other Essays on More Exact Branches of Science. By Grant Allen. D. Appleton & Co. 1890. 8vo, vi., 356 pp.

In this little volume Mr. Allen has gathered twenty-one essays contributed to the *Cornhill*, the *Fortnightly*, and *Longman's Magazine*. He is well known to readers of periodical literature as a skilled purveyor of the ideas of modern science and the facts of biology, neatly enfolded in a literary coating enlivened by a spice of humor. While a critical specialist might take exception here and there to a minor statement of fact, or to the broad and easy treatment of difficult subjects affected by Mr. Allen, he would hardly deny that, on the whole, the essays in question perform a work of great usefulness. Such intermediaries between the technical statements of the investigator and the curiosity of the lay reader are none too numerous. Of the small band who perform this public service, the writer of these essays is especially well qualified from a literary point of view, and we are glad to recognize the unusual measure of success which has attended his efforts to instruct and interest the general reader. The articles here reprinted will be practically new to the majority of Americans. Though of varying degrees of merit, literary or scientific, none of them are dull, and they are free from really important errors of fact. While the professional naturalist will perhaps prefer something more exact and profound, the average man will find his profit, not unmixed with pleasure, in an hour or two devoted to Mr. Allen's pages.

Life of William Ellis (Founder of the Birkbeck Schools). With some account of his writings and of his labours for the improvement and extension of education. By Edmund Kell Blyth. London: Kegan Paul, Trench & Co. 1889.

We have already reviewed at some length a life of Mr. Ellis by his granddaughter, in which his character and labors were described, and, though the present volume is more full in some respects and has much more apparent pretensions to being considered the true and complete biography, it does not add so much to our knowledge as to detain us for more than a moment. The simple and laborious character of Mr. Ellis, his singleness of purpose, his benevolent and practical nature, stand out plainly through all his career. His utilitarian interest, which became absorbed by the one cause of education, was the substance of his life; he believed that the world was to be made over only by forming the minds of the children, and instilling into them the rational grounds for the industrial virtues. To this he devoted time, money, and mind without stint. The present biography contains very full abstracts of his many writings in magazines and books and a good many letters. It brings to the fore somewhat more openly and boldly the radical element in his convictions, the grounds of his opposition to moral teachings out of the Scriptures, upon which he made many sensible observations worth attention by those who would not agree with his conclusions altogether; and all this helps to explain the opposition he met with in certain quarters because of his extreme secularism. He was a thorough Benthamite in opinion and by nature, indifferent to much of the fruits of culture, and generally to the fine arts and imaginative literature, hostile to university ideals of training, and very narrowly limited to the useful in all parts of his thought. But within his bounds he was clear-sighted and able, entirely self-devoted to the good of mankind as he understood it, and sagacious in the practical unfolding of his plans. He was in some degree a speculative and experimental educator, a seeker for new lines, and hence his books contain suggestive ideas and interesting records of experience which make this abstract of them of real value to educators who are not hidebound conservatives. The biography is thus to be regarded as being as much a tract to spread his views as an account of a noble and useful career.

The Castellated and Domestic Architecture of Scotland, from the Twelfth to the Eighteenth Century. By David MacGibbon and Thomas Ross, architects. Vol. III. Edinburgh: David Douglas. 1889. 8vo, pp. xvii., 639.

It is pleasant to receive the continuation, in the third volume, of Messrs. MacGibbon and Ross's book, of which the beginning we noticed some years ago. When the course of a people's architecture can be as clearly followed as in Scotland, there is no plainer witness to the growth of its civilization. Scotland never prospered, like most European nations, so as to efface the architectural testimony to her small beginnings. Her record is of hardship more than of splendor. It shows how the early feudal lord (here as indeed elsewhere) hived his family in his stately castle as the poor are hived nowadays in tenement-houses; and how, in spite of a command of personal service which is now unknown, and the abounding delights of feasting, hunting, and hacking one another to pieces, comfortable living was reserved for these late days. The contrast of Scotland's transitory prosperity in the thirteenth century with her long blight under the English wars of the fourteenth is imaged in the shrinkage from the ampler early castles to the cramped security of the Norman keeps, which superseded them here after being themselves superseded in more prosperous England, and in the cessation of church-building for two centuries while the rest of Europe was blossoming into churches like a field of daisies.

These conditions, and the slow recovery of the country in the sixteenth century, the returning prosperity of the Stuart reigns, are well outlined in the introduction of this volume, and confirmed by the examples which follow. There are not so many important examples as in the first two volumes, but the architectural story is told with the same faithfulness, the same intelligence, the same abundant and clear illustrations. The fourth volume, of which the contents are given in the present, holds in reserve many buildings of architectural and historical interest, and promises to end well a work which is exhaustive, and in its way final.

Fine Arts.

EXHIBITION OF THE AMERICAN WATER COLOR SOCIETY.

THE average of technical excellence rises steadily at the exhibitions of the Water-Color Society. In the present exhibition, if we take the pictures on the line, almost everything is creditable, except that there are always pictures on the line, by one right or another, that ought not to be placed there, and there are always some over doors and other high places that ought to be down. Seven or eight years ago there were about half-a-dozen pictures in each exhibition that were picked out and spoken of everywhere as "good things" or "fine water-colors," and there was much to pass by between them. Now we find not half-a-dozen such pictures merely, nor a dozen even, but thirty or forty, and most of the rest are so much better than they used to be that there is scarcely any comparison to be made.

But though technical excellence is much more general, a good deal of fault can still be found with American water-color painting. For one thing, there is apparently a widely prevailing belief that a water-color may be made of anything that comes handy, regardless of the fitness of the subject or motive for treatment in this particular medium. An old study in oil that has never been finished, and that never will be finished unless the painter means to go back to the place where he worked at it and finish it on the spot where he can get his facts from nature, is made to do service for a picture in water-color; for whatever is wanting in the oil study can be left vague in the water-color, and washes and blotches of pretty tints fill up the doubtful places. At least some of our painters must proceed on such a principle, and there is too much of that sort of incomplete work in the exhibitions. Not that everything should be made out, but accuracy and truth are necessary, and no really good work is without them. The truth need not be given in detail, but it must be given. The most charming water-colors, perhaps, are those in which it is suggested only, but in these, if they are good, nothing but the truth *is* suggested. Large pictures are better painted in oil, for it is easier to arrive at exact truth in values in this medium; and when it comes to making a picture "hang together" by working over to remedy faults of form or color, it may be done easily enough in oil, whereas in water-color most of the charm of the medium—which consists in frank, simple tints—is marred by such processes, if, indeed, it is not altogether lost. Not every landscape effect lends itself to successful treatment in water-color, though many are admirably suited to it, and sombre interiors cannot be so well painted in it as light ones, the followers of the modern Dutch painters to the contrary notwithstanding. No painter is cleverer in his way than Vibert, and his water-color pictures of interiors with figures are very skilfully worked out. He paints such subjects far better than any of our painters could paint them, yet doubtless there are few among them who would care to paint as Vibert does. Good drawing and careful painting will not alone make a good water-color, least of all when it is applied to a subject that is not suitable. Jacquemart, the well-known etcher, who died a few years ago, was one of the ablest of painters in water-color. His pictures were never carried very far, but the effect of nature was always faithfully rendered, and there was a never-failing charm in the direct, simple way in which it was noted on the paper. He never elaborated detail, and never blurred and scoured his paper for "effects." There are some pictures in this exhibition that resemble the work of Jacquemart in general treatment; those by Mr. Hassam and Mr. Wiles may be mentioned particularly.

Another fault in American water-color work as it is seen at the exhibitions at the Academy is triviality—both in subject and treatment. Light, sketchy work is not trivial *because* it is light and sketchy, but there are many pictures here that aim to be light and sketchy and are only tame and thin. This is the fault of insufficient skill in handling the medium, and of a timidity that causes the painter to stop without entirely realizing his first intention. The triviality of subject is even more apparent. The upper part of the walls is covered with landscapes in which not two thoughts have been given to composition, and with figure pictures in which the element of grace or beauty or strikingness of pose does not enter at all. Some pictures, too, look as though they were but parts of some other composition—pieces saved out of the wreck. Many exhibitors evidently have been satisfied with trifles, and have sent them here; the lesson they have to learn is, that a bad sketch is not any the more worth looking at because it is painted in water-color than it would be if it were done in oil, and that no picture, whatever the medium it is painted in, is worth exhibiting unless it shows something intended to be done and it is well done.

Those of our painters who have in the last few years—during the period of marked progress of which we have spoken—become known as genuine water-color painters, are well represented in this year's exhibition. Messrs. Abbey, Weir, Walker, Wiles, Hassam, Tryon, Smedley, Robinson, Ross Turner, Platt, and Day are some of these, but there is nothing from the one who is best known of all, Mr. Homer, who has, however, made an exhibition of his sketches in the gallery of a well-known dealer.

No painter surpasses Mr. Wiles in dexterity, and if his eye for color were only a little stronger, we should rarely have a fault to find with his work. "On the Coast of the Mediterranean," No. 37, is deficient in color quality, though it is very skilfully painted; and in the large picture, "The Convalescent," No. 393, representing two young girls in a pretty interior, color is not the chief merit. It is sufficiently colored, however, to be satisfying, and it is as well painted as anything in the galleries. But in a smaller picture, "In the Heat of the Day," No. 7, Mr. Wiles is successful in every respect, and this little bit of waterside, with the pavilions on the bank and the launch and row-boats anchored in the stream, is delightful. It might well be taken as an example of right water-color work, and it is to be hoped that we shall see more and more in the exhibitions with the same intention.

Mr. Hassam's methods resemble those of Mr. Wiles, though each is distinctly individual. Nothing could be better in its way than Mr. Hassam's "Paris and the Eiffel Tower from Montmartre," No. 262; and of the five or six other pictures contributed by him, all are excellent in every way, except "A Bit of New York," No. 641, and it is a figure of a man with a street for a background, while the others are pictures of streets and places, and the figures do not count except as color notes. Of the others—"Wet Night on the Boulevards," No. 363; "Under the Obelisk—Thames Embankment," No. 301; "Along the Seine—Bougival," No. 91, and "The Bathing Hour, Broadstairs, England," No. 640—it may be said that no better water-colors have ever been seen in these exhibitions, and that the artist gives proof of such ability and cleverness as a water-color painter that he is entitled to a place in the first rank of those who are already distinguished. Not the least charm in them is their freshness and truthfulness of color. As in Mr. Wiles's work, the method is expressed in two words—frankness and simplicity.

No better illustration of what a delightful thing a water-color sketch may be, if it is painted by a man who is at home in the use of the medium, could well be found than Mr. Blum's "Sketch of a Venetian Bead-Stringer," No. 275. The movement of the girl with her arm extended above her head is well given, the action of the figure is admirably suggested, and it is an agreeable color study. Technically, it is of the cleverest work to be seen, and to artists it is one of the most interesting of the pictures here.

"Peasant Woman Baking Bread," No. 335; "A Barn-Yard," No. 364; "Evening," No. 482, and "A Pastoral," No. 424, are the titles of the four pictures exhibited by Horatio Walker, and there are particular qualities in each of them well worthy of notice. "A Pastoral," however, is so characteristic of Mr. Walker's methods, and is such a fine piece of color and so complete a work, that it will suffice to speak of it alone. "A Pastoral" has for its subject three fat and lazy pigs that have come across the pasture lot, on a fine, sunny day, to lay themselves in the ditch. Mr. Walker paints excellent landscapes and cattle and sheep and horses, but he paints pigs better than any of these. Nobody anywhere, indeed, can paint pigs better than he. This little water-color is like a Millet in its homely truth and unaffected simplicity: the pigs are real pigs, and that they are lazy, existence-loving pigs is plain enough. The picture is admirable in characterization, and soundly painted. It does not belong to the class of work of which Mr. Hassam's or Mr. Wiles's pictures are types, but is one of those in which color is sought for by more intricate processes than in the clear washes used by these painters. It is perfect in its way.

"The Visitors," No. 434, by E. A. Abbey, which shows two pretty English girls in prim bonnets and gowns seated in chairs in the garden in front of a country-house of the last century, possesses much of the charm that is found in the artist's pen drawings that have made him famous. It is a notable instance, in an exhibition where there is so much that indicates shallowness of purpose, of a work that has been seriously composed. It is cleverly painted, and though full attention is given to detail, the ensemble is well kept, and the picture is harmonious and complete. A delightful little picture, and an apt example of technical skill properly displayed, is "Sweetheart," No. 190, by Albert E. Sterner; and a well-drawn and delicately painted little figure is the girl in a blue-check skirt aiming a carbine, "Shooting at a Mark," No. 156, by Theodore Robinson. Mr. Robinson also, among other things, exhibits a "December Landscape," No. 176, that is a fine bit of color, and an effect in nature realistically but tenderly treated. Mr. Tryon's landscapes, Nos. 171, 353, and 470, are noticeable, and there is an excellent winter scene, "Northern Winter," No. 467, by Jervis McEntee, that must be mentioned as the best among the snow pictures. It possesses one very important element that is lacking in much of the landscape work in the exhibition—the element of character, which is as essential in a landscape as it is in a portrait. Character

is a quality that we always find in Mr. Smedley's pictures, and in "A Thanksgiving Dinner," No. 442, "A Late Arrival," No. 313, and "By a Summer's Sea," No. 451, this is the chief merit. The composition of the first-named picture is not of the hap-hazard order—on the contrary, it is well thought out; but it is more the composition of an illustration than of a picture—a difference which lies in the fact that the impression of things as they actually look in nature without presenting them solely to the spectator's point of view is essential to the first, and that in the second the composition should be made with this point of view as the only one to be considered.

The pictures by J. Alden Weir, G. W. Maynard, H. Bolton Jones, H. W. Ranger, J. Francis Murphy, Ross Turner, Mrs. Rosina Emmet Sherwood, C. A. Platt, Francis Day, C. H. Eaton, Carleton Wiggins, D. M. Bunker, C. Y. Turner, W. S. Bucklin, Stanley Middleton, C. E. Cookman, E. L. Durand, Clark Crum, C. Morgan McIlhenney, Edward A. Bell, Charles Mente, Percy Moran, and Alexander Schilling, may be mentioned as among those which form the bulk of notable works in the present exhibition. This is the twenty-third annual exhibition of the Society. The rooms are tastefully decorated, as usual; the hanging is done by groups, according to the tone of the pictures and the color of the borders, and, by a happy innovation, no pictures at all are placed in the corridor. The illustrated catalogue contains a number of well-printed photographic reproductions, as well as pen drawings; but the book is not quite what the catalogue of this pretty exhibition ought to be.

MODERN WOOD-ENGRAVING.

THE Grolier Club is constantly doing something towards enlightening the public concerning the various arts and industries to which it stands as a nerve-centre. Having just held an exhibition of "Books and prints illustrating the origin and rise of wood-engraving," in which was shown a complete progression from the work of the "Formschneider" to the sudden burst of the great art of Albert Dürer, it now supplements that lesson with an exhibition of the work of some of our best-known engravers. Between the first exhibition and the present one, to be sure, there is a hiatus, in the order of production, of more than three hundred years; but, as that period is covered by a partial decadence, and subsequently by the revival of Bewick, about which much has appeared in current literature, it may be assumed that most of those who will be attracted by the subject can supply for themselves the historical omission, and thereby derive the full advantage of the Grolier Club's contribution to the study.

The present collection has been made under the auspices of the Society of American Wood-Engravers, and consists of 258 prints, 101 of which constitute the exhibit by which the Society was represented at the Paris Exposition. On entering the hall in the pretty little club-house where these prints are shown, one is impressed by the entire suitableness of the surroundings. The pictures themselves almost seem conscious of the more than favorable conditions for their appreciation, and take on an hospitable appearance. The show-cases are ranged along the sides of the room, convenient for the examination of their contents. One can read these pictures as he reads a book, going to his favorites over and over again, never tiring of what they say to him. They reveal, for one thing, the strong individuality in the work, which is somewhat surprising after all that has been written concerning the loss of this very quality by the modern engraver through the commonly great reduction of his subject, consequent upon the use of photography in transferring it to his block, and the finikin methods made necessary by this process. We look here in vain for evidences of such disaster; in fact, one of the charms displayed is this strong personal quality in workmanship, and another is the great value of its diversity to the entire collection. It is doubtful if we should wish to prolong our examination greatly if these prints were the result of one man's effort, however skilful, or that of a number of men who worked just alike. Even the interest one might feel in the variety of painters and draughtsmen would be greatly neutralized by uniformity of interpretation; whereas, here one feels a new delight with the discovery of a different translation of any given artist. There are, no doubt, several groups into which these workmen may be divided, as, from sympathy or schooling, a number may adopt similar means of reaching a result; but there is not an instance where personal expression is not distinctly marked.

In these show-cases are to be found the most of the work of Mr. Timothy Cole after the old Italian masters, now being published in the *Century Magazine*. Although these are printed on simple plate paper (a considerable disadvantage as compared with the surrounding "Japan" proofs), one is impressed by the reverential attitude of the engraver towards his "originals," and the consummate skill with which his devotion is expressed. Cole denies himself no advantage to be derived from any modern method of working, but his line is his main dependence, and it is sufficient for his need. It is marvellous that with the simple line he can sustain such pure tones, or make such nice gradations; that, with a line so close as in many of these pictures, he should remain so light and appear so strong.

The general view of the exhibition makes it apparent to what an extent the American engraver is limited by the magazine page. By far the largest portion of these pictures are illustrations which have appeared in the *Century*, *Harper's*, or *Scribner's* magazines. This fact is accountable for much that appears finical in the work of the American engraver to his fellow-craftsmen dwelling in countries where there is greater variety in the dimensions and quality of the work to be obtained. Notwithstanding want of appreciation on the part of the foreign engraver for this small work, it has obtained ample recognition from the foreign press and the foreign artist. As far as it goes it is complete, and has a bigness of its own which bears no relation to square inches. Standing half-way across the hall, one is struck by the distinctness with which he sees the whole intent of these subjects, although reduced to eight inches by five, and the expression of little faces. A closer examination would seem impertinent; nevertheless it discovers other charms worth seeking. But it is not from choice that the American engraver confines his efforts to narrow limits; it is his misfortune that the magazines by which his art has been fostered and encouraged in making what advancement it has, remain the only field for its practice; no avenues opening for progress in any other direction.

The recognition of the fact, by some of our engravers, that every art ought to be self-dependent, has led them to do something on their own account, purely for the sake of art, and depend for remuneration upon the sale of prints; and the evidences of this effort on their part rise above the cloud of pretty illustration like a bow of promise to the future of wood-engraving. All the large pictures on these walls, save two engraved by King for *Harper's Weekly*, are owned by the engravers themselves, and were done with the sole purpose of advancement as stated. First of all are the prints of the Portfolio published three years ago, for the Society, by the Harpers. These pictures, twenty-five in number, form the backbone of the Paris exhibit, and, as placed here, run through its entire length, binding it together and sustaining it at a high artistic level. Then comes Kingsley, who is represented by "Silence," after W. B. Baker, "The Old Mill," after J. F. Murphy, "Midsummer," after Daubigny, and "Historic Ground in the Connecticut Valley," and "In the Harbor," both from original paintings. Kruell has his four portraits of Darwin, William Lloyd Garrison, and Wendell Phillips, which were noticed in these columns on their exhibition at the Century Club last month. Miss Powell has "The Resurrection," after La Farge; and French "A Christmas Vigil," from an original. These prints are all of considerable size. Besides these are "The Spring Time of Love," and "White Birches" by Miss Cooper; a landscape by Dana: and "Mrs. Siddons," after Gainsborough, by Johnson, which are only less in dimensions, the merits being quite equal to those of the larger pictures, and the purpose the same, namely, to break through an outgrown environment.

Another hopeful sign here observed is the amount of original work, where painting and engraving are done by one person. Some of this is of great excellence. There is scarcely a better thing in the exhibition than No. 58, an original by French. It were useless to mention each particular contribution to this interesting and beautiful display. They are all included in the general excellence. Notable features are the strength shown by Kingsley's large work and the delicacy of Kruell's, the etcher's quality that seems to grow upon Johnson, and some of King's large work.

The Society of American Wood-Engravers should learn, from the success of the present exhibition, the value, as an educational force in their interest, of establishing in some fitting institution of this city a permanent exhibit of their work, for there are many people who have yet to comprehend the great beauty of their art.

Charles Scribner's Sons' New Books.

Vols. III. and IV. Just Published:

HISTORY OF THE UNITED STATES.

By HENRY ADAMS. Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. $4.00. Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"It would be difficult to speak too highly of the work. Mr. Adams has exhibited all the qualities of the ideal historian. He is thorough in research, exact in statement, judicial in tone, broad of view, picturesque and impressive in description, nervous and expressive in style."—N. Y. Tribune.

"A memorable addition to American historical literature, which will take rank with Bancroft's and above Hildreth's, and which is likely to long remain without a rival. His literary competence, his ripeness of culture and fulness of information, his breadth of sympathy and unswerving impartiality speak for themselves."—*N. Y. Sun.*

"Mr. Adams's thorough and captivating work is full of nervous life. Prominent among the admirable qualities is the remarkable combination of condensation with interest and vivacity. We should be inclined to call this the best book which has yet been written upon American political history. In point of literary execution Mr. Adams is easily the best of our political historians."—*N. Y. Times.*

Literature and Poetry.

By PHILIP SCHAFF, D.D. 8vo, $3.00.

The essays which make up this volume treat of "The English Language," "The Poetry of the Bible," "The Dies Irae," "St. Bernard as a Hymnist," "The University, Past, Present, and Future," "Dante Alighieri," and many other interesting literary topics, revealing throughout the breadth of the author's learning, the acuteness of his critical faculty, and the popular character of his method and style.

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

"The volume addresses the cultivated tastes of all who love a true poetry. It is the fruit of years of appreciative study of the poet. We owe the author a debt of thanks for giving us this estimate, so careful, so scholarly, so full of true devotion to poetry in its largest meaning."—*Rev. James O. Murray, Professor of English Literature in Princeton College.*

AMONG CANNIBALS.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

From Dr. Schliemann.

"I have read the book with immense interest and delight. It is a work which will have a very long life, for it is full of useful knowledge. The reader forgets that he is reading a mere description, and thinks that he is at the author's side, and shares with him the hardships, dangers, and joys of the life among cannibals in the wilderness of Australia. The whole civilized world must be grateful for this really wonderful work."—H. Schliemann.

The Religious Aspect of Evolution.

By JAMES MCCOSH, D.D., LL.D. 12mo, $1.00.

An able critique of the Evolutionary doctrine from the standpoint of Christianity.

"One of the best epitomes of the relation of the Creator to his earth, in the process of creation, that has been written."—*Hartford Courant.*

Down the Islands.

A VOYAGE TO THE CARIBBEES.

By William Agnew Paton. Beautifully illustrated. New edition. Square 8vo, $2.50.

"An exceedingly entertaining book of travels. Mr. Paton relates what he has seen in the Windward Islands, from St. Kitts to Trinidad, and with this he interweaves a vast amount of official and historical information. The story is highly romantic."—*Boston Beacon.*

EMIGRATION AND IMMIGRATION.

A Study in Social Science. By RICHMOND M. SMITH, Professor of Political Economy and Social Science in Columbia College. 12mo, $1.50.

CONTENTS.—Introduction—The History of Emigration—History of Immigration—Immigration and Population—Political Effects of Immigration—The Economic Gain by Immigration—Competition with American Labor—Social Effects of Immigration—Assisted Emigration and Immigration—Protecting the Emigrant—Chinese Immigration—Legislative Restriction of Immigration—The Question of Principle and of Method.

The comprehensive scope of Professor Smith's book is indicated in the foregoing summary of its contents. It is a popular examination of one of the most urgent of present-day problems from historical, statistical, and economic points of view, the information being full and exact, and the author's style being a model of terseness and clearness.

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 illustrations. Bound in half leather, 8vo, $6.00, *net.*

"The first satisfactory popular account of the American Railway. It is a striking example of thoroughness and judgment. In the general design, in the selection of writers, in the illustrations, and in the arrangement of the matter the book is a model."—*Christian Union.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. By PAUL B. DU CHAILLU. With 1,400 illustrations. 2 vols., 8vo. $7.50.

"These luxuriously printed and profusely illustrated volumes undoubtedly embody the fullest and most detailed account of our Norse ancestors extant. It is an extensive and important work."—*N. Y. Tribune.*

*** For sale by all Booksellers, or sent, post-paid, on receipt of price by the Publishers,*

CHARLES SCRIBNER'S SONS, 743-745 Broadway, New York.

Scribner & Welford's
NEW BOOKS.

The Early Diary of Frances Burney, 1768-1778.

With a selection from her Correspondence and from the Journals of her Sisters, SUSAN AND CHARLOTTE BURNEY. Edited by ANNIE RAINE ELLIS. 2 vols., demy 8vo, $12.00.

This is believed to be the only published, perhaps the only existing, record of the life of an English girl, written by herself, in a century before that which is now in its wane. Such a portrayal of a young English woman and her times would be interesting even if the girl had not been (as was this one) a born author, who lived among men and women more or less distinguished, herself became famous, and was admired by the admired, as well as praised by the common voice.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. Seeley, author of 'Horace Walpole and his World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

In Tennyson Land:

Being a Brief Account of the Home and Early Surroundings of the Poet Laureate, and an Attempt to Identify the Scenes and Trace the Influences of Lincolnshire in his Works. By J. CUMING WALTERS. With 12 Illustrations by F. G. KITTON, by drawings from photographs and sketches taken especially for the author. The pictures include representations of Somersby Rectory, The Moated Grange, The Brook, The Mill, Louth Grammar School, Tennyson's Birthplace. Demy 8vo, white cloth, gilt, $1.75.

The Marriages of the Bourbons.

By Captain the Hon. D. BINGHAM. With Illustrations. 2 vols., 8vo, $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

Shakespeare Sonnets.

Edited, with Notes and Introduction by THOMAS TYLER of the University of London, Editor of the Facsimile Edition of Shakespeare Sonnets. 8vo, cloth, with Portraits, $3.00.

Ancient Cures, Charms, and Usages of Ireland.

Contributions to Irish Lore, by LADY WILDE, author of 'Ancient Legends of Ireland.' 12mo, cloth, $2.25.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

(Removed from Amherst, Massachusetts, and Oswego, New York, to Burlington, Vt.)

FIFTEENTH SESSION: July 9th to August 19th.

For board and rooms address Miss H. L. Burritt, Burlington, Vt.

"The Sauveur Summer School of Languages has come to be a recognized factor in the educational work of this country."—*The Critic.*

For Catalogues of the School, and Circulars of Dr. Sauveur's Educational Works, address, DR. L. SAUVEUR, Copley Terrace, Roxbury, Boston, Mass.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

KNABE

PIANOFORTES.

UNEQUALLED IN

WAIT FOR

Stanley's Own Book

Henry M. Stanley is now at Cairo busily engaged in writing the only authentic story of his expedition to find Emin Pasha. It will be published at an early day by Charles Scribner's Sons, who control all American rights. This is the only book on the subject that will be written by Mr. Stanley himself, or with his consent or authority. Remember that STANLEY'S OWN BOOK WILL BEAR ON THE TITLE PAGE THE IMPRINT OF CHARLES SCRIBNER'S SONS, and that it is the only one in which he will have any personal interest. It will be in two volumes of about 500 pages each, well provided with maps, and amply illustrated from Mr. Stanley's own photographs and sketches. It will be sold only by subscription. Agents wanted everywhere.

CHARLES SCRIBNER'S SONS,
743 and 745 Broadway, New York

BANGS & CO.,

739-741 Broadway, N. Y.,
Announce the sale of

Books of portraits and engravings, and works in standard English literature. The books in exceptionally good condition, and many of them elegantly bound by Matthews and others. Bookcases, framed engravings, fine portraits and prints, and a few autographs. The sale to take place April 7, 8, and 9. Catalogue mailed on receipt of 50 cents.

The Bermuda Islands.

The Scenery, Physical History, and Zoölogy of the Somers Archipelago. By Prof. Angelo Heilprin, F.G.S.A., F.A. Geogr. Soc., etc. Large 8vo, cloth, 19 Plates. Price $3.50.

"A disciple of Darwin, Prof. Heilprin attacks the problem of the formation of the Bermudan rock; and rarely does one find so charming a combination of rhetoric and science. . . . With this volume for a field-book, one with even the rudiments of delight in the miracles of continuous creation could spend a happy season in this summer land."—*The Critic.*

". . . Two of the most important of scientific questions of the day are discussed in a manner charmingly clear and simple."—*Christian Union.*

". . . The whole discussion, together with the critical notices in the appendix, is full of interest."—*N. Y. Tribune.*

Sent, postpaid, on receipt of price.

ACADEMY OF NATURAL SCIENCES
of Philadelphia, or all booksellers.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.

NOW READY:

The Story of the Barbary Corsairs. By Stanley-Lane Poole, author of 'The Story of Turkey,' 'The Moors in Spain,' etc. With the collaboration of Lieut. J. D. Jerrold Kelley, U. S. Navy. No. XXVII. in the Story of the Nations Series. 12mo, illustrated, $1.50.

"He has produced a volume at once creditable to his literary sense and his historical knowledge, and at the same time of absorbing interest and value to any reader who will take it up."—*N. Y. Times.*

"A highly interesting account of the Barbary Corsairs. Much of the matter will be new to the majority of readers, and all of it will be found entertaining and instructive."—*N. Y. Tribune.*

Thomas Jefferson's Views on PUBLIC EDUCATION. By John C. Henderson. With a New Portrait of Jefferson engraved for the work from the painting by Thomas Sully. 8vo, cloth, $1.75.

"The volume gives an idea of what, in the best and in the truest sense of the term, 'Jeffersonian principles' demand that American statesmanship shall do in respect to duly cherishing the interests of learning in all parts of the Republic of the United States."—*Extract from Author's Preface.*

KNICKERBOCKER NUGGETS.

XXVII. The Boyhood and YOUTH OF GOETHE. Comprising the first eleven books of his Autobiography (Truth and Poetry from my own Life). 2 vols., $2.00.

XXVI. The Garden, as considered in literature by certain polite writers. With a critical essay by Walter Howe. With Portrait of William Kent. $1.00.

"A book that will especially delight all who are fond of gardens and gardening, and who take a certain pleasure in enjoying nature when treated by man as a work of art."—*Boston Home Journal.*

XXIII. The Autobiography OF BENJAMIN FRANKLIN. Edited, with Notes, by John Bigelow, $1.00.

"It is, perhaps, the neatest and prettiest edition of that remarkable book ever published in this country."—*Philadelphia Times.*

The Industrial Progress of the NATION; Consumption Limited, Production Unlimited. By Edward Atkinson, author of 'The Distribution of Products,' etc. 8vo, cloth, $2,50.

"The problems presented are treated with skill and force, and will interest even those who do not agree with the conclusions reached by the author."—*N. Y. Journal of Commerce.*

"Whether the reader fully agrees with his reasoning or not, he always finds something worth reading and thinking about."—*N. Y. Independent.*

WANTED — A YOUNG WOMAN who knows something of the work of a newspaper office and incidentally the book trade. One who can read exchanges and condense. Address, stating age, reference, and expected remuneration, "Weekly Paper," P. O. Box 3037, New York.

History of the United States.

By HENRY ADAMS. Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. $4.00. Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"It would be difficult to speak too highly of the work. Mr. Adams has exhibited all the qualities of the ideal historian. He is thorough in research, exact in statement, judicial in tone, broad of view, picturesque and impressive in description, nervous and expressive in style."—*N. Y. Tribune.*

Emigration and Immigration.

A Study in Social Science. By Prof. RICHMOND M. SMITH of Columbia College. 12mo, $1.50.

Prof. Smith's book is a popular examination of one of the most urgent of present-day problems from historical, statistical, economic, and social points of view, the information being full and exact, and the author's style being a model of terseness and clearness.

Literature and Poetry.

By PHILIP SCHAFF, D.D. 8vo, $3.00.

The essays which make up this volume treat of "The English Language." "The Poetry of the Bible," "The Dies Irae," "St. Bernard as a Hymnist," "The University, Past, Present, and Future," "Dante Alighieri," and other interesting literary topics, revealing throughout the breadth of the author's learning, the acuteness of his critical faculty, and the popular character of his method and style.

"A brilliant contribution to critical and historical literature."—*Brooklyn Times.*

Among Cannibals.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

From Dr. Schliemann,

"I have read the book with immense interest and delight. It is a work which will have a very long life, for it is full of useful knowledge. The reader forgets that he is reading a mere description, and thinks that he is at the author's side, and shares with him the hardships, dangers, and joys of the life among cannibals in the wilderness of Australia. The whole civilized world must be grateful for this really wonderful work."—*H. Schliemann.*

The Religious Aspect of Evolution.

By JAMES MCCOSH, D.D., LL.D. 12mo, $1.00.

An able critique of the Evolutionary doctrine from the standpoint of Christianity.

"One of the best epitomes of the relation of the Creator to his earth, in the process of creation, that has been written."—*Hartford Courant.*

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

"The volume addresses the cultivated tastes of all who love a true poetry. It is the fruit of years of appreciative study of the poet. We owe the author a debt of thanks for giving us this estimate, so careful, so scholarly, so full of true devotion to poetry in its largest meaning."—*Rev. James O. Murray, Professor of English Literature in Princeton College.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

The Nation.

NEW YORK, THURSDAY, MARCH 6, 1890.

The Week.

PRESIDENT HARRISON has rounded off the first year of his Administration by forcing through the Senate the confirmation of ex-Gov. Warmoth as Collector of the Port of New Orleans. This comes as a climax for a series of bad appointments which the President, in open violation of his solemn personal pledges, has been making with mournful regularity for a full twelvemonth. Nothing that he has done has been more inexplicable than his deliberate attempt to restore to political office and activity the most offensive members of the old carpet-bag régime in the Southern States. He made his first trial of this kind with Mahone, and his abject failure to accomplish anything in Virginia by turning over all the Federal patronage of the State to him appears not to have discouraged him in other directions. Mahone and his party were so overwhelmingly defeated in the November elections of last year that the President dropped him without ceremony; but he had previously been cultivating friendly relations with the Warmoth gang in Louisiana, and he did not break those off. As early as August of last year he offered the Collectorship of New Orleans to Warmoth, and nominated him to the Senate a few months later. If he did not know Warmoth's character in August, he had ample opportunity to learn about it before he sent in his name, for the newspapers at once refreshed his memory; but he must have known it well enough to know that a man more totally unfit for high office could not be found in the whole United States. Warmoth's performances between 1868 and 1875 were so scandalous that the country rang with them, and if Gen. Harrison did not know of them, he must have been blind and deaf.

It is not our purpose to give at this time a complete record of Warmoth's career. A few of its more notorious features will suffice. He was Governor of Louisiana between 1868 and 1872, and during that period the State was a pandemonium of scandal and disorder. "That his administration as Governor was corrupt and bad is unfortunately true," said the New York *Tribune* on December 28, 1874, when it was trying to make out a defence of him for killing a man in the streets of New Orleans. "Most of the Louisiana gang were brought into prominence because they were great rascals," said the *Tribune* again on July 12, 1877. Those two Republican judgments accurately sum up Warmoth's career as Governor. He had been charged before becoming Governor with having defrauded the Government while serving as a special cotton agent in the South. He closed his career as Governor in a fitting manner, by being charged by the Lieutenant-Governor of the State with seeking to bribe him, with an offer of $50,000 and unlimited appointments, to give his assistance to Warmoth in the legislative fight with Kellogg after the election of 1872. The Lieutenant-Governor revealed the offer, and Warmoth was impeached for it by the Legislature. After this exploit he disappeared temporarily from the public view. He left the Republican party and joined the Democratic. In the returning-board disputes of 1877 Warmoth reappeared again, first as a Republican and afterwards ratting to the Democrats. Little has been heard of him since till President Harrison took him up, and that little has not been good.

The President has added one more to the portentous list of editors whom he has muzzled with important public office by appointing Charles E. Fitch, editor of the Rochester *Democrat and Chronicle* and Lecturer on the Ethics of Journalism in Cornell University, a Collector of Internal Revenue. We have made no attempt to keep a list of editors of newspapers in smaller cities and towns who have been given post-offices and other minor places in the service, but it is known to be very large. The list of those conducting prominent journals who have received or been offered important offices now stands as follows:

Whitelaw Reid, Editor of the New York *Tribune*, Minister to France.

Murat Halstead, Editor of the Cincinnati *Commercial Gazette*, Minister to Germany. (Rejected by the Senate.)

John C. New, Editor of the Indianapolis *Journal*, Consul-General at London.

J. S. Clarkson, Editor of the *Iowa State Register*, First Assistant Postmaster-General.

Ellis H. Roberts, Editor of the Utica *Herald*, Assistant United States Treasurer at New York city.

Charles Emory Smith, Editor of the Philadelphia *Press*, Minister to Russia.

James B. Stone, Editor of the Detroit *Tribune*, Collector of Internal Revenue for the First District of Michigan.

Robert P. Porter, Editor of the New York *Press*, Superintendent of the Census.

John Hicks, Editor of the Oshkosh (Wis.) *Northwestern*, Minister to Peru.

Alexander Reed, Editor of the Appleton (Wis.) *Post*, Consul at Dublin.

J. C. Kinney, Associate Editor of the Hartford *Courant*, Postmaster of Hartford.

Charles E. Fitch, Editor of the Rochester *Democrat and Chronicle*, Internal-Revenue Collector for the Twenty-eighth District of New York.

A remarkable tribute has been paid to Mr. Saltonstall, the removed Collector of Boston, by a large number of the most prominent citizens, representing the Republican party as well as the Democratic. They say that they "have observed with cordial approbation and satisfaction your administration of the Boston Custom-house for the past four years"; that they "have seen that, during your tenure of office, the administration of the Custom-house has been, for the first time in a generation, free from partisan influence; that it has been conducted on business principles by business methods, and by men trained in those principles and methods; that it has been just and considerate to importers and entirely faithful to the Government"; that they "have heard nothing of Custom-house influence in caucuses and conventions, except in the way of complaint from persons who desired and demanded that such an influence should be exerted to advance their personal and political ends, and who have not succeeded in obtaining it"; and that "they have seen the national Civil-Service Law faithfully and fully carried out by a collector of customs in full and obvious sympathy with its spirit and purpose, and who has proved himself a loyal supporter of the great cause of civil-service reform." The appointment of his successor seems to them the appropriate occasion for expressing their satisfaction with Mr. Saltonstall's administration in a public and formal manner, and they therefore invite him to meet them at a public dinner. The testimonial will be read with interest by the man who, as candidate, gave a pledge "that fidelity and efficiency should be the sure tenure of office," and who, as President, has removed the most faithful and efficient collector in the country. But will it make any impression on him? Not the smallest. He will probably "lift up a prayer," and go right on in the old way.

So far as we have been able to discover, not a single Republican newspaper in the land has ventured to notice in any way the *Tribune's* remarkable confession that the Republicans bought the Presidency for Harrison in 1888 by selling the Governorship to Hill. Why is this the case? Why do Republican journals show no indignation over such a declaration from such a source? Why do they not denounce it as slanderous and demand its retraction? Is their silence due to a conviction that the statement is true, and that, therefore, the least said about it the better? There can be no other explanation. No great party of moral ideas would consent to remain silent under a charge so damning unless it was convinced that it could not be disproved. In his famous "soap" speech in 1881, the late President Arthur said: "If it were not for the reporters, I would tell you the truth [about Indiana], because I know you are intimate friends and devoted adherents of the Republican party." That meant that, so far as his knowledge went, there was no fear of protest or disapproval from "devoted adherents of the Republican party" over revelations that elections had been bought. His estimate of the moral sense of his party in 1881 best explains the party's silence now in the face of the *Tribune's* confession, as it best explains the confession itself.

Senator Hoar's answer to Senator Blair, when the latter complained of the scant attention given to his ponderous discourse on

the Mendicancy Bill, was exactly to the point. "If a man sits down in his house," said Mr. Hoar, "and prepares a speech three or four weeks before the measure is coming up that it has anything to do with, and gives notice to the Senate that next Thursday he is going to deliver that speech, how can you expect the newspapers of the country to fill their columns, which they want to sell, with productions that cause the desertion of every seat in the Senate except that which belongs to the man who is speaking, and perhaps his colleague, when they are both here?" This was not a mere personal thrust at Mr. Blair, although it served that purpose excellently well. It pointed at the growing practice in both houses of Congress of preparing set speeches and reading them from manuscript, whereby the Senate becomes a sort of academy or lecture-room or "protracted meeting," and, therefore, a very dull place. Such practices are not allowed in the English House of Commons, and that fact may serve to explain (to Senator Hale, for example) why the London press give much more attention to Parliamentary debates than the New York press give to Congressional proceedings. The Parliamentary debates are real debates, not compositions. They produce intellectual friction, with resulting heat, and this is always fresh and interesting.

Real debates in Congress get into the newspapers easily enough. This very debate on the newspapers, started by Blair, was very fully reported and published, because it was interesting matter. His long-winded essay on education was not noticed by the press, because it was intolerably dull, and the editors knew infallibly that the public would not read it, but would upbraid them for inflicting it upon them. Senator Spooner's speech of Monday does not lack publicity. It was fresh and crisp, and although evidently the product of careful study and reflection, as every speech ought to be, was delivered straight from the shoulder without notes. It was the speech of a debater. The reporters and the Senate alike recognized the tone and flavor and gave close attention to it. Contrast this with Mr. Blair's ponderous sermon. Contrast it with the two deliverances of one speech that Senator Vest reminded us of the other day. This was a case where two members of Congress had bought the same speech "unbeknownst" from a literary hack. One of them got "leave to print" from the House, while the other actually delivered it by reading from his desk, and both copies appeared in the same issue of the *Congressional Record*. This, Mr. Vest said, had actually occurred during his period of Senatorial service.

The new silver bill reported by Senator Jones of Nevada, from the Senate Committee on Finance, is as interesting as anything in Darwin's 'Variation of Animals and Plants under Domestication.' It makes the Treasury the purchaser of both gold and silver bullion, the purchases of the former being without limit and at the fixed price of the present standard, while those of the latter are to be at the market price (in gold) and at the rate of $4,500,000 per month. This is about the monthly rate of production of our mines. The bill would therefore open the treasury to the silver-miners to exactly the extent they desire. "At the market price!" What will be the market price when one purchaser takes half of the world's product? Clearly the market price will be much easier to manipulate than it is now. If the Secrétan syndicate had had a steady purchaser for one-half of all the copper produced in the world "at the market price," would they not have been able to make the market price to suit themselves? This is what they did for a long time without such a purchaser. They made the market price for more than a year, while every consumer was scamping as much as possible. This bill is much more objectionable than the Windom bill, for although that measure is bedevilled also with "market price," it has a provision by which the Secretary can, if he is wide awake, protect the Treasury against speculating syndicates. The clause in the Jones bill, making the Treasury a purchaser of gold bullion without limit, at the present standard, is in one sense the equivalent of present law. The mint now takes all the gold offered, and returns coin for it at the standard rate. This bill provides, however, that for the bullion so taken, whether gold or silver, Treasury notes shall be given, and that those notes shall be redeemed in "lawful money," that is, in gold coin, or silver dollars, or greenbacks, at the Government's option. No gold will be offered on such terms. The only meritorious clause in the Jones bill is that which repeals the present law requiring the coinage of $2,000,000 per month.

The extraordinary thing about the presentation of the Dependent Pension Bill scheme in the Senate the other day was the nonchalance with which the chairman of the Pension Committee presented the estimate that it would call for an addition of $35,000,000 a year to the outlay for pensions, already nearly three times that sum. The entire expenses of the United States Government for any one year never reached so large a total as $35,000,000 until the year 1837. Yet, nowadays, Senators talk of spending as much money as it once cost to conduct the Government as though it were a mere trifle hardly worthy serious attention.

There is a deal of waggishness in the newspapers about the duty on steel rails. It appears that the Committee on Ways and Means think that the duty might be reduced to $10 per ton (now $17) without allowing a pound to be imported from abroad, and they are disposed to make this concession on paper—a concession of form without substance, for a duty of $10 is absolutely prohibitory. But the Scranton manufacturers, of course, lift up their hands in horror, and begin to talk about wages and workingmen. So, too, the Philadelphia *Press* begins to shiver, or pretends to. It acknowledges that the price of rails in England is quite as high as it is here, but apprehends that it might decline there, and that then the opportunity of plundering the American consumers of $17 per ton, as they were plundered two or three years ago, would not recur. "A tariff is more needed in times of depression," it says, "than in times of prosperity." Yes, when the people are feeling poor, then is the time to go into their pockets deepest. "From him that hath not, shall be taken even that he hath." The truth is that the best rails are selling in England at £7 5s. ($34 50) per ton, and in this country at $32. The English makers have to bring their Bessemer ores from Spain and the Mediterranean at a constantly increasing cost, and the price of coke is two or three times higher there than here, and there are absolutely no signs of a change in either particular.

Mr. H. K. Thurber has rushed to the defence of the Pittsburgh Plate-Glass Company (which is reported to have paid net profits last year of $950,000) and the 144 per cent. tariff which enabled them to do it, by saying "that while foreign plate-glass was sold to American consumers in 1870 at $2.50 a square foot, in 1889 the same quality of plate-glass, made in America, was sold to American consumers for 85 cents a square foot," and that this result was due to the protection which the tariff afforded to the American plate-glass industry. In so saying Mr. Thurber has got himself into a dilemma from which he will find it not a little difficult to extricate himself. Thus, if it was the beneficial influence of protection that in the years from 1870 to 1889 brought down the cost of plate-glass in the United States from $2.50 to 85 cents per square foot, what was the influence that brought down the cost of this same article during the same year to the same extent in Great Britain and Belgium, where its manufacture has had no protection? On the other hand, if the United States can now sell for 85 cents what costs $2.50 to produce in Europe (which people unlearned in the subject would be likely to infer from Mr. Thurber's statement), why, in the name of common sense, do we want to keep up a duty of 144 per cent. on the importation of plate-glass?

The spoils politicians of both parties continue to unite in opposition to the onward march of ballot reform. The Republican majority of the West Virginia Senate has killed the bill proposed by the Democratic Governor in that State, which was an excellent measure, embodying the leading principles of the Australian system. There is no State in the Union more in need of the reform than West Virginia, chiefly because the Republican managers have made it debatable ground in the recent Presidential election by sending a large corruption fund there. The solid Republican vote in the State Senate against the reform is merely a confession that the party knows that the enactment of the law would put a stop to further operations of the kind. Word comes from New Jersey that the Democratic leaders there are not in earnest in their professions of zeal for the reform, and will either see to it that no reform bill is passed, or that only a

sham measure is allowed to go on the statute-books. In Maryland the Gorman influence has destroyed all hope of the passage of a measure there this year, unless it be one which will help rather than hinder Gorman methods in elections.

Mr. C. F. Peck, whose brilliant reports on the labor question have from time to time shed effulgence upon New York and added to the gayety of nations, has sent a reply to the State Senate in answer to a resolution asking him certain questions about the practical operation of a swindling bill that passed the Legislature a year or two ago, increasing the pay of laborers on the public works and making them a preferred class of wage-workers. Peck says that while he has no specific information, he is decidedly of the opinion that the said law has had the effect to increase the wages of laborers not in the employ of the State. He thinks that this has been brought about by the force of example. The sight of men getting $2 per day from the State is stimulating to a man who is getting only $1.50 from a private employer: it impels him to demand more pay. If Peck had had his ears open during the last campaign, he would put in a very different answer. He would have said that the extra money paid by the State stimulated industry; that it enabled the laborers on public works to buy more goods of every description, and that in this way employment was increased and the whole community made more prosperous. This, we all know, is what taxation at the Custom-house does. Why should not taxation at the State-house do the same?

Senator Stewart has introduced in the Legislature a bill which, if it became a law, would in time work a needed reformation in the police-court bench of this city. It provides that "no person shall be eligible to appointment as police justice unless he shall have previously served as such justice, or unless he shall have been regularly admitted to the bar as an attorney and counsellor-at-law." One would naturally suppose that the latter requirement, admission to the bar, would be taken as a matter of course by the appointing power, but it has not been. In fact, if it had been in force when our present fifteen police justices were appointed, only three of them would have been selected, for only that number of them had ever seen the inside of a law-book at the time. One was a coal-dealer; one had been on the police force; one was a contractor; one was a manufacturer of window-blinds; four were clerks in public offices; one was a produce-dealer; one was an iron-manufacturer; one was a school-teacher; and one had held various political offices, none of which had anything to do with the interpretation of law. Every man of the fifteen was, however, thoroughly saturated with "politics," and in nearly every instance had been or was still the leader or boss of his district. When we consider that for legal talent of this order the city pays $8,000 a year, just double what the national Government pays to its district judges, and nearly as much as it pays to its Supreme Court Justices, it does not seem unreasonable that the standard should be raised a little.

Opinions may differ as to the propriety of Labouchere's bringing up "the West End scandal," as it is called, in Parliament, but there would seem to be little question as to the injudiciousness of the way he has been disposed of by suspension. Much as he may be distrusted or disliked by thoughtful politicians and by "good society," the Radicals, and especially the working-class Radicals, have great confidence in him and admiration for him. His constituents, the Northampton shoemakers, adore him, and his weekly exposures of the sins and follies of high life in *Truth* make him a much more formidable personage than if he were simply a member of the House. That the aristocratic actors in the scandal have all escaped to parts unknown is a good thing for the community, as their flight means ruin, and their trial would have been in many ways a public misfortune. But the belief has, rightly or wrongly, got abroad that they received notice in time to fly, from some one in authority, with Lord Salisbury's connivance or at his instigation. Of this Labouchere says he has some sort of proof, in the shape of information from some highly placed person, whose name he offered to communicate on paper to the Attorney-General, who was put up in the House to oppose him on behalf of the Government and Lord Salisbury.

It would seem at this distance to have been the best policy to let him blurt out all he knew, name and everything, and then treat the whole affair with as much contempt as it could fairly be made to bear. Instead of this, the Attorney-General, Sir Richard Webster, one of the most aggravating and least convincing of orators, already much discredited by his disingenuousness in the Pigott affair, met him with a simple denial on behalf of Lord Salisbury, and refused to consider what Labouchere had to offer by way of proof. Now, Lord Salisbury, although a very great personage, is well known to be weak on the side of veracity. He has been guilty more than once of what may be called great public falsehoods. His denial, consequently, of any matter likely to discredit him does not carry conviction. When Labouchere refused to receive it as satisfactory, he had the sympathy and approval of the whole body of Radicals, and was secretly justified in the eyes of nearly every man in the House of Commons. The very best thing to have done with him, when he declined to believe Lord Salisbury, was to call him to order and reprimand him. To ask him to retract, and, on his refusal, suspend him, was a huge mistake, and probably the very thing he likes. He is now a martyr, and all England has been set talking about his secret, and will keep talking until he has had an opportunity to blurt it out. Not only the Northampton shoemakers, but the Radical voters all over England, will believe that he has been suspended because the Government and Lord Salisbury did not dare to face his revelations.

Besides Austria and Italy, France and England, nearly all the smaller European Powers have agreed to attend the German Emperor's Labor Conference. The small Powers always like to be asked to a conference of any kind, because it is a sort of recognition of their equality, which is grateful. But there is probably not one of them which expects any practical results from the discussion. There is nothing which the European Powers could agree on to help laborers except the reduction of the huge standing armies. These enormous armaments constitute the only burden on Labor which it is in the power of the governments to remove, and yet probably any such reduction is the last thing the Emperor William thinks of. But the occasion might be turned to good account if the small Powers were to join in a vigorous protest against the size of the German, Austrian, Russian, and French armies. These armies are eating the heart out of their respective countries, and have led to the protectionist experiments under which France, Germany, and Italy are now groaning. The Socialists are fully aware of this fact, and will not let it be forgotten when the Conference is sitting.

The long report on the financial position of Brazil put forth at the end of last December by Minister Barbosa is a good deal of a polemic against the fiscal policy of the Empire. The most serious allegations are of juggling bookkeeping and of underhanded expedients to keep up foreign exchange and the quotations of Brazilian bonds. Quite aside from all this, however, certain parts of Ruy Barbosa's report are of great significance as a protest against the tendency to public "prodigality, which appears to exercise such deep and fatal attraction in our day upon the policy of democracies." If the Minister of Finance correctly represents the drift of the new Brazilian Republic, his words are of much promise when he says: "Let us energetically prune expenses. Let us eliminate useless departments. Let us contract the orbit of officialism. Let us strengthen and improve administration, directing scrupulously the filling of State offices by competency, by merit, by capacity. Let us not multiply pensions, which drop by drop may grow into torrents of ruinous expense. Let us fly from republican favoritism, the immoral and fatal transformation of the old monarchical nepotism. Let us not continue in force, under the new situation, the habits of a nation of place-hunters." Referring to the countless schemes for internal improvement and for agricultural development which had received public sanction and monetary aid from the Empire, Minister Barbosa says that while, of course, the Republic will be bound to execute the contracts entered into under Dom Pedro, it will be against the best interests of the nation to continue that sort of "gross and foolish State socialism." Brazil is not the only country where there is need of having such frank utterances by public men.

STIRRING UP STRIFE.

THREE weeks ago W. B. Saunders, a deputy marshal of the United States Court in Florida, was shot dead from the side of the road one afternoon while out driving, everything indicating that the act was done deliberately, in pursuance of a plot to put him out of the way. It will doubtless seem a harsh thing to say, but no candid person can read the history of the proceedings in the Federal courts of Florida which preceded this shooting, without the conviction that they were calculated to lead to exactly such an outbreak of violence against an officer of the court. Judge Settle, the former District Judge of the United States for the Northern District of Florida, died early in December, 1888, and the Republican Senate during the following year refused to confirm the nomination made by Mr. Cleveland to fill the vacancy, in order to reserve the appointment for a Republican President. Some weeks after Mr. Harrison's accession he named for the place Charles Swayne, but the nomination has not to this day been confirmed. Mr. Swayne was a comparatively briefless lawyer, who went to Florida from Philadelphia but a few years ago, and was not even a member of the bar of the court over which he was placed as presiding officer. To make matters worse, he went upon the bench fresh from the disappointments of a political defeat, to hold a court in which some of those who had opposed him were to be tried. The District Attorney, J. N. Stripling, is described as "a man who had been making a bare living as a lawyer, was at enmity with the people of his own town and county, eager for the profits and emoluments of his office, and ready to use it to gratify his grievances against his old neighbors."

The Northern District of Florida is divided into three divisions, and the system had been to hold terms in each division of the district—one at Jacksonville, in the eastern division; one at Tallahassee, in the middle division; and one at Pensacola, in the western division. Tallahassee is by rail 166 miles from Jacksonville, and Pensacola is 203 miles from Tallahassee, making it 369 from Jacksonville. These divisions were established by a rule of court made by the former district judge, and the rule was based upon acts of Congress establishing these terms of the court for the trial of offences in the part of the State where they were committed. Without any motion made in open court, without any notice to anybody, without any public announcement of such action, this rule of court was secretly set aside on July 2, 1889. It was further ordered at the same time and in the same manner that the Commissioner be intrusted with the power of determining the times and places to which all criminal process and bonds should be returnable, without regard to the nearest terms of the court, either with reference to time or place.

The Federal Jury Law which was approved June 30, 1879, provides "that all such jurors, grand and petit, including those summoned during the session of the court, shall be publicly drawn from a box containing at the time of each drawing the names of not less than three hundred persons possessing the qualifications prescribed in section 800 of the Revised Statutes, which names shall have been placed therein by the clerk of such court and a commissioner, to be appointed by the judge thereof, which commissioner shall be a citizen of good standing, residing in the district in which such court is held, and a well-known member of the principal political party in the district in which the court is held opposing that to which the clerk may belong, the clerk and said commissioner each to place one name in said box alternately, without reference to party affiliations, until the whole number required shall be placed therein." At the same time that the changes regarding places of trial were made, the old Jury Commissioner—appointed by Judge Settle, a Republican—was removed and one Farnell was appointed in his place. The clerk of the court being a Republican, the Federal law required that the commissioner should be "a well-known member of the principal political party in the district opposing that to which the clerk may belong"—that is, in this case, a recognized and representative Democrat. But so far from being a recognized Democrat, Farnell was a leader in an independent movement in his county against the Democratic party at the last election, and had previously been elected to the Legislature by the Independents largely through the support of the Republicans.

A special term of the court was called to meet at Jacksonville in October. An examination of the list of grand jurors showed that twenty-two out of the twenty-three drawn and summoned were Republicans. Some of these were absent and their places were filled, not, as required by the Jury Law, by drawing the names from the jury-box, but by summoning Republicans from among the bystanders. A flood of light is thrown upon the methods by which such a result was brought about through the publication of the following letter, the authenticity of which is admitted by its writer:

> JACKSONVILLE, Fla., July 5, 1889.
> SIR: You will at once confer with Mr. Bulby and make out a list of fifty or sixty names of true and tried Republicans from your county registration list for jurors, United States Court, and forward same to Hon. P. Walter, Clerk United States Court, and it is necessary to have them at once, as you can see. Please acknowledge this. I am, yours truly,
> JOHN R. MIZELL, U. S. Marshal.
> C. C. KIRK, Esq., De Land, Fla.
>
> Please get the names of the parties as near steamboat and railroad stations as possible.

Before such a court, so officered and so conducted, were brought to Jacksonville persons indicted for offences committed in or near Tallahassee, 166 miles away, where, under Judge Settle, such cases had been tried, and even from Pensacola, nearly 400 miles away, where, under Judge Settle, they would have stood trial. In one instance two prominent business men of Tallahassee were served suddenly with warrants citing them to appear the next day before a United States Commissioner at Jacksonville, on a charge of despoiling Government timber lands, although there were two United States Commissioners in Tallahassee before whom their cases would regularly and properly have come. In another case a poor man who drives a milk wagon in Tavares, and who used to carry letters to his neighbors from the Post-office as a matter of accommodation, was arrested on the charge of violating the postal laws in so doing, and ordered to appear for trial before the court at Jacksonville. Of course there was a great deal of money for the court officers in such proceedings, and an incomplete statement furnished by the Attorney-General shows an expenditure of about $10,000 a month for witnesses' fees and fees of jurors and officers from October to February.

Saunders, the man who was killed, had proved his unfitness for the duties intrusted to him in a case which occurred about a year ago, the story of which is thus told: "He had in his hands a warrant for the arrest of one Brownell, who was accused of violating the internal-revenue law. He went out in the night-time, after having had several drinks of whiskey, to the house of this man, who lived in a little cabin in Holmes County. He entered the man's house without notifying him of his warrant or stating what his purpose was, and after stationing Mr. Weller, who was the internal-revenue officer and who had accompanied him, at the back door to intercept Brownell in case he should attempt to escape. . . . Brownell was resting quietly with his family. Alarmed at this invasion, not knowing that it was for any particular purpose, his first thought was that he was being attacked by enemies, and he jumped from his bed and ran to the back door, taking up as he went his gun. When he got out to the back door there was young Weller to intercept him. Supposing he also was engaged in a plot to rob or murder him, he killed Weller and took to the swamp and remained there till the next day."

That so flagrant a prostitution of the processes of justice to the purposes of private gain and partisan advantage should have provoked the people of Florida, until some reckless fellow went so far as to shoot Saunders, is not to be wondered at. It would be impossible to devise a system more cunningly contrived to provoke trouble and stimulate reprisals. The blood of Saunders rests upon the politicians who made him the instrument of their schemes.

The worst feature of this whole business is the suspicion, which it is impossible to avoid, that the Republican politicians really want to stir up just such difficulties as this; that they like to have an occasional Saunders murdered at the South, in order to "fire the Northern heart"; in short, that they are making a last desperate effort to revive the old sectional issue, and escape the new tariff issue, which they dread. How otherwise can one account for such performances as have just been recounted?

PROTECTION AND THE COLLEGES.

IN his report as Chairman of the Committee appointed to inspect the department of Political Economy at Harvard, Mr. John T. Morse, jr., utters an emphatic and apparently despairing protest against the wickedness of the course adopted by that institution towards the doctrine of protection.

So far as his strictures involve an imputation upon the fairness of those intrusted with the selection of instructors in this department, they seem to be sufficiently answered by the dignified and vigorous minority report of Mr. Henry W. Putnam. We need not, therefore, enter into any special discussion of the situation at Harvard College; but Mr. Morse's remarks remind us how familiar the like situation is in the colleges of all parts of the country.

What really troubles Mr. Morse—as it does his protectionist friends in the neighborhood of other colleges—is "the graduation every year of an almost solid phalanx of free-traders"; and he is not disposed to accept as ingenuous the explanation which defenders of the College authorities offer of this phenomenon. The instructors, say these defenders, do not undertake to dictate conclusions as to practical policy; they do endeavor to give the student such a grasp of principles and modes of thought, and such a command of the main facts of the case, as will make them competent to arrive at an intelligent conclusion themselves. Now, it is very hard for Mr. Morse to believe that a training of this kind can possibly have the effect of turning out an "almost solid phalanx" of young men opposed to our present protective policy; and it may therefore be worth while to point out some of the reasons why this effect is really a natural one.

The grounds upon which men honestly uphold protection may be divided into three great classes. The first class has reference to the immediate material benefit supposed to be gained by the nation which practises protection. Of "plain men," probably nine out of ten rest their faith in the benefits of protection upon the propositions that it "keeps the money in the country," and that it makes wages high by furnishing employment to native workers. Glaring fallacies like these—views which ignore the elementary fact that we cannot buy unless we sell, that we cannot employ foreign workmen unless we employ American workmen to produce the wherewithal for our side of the bargain—are of course dispelled at the first touch of rational method. No professor, protectionist or free-trader, German or English or American, would give such crudities and absurdities the countenance of his support. This alone goes a great way towards accounting for the change that takes place in a student's attitude towards the question; for whatever may be the actual merits of the case, a dangerous reaction is sure to set in when a young man suddenly perceives that the arguments by which, at home and in the streets and in the newspapers, he has been most accustomed to see it maintained, are so hollow and worthless. It is true that these shallow delusions do not constitute the whole of the argument which the protectionist makes, even on the point of immediate material benefit; but the more refined arguments on this head—even if we were to grant that they are not merely more complex forms of the same fallacy—have never formed a strong contingent to the protectionist's forces.

The second class of arguments comprises those which bear upon the future material benefit of protective duties; they are summarized in the phrase "protection to infant industries." Now, there was a time when this consideration was extremely influential in forming men's opinions on the subject. Whatever might be the force of the objections to this policy, it had at least the merit of not resting on a palpable delusion. Wise men might see the difficulty of making the policy effective, might point out the exorbitance of the price paid for the nurture of these infants, might foresee the certainty with which what was food for one would turn out to be poison for another; but reasonable men could believe, and did believe, that the price was not too high and that the benefits of the policy were not neutralized by its injuries. But the day of the "infant industries" argument is past; if for no other reason, because the very phrase cannot fail to provoke a smile in these days of giant manufacturing interests. We venture to say that no Harvard professor pronounces the "infant industries" argument intrinsically an absurdity; but he would have to be a very enthusiastic propagandist for protection to give the argument any vitality in the minds of open-eyed young Americans of to-day.

Finally, we come to the third class of arguments, those which are not strictly economic, but rather sociological. Unfortunately for protectionists, these also have been sadly weakened by time. It may have been all very well thirty or forty years ago to raise the cry that with free trade we must all be a nation of farmers, that we must introduce diversified industries by protection, and the rest of it. We are heartily convinced that the notion was erroneous always; but be that as it may, who is going to be stirred by such a cry now? With agriculture depressed and farms deserted, with the sudden and rapid increase of all the evils which we used to regard as confined to the great cities of the Old World, who is to be moved to dread the possible result of withdrawing some of the artificial stimulus which, according to its own advocates, is designed to encourage the pursuit of non-agricultural industries?

We must touch upon one more point raised by Mr. Morse. He cannot believe that there can be any difficulty in procuring thoroughly competent professors who shall be advocates of protection. We believe that what has been said above may serve in a measure to explain why that difficulty does exist now, in a greater degree than in former years. It was never possible for a clear-minded and trained professor of economics to countenance the notions still so current among the people as to the elements of the question; he had to support protection by more subtle considerations, and as a policy designed for more refined and distant uses than those which the wayfaring man looks upon as its purpose. These remoter considerations have lost much of whatever force they once had. But there is still another cause for their breakdown. High protection has now held sway in this country for a quarter of a century; and it has never been guided or inspired by any ascertainable principle except that of imposing on everything as high a duty as the public would by any possibility tolerate. We have not witnessed the spectacle of an assembly of disinterested statesmen at Washington impartially considering the comparative "infancy" of different industries, or the comparative necessity to our social well-being of this or that branch of productive enterprise. We have been witnessing all along a game of grab; and all talk about fine adjustments of complicated industrial matters through such means must strike a common-sense American as mere moonshine. And so we found, in the campaign of 1888, that Prof. Francis Bowen, the most eminent advocate of protection in New England, replied to an invitation to address a Republican meeting by a letter which rivalled, in its denunciation of the present tariff, the most vigorous attacks which were made upon it by any Democrat in that campaign. If Mr. Morse will consider how great must have been the force of that "logic of events" which had driven this able and venerable exponent of protection into the opposite camp, he will perhaps be able to believe that Harvard College chooses her professors of economics purely on the ground of ability, and that nevertheless they turn out an "almost solid phalanx" of tariff-reformers.

A SUGGESTION FOR SUMMER.

Mr. N. J. Bachelder, the industrious Commissioner of Agriculture and Immigration for the State of New Hampshire, has now published the complete pamphlet concerning abandoned farms within the limits of that State, advanced sheets of which have been noticed already in these columns. Mr. Bachelder says: "The wealth and population of New Hampshire are annually increasing, as well as the product of the agricultural and manufacturing industries, the leading interests of the State." He points out that the average amount of savings-banks deposits for each depositor in the State is larger than in any other part of New England excepting Rhode Island, where a few individual deposits of extraordinary magnitude disturb the comparison. "According to the report of the State Board of Agriculture, the value of the live-stock in New Hampshire has increased half-a-million dollars annually for the past two years, and farm improvements have increased in about the same degree." The State is "annually advancing in agricultural interest and methods," there is "a constantly increasing demand for farm products of all kinds," for which "the prices paid correspond with the prices in the Boston market, and are cash sales at the farmers' doors."

Nevertheless, there are reported to the State authorities by the Selectmen of the various towns 1,442 abandoned farms with tenantable buildings, the descriptions and prices of which, as offered for sale, are embraced in the Commissioner's very interesting pamphlet. Mr. Bachelder says: "Many of the abandoned farms are more desirable at the present time than when they became

vacated, by the extension of railroads, the establishment of creameries, and the rapid development of the summer-boarding industry throughout the State." Under these circumstances one naturally expects the Commissioner to say, as he does say, "Doubtless the question arises, why are these farms vacated when circumstances seem so favorable to their occupancy?" To this he makes various answers; there are many reasons why good farms in New Hampshire have been abandoned. We have already dwelt upon the economic side of this question. At present we pass that by for another consideration, which, indeed, is not, as most things are not, altogether without weight on the economic side, but has no direct concern with it.

We do not believe that Mr. Bachelder or anybody else can get farmers of any nationality whatsoever to take up the abandoned lands of his State as means of livelihood by all-the-year-round labor, and we must think the official efforts to that end in New Hampshire, as well as in Vermont and in other like cases, to be ill-directed. But there are persons of larger capital and keener sense and finer taste than the Swedish or Norwegian immigrants, who may be induced to buy these lands, and who will get out of them more real profit in three or four months than the most arduous labor in the farming line could reap in a year, or in several years, demonstrating thereby the mathematical paradox that a part is greater than the whole. We mean the inhabitants of towns who should take up these so-called waste places for their abodes of summer recreation. There are enough of such persons, we believe, to occupy just in this way all of New England that may be had for such purpose, if only they knew where and how to accomplish it, and if they knew how little it would cost each of them to own a real country-place full of natural beauty, a paradise for children, with convenient means of wholesome living, secluded, yet not cut off from the necessaries or even the conveniences of life. It is incredible, almost, that so many people should be willing to spend the summer in close rooms when they might have, at no more expense, a commodious house and all out-doors besides, with entire freedom or chosen companionship at their will, and the sense of proprietorship in fields and streams and woods and hills which in almost every every class of society is one of the deepest and longest abiding pleasures.

Take, for example, a farm offered in the township of Albany in Carroll County, to which for our purpose we give this free advertisement: 200 acres (in the Swift River valley it must be, or very near it), under the shadow of Chocorua, that queen among hills, a mountain of the very first rank in beauty and distinction, though not in altitude. Two hundred acres of land, a hundred and fifty in "wood and timber," the rest in mowing and pasture; a house of seven rooms, with a "barn 25x40"—for $500, or about the cost of the fortnight's trip of a small family along the St. Lawrence and the Saguenay. This is the price, moreover, for part cash; no doubt the property could be got for something less down on the nail. A railway station is but five miles distant, a post-office only three-quarters of a mile away, and the neighbors are Chocorua, Paugus, Passaconaway, and Wonnalancet. There is not a doctor, lawyer, or clergyman in the town, and there is but one shopkeeper—or was, for we fancy he has moved away; yet in any extremity Conway neighborhood provides everything necessary. De Quincey's mother, in her quest for a home in England, insisted upon five qualifications—"good medical advice somewhere in the neighborhood, first-rate means of education, elegant society, agreeable scenery," and "a Church of England parish clergyman, strictly orthodox, faithful to the articles of the English Church, yet to these articles as interpreted by evangelical divinity" We have explained that, supposing them to be insisted upon, these qualifications are not all to be found in Albany township; but Conway may afford the good medical advice and perhaps the clergyman reasonably answering to requirement, society may be imported, if it be wanted, the scenery is most agreeable, and as for means of education, our suggestions apply only to the vacation season.

To consider more curiously, taking this very case, having bought the estate for $500 or less, very little more need be expended for furnishing; a few things, like beds, must be of the very best, everything else better for being severely plain and even cheap. Most becoming on the floors is the sweet simplicity of rag-carpets. The entire quantity of articles which must be permanent in the country-house may be brought within very small cost, everything else needful for comfort being brought up from the house in town. Not more than one man-servant would be required, for the stable and odd jobs, since in such a situation of simple ease there is no need to keep up a place; not only is there nothing to keep it "up" to, but trimness and care are even unseemly; no thing is so fitting as the careless beauty of the wild growths that gather about it from the time of spring flowers till the glory of the golden-rod invests it in midsummer. Such a place will need not more than two or three house-servants in order to be very comfortable within doors; the "barn 25x40" will accommodate two or three horses, which (or, as we prefer to say in speaking of horses, who) can be transported, with the sufficient single groom and such heavy household stuff as may require conveyance, by rail, at a cost of no more than from $50 to $75. Upon such slight small scale of expense our client will find himself completely set up for the summer campaign, with something like wonder as the time goes on at the little outlay required as the price of so much comfort and pleasure. He will not have everything he wants to the last detail—one does not go out of town for that, at least not to many places—but he will have all the necessaries of life about him, and find perhaps a new and unexpected delight in limiting himself to them, while for other things it is not much to drive five miles, at which cost most of them may be had. They are sordid but imperative considerations, these about the means of mere living, yet they must not be allowed to impose overmuch care; the case is one in which the Apostle's dictum must be reversed, for here the things which are not seen are temporal, but the things which are seen are eternal. One is obliged to study ways of living, but in such beautiful retreats it is truer than elsewhere that it is not all of life to live. With food and raiment and needful shelter, all other things will be added to a man of taste dwelling in the Swift River valley.

"The bearings of this observation lays in the application on it." Millionaires need no hints from anybody about the spending of money, but a large number of persons of moderate means pass this present time of every year in small agonies over the disposition of the approaching summer leisure, and the necessary pecuniary provision for it. Before this great company we bring the appeal of the New Hampshire State authorities, not altogether in the manner which they intend, but giving a new direction to it, which may be more practical, more promising, and more profitable than any which they have thought of. Much travel in the country under notice, and some observation of living in such conditions as are here outlined, prompt a wholesome confidence in recommending the experiment here sketched out, to any persons having taste for comparative remoteness and the unfaltering companionship of nature.

It is not only the mountain region which is offered in fee simple by the New Hampshire authorities; the range of selection runs from Rockingham to Coös, and east and west through hill and plain, meadow, woodland, and lake country. No slightest variation of fancy can remain unsatisfied by choice among the opportunities here afforded, and in the case which we have cited the distances from railway and village conveniences is rather above than below the average.

NO NEW CHARTER NEEDED.

THERE could hardly be at this moment a better illustration of the way to waste public money than the investigation into city government which is to be set on foot here this week by a committee of the State Senate. There is nothing to be found out about city government which is not already well known. The forty questions which the Committee is said to be addressing to the Mayors of various cities within the State will bring in nothing new. There is no public question which has received so much discussion during the past quarter of a century as municipal government. There is no subject of legislation in which so many experiments have been tried as city charters. If we remember rightly, we are now in this city living under the eleventh since 1846. There is hardly any division or source of power, hardly any system of checks or balances, which we have not tried. The result, worked out after much tribulation, is that we have in New York and Brooklyn two excellent charters, against

which there is but little to be said, and under which any city in the world might be happy and prosperous. So that although the Committee may hear a great many witnesses and receive a great many letters, they will not come across materials for any new plan of city government, or for any serious amendment of the plan now in use.

Why, then, it may be asked, is not the city better governed? Simply because the offices are not filled by the right men, and for this there is no legislative remedy. The Legislature has given the voters of this city every reasonable opportunity to secure good municipal service. It has done in this direction as much as any Legislature could do, or has done in any country. If, therefore, the municipal government be not now good, it is the fault of those who live under it.

We are constantly told, and truly told, that a municipality is, to all intents and purposes, a business corporation. It is an association of neighbors to tax themselves in order to secure clean, well-paved, and well-lighted streets, good police, good criminal justice, good education for the children of the community, efficient means of extinguishing fires, and cheap and well-regulated means of intramural locomotion. It therefore resembles in many ways a great railroad or great trust company. Its success, like that of all corporations, depends on the manner in which it is officered.

Now, suppose a great business corporation, charged with very complicated duties, were started here to-morrow. What would the public think of its chance of success, what would its chance of success be, if the stockholders went out to Harlem Lane and took for its president a young, and unknown, and slenderly educated sporting man out of a trotting-wagon; went to an obscure law firm, and took the junior partner, even more obscure than the firm, and made him their counsel; went to a school-teacher and made him their architect and gardener, and put him in charge of their building and transportation and stables; went to an old politician, who had never followed any regular calling, and made him their cashier; went to a liquor-dealer, and made him their janitor; and went to the City Hall Park, and made up their list of clerks from the occupants of the benches on a sunny day? Suppose, in addition to this, the stockholders at every meeting, instead of looking into the affairs of the company, seeing how the officers did their duty, whether the business was prospering, and how it could be improved, were to spend the time fighting with each other in order to get dependents, who were incapable of earning their livelihood elsewhere, put on the pay-roll, and were to threaten the President with dismissal for not making places for old drunkards, and cripples, and bummers. Suppose all these things: would not the public be very much amused if, when this company began to show signs of insolvency, the stockholders were to say that its miserable plight was all due to defects in the corporation law of the State, and that with an amended charter they could undoubtedly make money?

Now, this, or something very like this, is what is going on in this city. There is no mystery whatever about its bad government. Any newsboy can lay his finger on the person responsible for any particular abuse. If things are going wrong in the District Attorney's office, it is because in 1887 we, with our eyes open, elected a notoriously unfit person to fill that place. If they are going wrong in the Board of Public Works, or in the Mayor's office, or in the Corporation Counsel's office, or in the Health Board, or in the Civil-Service Board, or in the Street-Cleaning Department, it is simply because we chose, also with our eyes open, to expel from the Mayoralty two Mayors in succession, chosen from the ranks of leading business men—the kind of Mayors all cities of the civilized world have, or ought to have—and put in their place a young man of no prominence, and of whom we knew very little, and that little, for public purposes, not good, well aware that he had the power to fill all our chief offices, and having every reason to expect that he would fill them, with his own cronies, in disregard of the public interest. If the Senate Committee will find out why "Ed" Hagan was made Deputy Street-Cleaning Commissioner, they will have the whole secret of municipal misgovernment before them. But they will find that, far from being a secret, it is an old story.

We defy any one to-day to suggest a change in the charter which will improve our condition. We played our last card when we gave the Mayor absolute power of appointment. The responsibility for the condition of the city was then thrown on the people. They had not begun to feel it, apparently, when they committed the egregious folly of letting Grant creep in between Hewitt and Erhardt. They have, we believe, begun to feel it now. The loss of the Fair will help to bring it home to them. Their Tammany tyrants, had that pageant taken place, would have hidden their misdeeds under the shadow of Columbus's great name. They must now face the world in their own proper garments, and we cannot help thinking the public will know its lesson better in 1892. Decent people who want to live in a decent city are in a majority here, and can take care of themselves perfectly, if they are determined to do it, under the present charter.

SCHOOLS OF JOURNALISM.

THE *Journalist*, a professional organ, has, owing to the continued silence of the "Professors of Journalism," undertaken to tell what is or can be taught in "schools of journalism." It says:

> "The editor of the *Evening Post* must know that there are technicalities of newspaper work which could be taught in a school of journalism, and he must know equally well that none of the existing 'schools' would be guilty of inculcating the ideas so cynically referred to. There are certain technical details which could as well be learned in a school of journalism as in a newspaper office. The sizes of type, methods of condensation, certain tricks of writing head lines and preparing copy, the use or avoidance of words and expressions, the mechanical possibilities and limitations of newspaper work, together with what might be termed 'journalistic ethics,' would form but a small portion of an advantageous special course which would have no bearing upon the degree B. A.
>
> "Not long ago a very bright young fellow, a graduate of President Eliot's own college, said to the editor of the *Journalist* that he had worked several weeks in a newspaper office before he had any idea of what the mysterious order, 'Write a stickful,' meant. The burden of teaching these details, which are, to the veteran, second nature, comes upon the already overworked city editor, and the fact that he is often overworked prevents him from filling the office of instructor very graciously."

The "sizes of type" can be learned in a composing-room, by any one, not a born natural, in about half an hour. "Methods of condensation" are, or ought to be, taught in all colleges by the professor of rhetoric. They are simply what is known in diplomacy as "précis writing." "Tricks of writing headlines" had better not be taught anywhere. They are among the worst "tricks of the trade." Headlines are often made to contain the most shameful falsehoods, misrepresentations, and innuendoes known to "journalism." A proper head-line is simply descriptive. "Preparing copy" for the press is or ought to be taught in all colleges. The same thing is to be said of "the use or avoidance of words and expressions." This is part of all good college courses in rhetoric. "The mechanical possibilities and limitations of newspaper work" can be learned in any newspaper office in two or three days—a week at the outside. As to "journalistic ethics," if they differ from the ordinary ethics of social and domestic life, they ought not to be taught to any young man. If they are the ordinary ethics of social and domestic life, no young man who has not learned them ought to be admitted to any kind of "school" except that of a well-conducted jail or penal reformatory. "The very bright young fellow" who was weeks in a newspaper office before he knew what "write a stickful" meant, would be a very silly young fellow if he went to sit under a "Professor" at a "School," in order to find out. You might as well set up a school to teach the technique or slang of any calling.

The truth is, that the mystery which the professors try to throw round what they call "journalism" is intended simply to supply a decent disguise for the intellectual poverty and nakedness of too many of the young men who enter the calling. They keep up their self-respect, or their conceit, in the absence of all other knowledge, by their knowledge of little office tricks, most of them mechanical. No man is proud of knowing what "write a stickful" means, who knows much else. The harm "schools of journalism" do is largely in giving this kind of knowledge a ridiculous importance.

The attacks of the Philadelphia *Press* on President Eliot for some very proper remarks on the conduct of some newspaper proprietors in employing "bright young fellows," without reference to their character and capacity, furnish as good an illustration as we could desire of the soundness of our position on this matter. He condemned some paper for taking into employment four young men, presumably dunces, who had been expelled from college for disgraceful offences. For this, and other remarks of the same sort, the Philadelphia *Press*, or one of its writers, has been assailing him fiercely. Now this very *Press*, about a year ago, printed in its Sunday edition two or three columns of illustrated biography of the seven London prostitutes killed by "Jack the Ripper." Some time before that it printed a similar biography of a well-known colored prostitute of Philadelphia. Of course the text and illustrations, in both cases, were simply a mass of filthy mendacity. The gentleman who paid for this disgusting stuff has gone to Russia as Envoy Extraordinary and Minister Plenipotentiary of the clergy and laity of the United States and

of Elder Harrison of the First Presbyterian Church of Indianapolis. But does any one suppose that the actual compounders of it were scholars and gentlemen? By no means. Newspapers which lay such things before their readers have to employ, if not "drunkards, thieves, deadbeats, and bummers," men who have somehow lost their self-respect, and are on the high-road to one or other of these seductive categories.

REPORT OF THE PARNELL COMMISSION.

DUBLIN, February 15, 1890.

WE have now before us the report of the "Special Commission to inquire into the charges and allegations made against certain Members of Parliament and other persons, by the defendants in the recent trial of an action entitled O'Donnell v. Walter and another." The judges constituting the Commission had, of course, nothing to do with its institution, the references, or their own appointment. They clear the ground by saying:

"We must leave it for politicians to discuss, and for statesmen to determine, in what respects the present laws affecting land in that country are capable of improvement; and we must confine our researches to the question whether the respondents, or any of them, have been guilty of things charged and alleged against them. We have no commission to consider whether the conduct of which they are accused can be palliated by the circumstances of the time, or whether it should be condoned in consideration of benefits alleged to have resulted from their actions."

The judges appear to me to have done their duty well on the whole, their review of the evidence and their conclusions seeming fair according to my own impressions of the events of the last twelve years. I question, however, Mr. Davitt having "established and joined in the Land League organization with the intention by its means to bring about the absolute independence of Ireland as a separate nation." He may have deemed that result neither impossible nor undesirable, but I believe he was actuated mainly by a desire to rescue the mass of his fellow-countrymen from the immediate miseries of their condition.

I need not summarize the "conclusions"—they have of course been telegraphed to you. They have been received with delight by the *Freeman's Journal*. The *Daily Express*, Mr. Balfour's leading organ in Dublin, seems equally well satisfied. The *Times* itself writes:

"The entire system of the League, as described in 'Parnellism and Crime,' is to be traced in the report; and if on certain points we are held not to have established our statements, the general effect remains unshaken. . . . But there are important political deductions to be drawn from them, and we shall be surprised if, when the report has been studied by the country, it will not be accepted as completely confirming the arguments we urged at the momentous crisis nearly three years ago."

In considering the "conclusions" we should of course estimate the proportion of each charge, whether proved or disproved, to the whole volume of forces by which the Land League and National League movements were impelled. On this point the judges do not, nor could they, assist us. All must admit the great power of a movement extending over such wide areas, calling into play such various forces, working through instruments so different and arousing passions so strong. When, therefore, it is found that "the respondents did enter into a conspiracy by a system of coercion and intimidation," that they did "disseminate the *Irish World* and other newspapers tending to incite to sedition and the commission of other crime"; that "the respondents did defend persons charged with agrarian crime, and supported their families"; that they "made payments to compensate persons who had been injured in the commission of crime"—before estimating general culpability we should know what proportion these trangressions, if such they were, bore to the entire scope, extent, and character of the struggle.

It would be idle to contend that the agitation was one of purely moral force. To condemn it on the whole on account of the above findings would be to condemn a righteous revolution because not entirely free from objectionable elements. No doubt "terrible responsibility" has been incurred in the course of the movement. Ireland and her leaders and all concerned fully accept their responsibility. All other means to effective reform had been tried. Those who had given their lives to the investigation of the land question, those who best understood its importance to Ireland, saw no chance of really remedial measures. Those who most despaired of awakening the mind and conscience of England on the home-rule question, most fully realized the depth of degradation to which the present system of government was dragging the country. Moral force had proved ineffective. Recourse to arms was impossible. Was Ireland to sit down hopeless and despised, the sport of the *Times* and the English "comics"? Another has been added to the countless lessons afforded by history, that outraged human nature must sooner or later find some means to vindicate itself.* Parnell and his party, like Columbus with the egg, accomplished "the impossible." And if there was some ugly work in the process, work from which many men of keen sensibilities shrank, we have its best vindication in the result (though possibly a Nemesis awaits us on account of some of the means): ten years ago, land reform declared impossible, peasant proprietary an *ignis fatuus;* today, Irish rents in half the tenant holdings reduced 20 per cent., 11,000 peasant proprietors already constituted, step by step concessions gained far beyond first demands; at present all parties seeking the best means of placing the largest possible amount of the land of Ireland in possession of the occupiers; and where before not a single English member supported home rule, Mr. Gladstone and his party now pledged to its establishment.

Was it a crime that Parnell and his party, true representatives of Irish feeling, ostracised none and were willing to work with every party? The iron had so entered into men's souls here that all who were against England were regarded as friends. Union could be effected only by the policy adopted. Ten years ago the different factions dominant in Ireland were united in common hatred of England. Now they are united in consent to union with her. The extremists have not converted Parnell, but he has converted them. The *Times* admits to-day: "The matters with which the Commissioners have dealt are as strictly questions of fact as any ever submitted to a jury, and have no more to do with politics than the Rule of Three." Had it all along acted upon that view of the case, we should have been saved a world of trouble.

The report affirms nothing with which we were not already acquainted. What could the *Times* and its party do with their verdict, even if altogether in their favor? Would it be to their interest, the interest of England, to break down the present leaders and the present movement? Would they prefer the sullen hatred of everything English of fifteen years ago, to Ireland of to-day looking confidently to Westminster for justice, Mr. Gladstone's portrait in every cottage? Would they, like the boor in the fable, stand idly by the river of Irish discontent until it has passed away, instead of making some intelligent attempt to deal with its source? The institution of the Commission was not statesmanship, but a piece of party warfare. As a moral lesson it may in the end do us no harm, but it has "no more to do with politics than the Rule of Three." The sooner we turn from it the better, and, putting aside personalities, consider the possibilities of the present. D. B.

*For generations the necessity of radical reform regarding the government of Ireland and in its land system had been acknowledged, and many had predicted the trouble certain to arise sooner or later in regard to it, and yet people are astonished when the reckoning has come! I am struck with a certain appositeness in the following remarks by Mr. Garrison (Life, vol. iv, p. 23) at the commencement of the war of secession: "For thirty years the abolitionists have been faithfully warning the nation that, unless the enslaved were set free, a just God would visit it with tribulation and woe proportional to its great iniquity. Now that their predictions have come to pass, are they to indulge in morbid exclamations against the natural operation of the law of immutable justice, and to see in it no evidence of the growth of conscience, the power of truth, or the approach of the long-wished-for jubilee? Surely, this would be to arraign Infinite Wisdom, to be blind to the progress of events."

WEST AFRICAN SIGHTS AND IMPRESSIONS.

ST. PAUL DE LOANDA, January, 1890.

ST. PAUL DE LOANDA is full of anachronisms, indeed, it is itself an anachronism. There is a curious mixture of modern appliances of civilization and customs which are adopted from the original savage inhabitants of the region. In the European quarter of the town the buildings are of old-time architecture, belonging to the middle age rather than the modern. The shops are mostly small, dark, and dirty, and it is exceptional to see a sign over the door to indicate the name of the dealer or the nature of the wares for sale. On the hillside, back of and overlooking the town, is the native quarter. Here the houses are of wattle—small poles interwoven like basket-work and plastered inside and out with mud made of red clay. These houses have been so long built, or the great majority of them have, that the clay has washed off from the outside, showing the frame of wattle-work and the "clinch" of the inside coat of mud. The roof is of long grass, piled on nearly a foot in thickness. Rain, burning sunshine, and time have made these roofs a sombre dark brown, or dusky neutral gray, which blends so well with the surroundings as to make this part of Loanda practically invisible from the distance of a mile.

Loanda is very clean, superficially, although it has no sewers. Much of the surface débris is washed into the harbor by the fierce tropical rains. What is left is gathered up into little baskets by native women, and put into carts, which deposit their loads on the beach, where the collected mass is burned—a very safe and excellent manner of disposal. But although the surface of the town is kept clean, the ground is saturated with the filth of three hundred years of occupation, and the atmosphere of Loanda is filled with a faint, sickly-sweet odor similar to that of sewer gas. It is strange that fever and other diseases are not endemic in consequence; but it is claimed by the inhabitants that the place is far healthier than others on the coast having the same no-system of drainage—which may be true or not, the actual facts in the case having little or nothing to do with their claim for the healthfulness of the town.

Leaving Loanda, the *Pensacola* ran about eighty miles down the coast southward to Cape Ledo, where Prof. Todd established the eclipse

station. This is an exceedingly interesting region and is entirely uninhabited. Cape Ledo itself is a bold, rocky headland, about three hundred feet high, nearly perpendicular for a third of its height down, from which point a talus of fallen boulders and disintegrated rock slopes to the sea-level. The rocks are stratified and were once horizontal, but have been upheaved, having now a dip of twenty-five or thirty degrees to the north. Between the rocky headlands on the east side of the roadstead the cliffs are of red and yellow clay disposed in strata which dip about twenty degrees to north and south of an exceedingly well-defined anticlinal axis. The strike of the axis I did not ascertain. The strata differ in hardness, and the softer ones weather out more rapidly than the others, leaving projections or shelves which give a curiously artificial appearance to the face of the cliff, like courses of Titanic masonry.

In one place, the bold, jutting end of what was once a promontory is isolated from the cliff behind it by a deep gorge, eroded by centuries of tropical rainfall. This vast mass of indurated clay, nearly circular in horizontal section, with broad projections extending around it at a small angle, is a nearly perfect representation of the tower of Babel as authentically pictured in the illustrated "First Readers" of two generations ago.

The vegetation, though tropical in character, shows little of that wonderful luxuriance of growth generally supposed to be the unfailing characteristic of vegetable life in the torrid zone. That which first strikes the Northern eye is the tall, cactus-like euphorbias with their angular trunks and tops of dark-green, fleshy leaves; lofty palms crowned with fan-shaped, rustling foliage, the dead leaves still adhering to the trunk, hanging down in a vast spheroidal mass, in shape and color exactly like an enormous hornet's nest; and the gigantic baobab, its huge trunk (sometimes twenty-five feet in diameter at the base) always tapering rapidly upwards to the point where the branches are thrown out—its foliage light green, among which show the long-stemmed flowers, pure white as the magnolia, but without the fragrance, the pistil prolonged for six or seven inches, and ending in a crowded sphere of stamens more than two inches in diameter. All these attract the stranger's eye, not merely because they are unfamiliar, but for their rare beauty. In some places the ground is covered with a low, dark-green plant, having pinnated foliage which is almost hidden by the multitude of delicate, primrose-yellow blossoms, opening their tender petals to catch the hot African sunshine, but closing again as soon as the genial heat and light are withdrawn at sunset.

This region abounds in game. Every morning the beach showed the tracks of leopards, come down to dig in the sands for eggs of the green turtle; and they were always accompanied by jackals and wild-cats, which had followed, no doubt, hoping to share the feast. Our hunters shot an antelope, and in their wanderings came across the spoor of the eland and several kinds of deer, as well as of the African buffalo.

The Cape Ledo oysters are truly gigantic. I opened one of which the cavity occupied by the bivalve measured nine inches in its longest diameter and four and a quarter across its greatest width. Nor was the specimen an exceptionally large one. I retain the shells for a voucher. The oyster itself was as delicate as the tenderest Blue Point.

The camp of the Expedition was visited several times by members of the Quissama tribe of natives. They were armed with old flint-lock muskets, ornamented from butt to muzzle with narrow strips of brass encircling stock and barrel, fastened to the stock with the old-fashioned, convex-headed brass nails such as were formerly used on hair-covered trunks. Their dress was much more remarkable for its perfect adaptation to a tropical climate than for either quantity or complexity. Some were clothed in the skin of a small wildcat, tied around the waist and hanging down the front; some had progressed so far in civilization as to be the owner (probably, judging from the dirt, the inheritor, from some great-grandfather), of a piece of Portuguese calico. This was wound around the loins, and secured in its place—this is hypothesis only—by the adhesiveness of generations of filth which completely enveloped the original fabric. The hair of the Quissamas was done into innumerable little braids, terminating at the same level, the end of each braid ornamented with a scarlet bead. Altogether the effect was that of a string of beads tied around the head. Their teeth, solid and white as ivory, were filed or chipped to a point, which in barbaric heraldry shows their pure descent from, and their present good standing in, the noble tribe of cannibals. I saw them, indeed, examining our party of astronomers with furtive glances, as if selecting that one among us best fitted by his rounded outlines for their friendly purpose; and their expression of disappointment at the astronomic leanness of the expedition did not change until their eyes rested on one of the naval officers, whose bones were so hidden in juicy flesh that his form showed no angles or abrupt points, but only sweeping curves of well-nourished muscle. Unfortunately for their design, this officer was armed with a repeating rifle. It is not always entirely disadvantageous that astronomy and adipose are incompatible.

While putting up the transit house, one of our odorous visitors, urged by curiosity, approached the spot and hindered the workmen. With a majestic motion I waved him away, but, as he only laughed, I saw at once that a crisis had arrived, that stronger measures than majestic wavings must be taken immediately, or the country would be ruined—the work would be delayed. Stepping to a tripod on which happened to stand a ship's portable compass, I lifted the handle by which it is carried and gazed sternly through the harmless wire at the offending savage. With an agility which would not have discredited an antelope of his native hills, the gentle cannibal bounded away and hid himself behind his fellows; he could not "stand such an eye as that."

There is always more or less surf running on the beach near the Cape Ledo roadstead where the *Pensacola* anchored, but while we remained this was never heavy enough to entirely prevent landing, although at times it was sufficiently rough to make a sudden and quite thorough admixture of sea water and astronomers. However, a proper segregation of the two was always effected, although it sometimes required several hours of hot sunshine to complete the process.

Our stay at Cape Ledo extended through eighteen days, and so delighted was I with the place that, had I a yacht and leisure, I would spend December of every year there, until I had thoroughly acquainted myself with that lonely coast; eating under the shade of a gigantic baobab my Christmas dinner of oysters, green turtle, fish, lobster, antelope steak, and venison, all taken within the radius of a mile; bathing in the delicious surf which breaks into feathery foam on that perfect beach; listening to the strange songs of the strange, bright birds, until, perchance, a thought of my far northern home would impel me to weigh anchor. And, as sunny beach and rocky headland grew dim in the increasing distance, it would be parting with a friend when I should wave farewell to beautiful Cape Ledo.

EBEN J. LOOMIS.

ST. PAUL DE LOANDA, January 5, 1890.

At length I have really seen Africa. The other towns on the coast where the *Pensacola* has called have a large admixture of Occidental civilization, which mars the completeness of the picture, from the African standpoint. Elmina, however, is pure "Dark Continent."

Elmina, a little town originally settled by the Dutch, and afterwards purchased by the English, is about eight miles from Cape Coast Castle, which is the capital of the British settlement in the gold-coast colony. There is very little in the town to remind one of the original European settlers. Occasionally a Dutch or a Scotch name, with "licensed to sell spirits" subscribed, will be seen over a door or window, and a few houses are still left which show in shape and material a European hand. These remains of Western occupation are, however, too few to make any impression. The native house of Elmina is exceedingly well adapted to a climate where only heat and rain have to be guarded against. The walls are made of clay shaped by the hands into an irregular mass somewhat larger than a brick. Such blocks are placed in succession on the walls, patted down, and then smoothed on the outside by passing the hand over, until enough regularity of surface is developed to satisfy the æsthetic longings of the Elminote builder. After a few courses are laid, it is necessary to wait several days for them to dry before adding more clay, as, while wet, the walls will not bear much weight. I cannot think that this necessity for waiting is regarded as an unmixed misfortune by the workmen, for the male population of Elmina has immense capacity for rest—so great that, except in one or two occupations, the women are permitted, and indeed encouraged, if not required, to do all of the work. In coaling the *Pensacola* at this place, the fuel was brought down from the store-house to the lighter on the heads of women. Rowing the lighter to the steamer was done by men.

Considerable pottery is made in Elmina, but only in one shape—a broad flat dish, ornamented with scallops on the edge. This work is done by women with absolutely no instruments or conveniences. A lump of clay is placed directly on the ground, and the potter (potteress) stoops down and with her hand, the thumb principally, gradually shapes the clay into the required form. It is wonderful how rapidly and accurately the rough material is shaped and moulded. After sun-drying, the bowls are rubbed over with some substance which produces a kind of steatite lustre. They are then put in little clay furnaces and burned a few hours, coming out a shining black.

Quite handsome jewelry is made in this place, of gold, silver, and copper; the baser metal being used principally for bangles. Beautiful rings, bracelets, pins, and earrings were offered me for sale by the manufacturess herself, for work of this kind is done by women, as well as nearly all other except the managing of boats. The first price asked was exorbitant: for a very small but pretty silver pin six English shillings was demanded. As I refused to purchase, the price gradually lowered, and I finally bought it for one shilling. This is a fair, typical case, showing the relative proportion between asking and selling price at Elmina.

There is no "one-price store" in this African town. Most of the streets in Elmina have cocoanut palms on either side, which gives the final touch to its tropical and unfamiliar appearance.

The American Consul took us to see King Andoh of the Ashanti tribe. He is a noble-looking man, about six feet two inches in height, and of fine proportions. The Consul acted as interpreter, and our call was interesting and unique. We were ushered into a bare, dirty room, with a long table in the centre which took up a great part of the space. At one end, under a lithograph portrait of Washington, was a large stuffed arm-chair, standing on a slightly raised dais. This was the King's seat, or throne, and he insisted that Capt. Yates of the *Pensacola* should occupy it, while he himself took a chair at the opposite end of the table. On the table was a long staff with a gold head, on which was an inscription setting forth that it had been presented to the chief for his distinguished services to the English. Beside this staff lay two scimitar-like swords with gold handles of native manufacture. The blades were evidently iron, not steel.

The King, "on hospitable thoughts intent," wished us to taste the native corn beer, his favorite beverage. It had a pleasant, slightly acid taste, with a sub-flavor of grape sugar. Afterwards, by the King's order, a pasteboard box was brought in and placed on the floor beside him. On opening this, there appeared another box of the same material and considerably smaller. Within the latter, wrapped in tissue paper, was the crown of King Andoh —a cap of skin without lining, but covered on the inside with characters in ink or black paint. These bore as much resemblance to the Assyrian alphabet as to anything that I feel well acquainted with. On the outside were eight narrow strips of dark leather, radiating from the top of the crown to the rim. Upon these strips again were fastened gems set in gold. The strip which extended from the top of the cap to the back was prolonged beyond the rim into a sort of tail, three or four inches long, projecting over the wearer's neck. With a kindly smile, as if recognizing in our expression a natural desire to see him wear this emblem of authority, the chief placed it on his head. I doubt whether any European potentate would present a more kingly appearance under any circumstances than did this noble-looking man in his barbaric-looking cap.

With a good taste for which I was hardly prepared, he allowed it to remain on his head but a moment, when he removed and handed it to his attendant, taking away by the promptness of this action any appearance of vanity, and ascribing the exhibition, where I think it truly belonged, to the kindness of a host entertaining his friends. King Andoh wore upon his hands magnificent finger and thumb-rings of native gold and manufacture. The designs of these rings were exceedingly elaborate and very original, and the surface of all was covered with the richest chasing. Although of pure negro blood, the King is not black, but a rich, dark chocolate brown. The facial angle was nearly if not quite as large as that of Europeans, and his countenance showed high intelligence and energy.

The beach at Elmina is a very fine one, with generally a high surf rolling in. Men, boys, and little children are bathing all day. They are as expert swimmers as any Sandwich Islander, and children of not more than six or seven years swim out and dive under the great, green breakers, reappearing on the seaward side of the "roaring cataract," then, waiting until another swell begins to gather its water into a ridge of foam, they keep directly on its crest and are swept in and landed far up on the beach.

The country back of Elmina is very fertile and easy of cultivation. Fruits of nearly all kinds could be readily raised in unlimited quantities, but a sufficient market for the produce is too distant to permit fruit-raising to become profitable. Two staples, cotton and coffee, might possibly be made to pay; but as long as the wants of the natives are confined to food, which is amply supplied by yams, bananas, and plantains growing almost spontaneously, and to clothing, for which two yards of calico make a sufficient suit for a year, there remains no cogent reason to convince the native mind that to labor for more is either desirable or necessary. I cannot think that any large agricultural enterprise in the neighborhood of Elmina will have a chance of success.

I believe that the mission of the Dark Continent among sister lands is to furnish a haven of rest for the weary. In the parts of Africa which I have seen, if one is wise enough to do nothing, the temperature is exactly right for perfect enjoyment. The warm, fragrant air blows softly and caressingly over the reposing philosopher, inducing quiet of body and "thoughts too deep for utterance." As he slowly swings in his hammock and looks out upon the beautiful sunlit hills from the cool shade of his tent, he cannot but believe with me, not that equatorial Africa has an agricultural future before it, but that its true purpose is to afford a place where the natural, restless energy of more rugged climates evaporates, leaving only a desire for rest. It is the lotus continent, where "there is no joy but calm."

DAVID P. TODD.

Correspondence.

THE ENGLISH PHILOLOGICAL SOCIETY'S DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: Given a literary undertaking which should be welcomed by every one whose mother tongue is English; an undertaking, moreover, towards which hundreds of Englishmen and Americans have, in friendly emulation, clubbed their aid, and the engineering of which rests mainly with a scholar all but unique in combining manifold and appropriate ability, untiring industry, and scrupulous conscientiousness—how are we to rate a critic who, deeming it, without personal examination, a thing deserving of at most mere cursory mention, implicitly accepts a palpably disingenuous and sinister description of it, which he aggravates by gratuitous invention, and dismisses it with what amounts to contemptuous wholesale condemnation?

This, in strict literality, is the treatment which Dr. Murray's noble Dictionary has received at the hands of Mr. E. J. Phelps, who, as a man of law, if he did not aspire to be judicial, ought at least, if only for the honor of his craft, to have shown himself respectably causidic. Since he was pleased to take a brief against Dr. Murray, it was, unquestionably, his duty to supply himself with relevant facts at first hand; and that he has done this no evidence is perceptible.

Discoursing in *Scribner's Magazine* for last December, he delivers himself as follows:

"In the compilation of the Oxford Dictionary, which undertakes to give an account of every word in the language, it is stated, in the *Edinburgh Review*, that thirty years' labor has produced one volume of 1,240 closely printed quarto pages in triple columns, only containing [*read* containing only] words beginning with the letters A and B, and that these number 31,254, including those of doubtful meaning *and of no meaning at all*. At what remote period is it reasonable to expect that this work will be completed? And, when finished, what, at the same rate of increase, will be the supplement, to be added, of new words coined in the meantime?"

Now, who would not suppose, from this, that the labor of thirty years had been confined to collecting, digesting, and printing words in A and B alone? The questions with which the quotation concludes apparently point to the entertainment, by their writer, of some such supposition, or to the aim that it should be entertained by his readers. Noticeable, too, is the libel that Dr. Murray has registered "words of no meaning at all." Would Mr. Phelps have it believed that the English Philological Society selected their editor from the wards of Bedlam? As to the space of time within which we may look to see the Dictionary finished, grounds for forecasting it with some certainty were already before the American public when Mr. Phelps went to press with his flippant flouts. The truth of the matter, perfectly accessible, it was his business, in all probity, to inform himself of; and it fares all the worse for him if, having done so, he preferred its suppression. More than this, neither in commendation, nor by way of encouragement, does he deign to bestow a single syllable on the new Dictionary, though one of the marvels of modern literature, and secure of being a lasting honor to our age. Pretty evidently content with knowing next to nothing in its favour, he would fain have it regarded as a project of the half-crazy, Quixotic order, and destined to no serviceable finality, the appreciation of which is adequately summed up in sneers qualified with fiction. Of Dr. Murray, matchless as an etymologist, and otherwise eminently competent for his most arduous task, he ignores even the existence. This is significant; and so it is that he should be silent as to the circumstance that hundreds of Englishmen, each of them distinguished in some department of science, art, or letters, should have coöperated with the editor towards rendering the outcome of his labors exact and exhaustive. In short, so far as one can judge from his account of the Dictionary, whose very title he misrepresents, it might be simply a swindling speculation of some anonymous sciolist, at best semi-lunatic, who had merely huddled together, somehow or other, an unwieldy mass of indigested letter-press.

In justice to an enterprise the progress and success of which are matters of widespread interest, a succinct statement is now offered. Shortly after 1857, a group of persons, which eventually increased to a formidable host, some thirteen hundred practical workers, ransacking upwards of five thousand authors, engaged in collecting materials for the new Dictionary. No promise was ventured as to when these materials were to be utilized. In 1884 the first Part of the Dictionary was published, and the whole of the first Volume, containing three Parts and a half, was before the world early in 1888. The Edinburgh Reviewer, whose diatribe is dated in April, 1889, seemingly desired to have it credited that, A and B having been despatched, the work was hanging fire, although half a Part, introducing C, was distributed with the end of Vol. I. Besides this, as Mr. Phelps should have acquainted himself, Part V., running to p. 508 of Vol. II., was on the counters of the booksellers in October of last year. Furthermore, in February, 1888, notice was industriously circulated that Mr. Henry Bradley, a phi-

lologist of approved ability, had been entrusted with the preparation of an independent portion of the Dictionary. This portion is, for the present, Vol. III., leading off with E, the opening Part of which, to make about 350 pages, I know to be well advanced, since I have read all its proof-sheets.

That the conclusion of the Dictionary will be reached within a few years, say by 1900, is highly likely. And, considering the professed character of the work, could any one, except at random, expect it to be out, in its entirety, sooner? What person whose opinion is worth having can, after examination, help being satisfied with the manner in which it has hitherto been executed, or can wish, just to see it speedily finished, that its remainder should be hurried over and, of necessity, scamped? Unless thoroughgoing in one particular feature, to name no other, it would reflect nothing but disrepute on the learned society by which it was projected. Etymology is here referred to; and one need but consult the Dictionary almost at any page to be convinced of the striking superiority of Dr. Murray, in dealing with this subject, as compared with that of any previous investigator. This superiority could never have been achieved without immense toil; such toil implies time for research, and for deliberation on its fruits; and there an end. It seems, however, that the words in A and B present the chief etymological enigmas of our vocabulary, and that, henceforth, difficulties of this stamp will by no means operate to retard the growth of the Dictionary as they have, unavoidably, done till of late. Having said so much, I would commend to the attention of every one interested in lexicography Dr. Murray's Preface and General Explanations, the issue of which, in the form of a pamphlet, I cannot but think would be found advantageous to sellers and buyers alike.

And now I would be allowed to return, for a moment, to the essay, entitled "The Age of Words," quoted near the beginning of this letter. As its writer, rolling together St. James and Spenser, warmly champions "pure English undefiled," his use of our vernacular is hardly what was to be counted on, especially considering his antecedents. An unsparing critic might dwell at length on his slipshod grammar, his solecisms, his vulgarisms, and his indefensible Americanisms, such as "*aside* from" for "*apart* from," "at that" for "too" or "withal," and the slangy "oversloughed" (*sic*). A counterpoise to the demerit attaching to these blemishes may, however, be found, by the naturalist, in the credit due to him for having brought to light a novel species of rodent, to be described, scientifically, as mythotocous. The existence of this remarkable creature he thus divulges, in passing: "Popular literature, now-a-days, consists, in large part, of *fiction, of which the authors are more prolific than the Australian rabbit.*"—Your obedient servant,

FITZEDWARD HALL.

MARLESFORD, ENGLAND, February 15, 1890.

MORE ABOUT THE "RACE PROBLEM."

TO THE EDITOR OF THE NATION:

SIR: It will be admitted on all sides, I think, that the solution of the "race problem" offered by "L. N. D." in No. 1287 of the *Nation* would be very desirable, and it seems to me far more practical than that offered by either Senators Butler and Morgan or the Mississippi legislators. That the negroes in some States are beginning to divide their votes at all is a very hopeful sign, and time and work on the part of the Democrats can, and doubtless will, do much. But there is one influence which, more than all others, tends to keep the negro vote solid, and that is the "social influence." All over the South the negroes persistently ostracize, and oftentimes maltreat, any of their race who dare vote the Democratic ticket. Of course, there are limitations to this, and I believe the exceptional cases are becoming more and more numerous. But still it is the rule. Many of them will admit that they have never realized any of the specious promises made them by the Republican leaders, that they have been coddled and deceived for twenty-five years, and it is actually beginning to enter their heads that Democratic control of affairs does not mean that they will be returned to slavery; but their prejudices are so strong that, as a race, they are still blind in their allegiance to their party bosses, and those who would break off from this allegiance do not do so, for the reasons mentioned. In North Carolina this is frequently seen.

Now, as your correspondent intimates, here is an argument for the Australian ballot. It has been charged that in some parts of North Carolina the negroes are defrauded of their right to the elective franchise. I do not think this can be substantiated, but we certainly need ballot reform to protect negro voters from one another. To be sure, this would not entirely eradicate the evil, but it would do much towards it. The rest must be done by instruction, political and otherwise. And they are not entirely unimpressionable on this subject. But when any of them do realize that they have been deceived and are following hard taskmasters, they show their resentment oftener by refraining from voting altogether than by changing votes. It is quite common to hear them say that they reap no benefit from either party's success, so they stay away from the polls. Strange to say, it seems never to occur to our Northern brethren that it is possible for the negroes to voluntarily refrain from voting on this ground; and whenever they fail to poll their full party strength in a Southern State, the cry of fraud is raised. It goes without saying that such devices as the "eight-box" law deprive some of them of their votes, but it should be remembered that they are beginning to see into the deception that has been so long practised on them, and consequently lose all interest in the elections.

Here is an opportunity for good and profitable work on the part of the Democrats. Pass ballot-reform laws to protect those who would change if they could, and persuade those who have become indifferent on account of the broken pledges of their Republican friends that they can benefit themselves by voting with the Democrats. It may be a difficult task, but it is not an impossible one, nor one which would require a very great length of time to accomplish. W.

UNIVERSITY OF NORTH CAROLINA, March 1, 1890.

ENGLISH PROSPERITY UNDER PROTECTION.

TO THE EDITOR OF THE NATION:

SIR: In the last chapter of Ricardo's 'Political Economy' he quotes from Malthus a paragraph showing that wheat varied in price per bushel during the prevalence of the protective ("mercantile") system in England as $2.15, $2.22, and $3.00. "During the twenty years beginning with 1794 and ending with 1813 the average price of British corn per quarter was about 83 shillings; during the ten years ending with 1813, 92 shillings; and during the last five years of the twenty, 108 shillings. In the course of these twenty years the Government borrowed near five hundred millions of real capital" ($2,500,000,000), which, says Mr. Blaine, it was enabled to do by this protective system and the prosperity necessarily consequent thereon.

The *Nation* has lately given two pictures of England under protection, one by Carlyle and one by Bagehot, who, according to your correspondent Mr. Cozens of Amsterdam, N. Y., accounts by the condition of England then for the great interest taken in political economy. The same causes are producing the same effects here. I know many intelligent farmers, Republican voters hitherto, who are studying "maxims and markets," and have come to the same conclusion with Mr. Powderly as to the tariff's protecting the poor. N. NILES.

BELLEVILLE, ILL., February 28, 1890.

THE PHOTOGRAPH NUISANCE.

TO THE EDITOR OF THE NATION:

SIR: As the mattter complained of by "M. G.," in the *Nation* of February 20, is, unfortunately, of practical interest, I venture to call attention to a recent case of Pollard vs. The Photographic Co., 5 Times Law Rep., 157, where Mr. Justice North held that where a person is photographed in the ordinary way, the photographer has no right to dispose of or exhibit copies of the photograph, and if he does so, an injunction will lie at common law for breach of contract. In this case the photograph was offered for sale as a Christmas card, no change being made except to add some scroll work, and the words "A Merry Xmas." The law is fully discussed and the case worth reading. FRANCIS MCLENNAN.

MONTREAL, February 25, 1890.

TO THE EDITOR OF THE NATION:

SIR: I have just read "M. G.'s" article on the "Photograph Nuisance," published in your last number.

You will be glad to hear that there is at least one city in the country where photographs cannot be sold without the consent of the sitter. A prominent photographer of this city was recently arrested and heavily fined for selling a dozen photographs in his possession to a saloon-keeper who used them to decorate the walls of his saloon. The Judge decided that such proceeding was a gross breach of contract on the part of the photographer.

It is to be hoped that this decision will serve as a precedent. X. Y. Z.

MINNEAPOLIS, MINN., February 24, 1890.

TWO USES OF "KEEN."

TO THE EDITOR OF THE NATION:

SIR: In Dion Boucicault's article entitled "Spots on the Sun," in the January *Arena*, page 138, occurs the following use of *keen*: "the 'keen' of *Constance* over her lost son *Arthur* (I must use the Irish expression 'keen,' which means the cry of the heart over the dead)." And then "King John," iii., 4, l. 76-105, is cited.

The use of adjectives as nouns is by no means uncommon, even, as here, in a secondary sense; but I wish to call attention to the use of this same word as a noun in a very different signification, namely, in the sense of a 'witticism,' more especially a 'pun,' as I have heard it frequently used by students at the University of Virginia and at Hampden-Sidney College. No doubt its use is even more widespread, but I do not remember ever to have met with it elsewhere. Are the two almost converse significations of this word (though, of course, they are both derived from

the sense of sharpness, whether of grief or of wit) anywhere in use side by side?

J. B. HENNEMAN.

HAMPDEN-SIDNEY COLLEGE, VIRGINIA.

Notes.

SCRIBNER & WELFORD'S spring announcements include 'The Uncollected Writings of Thomas De Quincey,' with preface and annotations by James Hogg; the 'Select Essays, Narrative, and Imaginative,' of the same writer, edited by Prof. Masson; 'Italian Characters in the Epoch of Unification,' by the Countess Evelyn Martinengo Cesaresco; 'The Marriages of the Bourbons,' by Capt. D. Bingham; 'The Early Diary of Frances Burney, 1768–1778,' edited by Annie Raine Ellis; and 'In Tennyson Land,' by J. Cuming Walters, with illustrations.

Ginn & Co. will publish in a month or two a 'Directional Calculus,' by E. W. Hyde, Professor of Mathematics in the University of Cincinnati.

S. C. Griggs & Co., Chicago, will shortly issue 'Semitic Philosophy,' by Philip C. Friese; 'The World Energy and its Self Conservation,' by W. M. Bryant; and a 'Digest of English and American Literature,' by the late Prof. A. H. Welsh.

The 'Library Reference Atlas of the World,' compiled by John Bartholomew, F.R.G.S., and published in a handsome quarto volume by Macmillan & Co., makes but modest pretensions. It is not for the scholar in the strict sense of that term, yet it is, as its title purports, for the library; it is also especially adapted for the man of business in his counting-room. In technical execution it falls below the best German cartography, and for the most part it eschews the physical delineation for the sake of greater clearness in the lettering. This is true even of Switzerland, whose surface is very conventionally suggested. Palestine and India, on the other hand, are colored hypsometrically. Naturally, the British Empire is best looked after, and the maps of England and Wales, in six sections, of Scotland and Ireland, in four each, will be appreciated because of the minute indications of places. Three sections are likewise employed for India, four for Australia, etc. The United States is treated in detail on about the scale common to our grammar-school atlases. In the selection of related areas there is no originality except in the useful double-plate map No. 10, showing the British Isles and the adjacent parts of the Continent—something of Norway and Sweden, all of Denmark, Holland, and Belgium, and so much of France and Germany as is bounded by Stettin, Dresden, Strassburg, Paris, and Cherbourg, with their railroad connections. The map of central Africa shows Stanley's recent route; that of Greenland, Nansen's. The maps are named and numbered on the back, and there is a very full general index of names.

The 'Atlas of the World' published by Adam & Charles Black, Edinburgh (New York: Charles Scribner's Sons), contains 27 pages of descriptive text and 55 maps, to which is added a copious index of 105 pages. Of the maps, 5 plates present the physical features of the globe, 15 relate to Europe, 10 to Asia, 4 to Africa, and 37 to North America. Of these last, 28 are devoted to the United States, each State being represented separately. To South America are allotted 4, and to Australia 3 maps. With slight exception, all the maps are brought closely up to the date of issue, in respect both of geographical discovery and survey, and of cultural development. Here, too, on the map of Africa, Stanley's recent discoveries are represented. The execution, mostly from copper plates, is beautiful. The maps are clear, easily read, and not overloaded with matter.

The second volume of the 'Century Dictionary' comes bound to our table. It ends with the letter F, but the parts already distributed have passed this point by three letters. We need make no further remark on ground already covered by our review of this notable undertaking. The beauty of the typography, press-work, illustrations, and binding must impress any one who examines the two volumes now completed. The pains taken to verify the quotations are beyond the reach of observation, but they form one of the chief recommendations to confidence of the 'Century Dictionary.'

The two noble volumes of *Garden and Forest* (1888–'89), edited by Prof. Charles S. Sargent, and published in this city, are strongly and simply bound in dark cloth, and make an elegant appearance on the shelves. This weekly journal is one of the few American original ventures, and one of the very best and most creditable. Its literary style, tone, learning, variety, and high grade of illustrations make it a welcome visitor to the most fastidious home, where its influence will be felt to be refining and liberalizing. It deserves the heartiest support.

Macmillan & Co.'s inexpensive reprint of Charles Kingsley's novels now embraces 'Westward Ho!' 'Hypatia,' 'Yeast,' and 'Alton Locke.' It is a pity that the print adopted for these classics had to be so small, for only the eye and the happy recklessness of youth can brave it.

Prof. Masson's definitive edition of 'The Collected writings of Thomas De Quincey' (Macmillan) fills its fourth volume with biographies and biographic sketches, in which Shakspere, Milton, Bentley, Pope, Goldsmith, Kant, Herder, Goethe, and Schiller make an extraordinary galaxy. The frontispiece is a very attractive portrait of Florence De Quincey (Mrs. Baird Smith), whose likeness to her father is unmistakable.

The latest addition to the "Knickerbocker Nuggets" series is John Oxenford's translation of Books I.–XI. of Goethe's 'Dichtung und Wahrheit' ('The Boyhood and Youth of Goethe': G. P. Putnam's Sons). It makes two of the pretty volumes of this ever-lengthening series.

Mr. Walter J. Clutterbuck, in the preface to his 'The Skipper in Arctic Seas' (Longmans), states that it is "impossible in this universe to find any name which would apply to such a conglomeration of foolishness as is enrolled in these pages." On the whole, we think his modesty is not excessive. So dreary and flat an attempt at fun we have never seen in print. It is possible that the British mind is so constituted that it enjoys this sort of thing. The book is ostensibly the record of a sealing voyage to the seas between Spitzbergen and Greenland. The illustrations are of unusual merit, the paper and printing are excellent, but the text adds a new terror to the Arctic regions.

Prof. E. N. Horsford persists in his identification of the "lost city and country" of Norumbega, and has published, with his customary nice taste and lavish outlay in matters typographical, 'The Discovery of the Ancient City of Norumbega' (Boston: Houghton, Mifflin & Co.), being his communication to a special session of the President and Council of the American Geographical Society at Watertown, Mass., on November 21, 1889. Nature-pictures show us the site in question, and a map of the vicinity of Boston leads us straight to it. No close student of the sagas can doubt that the Northmen made various trips to the mainland opposite Greenland, and went along the coast southward; but that they got further than the waters close to Newfoundland is, in our present state of knowledge, not to be credited.

K. J. Trübner of Strassburg publishes a General Index (*Gesamtindex*), by V. F. Janssen, of Kluge's 'Etymological Dictionary of the German Language,' the first and last issues of which we have noticed at some length. Kluge's Dictionary is really a remarkable work, not only for its learning and thoroughness, but also for its conciseness and handiness. Both those to whom it is a vademecum and those who have not yet fully appreciated it, will be surprised by its wealth and comprehensiveness as shown by this General Index, which is more than half as large as the Dictionary itself. Janssen's compilation consists of a word-index, subject-index, list of Indo-European roots, list of Germanic roots. The general reader and the historian will find interesting reading under such heads as *Amerikanisch*, *Christentum*, *Kultur*, *Lehnwörter*. An appendix gives a list of words with additional references and cross-references, which point to unlooked-for or overlooked words. The word indexes of the Germanic and Romance languages are so full that they can indeed, as the compiler hopes, be used as German, English, and French dictionaries. The New High German index includes the proper names.

Two dog pictures are among the most satisfactory in *Sun and Shade* for January (New York: Photogravure Company). The Venetian Palazzo Reale, Miss Ada Rehan as *Rosalind*, copies of original designs, a landscape, and some grill-work form the subjects of the other plates.

To the December number of the *Revue de Famille*, edited by M. Jules Simon, M. Simon himself furnishes the leading article, on "The Church Marriage" (*mariage religieux*). M. F. Sarcey has a paper on "Le Timide au Théâtre," which affords a curious (English) commentary on the title of the magazine—"de famille." It is enough to say that he just stops short of relating the whole of the affair of J.-J. Rousseau with Zulietta in Venice. M. Auguste Moireau discusses the Pan-American Congress in an article which our readers will not find wholly unfamiliar. The *Revue* is generously printed (Paris; New York: F. W. Christern).

"The Great Central Asian Trade Route from Peking to Kashgaria" is the subject of a paper by Col. Mark S. Bell in the February Proceedings of the Royal Geographical Society. He formed a more favorable opinion of this province than some other travellers have done, regarding it as "a territory fairly rich in the precious metals, producing cereals in abundance, besides cotton and silk, of a healthy and enjoyable climate, rich in all fruits—grapes, figs, apricots, melons, etc., and vegetables—well watered by cool streams, and supporting over two millions of a hardy race, of excellent physique." The Russian merchants are very active, their cottons, chintzes, candles, sugar, cutlery, etc., being found everywhere, while there is a corresponding lack of British commercial enterprise in the interior of China. The people, though not disaffected towards their Chinese rulers, who tax them lightly, would not resist the advance of Russia, "whom they are gradually being taught to regard as their future mistress," and which can at any time absorb the province, as it is practically defenceless. The remainder of the number is taken up with obituary notices of Mr. John

Ball, the author of the 'Alpine Guide,' and Col. Sir Henry Yule, the editor of Marco Polo.

Dr. Hans Meyer gives an interesting account of his finally successful ascent of Mt. Kilimanjaró in October last in *Petermann's Mitteilungen*. The highest peak he estimated to be 19,680 feet. The great Kibo crater is more than a mile in diameter and 650 feet deep. Near the centre rises a cone of brown ashes to a height of 500 feet from the floor. A glacier flows out through a gap in the western wall and descends the mountain for nearly 2,000 feet. A supplementary number is devoted to a description of the explorations of Max Beschoren, between the years 1871 and 1887, in the Brazilian Province of São Pedro do Rio Grande do Sul.

Among the last official documents signed by the ex-Emperor of Brazil were diplomas sent to Admiral Mouchez and MM. Janssen and Perrotin, which conferred upon them the grade of Officer of the Order of the Rose of Brazil; and on M. Frassenet and the brothers Henry knighthood of the same order.

The special feature of Mr. Arthur Cottam's recently published charts of the constellations consists in their unusually large scale of 3° to an inch, which renders them suitable for working on small portions of the sky. They extend from the pole to between 35° and 40° south declination, and seem to be accurate and excellent in every way. Stars which can be seen by the naked eye are all shown, doubles are marked, and variables indicated by a ring (maximum) surrounding a disc (minimum).

In memory of Harriet Louisa Dudley Field, and of the fiftieth anniversary of the dedication of the first American college observatory, was printed the Williams College 'Catalogue of North Polar Stars,' by Dr. Truman Henry Safford. It is the first fruits of the fine Repsold meridian circle presented to the College by Mr. David Dudley Field, and is but the beginning of a more extended catalogue of polars whose observation is in progress. Prof. Safford's well-recognized ability as a practical astronomer shows to great advantage in a work of this sort, where precision of a high order is sought, and Williams is fortunate in having an astronomer who is both disposed and competent to make the best use of an admirable instrument. Among other things Prof. Safford's researches will promote the study of the relation between apparent proper motions and stellar distances, in order to extend our positive knowledge, instead of hypotheses, to the distances which cannot be measured directly. It will be remembered that Williams is indebted to Mr. Field not only for the Repsold circle, but for the observatory which contains it and for the foundation of the chair which Prof. Safford fills.

We have received the twentieth annual report of the Lenox Library for the past year. This library is now open to free inspection daily, and to the free use of readers. The Board of Trustees intimate, as the ground of their action in refusing to part with adjacent real estate, an ultimate expansion of the institution to the great advantage of the public.

The second annual Munich Art Exhibition takes place during the coming summer, beginning July 1, and closing October 1. All works of art intended for the exhibition must reach Munich on or before May 1, and be sent to the Artists' Association, 1 Königsplatz, where forms of application may also be obtained. Such works as are accepted by the Committee and not sold will be returned to the artist free of charge. Last year, notwithstanding the competition of the Paris Exposition, the Munich Art Exhibition was financially a decided success, and the thousands of persons who will visit Oberammergau to see the Passion Play will tend to render it even more successful during the present year. Of the 1,683 works exhibited, nearly one-third were sold. Twenty-six medals were awarded: of the five first-class medals, one was awarded to an American, Carl Marr of Milwaukee, for his colossal picture "The Flagellants." In view of the fact that America was represented by only twelve artists and twenty-one pictures, this is doing very well. Henceforth a medal of honor will also be given as the highest prize. Last year America paid a larger sum (143,810 marks) for pictures than any other country. She purchased fewer paintings (fifty-six) than Germany (seventy-six) or Munich (seventy-eight), but she purchased better or at least more expensive ones. American artists who wish to sell their pictures, and American collectors who wish to buy works of art, should not overlook the Munich Exhibition.

Mr. F. M. Bird writes to us: "Your reviewer of 'Death No Bane' (No. 1287, p. 186), in enumerating previous translations of Cicero's 'Tusculan Disputations,' overlooks that by Thomas Chase, Cambridge, 1858; one anonymous, 8vo, Oxford, 1840 (possibly a reprint); one by 'A Gentleman,' 8vo, London, 1758; and one by Christopher Wase, 'The Five Days' Debate at Cicero's House at Tusculum,' London, 1683."

—The *Atlantic* for March opens with a detailed account of the trial and opinions of Giordano Bruno, by Mr. W. R. Thayer, the most interesting part of which is a translation of the confession made by the martyr before the Inquisition at Venice, taken direct from the records. Through Bruno's own words one gets a clear and instructive impression of his personality and of the conditions under which he carried on his thinking. Mr. Charles W. Clark contributes a paper, in a conservative spirit, upon woman suffrage. He sums up for both sides. Other noticeable articles are upon the "Paris Exposition" and the "Dangers from Electricity," both of which are treated in a fresh and practical way, and make the best sort of popular papers. Dr. Holmes devotes himself to a Dunciad, without names, of modern current poetry, in which he discourages the producers of volumes of verse with all the severity of which his genial tolerance is capable. Some new lines of his own will be found in the text. An unsigned tribute to Tennyson, in a higher and more artistic strain than belongs to ordinary verse-writers, betrays some long-practised hand; and in the Contributers' Club are reminiscences of Boker, happily written.

—The Army series in *Harper's* takes up our own organization and illustrates it, less strikingly than was the case with Lord Wolseley's paper last month, but the text, from Gen. Merritt's pen, is excellent. An article upon "Venetian Boats" affords some picturesque cuts; and Sculpture, which is represented by two papers upon the Winged Victory of Samothrace and the head of Iris in the Parthenon Frieze, gives some very beautiful figures well engraved. An unusual contribution is made by Mrs. Ritchie upon Ruskin, in which several private letters of his to Burne-Jones, Watts, and others exhibit the character of his personal friendships after a fashion which generally does not obtain until a man is dead, and these are supplemented by sketches of Ruskin's hospitality at Brantwood. A curiosity of scientific interest is treated of in the account of the cobra-stone, which is a piece of chlorophane, luminous in the dark, which the cobra carries about with it and uses as a decoy for fire-flies, which mistake it for the glow-worm and gather about it. Mr. Curtis, in the Easy Chair, tells of his early acquaintance with Browning in Florence.

—The *Century's* leading illustrated papers exhibit the rôles of Joseph Jefferson and views of Gloucester Cathedral. The most valuable article, perhaps, is the exhaustive account of the municipal government of Glasgow, from which a great deal is to be learned in respect to matters and methods of administration which are a common subject of agitation in this country. La Farge's paper upon Japan is characterized by the same unusual artistic sensibility and felicity in word-rendering which we have already remarked. The two American papers are upon the mound-builders of the river valleys and the irrigable lands of the West, and are both from high authority. Prof. Fisher deals with the general subject of Faith as contradistinguished from Reason, with his usual clearness of thought and liberality of tone. Fiction and poetry occupy the large space which always belongs to them in this magazine, and are of the average quality.

—*Scribner's* is distinguished by two excellent leading articles, one upon Charles Lamb, in which the charm of his personality is thoroughly felt and well rendered by the writer, and the second upon Ericsson, in which the long and fruitful career of this great inventor is set forth with such force that he seems to be identified with the mechanical progress of the world since the present age of engineering began. A third remarkable paper is Prof. William James's account of the hypnotic experiments made in France, with the intention of bringing out the existence of several conscious selves in the individual whose activity is incompletely integrated. The observations which he reports are of great interest, and the comments made upon them, though not to be described as conservative, are temperate. The statement that he knows a "non-hysterical woman who, in her trances, knows facts which altogether transcend her *possible* normal consciousness—facts about the lives of persons whom she never saw or heard of before"—is the most startling; but he makes it "deliberately," upon full conviction of its truth. The Seminoles and the Boomerang are the only other papers of consequence.

— The death of the Empress Augusta of Germany has at last lifted the veil from an episode of her late husband's life which will undoubtedly rank henceforth among the noblest testimonies to his unflinching devotion to what he conceived to be his duty, while it throws at the same time a romantic charm around his personality which one would hardly have expected in this man of prompt action and of stern resolves. Emperor William's youthful love for the Princess Elise Radziwill, and his subsequent submission to the will of his father, who protested against the alliance of his son with a family outside of the reigning dynasties of Europe, has always been known. But only now, when, by permission of the present Emperor, the *Deutsche Rundschau* has published the unfortunate lover's correspondence about this matter, are we able to divine through what terrible conflicts he must have passed before he found at last the strength and courage to drink the bitter cup of resignation. The father of Princess Elise was one of the most notable figures of Berlin society, chivalrous, poetic, and high-minded. Goethe called him the only genuine troubadour he had ever seen, and his "Faust" composition is perhaps the finest interpretation of Goethe's masterpiece that we possess. Elise

herself was a beautiful and lovely character, and seems to have possessed to an unusual degree that combination of womanly modesty and delicacy with broad culture and serious purpose which gave the German women of the beginning of this century such a marked influence upon the shaping of their country's destiny. It seems that the King himself tried every means of removing the obstacles that stood in the way of his son's marriage with this noble girl. He had the crown lawyers investigate the pedigree of the Radziwill family in the hope of detecting some drop of royal blood in their veins; he thought of an adoption of the Princess into his own dynasty: he shifted from one proposition to another without coming to a final decision. And so Prince William was for fully five years, from 1821 to 1826, kept in constant suspense between hope and despair. It is remarkable to see how, with all his passionate devotion to the woman of his heart, he preserves throughout this trial the poise of an evenly balanced mind and the most scrupulous adherence to his duties as a Prince. Only once when, asking his father's permission to join the then threatening Russo-Turkish war, he receives the curt answer, "Es giebt keinen Krieg," he loses his temper and complains that "these beautiful war prospects, too, have now disappeared." But he soon recovers himself, and declares that he is prepared for anything which the welfare of his house and country may exact of him.

— When, at last, the King makes his final decision, the Prince lives fully up to his principles. To a friend he writes:

"It requires a great deal of strength to sacrifice one's dearest, highest wishes. But what a degree of strength did I need to abandon an alliance which was hoped for by all those interested in me, in which I have dreamed for many, many years that I should find my happiness, and which is now dissolved only by external circumstances! I may truly say that I have been badly played with all this time through the intrigues of men; and yet no grudge against them enters my heart. God uses men on this earth as his instruments through which he directs our destinies according to his will. And he who sends such heavy trials, shows us also the ways of comfort and of strength. To this I shall firmly hold, but my heart is torn, and human sympathy can soothe it, but not heal."

And this is his last answer to his father:

"You have, dearest father, given the decision of my fate which I had to anticipate, and yet shrunk from anticipating as long as a ray of hope was left to me. Read my heart to find there inexpressible gratitude for the countless tokens of your kindness, love, and mercy which you have given me in the last five troubled years, but, above all, for your letter of yesterday, which has moved me indescribably. Your fatherly love and goodness, your deep sympathy with my hard fate, the recalling of my royal duties, the acknowledgment of the worthiness of her whom I love, the allusion to all those attempts which your love for your children bade you make in order to fulfil the wishes of my heart—to find all this in those lines which decided my fate, sheds comfort and inexpressible gratitude on my broken heart. I shall justify your trust, and by trampling down my deep grief and steadfastly bearing the inevitable I shall overcome. So I close these important lines, with a broken heart, but with a heart that clings to you, dearest father, more lovingly than ever. For your fatherly love was never greater than in this hard decision."

Three years after this letter, Prince William led the Princess Augusta of Saxe-Weimar to the altar. Elise remained unmarried, living in the retirement of her family estate, a guardian angel to all who came near her. She died of consumption in 1833. Very properly does the editor of Prince William's letters apply to this romance of princely life in the nineteenth century the old German ballad—

"Es waren zwei Königskinder,
Die hatten einander so lieb;
Sie konnten zusammen nicht kommen,
Das Wasser war viel zu tief."

— President Eliot's Harvard University report for the past year is on the whole buoyant in tone. The stream of beneficence has not failed, salutary reforms in guidance and in discipline have been instituted, living has been made cheaper. "The cost of living in Cambridge is lower now than at any time since 1861." A problem to be attacked is the shortening of the college course. "Wherever the fault, and whatever the remedy, it is clear that the degree of Bachelor of Arts is taken in the United States later than in any other country in which the degree is used, and too late for the best interests of the individuals who aspire to it, and of the institutions which confer it." The problem of college athletics has hardly begun to be solved, but President Eliot's position is further advanced than ever. "What is desirable for the right conduct of college sports is, that all practice should be at home and only with other organizations within the same college." So far so good. But President Eliot would still retain inter-collegiate contests, confining them to "two fairly-matched colleges"—in other words, to Harvard and Yale. The foot-ball and base-ball leagues have miserably failed, he says, to effect reform or to prevent incessant misunderstandings. He rests his hopes of a dual arrangement, without league or association, on the relatively good conduct of the inter-collegiate boat-races. To our minds, the premises are faulty. These boat-races from the beginning, when they were the sole form of college contests, fostered a deplorable special antagonism between Harvard and Yale, kept alive the false muscular standard of college superiority, and were attended with all the evils inseparable from transporting large masses of excited youth to a distance from surveillance and restraint, together with betting. President Eliot records as "an agreeable incident of the year" a report on the "moral tone, intellectual earnestness, and general advantages" of the University by a committee of students drawn to it from other colleges. Passing by the disagreeable defensive appearance of such a document, we think it may be affirmed that nothing has done so much to stimulate rumors injurious to Harvard as the jealousies engendered by inter-collegiate contests, and that nothing will do so much to suppress the manufacture of such rumors as the total abolition of such contests and the sticking closely to business —*i. e.*, to the task of turning out the best equipped minds which the science and resources of the College can produce.

— The official relation of the public to the Yosemite is not popularly understood. In 1864 Congress gave the Yosemite Valley to the State of California, upon the condition that it should be inalienably held for public use, resort, and recreation, that it should be managed by an unpaid commission, and that the income derived from certain authorized limited leases should be devoted to its maintenance and improvement. The public spirited citizens who are or who have been the Board of Commissioners (for, in common with much of the public service in that troubled State, under the new Constitution, it has undergone changes which, in this case, the courts have yet to settle), although the recipients of local censure, appear to have discharged their duties with zeal and intelligence under very adverse conditions. For the State does not seem to realize the character of this treasure, and has treated it with the narrow-mindedness that the average legislator so often shows towards similar objects. For years not even the meagre salary due the local guardian was voted, preposterous claims for squatters' damages were seriously entertained, and the reservation seemed to be regarded as an endowment, not a trust. Two bridges across the Merced are the sole indications that the commonwealth has any interest in this domain. Indeed, excellent legal authority is of opinion that California has forfeited its title, and that the control might equitably and in law revert to the general Government. The Interior Department might administer it through an appropriate organization, to the benefit of the place and the advantage of its visitors. As it stands, the Commissioners are helpless to do more than to protect the valley from direct violence, and, by a maximum tariff, to avert such overcharges as disgrace many other public resorts. In the absence of positive means to render its beauties more accessible, they have authorized private parties to build toll trails to some of the more attractive points. The trails, made at considerable expense and kept in repair with great labor, lapse at the end of ten years to the Commission, but, meanwhile, the tolls, ranging from 50 cents to $1 and paid but once in a season, give a revenue to the builders. These moderate charges have been represented as extortions, and to those who are ignorant of the niggardliness of the State they seem inexplicable. But, really, that men could be found to construct these roads under the circumstances is a matter of public gratulation. When California discharges her duty towards the trust, and with broader policy brings its beauties fairly within reach, the swelling tide of visitors and their increased expenditure will repay the State, even in a material sense, a hundred fold.

BANCROFT'S UTAH.—II.

History of Utah. By Hubert Howe Bancroft. 1540–1887. San Francisco: The History Company. 8vo, pp. xlvii., 808.

THE outcome of Mormonism is still a problem of grave interest for the people of the United States. Its domination in Utah has, for a quarter of a century, kept that Territory from admission as a State into the Union. Although the "Gentile" population has of late years so largely increased that the Mormon rule in the municipality of Salt Lake City is seemingly about to end, the sect is no doubt largely in the ascendant in the Territory as a whole. The opening of the Union Pacific Railway and the death of Brigham Young were, respectively, events on which many persons confidently predicted the abandonment of polygamy or the dissolution of the church organization. More than twenty years have elapsed since the first, and more than twelve since the other, but Mormonism is still vigorous. Its leading men have learned some prudence from closer contact with the new elements which have invaded the Territory: but they have made no material change in their polity. It is probably true that the number of new polygamous marriages has diminished under the stringency of the acts of Congress, and some of the schisms in the body give hope that forces are at work to weaken the despotic control of the "apostles" and the "first presidency" over the masses of ignorant people who make up the great body of the Church. Yet if Utah were a State in the Union to-day, there is too much ground to expect that the whole power of the State organization would be used to drive away "Gentile" residents and restore a homogeneous Mormon community under a system in which Church and State would not be sim-

ply harmonious, but identical. They would not intentionally make war upon the national Government—the hopelessness of that is too apparent; but their past history shows their cunning skill in using the forms of popular government under the autocratic direction of the heads of the Church, so that the absolute decrees of a hierarchy shall be executed before the world in the guise of democracy and universal suffrage. It is beyond doubt the conviction of this, impressed upon the minds of public men who have attacked the problem, that has kept Utah for a whole generation within the grasp of national law. This is why reiterated denials have been returned by Congress to oft-repeated requests of the Territory for admission to the Union.

Although polygamy is now the odious feature first thought of when Mormonism is mentioned, it has not been the cause of the collisions between the Mormons and their neighbors. Missouri made war upon them and expelled them from her territory before polygamy was openly practised among them. They were driven from Illinois, and their famous temple at Nauvoo became a ruin, before the disgusting doctrine had been avowed; and one of the last acts of the Church on the east bank of the Mississippi was the excommunication of a preacher who had prematurely advocated it in public. We must look elsewhere for the cause of their collision with the people who lived near them, and for the constant tendency to make crusades against them. Ignorant impostors had been followed by deluded dupes before Joe Smith pretended to find the golden plates of a new revelation in Ontario County. Shakers and Dunkers had established religious communities, excluding the world, before the Mormons began to "gather unto Zion." Why, then, did these last so soon find every man's hand against them?

The word "crusade" itself suggests the answer. Like the Mohammedans, the Mormons distinctly avowed the intended triumph of their faith, and the establishment of the reign of the Latter-Day Saints upon the earth, by the physical conquest of the nations. The slaughter of the Amalekites was not to them a figure of speech representing a spiritual triumph of their faith by the submission of consciences: they meant it literally. Their publications and their harangues are full of the proof of it. Hardly had the "prophet" made the first organization of his Church at Kirtland, Ohio, when he formed a military company with a view to their march to Missouri. Later, the company expanded into the Nauvoo Legion with a lieutenant-general, nine major-generals and brigadiers, and a full complement of subordinates; the rank and file enrolling all the able-bodied men in the Church. This organization was never disbanded, and only ceased its public parades and drills when forbidden by Gov. Shaffer in Utah in 1870, after an unbroken existence of more than thirty years.

In 1831, Smith, by one of his formal "revelations," announced Independence, Mo. (in Jackson County), as the divinely appointed centre of Zion, and a location for the temple was fixed near the court-house. From this centre the kingdom of the Saints was to expand, first over the United States and then over the world. As a revelation by their "prophet" this has never been abrogated, and it is a curious fact that Brigham Young, in making his will in the last years of his life, provided for his burial in Utah, though he added, "but if I should live to go back with the Church to Jackson County, I wish to be buried there." No better proof could be given of tenacious adherence to the original purpose and faith in this respect, which was adopted in the earliest days of the Church.

The most striking feature in Mormon propagandism was its early success among the uneducated classes in England and Wales. The bands of recruits coming to them across the ocean made Smith and his counsellors overconfident and incautious. They were not the first to appeal to force: common prudence dictated that they should wait. Their visions of empire were preached abroad, however, as a means of attracting converts, and the rough neighborhoods of the frontier became excited. A backwoodsman is as capable as a king of understanding the practical maxim that if a collision is sure to come, the advantage is with the initiative. The real secret of the gathering of mobs lay there.

Smith's plan was to concentrate his followers, first obtaining control of a township and its legal organization, then of a county, then of a State. His people acting as a unit would elect magistrates, sheriffs, judges, and his "legion" would be the ever-ready *posse comitatus*. He himself, as the divinely inspired prophet and leader, would mould the will of his people like wax, and be the real power behind the simulacrum of popular sovereignty. The outbreak in Missouri came before his forces were all organized, and, after a bitter struggle, in which the Missourians were the aggressors and the Mormons the greater sufferers, the exodus was accomplished, and a new settlement was made at Nauvoo.

The Mormons were at first welcomed into Illinois, and a too liberal charter for their city was granted by the Legislature. The swelling tide of immigration turned the heads of the leaders, for Nauvoo became the largest city of the State, and the Mormon vote, cast as a unit, controlled the Congressional district by holding the balance of power between Whigs and Democrats. In the same way their power in the Legislature was such that Stephen A. Douglas, when first elected to the Senate of the United States, was called by his opponents "the Mormon Senator." Intoxicated by the tide of power which seemed to rush in his favor, Smith, in 1844, first interrogated the candidates for the Presidency with a view to the casting of the vote of his followers, and soon announced himself as a candidate. The Nauvoo municipality placed their ordinances above State laws. They enacted (as is declared by Gov. Ford, with whom they had affiliated politically),

> "that no writ issued from any other place than Nauvoo, for the arrest of any person in it, should be executed in this city, without an approval endorsed thereon by the Mayor; that if any public officer, by virtue of any foreign writ, should attempt to make an arrest in the city without such approval of his process, he should be imprisoned for life, and that the Governor of the State should not have the power of pardoning the offender without the consent of the Mayor."

A very small modicum of the spirit of prophesy should have taught Smith that a new collision was not far off. The occasion was the issue of the first number of an opposition paper in Nauvoo, charging the "prophet" with immoralities which have since become notorious. A second never was issued. The city council summarily declared the paper a nuisance, and the marshal, with a detachment of the "legion," destroyed the establishment with its press, type, etc. The local courts refused redress. The proprietors sought it in courts outside the Mormon settlement, while in Nauvoo the whole "legion" was put under arms and a defiant attitude taken. As had happened before in Missouri, however, and as happened later in Utah, the Church leaders gave way when brought face to face with actual war; and Smith, with his chief counsellors, submitted to arrest, treason being now added to the charges. The murder of Smith and his brother at the Carthage jail was by a disguised mob, with the usual pretext of mobs, that they feared the chicane and delay of the law. The militia of the State reassembled, but it was now to drive the Mormons from Illinois.

A second and more wonderful exodus took place. Brigham Young assumed the leadership by a sort of *coup d'état*, excommunicating Sidney Rigdon, his chief rival. It is not strange that, to a fanatical multitude saturated with the phraseology of the Jewish story, and with its idea of intense unity under a militant theocracy, the march across the plains seemed a miraculous exhibition of divine leadership. In the basin of the Great Salt Lake they seemed to be out of the reach of the world, and it was not altogether irrational for Brigham Young to think and to declare that in ten years he would build a community that could defy the United States. There was no change in general purpose or aim. Polygamy was openly proclaimed, but Smith's "revelation" concerning it dated back to 1843, nine years before its avowal. Its publication checked the spread of Mormonism in Europe as at home, and the culmination of the growth of the sect dates from that time.

In Utah the same causes which had operated in Missouri and Illinois produced the same results, modified by the new situation. The hierarchy was all in all. The forms of civil government were only to carry out the will of the Church, and this soon came to mean the will of Brigham Young, who from year to year was reëlected and installed "prophet, seer, and revelator." The attempt to set up a Territorial organization with "Gentile" judges and other officers proved a farce. It was tolerated so long as it did nothing. Probate courts were established by the Mormon Legislature in the several counties and given general jurisdiction, civil and criminal, with such obstacles in the way of appeal as to make this of no value. Juries in the United States courts, whether grand or petit, would enforce no law against the Mormon polity, or in any controversy between individuals at all involving questions of land tenure or personal tests. We may pass by the debatable ground concerning secret executions by the "Danites" at the command of the Church, or the "blood atonement" which terrorized any who leaned towards apostasy, and there is still plenty of material to show that the true seat of the disease in Utah, as in Nauvoo, is the close organization of a Church which declares its right to dominate the State, and to do it by force whenever the hierarchy shall regard it prudent, or shall think the time ripe for it. The repressive legislation of the United States cannot be understood except this be kept in mind. Polygamy is an incident which has simplified the problem by the disgust and hatred with which all civilized people view such an institution. To make a religious duty of the committal of a common-law crime, arouses universal antagonism, and gives a plain and simple point of attack. But, as has been shown, the cause of collision lies back of polygamy. It will not die when polygamy is suppressed, except as a general decay in the vitality of the sect shall accompany the suppression.

The problem before American statesmen, then, has been and still is, how to deal, under the forms of our democratic institutions, with an organized community which does not share

the spirit of those institutions, and does not assimilate with the rest of the people, but uses the powers and the privileges of citizenship with a real aim at destroying the State? The practical answer has not been illogical in substance, however inconsistent it may have been in form. It has been to ignore it when its strength is contemptible, to repress its criminal development and trust to time so long as desperate collision can be avoided, and to crush it ruthlessly when that limit is passed.

The necessity of general homogeneity in a State is a thing which Americans instinctively assume without arguing much about it. It is among the fundamentals of the unwritten law, lying beneath our formal constitutions themselves. By virtue of it we have shouldered off Indian tribes beyond our ever-advancing frontier, till we have planted the remnants upon reservations to dwindle away in the midst of a civilization few of them can comprehend or accept. The clashing between the practical unwritten law and over-elaborated theories of democracy has made us seem vacillating, unjust, cruel; but the tide of civilization has rolled on. The logic of events has been stronger than the logic of theorists.

The Mormon question is of the same sort. We have been charged with violating the sacred rights of majorities by refusing to let Utah govern itself like its much smaller neighbor, Nevada. We have been charged with imposing distasteful rulers upon a nominally free people. We have been charged with disfranchising citizens because of their religion, with setting up a minority rule, with packing juries, and with holding a community down by a standing army. It is all true in form, and if the answer that Mormonism is essentially unrepublican and un-American is not a sufficient answer, there is none. If the law of real political homogeneity as a necessary condition of a great State is in fact the most fundamental thing in political science, the answer is conclusive. The result will be that the pressure of the national hand will be felt till Mormonism dwindles into insignificance again and loses all importance as a political element in Utah. If it goes further, it will fare worse. He must be a very shallow reader of American history who does not see that the people will never long allow the forms of democracy to be used to destroy its substance, much less to set up an autocratic despotism.

FATHERS AND SONS.

James G. Birney and His Times. By William Birney. D. Appleton & Co. 1890.

On the 17th of September, 1830, Boston celebrated the 200th anniversary of its foundation. Among the lookers-on at the festival was a native Kentuckian of good family, who, a graduate of Princeton College, an eminent lawyer living at Huntsville, Ala., had come North on a mission from the University of Alabama to procure for that institution a president and several professors. Such a mission would of itself have insured him a cordial reception in the Athens of America. But Mr. Birney was a man of elegant appearance and manners, and possessed ample means; he was not only a gentleman, but a Southern gentleman, in the best sense of the term; withal he was a slaveholder, and in the eyes of Boston respectability this circumstance capped his social credentials. All doors were open to him. He met Webster and Ticknor, he called on President Everett at Harvard.

Amid the city's throng on the same occasion there was, in all probability, a youth younger by fourteen years than the Southern visitor, a native of Essex County, Mass., of obscure and very humble parentage and no family connections, uneducated beyond the grammar school, a printer by trade, an editor unsuccessful in three or four enterprises, poor as a church mouse, and a recent inmate of the Baltimore jail. He had just returned to Boston by way of Philadelphia, New York, and Hartford; and if he had counted upon any welcome to the city which was to be his future home, he had utterly forfeited it by publicly addressing en route sundry gatherings of "free niggers." Moreover, he carried in his pocket the draft of "Proposals for publishing a weekly periodical in Washington City, to be entitled the *Public Liberator, and Journal of the Times*," whose primary object was to be "the abolition of slavery, and the moral and intellectual elevation of our colored population."

Of these two men, however, Garrison was already the more widely known, since his trial for libel and imprisonment on account of his denunciation of the domestic slave trade had drawn the attention of the press and excited general comment. The movement which, a month later, he inaugurated in Boston, with an abolition lecture in the only hall procurable—that of "infidels"—was destined to shape the career, and consequently to determine the biography, of the high-bred Kentuckian. It was natural, therefore, to expect in any adequate Life of Birney some mention of the editor of the *Liberator*. The work before us does not err on this side. Its poverty-stricken index is rarely analytical, but to Birney are assigned three itemized columns, and to Garrison, ostentatiously, one, which is, besides, far from complete in its references. There are, indeed, very few pages on which one cannot read Garrison between the lines, and the fact is scarcely concealed that Garrison and not Birney is the main subject of what purports to be biography and history, and is really one long defamation of a person whose name does not appear in the title.

The author's story of the genesis of this production is curious. He relates in his preface that his father had always met, on the part of anti-slavery historians, with "such a consensus of favorable appreciation" that "there seemed to be no need of a [second] biography of James G. Birney. It transpired, however," he continues, "about 1883, that the sons of Mr. Garrison were preparing an ample memoir of their father—a work which, from a filial standpoint, involved the reproduction and expression of Mr. Garrison's theories and prejudices. The first two volumes of the memoir appeared in [October] 1885." We pause to remark that the undertaking of a family biography was announced, within three weeks of Mr. Garrison's death, in the *Nation* of June 12, 1879 (p. 405). That it would be "ample" was unknown to any one at that time or in 1883. That it would "involve the reproduction and expression of Mr. Garrison's theories and prejudices" was equally unknown till 1885; but as this meant simply painting Mr. Garrison as he was, it ought really to have caused alarm to nobody, but rather to have inspired confidence in his biographers. Gen. Birney's phraseology, however, is intended to convey the idea of misrepresentation and distortion, as he shows by citing an *obiter dictum* of Mr. A. G. Riddle's, in 1886, that the "way of writing history lately attempted" in the 'Life of Garrison' should not be "accepted without protest," and that the work was a "challenge" to "the sons of the late J. G. Birney."

By this subtle but incoherent tissue, Gen. Birney insinuates that his rest was undisturbed till 1883, and not completely broken till 1885, and perhaps that he even needed the incentive of his neighbor Riddle to undertake the filial duty of showing how history should be written. He next records the completion of the 'Life of Garrison' in October, 1889, and only then says that he (as a "surviving political abolitionist") cannot afford to let it go without protest—as if he had accomplished his task between that date and January 10, 1890. Now the truth is, that as far back as 1881 he gave publicity to his intention to write a 'Life and Times' of his father, showing the "rise, growth, and success of the anti-slavery movement in the United States." This notice was copied into the *Nation* of September 29, 1881 (p. 254); and a passage on p. 105 of the present work shows that in 1882 he was in correspondence on the subject. In short, neither the contents nor the method of the 'Life of Garrison,' nor any rumor about them, had anything to do with Gen. Birney's motive in writing the Life of his father.

This *suppressio veri* and *suggestio falsi* is characteristic of every part of the volume before us, and it is bewildering to choose examples from such a mass. The orderliness of the narrative (and its completeness) is entirely sacrificed to the necessity of belittling, discrediting, and reviling Mr. Garrison from beginning to end. This is obvious to the most casual reader, and is the sole explanation of the author's meddling with the "Times," instead of confining himself to a straightforward "Life." His epigraph reads: "The abolition of slavery in the United States was neither an accident nor a miracle; it was a result of evolution." We do not know any one who disputes this truism, except Mr. Eli Thayer of Massachusetts. What Gen. Birney intimates by it is, not that Garrison had predecessors, but that his accession to the cause was unimportant, save in impeding and retarding it. To this end, he applies indiscriminately, as suits his fancy, the terms "abolitionist" and "immediate abolitionist" to any one who detested slavery before 1830, thus picturing a state of things satirized by Mr. Garrison in 1831 in these words: "Everybody is opposed to slavery. . . . O yes! there is an abundance of philanthropy among us: the difficulty is, we have *too much*, instead of *too little* of it. . . . *There is nobody to reform* (except the reformers)—here lies the difficulty."

James G. Birney, to his everlasting credit, worked himself, in a truly religious spirit, out of the slaveholding relation, emancipating the few domestic servants retained when he gave up plantation life, and later those bequeathed (by agreement) by his father as his portion of the latter's estate. As in the case of many others, his first stopping-place in his abolition pilgrimage was the American Colonization Society, of which he became an earnest agent till convinced of its essential folly and wickedness. What was this Society? Gen. Birney does not think it incumbent on him to give any direct account of it; and though he honors his father for abandoning it in 1834, he quotes with relish J. G. Birney's reference, in 1832-'33, to the "rhapsodies" of Mr. Garrison's destructive pamphlet, 'Thoughts on Colonization' (published in 1832), together with the official Colonization abuse of Mr. Garrison for it. Birney by and by removes to Kentucky, and founds, in March, 1835, a State anti-slavery society at Danville, auxiliary to the American Anti-Slavery Society. What was this parent Society? Who was at the bottom of it? Why were all the anti-slavery societies formed later in affiliation with it? Gen. Birney does not immediately enlighten his readers: the "evolution" is at work, and they should be

satisfied. In Appendix C they will learn, if they are tolerant of falsification in fine print as well as in large, that the Philadelphia Convention which founded the American Anti-Slavery Society in 1833 was but one in a long series of "associations of a national character to promote the abolition of slavery"—only this and nothing more; that Garrison had no hand in calling it, and, though he drew up the Declaration of Sentiments (including a rough draft invented by Gen. Birney in order to get it rejected by Mr. Garrison's fellow-committeemen), he played a very subordinate part throughout.

Forcibly prevented from publishing an anti-slavery paper in Kentucky, Mr. Birney crossed the Ohio, and in January, 1836, started the *Philanthropist* at New Richmond, with a speedy transfer to Cincinnati. Simultaneously he was made a member of the Executive Committee of the State (Garrisonian) Anti-Slavery Society, which he had helped to found the previous year, and he rendered efficient aid in multiplying affiliated societies, every one of which, on any rational principle of "evolution," was derived from the organization unquestionably founded by Garrison in Boston on January 1, 1832. Mr. Birney had no illusions on this subject, but his son industriously conceals the relationship, nor does he dwell on the parallel between the mob which, on July 30, 1836, destroyed the press of the *Philanthropist*, and that more famous one in which Mr. Garrison was involved on October 21, 1835, both having the approbation and participation of the most respectable citizens, and having been preceded by public meetings instigating to mob violence. At the Cincinnati meeting J. G. Birney's conduct was intrepid and admirable (he was absent during the sacking of his office), but the son would fain magnify it by making light of the Garrison mob, which he characteristically dismisses without even naming the chief victim of it. The father, on the other hand, in his letter of December 9, 1835, to the Alabamians, in defence of the Garrisonian abolitionists, wrote of the same event:

"You have excited your instruments to war against associations of unoffending and respectable females [the Boston Female Anti-Slavery Society]; to trample under their unhallowed feet, in the person of an American citizen [Garrison], the most sacred immunities of law, and to shout their fierce triumphs over Constitutional rights, and to celebrate their foul orgies in the face of day, and almost in the vestibule of the venerated 'cradle of liberty' [Faneuil Hall]."

In 1837 the magnet of the American Anti-Slavery Society drew Birney out of journalism into official connection with this body, and led to his removal to New York to become Corresponding Secretary. At this point his son's reticence or lack of original material is most felt, for there was opportunity to make an interesting contribution to the history of the anti-slavery cause. Before leaving Cincinnati and the *Philanthropist*, Mr. Birney had taken sides with the New York Executive Committee and the Massachusetts orthodox clerical abolitionists in the matter of the censorship sought to be enforced upon Mr. Garrison's theological opinions. We are told that the impending schism was the main inducement for Birney to come to New York and take the post occupied by Judge Jay. But no proof is furnished unless it be the fact that he never proffered hospitality to the editor of the *Liberator*.

Thoroughly disingenuous is the whole treatment of Birney's views as to political action. His son pretends that he was the first who "called abolitionists away from obsolete issues to true ones," but he does not name these issues, neither does he point, nor can he point, to any article in Garrison's Declaration of Sentiments—the abolition creed—which it was proposed to drop when the moral organization should be converted into a political machine, as Birney and his friends came to desire. Gen. Birney, on the other hand, studiously conceals the fact that, down to 1839, there was no opposition between his father and Mr. Garrison as to the catechising of candidates for office, or as to voting (if one chose to vote) for anti-slavery men. He is silent about a circular signed by his father in July, 1838, preferring independent catechism to separate party nominations—the ground consistently maintained by Garrison.

The change and the division came when the agitation for a third party began to make head in central New York, and when Mr. Birney made his amusing attempt to read the founder of the American Anti-Slavery Society out of it because of some Quakerish scruples about his own voting. Gen. Birney's account of this collision is neither full nor fair. It ended, in 1840, in the secession of Mr. Birney and his friends from the Garrisonian organization, in Birney's virtual withdrawal from the anti-slavery propaganda, and relegation to the function of a standing Presidential candidate—by fitness, not by self-seeking—until he was physically disabled in 1845, when the story of his life ceases. Meanwhile, he had been sent abroad to the World's Anti-Slavery Convention of 1840 as a delegate nominally of the American Anti-Slavery Society, but really of the Executive Committee hostile to Garrison, and foreseeing its overthrow at the annual meeting. The funds voted him by the Committee for his travelling expenses were taken from the Society's treasury on the same day when it was voted, for the want of a smaller sum, to transfer the Society's organ, the *Emancipator*, to another ownership—an act which Birney's kinsman, Gerrit Smith, declared indefensible, and concerning which it would be desirable to learn Birney's opinion, seeing that he was a member of the Committee. But his son is dumb on this delicate subject, and inexcusably puts in the background, with slight apologetic mention, his father's greatest literary monument—the historic pamphlet composed during his English tour, called 'The American Churches the Bulwarks of Slavery.' The Rev. Beriah Green, in his 'Campaign Life of Birney' (1844, p. 91), on the other hand, declared "it must not be disposed of with a passing notice merely," and gave five pages to it. His son's moderation is accounted for by his policy of emphasizing Mr. Garrison's "infidelity" in season and out of season.

We have left ourselves no space to comment on Gen. Birney's failure to give a true or compact and consecutive narrative of the rise, course, and fall of the Liberty party and its successors. Nor, which we much regret, can we dwell upon his father's merits as an abolitionist, or on that private life which Gen. Birney relates (when he has an eye single to it) with candor and charm. Our author is confident that Garrison bore towards his parent "a deadly hatred which grew stronger with years, and which he appears to have transmitted in all its venom to his descendants [*i. e.*, his biographers]." This is purely mythical. At the height of their opposition on grounds of anti-slavery policy, viz., in 1840, Garrison expressed satisfaction that Birney had been so well received in England as an American abolitionist (Life, vol. ii, p. 431). In the *Liberator* of December 4, 1857, he devoted an article to Birney, by way of obituary, full of generous praise of his character and services to the cause from 1834 to 1840—

"when he joined the malcontents, and committed an error which proved fatal to his usefulness, and which, we doubt not, he deeply regretted toward the close of his life; for it is only a short time since he made a donation to the treasury of that [American Anti-Slavery] Society, and in other ways he has indicated a friendly interest in its welfare. He was highly courteous and dignified in his manners, less able as a speaker than as a writer, true to his convictions, and devoid of sectarian malevolence."

Such was Garrison's legacy of "deadly hatred." That the elder Birney became reconciled to a Society presided over not only by a non-resistant and an "infidel," but (in 1857) by a disunionist (for freedom's sake), and gave money towards its support, is a fact assuredly not to be looked for in Gen. Birney's diatribe, which it makes ridiculous. Half-a-dozen chapters at most would have sufficed to contain all the novel information concerning his father which he has chosen to give. A truer impression of J. G. Birney can still be got from Green's Life, which abounds in quotations from his writings. All of Gen. Birney's history of the "Times" is tainted by his leading motive to malign Garrison, in which he has been greatly assisted by the Life of the latter, with its convenient store of censure and opprobrium set forth without garbling or dislocation in time, place, or circumstance.

RECENT WORKS ON GEOLOGY.

Metamorphism of Rocks. By Dr. A. Irving, D.S.C., B.A., F.G.S. Longmans, Green & Co. 1889.

Creation and Physical Structure of the Earth. By John Thornhill Harrison, F.G.S., M.Inst. C.E. Longmans, Green & Co. 1889.

Handbook of Geology, for the Use of Canadian Students. By Sir J. William Dawson, Principal of McGill University. Montreal: Dawson Bros. 1889.

THE three works above referred to represent fairly well three different types of geological publications of the present day. The first is an essay, from the point of view of the chemist and physicist, on one of the most abstruse and subtle problems that the geologist has to deal with—namely, the character and cause of the various changes that rock masses have undergone since their original formation, which in earlier times were comprehensively designated metamorphism, with little or no attempt on the part of those using it to discriminate between the different kinds of changes produced, or the necessary differences in the causes which could be assigned to them. The opposite tendency, and the danger to which it leads some too ambitious geologists of the present day, is well characterized by the author in the following words:

"In the conflict of opinions and views which has been waged for years over those phenomena connected with rock structure, which are generally understood to be included under the term 'metamorphism' in its more restricted sense, it is to be feared that many 'theories' which have been put forward from time to time are simply suspended in the air; instead of hanging on to a series of rigid *inductions from facts*, they have often little more than the imagination of their authors to rest upon."

Dr. Irving's work gives internal evidence of extensive personal research and investigation in the laboratory and library. His language is as involved, as full of parenthetical clauses, and consequently as difficult of comprehension, as that of the typical German investigator. While his reading of Continental and American works is unusual for an Englishman, it was apparently taken up somewhat as an afterthought, and the naïve surprise he frequently expresses that, in the conclusions he had laboriously reached, he had already been forestalled

by foreign authors, is thoroughly British. The rather strong and often contemptuous language in which he characterizes what he considers the errors of other geologists, is apt to lead the reader to suspect him of that rashness of statement which is a characteristic of immaturity. Still, his work, though containing no striking novelties, is of undoubted value to special students as a summary of the present state of knowledge of the chemical and physical side of this complicated problem, whose ultimate solution tends to a knowledge of the character and manner of formation of the primeval crust of the earth.

To most geologists who might be attracted by the title of Mr. Harrison's book, the sight of verses from Genesis i. at the head of each chapter would sufficiently typify the probable character of the book, as one of those many emanations from the minds of well-meaning men in whom a little knowledge has indeed proved a dangerous thing, and who think that the inspiration of a truly religious spirit will enable them to reach the final truths of geology, which the actual workers therein have missed through the want of this spirit. Perusal will show, however, that Mr. Harrison's work is superior to most of its class in that it is the result of a great deal of reading by one who must have had some grounding in geology, since he was a pupil of the late Prof. J. D. Forbes. He modestly disclaims the pretension that he shall be able to establish in this work a perfect "theory of the whole earth," but hopes to afford a basis for it, considering that the problem to be solved very much resembles a Chinese puzzle, the pieces of which are all given, the difficulty being to put them together. It is on this notion that his book is constructed, the pieces of his Chinese puzzle consisting of short quotations from a few excellent geological authors, such as Buckland, Lyell, Prestwich, Geikie, Bonney, and others, arranged in his own peculiar way, so as to support his conclusions, which, when differing from those of the authors quoted, are, as might be expected, of no scientific value whatever. Such books, however, like the more ingenious and imaginative speculations of Donnelly, will always find readers among people of that class who have more faith in quacks than in regularly educated physicians.

More modest in form, but of greater intrinsic value than either of the above, is the work of the veteran geologist, Principal (now Sir William) Dawson. Although described as a handbook for the use of teachers, and for scientific travellers in the Dominion, it is in reality an epitome of the geology of that immense and (until within a few years) comparatively unexplored region stretching from our northern boundary towards the Arctic Circle. The Geological Survey of Canada, though much less richly endowed than that of the United States, and having a more inaccessible region to examine, has yet accomplished very valuable results, especially in late years, which are summarized in this volume. In general, these correspond with those of their brother geologists in the United States, but on some points they still differ.

With regard to glacial movements in the extreme north, Dawson says:

> "The facts so far developed in this northern part of the continent, and in the Arctic islands, thus point to a movement of ice outward in all directions from the great Laurentian axis, or plateau, which extends from Labrador round the southern extremity of Hudson's Bay to the Arctic Sea, rather than to any general flow of ice from the vicinity of the geographical pole southward."

He still clings, however, to the old method of accounting for many glacial phenomena as the result of floating ice, thus necessitating the supposition of very great subsidences of present land areas during the glacial period. British conservatism is also shown in the unwillingness of Canadian geologists to accept the natural classification of the so-called Huronian rocks, proposed by the late R. D. Irving, as opposed to the extremely artificial and unnatural ones originally established by Logan and Hunt.

Arne, and the Fisher Lassie. By Björnstjerne Björnson. Translated from the Norse by Walter Low. [Bohn's Novelists' Library.] London: George Bell & Sons; New York: Scribner & Welford.

If the number of translations is the criterion of popularity of a foreign book, then both stories contained in the present volume have enjoyed an amount far beyond the ordinary allotment, for the present is the third English version of 'Arne' and the fourth of the 'Fisher Lassie.' There is here, however, in each case a proper justification for a new translation. Mr. Low has improved upon all of his predecessors, immeasurably upon some of them, and gives us, at last, an English rendition that retains in an admirable degree both the characteristic spirit of the original and that apparently artless simplicity which is itself the perfection of art, easy, perhaps, to appreciate, but difficult to catch and to hold through the medium of another language.

The two stories, although alike generically "village novels," are widely different in character, but it is a happy thought to bring them together in one volume. 'Arne' belongs to the early period of Björnson's literary life (it was written in 1858), and shows its youth in a freedom and freshness of manner which in an older writer is either apt to be repressed as immature, or, more frequently, is soon utterly lost is spite of all effort to retain it. The story tells how the peasant boy, Arne, whose talents his drunken fiddler father abuses in encouraging him to make ribald verses, comes through the fire unscathed, and, at last, like the lad in the fairy tale who gets the princess, carries off as his wife the fairest girl in the whole countryside. It is a pure idyll, in which the landscape is supplied by the mountains of Norway, with their pine-covered sides and sloping fields and wide views across the lake to the isolated farmsteads on its shores. The materials of the story are often sordid enough, and not over-poetic, but the author has given it all a spirit that invariably lifts it above its environment and turns towards us its brighter side. The prose is interspersed with Arne's songs.

The 'Fisher Lassie' is a novel of stronger purpose, and shows in every way a firmer and maturer literary power. It appeared originally in 1868, ten years after 'Arne' was written. The intervening period was for Björnson one of constant literary activity, and some of his best dramatic work lies within it. From 1865 to 1867, he was director of the theatre at Christiania, and to this fact is clearly due the motive of this story, which is a strong and manly plea for the profession of the actor. Petra, the "Fisher Lassie," who has succeeded to her title from her mother, leads, as a child, her hordes of street urchins in all their mad pranks, but is taken in hand by the son of the village pastor, and given an education much above her rank in life. Afterwards, driven away an outcast by her own unthinking folly, but guiltless of any deeper fault, she comes to Bergen and for the first time sees a play at the theatre. When she is made to understand that it is acting, and not reality, that she has seen, she determines then and there that she will follow what she says to herself surely is "the greatest calling on earth." The director, to whom she presents herself, finds that she has not the slightest conception of what being an actor implies, and none of its requirements, and, chagrined beyond measure, she again flees anywhere to be away from it all, but this time falls into the good hands of a clergyman far up among the mountains. It is her career here, and the struggle of the old clergyman with his preconceived opinions about the stage and their final overthrow, that form the main argument of the story; and the book ends when the curtain rises at the first appearance of the young actress, before whom in the audience sit the clergyman, her mother, who had cast her adrift, and her benefactor and whilom lover, the pastor's son, whom she had renounced for her art's sake. It is a story admirable in purpose and admirably told. Its situations are distinctively dramatic, and the principal characters have to a rare degree the quality of personality that leaves them behind in the memory as unmistakably real.

In grouping 'Arne' and the 'Fisher Lassie' together, the translator has not only associated two stories that show different phases of Björnson's literary work, but he has thus incidentally instituted a comparison of some interest between an earlier and a later point in a career that belongs not only to Norway, but to the world.

A Study of Ben Jonson. By Algernon Charles Swinburne. Worthington Co. 1889.

The general character of Swinburne's criticism has been so amply illustrated in his previous volumes upon the dramatists and others that one knows beforehand the sort of laudation which he will bestow upon Jonson, and anticipates the pæan of appreciation, relieved by damnatory clauses visited upon some convenient blockhead, which he will raise in the "Laureate's" praise. He surveys the entire work of Jonson, plays, masques, lyrics, and the 'Discoveries,' in much detail. The method he employs has the disadvantage of rendering his criticism almost wholly useless to those who are not intimately acquainted with the special work at the moment considered; but as the stress of the author's eloquence necessarily bears upon the four or five principal dramas, the reader who may never have devoured the whole of the poet's work gets a sufficient idea of the amount, or perhaps one may better say of the temperature, of Swinburne's approval of the first of "the giants." Reasons are always few in this critic's pages; but vehemence of panegyric shows the extent to which in each particular case he has been excited by the poet's power.

He does not praise Jonson, however, without reservation. His old distinction between the "giants" (Dryden, Byron, and Jonson) and the "gods" (Shakspere and Shelley) stands him in good stead and marks out a convenient limit to his eulogy. He denies to Jonson the divine inspiration, the free song, the charm of the born poet. Lyrical power, he declares, this dramatist did not really possess, and though he wrote, by happy accident, a few excellent stanzas occasionally, yet he never really sang, like Barnwell, for example. This limitation of the praise accorded to Jonson seems to us in the right line, since he has been overvalued as a lyrical writer in this century. Otherwise, Swinburne does not add to our knowledge of Jonson's art or genius. He seems to think that the poet's 'Discoveries' have never been heard of before,

and brings them forward as a treasure-trove; but they are well worth the emphasis and relief which they thus gain. Finally, the object of Swinburne's objurgation in this instance is the editors of the text upon which he ventures a few emendations, several of which are excellent, but all do not seem to us improvements.

A Race with the Sun. By Carter H. Harrison. G. P. Putnam's Sons.

THE letters which Mr. Harrison sent home to the newspapers in Chicago, of which city he was formerly Mayor, have been collected by him, and in condensed form printed in a handsome octavo volume. The book weighs more than four pounds, contains 569 pages, and 32 full-page illustrations. The fair white paper, wide margins, handsome binding, and clear pictures make this one of the most attractive works of travel issued during the past year; but in the main it cannot be said that the text is vastly above the average of people who travel round the world and then make books. More than fifteen years of official life and wide observation of men and things in our own country certainly prepared Mr. Harrison to see the seven great wonders of the world, and thousands of minor matters into which the average tourist does not inquire and for which he does not look. The generous interlarding of his pages with American slang, however, and his manifest receptivity for the local misinformation so plentiful at the Hong, tea-table, and club-house of the commercial ports of the East, mar his text, and show that better editing of his material would have improved it as a book. The use of the English language is not that of the purist or the pedant, and the liberties taken with it are noticeable. Some words are used in a sense not known to the standard dictionaries, though probably understood in Chicago.

Mr. Harrison has named his lively book 'A Race with the Sun,' because he took his course round the world westward. He occupied more than five hundred days, making a sixteen-months' tour of Manitoba, Oregon, Washington, Japan, China, Siam, Burmah, India, Ceylon, Egypt, Greece, Turkey, and the countries of northern Europe. Being in company with two lads, he took pains to see what would interest young eyes, as well as his own. He met a great many eminent people, and was well received in many places. Probably in no other volume printed in the year of grace 1889 shall we find so full and clear a picture of that part of the world which lies in the beaten track of the world-compassing tourist.

BOOKS OF THE WEEK.

Baring-Gould, S. Old Country Life. Philadelphia: J. B. Lippincott Co. $3.
Bartholomew, J. Library Reference Atlas of the World. With general index. Macmillan & Co. $18.
Bingham, Capt. D. The Marriages of the Bourbons. 2 vols. Scribner & Welford. $7.50.
Catalogue of the Books in the Legislative Library of Nova Scotia. Halifax, N. S.
Cesaresco, Countess E. M. Italian Characters in the Epoch of Unification. Scribner & Welford. $3.75.
Collier, T. S. Song Spray. New London, Conn.: Carl J. Viets.
Cremona, L. Graphical Statics. Oxford: Clarendon Press; New York: Macmillan & Co. $2.25.
Crookshank, Prof. E. M. History and Pathology of Vaccination. 2 vols. Philadelphia: P. Blakiston, Son & Co.
De Leon, T. C. Juny; or, Only One Girl's Story. Mobile: Gossip Printing Co. 50 cents.
Dobson, A. Selected Poems of Matthew Prior. Scribner & Welford. $2.
Dodge, Col T. A. Great Captains: Alexander. Boston: Houghton, Mifflin & Co. $5.
Dilke, C. W. Problems of Greater Britain. Macmillan & Co. $4.
Haeckel, Prof. E. Natürliche Schöpfungs-Geschichte. 8th ed. 2 vols. Berlin: Georg Reimer.
Hall, A. D., and Heckel, G. B. Journal of Marie Bashkirtseff. Chicago: Rand, McNally & Co.
Hartmann, Dr. F. Magic, White and Black. John W. Lovell Co. 50 cents.
Hudson, W. C. Jack Gordon, Knight Errant. Gotham, 1883. Cassell Publishing Co. 50 cents.
Kingsley, C. Alton Locke. Macmillan & Co. 25 cents.

HENRY HOLT & CO., New York.

Is it another *Volapük?* No; the title is "Sound-English, a Language for the World." By A. Knoflach. Price 25 cents. Sold by G. E. Stechert: New York, 828 Broadway; London, 30 Wellington Street, Strand, W. C.; Leipzig, Hospitalstr. 10.

THE OPEN COURT—A WEEKLY Magazine of Philosophy, Science, and Ethical Religion. The all-important want of our time is the foundation of a purely ethical religion. This religion must rest upon a scientific basis. Its principles must be derived from the scientific investigation of the facts of human soul-life, and the re ations of the world and the circumstances of society that determine human conduct. One of the most important topics of investigation, in the columns of *The Open Court*, directed towards the establishment of such a religion, is that of the facts of human soul-life, or the science of PSYCHOLOGY. The most eminent investigators of Germany, France, the United Sta es, and Great Britain supply original psychological articles to our magazine; and authorized translations are made from the leading Continental periodicals devoted to this special branch of science. The essays are popular, concise, and pervaded by the spirit of true philosophical criticism. Subscription Price one year $2.00; for six months $1.00. Specimen Copies free. THE OPEN COURT PUBLISHING CO., 1731½ La Salle St., Chicago, Ill.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.

NO. 5 WALL STREET, NEW YORK.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

MACMILLAN & CO.'S

NEW BOOKS.

Sir Charles W. Dilke's New Book uniform with James Bryce's 'American Commonwealth.'

PROBLEMS OF GREATER BRITAIN.

By the Right Hon. Sir CHARLES W. DILKE, Bart. With Maps, large 12mo, $4.00.

"It is a book of full, careful, and elaborate descriptions, of comparative study of institutions, and of thoughtful discussion of the problems which the whole survey suggests."—*Daily News.*

"This truly remarkable and important work. . . . No book has ever appeared more precisely at the moment it was most wanted."—*Speaker.*

"Sir Charles Dilke's very able book. . . . To deal adequately with a book so stuffed with facts and occupied with so vast a variety of subjects is utterly impossible even in the course of two notices. All we can do is to fasten upon one or two of the most interesting features."—*Spectator.*

"Every line of his book is readable. We . . . recommend his volume, in which the impulse of an ardent patriotism and the conclusions of a sagacious statesmanship are as conspicuous as their great literary ability."—*Saturday Review.*

New and Revised Edition.

THE AMERICAN COMMONWEALTH.

By JAMES BRYCE, M.P., D.C.L., Regius Professor of Civil Law in the University of Oxford. 2 vols., large 12mo. $6.00.

Part I. THE NATIONAL GOVERNMENT
" II. THE STATE GOVERNMENTS.
" III. THE PARTY SYSTEM.
Part IV. PUBLIC OPINION.
" V. ILLUSTRATIONS AND REFLECTIONS.
" VI. SOCIAL INSTITUTIONS.

"It cannot be too widely known that the second (revised) edition of Mr. Bryce's 'American Commonwealth' is now deliverable. Marks of the indefatigable author's retouching are everywhere visible. . . . A work destined to maintain a living hold on our institutions of learning and to shape the political thinking of the rising generation."—*The Evening Post.*

DEVELOPMENT AND CHARACTER OF GOTHIC ARCHITECTURE.

By CHARLES HERBERT MOORE. With Numerous Illustrations. 8vo, $4.50.

Second Edition of Lewis Carroll's New Book.

SYLVIE AND BRUNO.

By LEWIS CARROLL, author of 'Alice's Adventures in Wonderland,' 'Through the Looking-Glass,' &c. With 50 illustrations by HARRY FURNISS. 12mo, cloth, gilt, $1.50.

"A delightful fable, amply illustrated by Harry Furniss with excellent drawings."—*Philadelphia Press.*

"The book is a charming one for children. The illustrations are very happy."—*Traveller.*

"A charming piece of work. The illustrations by Harry Furniss admirably supplement the text."—*New York Sun.*

Chesterfield's Letters. New Edition.

LETTERS OF PHILIP DORMER, FOURTH EARL OF CHESTERFIELD,

TO HIS GODSON AND SUCCESSOR. Now first edited from the originals, with a Memoir of Lord Chesterfield. By the Earl of Carnarvon. With Portraits and Illustrations. Royal 8vo. $4.50.

By JULIUS VON SACHS. Authorized Translation by H. G. F. GARNSEY, M.A., Fellow of Magdalen College, Oxford. Revised by J. BAYLEY BALFOUR, M.A., F.R.S., Professor of Botany, Edinburgh. 12mo. $2.50.

THE ANCIENT CLASSICAL DRAMA:

A STUDY IN LITERARY EVOLUTION. Intended for Readers in English, and in the Original. By RICHARD G. MOULTON, M.A., author of 'Shakespeare as a Dramatic Artist.' 12mo. $2.25.

MACMILLAN & CO., 112 Fourth Avenue, New York.

A Dictionary OF Applied Chemistry.

By T. E. THORPE, B.Sc, (Vict.), Ph.D., F.R.S. Treas. C. S.,
Professor of Chemistry in the Normal School of Science and Royal School of Mines, South Kensington; assisted by Eminent Contributors.

To be Published in Three Volumes.
VOLUME I. NOW READY.

A—DY.

Royal 8vo, pp. viii–715. Price, $15.00.

*** This work is essentially a Dictionary of Chemistry in its Applications to the Arts and Manufactures; hence it deals but sparingly with the purely scientific aspects of Chemistry, unless these have some direct and immediate bearing upon the business of the technologist. For all such matters, reference is made to the new edition of 'Watts' Dictionary of Chemistry,' by Dr. Forster Morley and Mr. Pattison Muir, to which, indeed, the present work may be said to be complementary.

WATTS' DICTIONARY OF CHEMISTRY.

Revised and entirely rewritten by H. Forster Morley, M.A., D.Sc., Fellow of and lately Assistant Professor of Chemistry in University College, London; and M. M. Pattison Muir, M.A., F.R.S.E., Fellow and Prælector in Chemistry of Gonville and Caius College, Cambridge. Assisted by Eminent Contributors. New Edition. To be published in Four volumes. 8vo. Vols. I. and II. now ready (A–IN). Price, each, $14.50.

Modern Theories of Chemistry.

By Dr. Lothar Meyer, Professor of Chemistry in the University of Tübingen. Translated from the German (Fifth Edition) by P. Phillips Bedson, D.Sc. (Lond.), B.Sc. (Vict.), F.C.S., Professor of Chemistry in the Durham College of Science, Newcastle-upon-Tyne, and W. Carleton Williams, B.Sc., F.C.S., Professor of Chemistry in the Firth College, Sheffield. 8vo. $5.50.

"For the student just entering the real work of chemistry, this book seems to us the most important which has appeared in English for many years."—*Science.*

The Fundamental Principles of Chemistry Practically Taught by a New Method.

By Robert Galloway, M.R.I.A., F.C.S., Hon. Member of the Chemical Society of Lehigh University, etc., etc. With 71 Woodcuts and 729 Exercises and Answers. Crown 8vo. $1.75.

Inorganic Chemistry,

Theoretical and Practical. With an Introduction to the Principles of Chemical Analysis, Inorganic and Organic. By William Jago, F.C.S., F.I.C., Head Science Master of the Brighton School of Science and Art. Tenth Edition (1889). Rewritten and greatly enlarged. With 196 Experiments, 49 Woodcuts, and numerous Questions and Exercises. (LONGMANS' ELEMENTARY SCIENCE MANUALS.) 350 pp. 12mo. 80 cents.

Elementary Chemistry, Inorganic and Organic.

By W. Furneaux, F.R.G.S., Lecturer on Chemistry, London School Board. With 65 Illustrations and 155 Experiments. (LONGMANS' ELEMENTARY SCIENCE MANUALS.) 12mo. 80 cents.

Longmans, Green & Co. will be happy to send their new Catalogue of Scientific Works to any address upon application.

(*READY THIS WEEK.*)

A NATURALIST'S VOYAGE ROUND THE WORLD.

Journal of Researches into the Natural History and Geology of the Countries visited during the Voyage round the World of H. M. S. "Beagle," under the Command of Capt. Fitz Roy, R. N.

By CHARLES DARWIN, F.R.S.

An entirely new edition, handsomely illustrated, consisting of Views of the Places visited, and Representations of the Animals describ

Public Library F

Illustrations are chiefly from Sketches taken on the spot by R. J. Pritchett.

The extraordinary minuteness and accuracy of Mr. Darwin's observations, combined with the charm and simplicity of his descriptions, have insured the popularity of this book with all classes of readers—and that popularity has even increased in recent years. No attempt, however, has hitherto been made to produce an illustrated edition of this valuable work; numberless places and objects are mentioned and described, but the difficulty of obtaining authentic and original representations of them drawn for the purpose has never been overcome until now.

Most of the views given in this work are from sketches made on the spot by Mr. Pritchett (well known by his connection with the voyages of the *Sunbeam* and *Wanderer*), with Mr. Darwin's book by his side. Some few of the others are taken from engravings which Mr. Darwin had himself selected for their interest as illustrating his voyage, and which have been kindly lent by his son.

With maps and 100 illustrations. 8vo, cloth, Price, $5.00.

Baltimore, 22 and 24 E. Baltimore St.
New York, 148 5th Ave., near 20th St.
Washington, 817 Market Space.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

FAIRHAVEN, WASHINGTON, WITH its magnificent harbor and water front, is fast becoming the railroad centre of the Northwest; has three banks, saw-mills, electric light and railways, water works, school-houses, and churches; manufacturing centre; homes and employment for men with trades; business openings of every kind. For particulars address FAIRHAVEN LAND CO., Fairhaven, Washington.

A FAMILY HAVING A NICELY furnished house in an orange and lemon grove in the suburbs of Santa Barbara, Cal., and being unable to occupy it offer it for the season. Address J. H. MORAN, Supt., 500 Madison Ave., N. Y.

Houghton, Mifflin & Co.'s New Books.

Easter Gleams.

Poems for the Easter Season. By LUCY LARCOM. Not included in her previous volumes. Parchment-paper, 75 cents.

In a Club Corner.

By A. P. RUSSELL, author of 'A Club of One,' 'Library Notes,' 'Characteristics,' etc. 16mo, gilt top, $1.25.

An engaging book, discussing numerous topics of literature, society, character, custom, etc. Much like 'A Club of One,' which enjoyed great popularity.

Sixty Folk-Tales.

From exclusively Slavonic sources. Translated, with brief Introductions and Notes, by A. H. WRATISLAW, M.A., sometime Fellow and Tutor of Christ's College, Cambridge. Crown 8vo, $2.00.

De Quincey's Works.

New Popular Edition. 12 vols. 12mo, $12.00. (*Sold only in sets.*)

A Satchel Guide

For the Vacation Tourist in Europe. Edition for 1890, revised. With Maps, etc., $1.50.

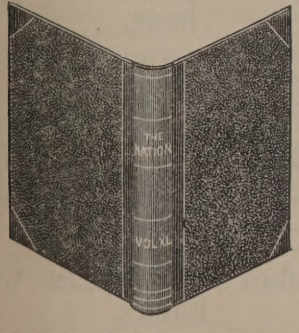
The Lady of the Aroostook.

By W. D. HOWELLS. *Riverside Paper Series.* 50 cents.

Houghton, Mifflin & Co., Boston; 11 East 17th St., New York.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,



in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to XLIX., *i.e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering, state the volume-number wanted.

Address

THE NATION, Box 794 New York.

BOOKS IN THE FOREIGN AND ANCIENT LANGUAGES. } Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

G. P. Putnam's Sons,

27 and 29 West 23d St., N. Y.

NOW READY:

American Farms, their Condition and Future. By J. R. ELLIOTT. No. LXII. in the Questions of the Day Series. 8vo, cloth, $1.25.

Liberty and a Living. How to Get Bread and Butter, Sunshine and Health, Leisure and Books, without Slaving away One's Life. By P. G. HUBERT, jr. 16mo, cloth, with frontispiece, $1.00.

"It well presents the attractions and compensations of unconventional living, the unsatisfactoriness of many imagined social necessities, and furnishes a picture of living on next to nothing a year which cannot fail to attract lovers of nature and liberty."—*Christian Intelligencer.*

English Wayfaring Life in the MIDDLE AGES (Fourteenth Century). By J. J. JUSSERAND. Translated from the French by LUCY TOULMIN SMITH. New and cheaper edition. Octavo, pp. 451, fully illustrated, $3.50.

The author has supervised the translation, and has added about a third of new matter, so that the volume differs to a great degree from 'La Vie Nomade.'

Many of the illustrations are taken from illuminated manuscripts, and have never been published before.

"We can heartily recommend this book as one of the pleasantest and most carefully executed pictures of a side of English mediæval life that we have met with for a long time,"—*Saturday Review.*

"Have you seen a book just published by M. Jusserand of the French Embassy, entitled 'English Wayfaring Life in the Middle Ages'? If not, let me assure you that the sooner you get it the better for yourself and your friends, for you are certain to talk about it, and talk *out* of it, and in proportion as you do so will the liveliness of your conversation be remarked upon! . . . A pleasure to handle, a joy to read, and bearing with it, when one gets to the end of it, a conviction that one has become a much more learned man than one was a week ago, for that somehow one has absorbed a great deal that the outer world knows little about."—*Augustus Jessopp, in Nineteenth Century.*

*** *Putnam's List of Recent Publications will be forwarded free to any address.*

COLLEGE NEWS

IN THE

NEW YORK EVENING POST.

THE EVENING POST has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will hereafter appear in each Friday's edition of THE EVENING POST, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from trustworthy correspondents in the leading institutions, but also special articles, some of which are now preparing, on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of THE EVENING POST at $1.50 per year. Reduced rate for clubs. A special agent wanted at every college. Address

THE EVENING POST, NEW YORK.

Three large editions within one year of

Anderson's Dictionary of Law.

This most successful work (the product of ten years' research and elaboration), by William C. Anderson of the Pittsburgh bar, is based upon 31,000 citations of cases, statutes, codes, constitutions, treaties, text-books, and periodicals. It is a Dictionary and a Compendium in one large volume. It presents the JUDICIAL DEFINITION and INTERPRETATION of all kinds of Words and Phrases; a Commentary upon all legal rules and principles, freshly stated; the pronunciation of difficult terms; authorized spellings; the origin of technical expressions; synonyms and antonyms; law maxims, new and numerous illustrations; citations by names, year, and page of opinion; copious cross-references; a terse, clear, and vigorous style; a text easily and quickly read, the authorities being placed in numbered footnotes.

"It is the best specimen of the printer's art we have ever seen in a law-book. The definitions and deductions are based almost exclusively upon recent judicial decisions, the number collected being amazing. Our deliberate judgment is that the work will largely supersede all other American law dictionaries."—*American Law Review.* "This work is the latest, the most convenient, the least expensive, the most thoroughly American, and the most satisfactory."—*Law Librarian.* "It has a great many features which make it the best law dictionary I know of."—*Daniel Agnew, ex-Chief-Justice, Penn.* "It is an excellent work, the result of great thought and care, comprehensive and well arranged,"—*Samuel Blatchford, United States Supreme Court.* "The work is admirably done. It represents an immense amount of labor."—*Prof. George Chase, Columbia Law School.* "Care, accuracy, and thoroughness characterize every page. The author did wisely to adopt the decisions of the courts as his standard of definition."—*James L. High, Esq., Chicago.* "It is easily the most valuable book of its class."—*Prof. F. W. Burdick, School of Law, Cornell University.* "The work affords a signal illustration of the useful results which may be brought about by patient, conscientious, and intelligent labor."—*Hon. William G. Hawkins, Pittsburgh.* "It is a boon to the profession. I cannot speak too highly of it."—*Hon. Seymour D. Thompson, St. Louis.* "I can scarcely see how any citizen who would be well instructed can do without its compact, suggestive, and well-proportioned articles. It is an amazing convenience, not only to the professional lawyer, but to any earnest inquirer in political or sociological studies."—*Sylvester F. Scovel, LL.D., President of University of Wooster.*

One volume of 1145 pages, imperial octavo. Best law binding; price $7.50. Specimen pages mailed free.

Special Agents:

G. H. LEPPER & CO., Box 27, Pittsburgh, Pa.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

CANCER CURED

Without the aid of knife or plaster. Positively no pain. A purely vegetable treatment which removes cancer, tumor, and scrofula. For particulars and circular address Dr. ABBOTT M. MASON, Chatham, N. Y.

Charles Scribner's Sons' New Books.

HISTORY OF THE UNITED STATES.

By HENRY ADAMS. Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. $4.00.
Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"It would be difficult to speak too highly of the work. Mr. Adams has exhibited all the qualities of the ideal historian. He is thorough in research, exact in statement, judicial in tone, broad of view, picturesque and impressive in description, nervous and expressive in style."—N. Y. Tribune.

Literature and Poetry.

By PHILIP SCHAFF, D.D. 8vo, $3.00.

The essays which make up this volume treat of "The English Language," "The Poetry of the Bible," "The Dies Irae," "St. Bernard as a Hymnist," "The University, Past, Present, and Future," "Dante Alighieri," and many other interesting literary topics.

"A brilliant contribution to critical and historical literature."—*Brooklyn Times.*

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

"The volume addresses the cultivated tastes of all who love a true poetry. It is the fruit of years of appreciative study of the poet. We owe the author a debt of thanks for giving us this estimate, so caretul, so scholarly, so full of true devotion to poetry in its largest meaniux."—*Rev. James O. Murray, Professor of English Literature in Princeton College.*

EMIGRATION AND IMMIGRATION.

A Study in Social Science. By RICHMOND M. SMITH, Professor of Political Economy and Social Science in Columbia College. 12mo, $1.50.

CONTENTS.—Introduction—The History of Emigration—History of Immigration—Immigration and Population—Political Effects of Immigration—The Economic Gain by Immigration—Competition with American Labor—Social Effects of Immigration—Assisted Emigration and Immigration—Protecting the Emigrant—Chinese Immigration—Legislative Restriction of Immigration—The Question of Principle and of Method.

"The fullest and most philosophical study of the question that has come under our notice. The book ought to be read by all true and intelligent citizens."—Philadelphia Bulletin.

The Religious Aspect of Evolution.

By JAMES MCCOSH, D.D., LL.D. 12mo, $1.00.

An able critique of the Evolutionary doctrine from the standpoint of Christianity.

"One of the best epitomes of the relation of the Creator to his earth, in the process of creation, that has been written."—*Hartford Courant.*

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square 12mo, illustrated, $2.00.

"What a field of romance, of color, of incident, of delicate feeling, and unique social conditions these stories show! The mechanical part of the book fits the delightful text."—*Hartford Courant.*

AMONG CANNIBALS.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

"I have read the book with immense interest and delight. It is a work which will have a very long life, for it is full of useful knowledge. The reader forgets that he is reading a mere description, and thinks that he is at the author's side, in the wilderness of Australia. The whole civilized world must be grateful for this really wonderful work."—H. Schliemann.

Aspects of the Earth.

A Popular Account of Some Familiar Geological Phenomena. By N. S. SHALER, Professor of Geology at Harvard. With 100 Illustrations. 8vo, $4.00.

"Few books are so well calculated to arouse interest in, and to develop intelligent observation of the world around us. Such chapters can only be written by a man who is at once a profound student and a successful teacher. Of their many merits, the chief one is their absolute clearness."—*Christian Union.*

English Lands, Letters, and Kings.

By DONALD G. MITCHELL.
Vol. I.—From Celt to Tudor. 12mo, $1.50.
Vol. II.—From Elizabeth to Anne. *(In press.)*

"A bright, pleasant, chatty record, true to history, and full of useful hints and suggestions."—*Boston Saturday Evening Gazette.*

"A most charming book for lovers of the purest and best literature."—*Hartford Post.*

SAID IN FUN.

By PHILIP H. WELCH. With preface by ROBERT GORDON BUTLER. With many full-page illustrations by Rogers, Attwood, Bush, "Chip," Frost, Gibson, Herford, Kemble, Mitchell, Opper, Sheppard, Smedley, Snyder, Sterner, Taylor, Van Schaick, and Woolf. Square 8vo, $1.25.

"There is not a pointless jest in the whole collection, and the pictures are abundant and of capital quality. The work of the artists has been entirely a labor of love, for all the profit from the copyright goes to the fund for Mr. Welch's family. Whoever buys the book, therefore, not only secures a copious equivalent in wholesome, clean, genuine 'fun,' but he also contributes something to the needs of the family of one of the gentlest, truest, and best-loved men in newspaper circles, whose death has been widely deplored."—The Boston Journal.

CHARLES SCRIBNER'S SONS, 743-745 Broadway, New York.

Scribner & Welford's NEW BOOKS.

Shakespeare's Sonnets.

Edited, with Notes and Introduction by THOMAS TYLER, M.A., of the University of London, Editor of 'Shakespeare's Sonnets' (1609) in facsimile; author of 'The Philosophy of "Hamlet,"' etc., etc., with Portraits of William Herbert, Earl of Pembroke; of his mother, Mary, Countess of Pembroke, and of Mrs. Mary Fitton. Post 8vo, cloth, $3.00.

In Tennyson Land.

Being a Brief Account of the Home and Early Surroundings of the Poet Laureate, and an Attempt to Identify the Scenes and Trace the Influences of Lincolnshire in his Works. By J. CUMING WALTERS. With 12 Illustrations by F. G. KITTON, by drawings from photographs and sketches taken specially for the author. The pictures include representations of Somersby Rectory, The Moated Grange, The Brook, The Mill, Louth Grammar School, Tennyson's Birthplace. Demy 8vo, white cloth, gilt, $1.75.

Italian Characters in the Epoch of Unification.

By the COUNTESS EVELYN MARTINENGO CESARESCO. 8vo, cloth, $3.75.

CONTENTS: Ricasoli—Settembrini—Manin—The Poerios—D'Azeglio—Ugo Bassi—Bixio—The Cairolis, etc., etc.

Fontainebleau.

Fifteen Photogravures after the Pictures by J. HAYNES-WILLIAMS. With an Introduction by FREDERICK WEDMORE. Limited Edition of 150 copies for America. 4to, cloth, net, $15.00.

Ancient Cures, Charms, and Usages of Ireland.

Contributions to Irish Lore, by LADY WILDE, author of 'Ancient Legends of Ireland.' 12mo, cloth, $2.25.

Palmistry and its Practical Uses.

To which are added chapters on Astral Influences and the Use of the Divining Rod, with 12 plates, by LOUISE COTTON. 16mo, cloth, $1.00.

The Marriages of the Bourbons.

By Captain the Hon. D. BINGHAM. With Illustrations. 2 vols., 8vo, $7.50.

"Capt. Bingham is an anecdotal master in history and biography, and has made a special study of the dynastic annals of France and of those memoirs which fill so large a space in French literature and throw so vivid but so dubious a light on the world of ante-chambers and boudoirs. To his favorite task he brings the curiosity of a courtier and the skill of a journalist."—*London Daily News.*

Baedeker's European Guide Books.

Latest Editions always on hand. Illustrated with numerous Maps, Plans, Panoramas, and Views. Unquestionably the very best Guides published.

*** The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

The Nation.

NEW YORK, THURSDAY, MARCH 13, 1890.

The Week.

THERE will be little surprise in the public mind at the announcement which is made, in the *Times's* Washington despatches, that President Harrison's removals from and changes in Federal offices during the first year of his term are nearly double those during the first year of President Cleveland's term. The grand total is 35,800, against Cleveland's 20,500. Nothing is more generally accepted as a matter of course now than that the Harrison Administration is thoroughly given over to the spoils view of public office. There is no longer any pretence in the muzzled organs of the Republican party that the civil-service-reform pledges of the candidate and the party's platform are observed by the Administration. The man who wrote in his letter of acceptance, "Only the interests of the public service should suggest removals from office," is now universally regarded as the most subservient disciple of the spoils doctrine who has occupied the Presidential chair since the Civil-Service Law was enacted.

Mr. Saltonstall has declined the dinner offered to him by his friends in Massachusetts, and in doing so has taken occasion to give a statement of his views upon the value of civil-service reform. He says, among other things:

"It gives me great satisfaction to testify to the admirable results of the merit system in its application to the conduct of the business of the Boston Custom-house. Had there been any doubt in my mind as to its benefit, such doubt would have disappeared at an early stage of my observation of its practical workings. The improvement in the morals of the whole force, from the highest to lowest, was noticeable as soon as it became understood that the political belief of individual officers in no way affected their standing; that their tenure of office was secure during good behavior and faithful performance of duty; that promotion would only follow demonstrated efficiency, and that removals would be made only for the good of the service in case of misconduct, neglect, or manifest incapacity. Relieved of the distracting influence of uncertainty through political considerations, and called upon for no service except that which the business of the Government required, there appeared among the officers and employees generally an increased efficiency and an undivided and undisturbed attention to duty. I found, under the improved conditions following the establishment of the merit system, that the steadily increasing business of the Custom-house was fully met by a corresponding increase of ability in the force handling it, and that with the annual aggregate of business increased by 25 per cent. during the four years of occupancy of the office of Collector, the necessary work could be and was performed by a smaller number of employees and at a considerably less cost to the Government."

And this is the official whom President Harrison, in defiance of his own personal pledges, removed from office before the end of his term in order to turn that office, thus organized and conducted on civil-service-reform principles, over to a Republican spoils politician.

One Republican paper has at last found the courage to mention the *Tribune's* confession that "Hill succeeded [in 1888] only because he was able to sell a Presidency for a Governorship." It is the New Haven *Palladium*, and its explanation of what it calls "the *Tribune's* chance remark" and "off-hand statement" is quite interesting. The main points of it are:

"While there was no deliberately planned exchange of Democratic Gubernatorial votes for Republican Presidential ballots, we presume during that memorable November day in 1888 the machinations of the Democrats brought about many such an exchange of votes. *The dirty work was done wholly by Democrats.* We say this, not merely claiming superior virtue for Republican workers, but because the exchanges were made on Hill territory, and by Hill men, who worked with the inspiration of despair. To elect Hill and secure immunity from attack was the care of the saloon interest. They operated on the ignorant and vicious of the voters. This disreputable Democratic trickery was practised to some extent in New York, notably in the Albany district, directly under the Hill personality. The Harrison workers there were few, while Hill's cohorts were strong and active. The Democrats engineered any exchange of votes that may have been effected, and operated among the lower class of voters. There was but little of it done, Hill's plurality being explained, as we have said, by his personal strength, and Cleveland's weakness by the distrust of farmers and the industries of the Mills bill. These are the facts, and truth fears nothing."

As nearly as we are able to comprehend this able piece of ratiocination, it amounts to a declaration that there was very little trading anyway between the Hill and Harrison forces, and what little there was was all on one side. "The dirty work," says the *Tribune's* defender, "was done wholly by Democrats." Whether that means that Hill sold and nobody bought, or Hill bought and nobody sold, we are not clear, for we are unable to comprehend trading of any kind which has only one side.

The remarkable gains made by the Democrats in the municipal elections held in Iowa and New York on Monday week are symptoms of what is in store for the Republican party in the near future. In both States the Democrats have carried cities which have been Republican strongholds for years, and in most cases the victories have been secured by majorities which indicate changes in party lines which are practically revolutionary. In another quarter, Rhode Island, the Democrats leave no opportunity for doubt as to their position on the questions of the day. In their State Convention last week, their Chairman said that though the Republicans succeeded in 1888 by means of unblushing bribery in getting their candidate into the White House—the *Tribune* says they bought the Presidency of Gov. Hill, which was certainly unblushing bribery—yet there is no man in the country to-day whose words have so large an audience and are so carefully read as those of Grover Cleveland; that the Democrats of Rhode Island were proud even in defeat to have Cleveland for a leader; and that the principles he enunciated were the principles of the Democratic party, particularly those on tariff reform and ballot reform. The Convention applauded the Chairman's views, and adopted a platform which embodied and emphasized them. Such is the attitude of the Democratic party in a State which, in proportion to its size, outranks all other States in the value of its manufacturing industries. It is the utterance of a party also which polled nearly 5,000 more votes in the last election than the Republican party did, and which would be in control in the State to-day did a plurality elect there as it does in most other States.

Congressman Cannon of Illinois is entitled to the thanks of the whole country for his resistance to the ravages of the public-building grabbers, who seem to be struggling with the pension agents to see which of the two can dispose of the surplus most rapidly. Of course any member of the House who stands in the way of grabbing must expect to be sneered at by the grabbers as a being too good for this world. So we are not surprised to hear Mr. Milliken of Maine saying: "Of course, we all understand that my friend from Illinois is posing as the Father of the House and taking care of the Treasury and all that, and we all want to help him so far as we can." Yes, Mr. Milliken is helping him to a large measure of public confidence and himself to the opposite. All these building jobs are put forward with the plea that the Government is paying large sums for rent for its post-offices, etc., and that it is better to own the buildings and stop the rent, whereas in most cases the care and repair of the new buildings, to say nothing of interest on the money expended, will exceed the total rent now paid. Such, we suspect, will prove to be the case in San José, Cal., which was voted a building the other day to cost $200,000, the lot alone costing $75,000. The town is in a Congressional district which embraces a part of the city of San Francisco, where most of the Government business of the district is done. The report for the building sets forth in a magniloquent way that the Government business of all kinds, postal and other, transacted in the district (not in San José alone) amounts to $35,000 per annum. A great many cigar-stores and liquor-saloons in California do more business than that. On account of this $35,000 worth of business, San José was voted a building to cost $200,000. Mr. Cannon was quite right when he said that the town of Danville in his own district was as well entitled to a Government building. The rent paid by the Government for its accommodations in Danville, he added, was only $700 per year. The cost of care and repairs on a $200,000 building will be three times that sum, at the lowest calculation.

Senator Stanford's resolution in favor of lending the money of the Government to farmers on mortgage at 2 per cent. interest is apparently put forward seriously. There are so many new schemes of finance simmering in the heads of our public men, all

tending to upset the laws of trade and the relations of *meum* and *tuum*, that we think they ought to be consolidated in one comprehensive measure making every man's check legal tender up to a certain fair amount, to be determined by a committee in each Congressional district. The basis for apportioning the right of legal tender might be fixed according to the amount of a man's property. This would accord best with the Stanford idea. But a more equitable arrangement would be to make a man's debts the basis of his exercise of this right, since the man who has property has better opportunities to get money from banks and private lenders. He has an obvious advantage over the man who has only debts for a basis. There have always been people in the world, since banks were first invented, who wanted to issue money on the "basing" process. Give them a base, and they would furnish any amount of money required. Real estate has generally been the most attractive base, but we think that personal property ought to have an equal chance, and that something might be said for debts. We hope that Senator Stanford will not take the narrow-minded view of the subject which his resolution, at first blush, would seem to imply.

In his speech on the Blair Mendicancy Bill, Senator Spooner of Wisconsin called attention again, in his vigorous, incisive way, to the basis of distribution of the $77,000,000 to the States, as follows:

"It is not apportioned upon the basis of illiteracy among the children of school age, but it is apportioned among the States and Territories upon the basis of illiteracy as shown by the census of 1880, without any regard whatever to age, so that there enter into and become a part of that basis of apportionment about 2,900,000 people who, even in 1880, were too old ever to go to the public schools. If the object is to treat illiteracy as a common enemy, and strike at it with the Federal hand full of gold wherever it is found in the United States, then there is neither principle nor philosophy in that basis of apportionment. The apportionment should be based upon illiteracy among those of school age who can be benefited by the appropriation when it shall have been made. In other words, the plaster should be put upon the sore instead of over the entire body, that which is well together with that which is ill."

He then went on to show that, when the States get the money on that false and unphilosophical basis, the distribution in the States is to be made in the same way as their own school fund is distributed. But their own school funds are distributed to white schools and colored schools separately, and the larger part to white schools, although much the larger part of the illiteracy is among the blacks. The same rule would control the distribution of the Federal aid. So that while the illiteracy of Uncle Remus and Daddy Jake and other aged plantation hands would form the basis for parcelling out the aid *to* the States, the stream would turn a short corner *in* the States, and the larger part would go to places where it was least needed.

Here is more protection run mad. Under the title "Our Tin Costs Less Than Half," the New York *Press* prints the following paragraph:

"The announcement that a sample of American refined tin has reached the office of the American Tin-Plate Association in Pittsburgh from the mines in South Dakota warrants the hope that our tin-plate industry will soon be set in motion. This Dakota tin costs $2.15 a ton to produce, as against $4.44 per ton for producing tin of the same quality from the mines of Cornwall, England. When the higher cost of labor here is considered, these figures show a marvellous advantage on our side in the production of the raw tin, and, with tin representing less than 5 per cent. of the value of tin plate, with iron representing 95 per cent., and with a highly developed iron industry already existing here, we can see no reason in the world why the duty on tin plate should not be increased and the tin-plate industry established."

"No reason in the world why the duty on tin plate should not be increased," when the tin "costs less than half" the cost of Cornish tin, and the plates are the product of "a highly developed iron industry already existing here"! Is it for further gifts to the already "highly developed industry" that the duty must be increased, or for the benefit of the tin mines which can undersell the world? And is there any conceivable combination of circumstances in which, to a mad protectionist, there will appear "no reason in the world why the duty should not be increased"?

The *American Grocer* favors an increase of the duty on tin plates on the ground that there is too much competition in canned goods, and that a higher cost for cans would keep it within reasonable bounds. Such is the plain interpretation of an article in the latest number of that trade journal. It says, however, that the canned-goods trade is not a unit on the question, all being governed "to some extent" by selfish motives. Those who want tin plates put on the free list, or at all events not subjected to a higher duty, think that there would be an increase of the trade if the cost of cans were cheapened. Those who are on the other side "argue for a higher duty in order to check the production of cheap canned goods and to check the starting of new factories." The interests of the public are evidently with cheap canned goods and new factories. We trust that members of Congress will take note of the *American Grocer's* very candid statement of the reasons which govern the two contending parties in the canned-goods trade.

The detailed report of the foreign trade of Chili for the year 1888 has recently been issued by the Government, and reveals a very high degree of national prosperity. The imports amounted to $60,717,698, a gain of $12,068,846 over the results attained in 1887. This gain is generally distributed, too, through all the classes of imported goods included in the official enumeration. The countries whence the bulk of these imports proceeds are shown in the following table:

Great Britain	$26,351,141, a gain of 28 per cent.
Germany	14,046,577, a gain of 20 per cent.
France	6,181,513, a gain of 12 per cent.
Argentine Republic	4,345,497, a gain of 95 per cent.
United States	3,133,173, a loss of 3 per cent.
Peru	3,057,854, a gain of 14 per cent.

The great gain noted in the imports from the Argentine Republic is mostly due to the abatement of the cholera prevalent in 1887, and to the raising of the quarantine then enforced. The extension of the Argentine railroad system up to the foot of the Andes, and the easy routes opened to Argentine cattle (almost the only article of export to Chili) through the mountain passes for a good part of the year, also account for a part of the increase.

Chili's exports for the year named footed up $73,089,935, as against $50,349,985 in 1887. Of the total, Great Britain takes 80 per cent., Germany 6, and France 5. The United States took the magnificent sum of $2,070,690, being a loss of 20 per cent.—though, of course, as good protectionists, we are bound to say it was a gain instead of a loss—in comparison with 1887. We are at pains to give these detailed figures because they are more telling than columns of eloquent writing about the sisterhood of the American republics and the way the big sister is going to get the trade of all the others. How unspeakably stupid, in the light of the above exhibit (and it is only indicative of the state of the case in South America generally), appears the wild dream of an American Zollverein, and all those clippings from European newspapers complacently sent out by the Department of State, last summer, to show how it was already clear to the keen European mind that Mr. Blaine was going to divert all South American trade to this country. Why should Chili offend the customer that takes 80 per cent. of what she has to sell, for the sake of pleasing a country that grudgingly takes 2 per cent? The report of the Committee of the Pan-American Congress on a customs union shows that neither Chili nor any other of the South-American republics ever gave so much as a thought to this folly. The showing made by the United States in Chilian foreign trade will please the protectionists, for it is just what they have been striving for—buying nothing abroad. To be sure, they now display an illogical desire to sell something abroad, but, even so, what can they care if the Argentine Republic, a country without manufactures, surpasses us in exports to Chili, or that Peru is scarcely behind us? They will simply turn with fresh fury to the work of shutting out "foreign devils" and subsidizing domestic saints.

The English Liberals last week carried North St. Pancras, one of the London boroughs, by 108, in a total of 5,206. Their candidate, Mr. Bolton, contested the same division at the last election and was beaten by a majority of 261 votes in a total of 3,887. The loss of this seat by the Tories at this juncture, in a London constituency, just after the presentation of the Parnell report, and after Mr. Balfour's repeated announcements of the great success of his coercion policy in Ireland, is one of the most stunning blows they have recently received. It is all the more serious because of the marked and rapid decline in their majorities, as shown in the leading divisions in the House of Commons. In 1887 Parnell's amendment to the Address was beaten by a majority of 106; in 1888 by a majority of 88; in 1889 by a majority of 79; this year by only 67, and in

all these cases the House was very full and the Tory forces well whipped up. What effect the St. Pancras election will have remains to be seen.

Mr. Gladstone's amendment, which was defeated on Monday in the House of Commons by a vote of 339 to 268, did not wholly end the attack of the Opposition on the report of the Parnell Commission, for it was reinforced by Lord Randolph Churchill on Tuesday. The most remarkable features in the debate were the unbroken vigor of Gladstone's oratory, and the production of Mr. Chamberlain's positive declaration, when advocating the appointment of the Commission, that the only thing of consequence to be inquired into was the Parnell letters — that if these were found to be forgeries, everything else would be of small interest. The contention of the *Times* and of a good many Tories now is, however, that the letters were but a small part of the case, and that it was the boycotting and "the criminal conspiracy" to establish Irish independence which formed the gravamen of the charge; but this, of course, is somewhat ridiculous.

The Berlin correspondent of the London *Times* gives some startling figures as to the result of the recent elections in Berlin. At the last election in that city in 1887 the Socialists cast 93,000 votes out of a total of 232,000. But this year they have cast 125,000 out of a total of 230,000. In other words, the Socialists have a majority in the capital of the German Empire, where they have been for some years under the close surveillance of the police and a modified state of siege. The great commercial city of Hamburg has had a similar experience. In the last Reichstag it had two Socialist representatives and one National Liberal. All three representatives are now Socialists, and yet Hamburg has been for twelve years under the Anti-Socialist Law. In Berlin an old Polish bookbinder who only speaks broken German, has beaten Prof. Virchow, the eminent scientist, by 2,000 majority in a total of 38,000. It must be remembered, too, that all this has occurred in the immediate presence of the Emperor's and Prince Bismarck's efforts to ameliorate by legislation the lot of the workingman. Of course, various lessons may be drawn from the election. The Socialist ranks doubtless contain a great many persons who are not Socialists, and wish simply to protest in the strongest terms against militarism and heavy taxation. But there is one lesson about which there can be no mistake, and that is, that it is folly to try to govern by martial law under parliamentary institutions, and have free elections in a state of siege. This is the experiment Mr. Balfour is trying in Ireland. He is armed with tremendous powers of arbitrary repression, but in only two counties in Ireland can he carry an election. When you put men under martial law, or anything similar, you must not let them vote if you care about the result. The stronger you make the police, and the more you muzzle the discontented, the bigger the majorities they will roll up against you. The two systems are incompatible. Each may have merit, but it must have the field to itself.

The young German Emperor is evidently taking himself more and more seriously—so seriously, in fact, that some people are beginning to doubt whether he is not already showing signs of the malady which finally drove his grand-uncle from the throne. In the speech he made on Saturday last, this young soldier, wholly without civil experience, told a nation of 47,000,000 that "the people and the land were intrusted to him by God—a talent which, as the Bible said, it was his duty to increase," and that he was going to trade with it, so as to add many another thereto; that "those who helped him he would heartily welcome, but those who opposed him he would dash to pieces." These crazy utterances, too, are made just as the Reichstag containing a majority hostile to the Government is about to meet. It is not surprising that the Conservative newspapers look on them as an indication of his readinesss for a coup d'état, and some advise him to establish a dictatorship, and others to abolish universal suffrage, and suspend the Reichstag if the opposition in it becomes unpleasant. The situation is a most unpleasant one for the National Liberals, who at the last election betrayed their own cause and formed an alliance with the Conservatives to oblige Bismarck, and now find themselves not only discredited, but swept out of existence. The Centre or Catholic party holds the balance of power in the new Reichstag, and expects to extort valuable concessions for the Church in return for its help. The critical period in the history of the Empire is clearly at hand—and it is a period which was sure to come after Bismarck's disappearance, and is coming now before his disappearance, owing to the death of the Emperor Frederick.

A bill has been introduced in the French Chambers providing, as a remedy for the decline of population, for a tax on all bachelors—an old remedy—and in addition to this a tax on all married people who have no children and are unable to offer any reasonable excuse to the Collector—an entirely new remedy. The *Journal des Économistes* discusses the measure very seriously, but condemns it *in toto*, as impracticable and even ridiculous. It even suggests that the revenue officer would suffer personal violence at the hands of married couples on whom he attempted to levy fines. But the writer says there is nothing surprising in such attempts at legislation as this, considering the extent to which French people submit to government "réglementation." There is already a law on the statute book offering a premium for large families, and in truth the right to interfere with the size of people's families is an easy deduction from the right, on which the protective system is based, to interfere with the conduct of their business. This system assumes that the men who sit in the Legislature know what is good for every other man better than he knows himself, and that any one who denies it is a rascal, and is probably paid for disbelieving it. It assumes, also, as most of the French "réglementation" does, that man is made for the State and not the State for man. There is a very funny illustration of this in the denunciations one sees in our own protectionist newspapers of those New Englanders who are now clamoring for free raw materials in order to save them from ruin. They are actually scolded for their selfishness in seeking to avoid ruin by an attack on a system designed by the Congressional philosophers for the good of the whole community. It is not surprising that "Nationalism" and Cæsarism make progress under such influences as these, and that politics should in so many countries be resolving itself into a struggle to enable every man to mind his neighbor's business.

The debates in the Spanish Cortes are dragging along in a tiresome fashion. The universal-suffrage bill is suffering the steady though indirect opposition of the Conservatives, who offer various plausible amendments designed to mitigate the evils, as they say, of the dangerous measure, and go on taunting the Liberals with insincerity and with not really desiring the bill to pass. Still, it is on its way towards final enactment, and will undoubtedly be a main reliance of Sagasta in the electoral campaign which all believe to be imminent. Cánovas recently declared his position in a great speech before the Conservative Club, in which he maintained that the Conservative party was the only one able to direct the affairs of Spain successfully, by conserving the interests both of the monarchy and of popular liberty. He really opposes the suffrage measure only on the ground that it is premature. The purposes of the Republicans, about which so much has been written and surmised since the overturning in Brazil and the agitation in Portugal, remain discreetly veiled, though their support of Sagasta, on the main features of his policy, is altogether probable. The anniversary of the establishment of the republic of 1873 was observed this year, on February 11, with unusual enthusiasm at banquets and meetings of Republicans. Singularly enough, the great man of them all, Castelar, took no part in any of the celebrations. He appears to have given his word to Sagasta to allow no Republican disturbance at present, so far as he is concerned, and carefully held to his pledge, even requesting his Republican friends, so it is alleged, to let the date pass unnoticed. The political situation will become critical when once the budget is taken up for discussion. This is the nightmare of every administration. The new Secretary of the Treasury has been heralding that rare thing, a surplus, in the estimates, but the latest news indicates that this is all a mistake, and that the deficit will be even greater than usual—about $24,000,000, in fact.

NEW YORK AND THE M'KINLEY BILL.

WILL not the Senate heed what has been said of the McKinley bill by the Chamber of Commerce of the great port wherein is entered quite two-thirds in value of all the foreign merchandise brought to this country? Not all of the members of that body are persons who now make entries at the Custom-house. A great many have been importers, but have retired from active business. All are observant and prudent business men who know about the business topics of which they speak, and all condemn the McKinley bill. Every Senator will probably concede that New York is a great port, that two-thirds of the customs revenues of the nation is here paid, and that our business men are as competent and far-seeing as any. Germans have a proverb which says praising is not loving: *Loben ist nicht lieben.* New Yorkers may not ask Senators at Washington to love them, but they do ask that their well-matured opinions on affairs under their daily observation be regarded. Surely Democratic Senators will heed the comments made by the Democratic merchants of a conspicuously Democratic city. Mr. Evarts, with Mr. Hiscock, cannot but be respectful to the utterances of the New York Chamber of Commerce, and the vigorous contentions of those two ought to persuade Republican Senators enough to defeat, in coöperation with Democratic Senators, this most unwise bill, aimed chiefly at those who bring hither consigned goods.

If Senators at Washington will read carefully commercial advertisements, they will discover that the great manufacturers of textile fabrics in New England and elsewhere announce agencies in this city where and of whom their fabrics can be purchased by sample. Buyers are not required to go to Manchester, N. H., or Lowell, Mass., in order to make contracts of purchase at the lowest possible rates. And yet the McKinley bill attempts to formulate in a statute the clamor of rival cities, and of our domestic producers, because European manufacturers imitate New England manufacturers, and establish in New York the chief warehouse and agency for the sale of their goods. The Treasury Department eggs on the raid upon New York, upon American jobbers, and upon American consumers who wish to buy European articles on the best terms they can and with the least inconvenience to themselves. If European goods are purchased in New York of the partners or agents of the foreign makers, the buyer has at hand a responsible party on whom reclamations can be made if the package delivered does not respond to the sample or the contract of purchase.

The Treasury Department and the McKinley bill are endeavoring to break up these existing methods of business, upon the remarkable plea that Government appraisers cannot value correctly *consigned* merchandise, but can accurately appraise *purchased* goods of the same character and quality. Even a very little sense of the ridiculous ought, one would think, to put an end to such pleas. If custom-house examiners, assistant appraisers, and appraisers can correctly report to collectors the foreign value of a case of silk, or worsted, or linen goods *purchased* in Europe, why can they not correctly value precisely similar goods sent hither by the manufacturer? If a New York buyer goes to Zurich, or Dublin, or Manchester, or Lyons to make purchases, is he ignorant of the value in the market of the thing he buys? and if importing houses in New York can have agents familiar with such values, why cannot our Government? The large importing houses in New York must know the foreign values of the articles they buy, or they could not safely conduct their business.

What is needed is more intelligent and correct appraising by local and subordinate officers, and not savage laws treating importers as misdemeanants. If the value is accurately reported, the Treasury can, on goods subject to ad-valorem rates, get the full amount of tax required by Congress. Appraising officers as competent as are European buyers for New York importers can report correct values no matter what an invoice declares; but correct appraising is impossible by officers who have always been in New York, who have never been buyers abroad, and who have merely been promoted at the Custom-house from the commonplace work of openers and packers. In an extract which we make from the report to Congress in 1886 by Secretary Manning, he exhibited the causes of our ignorant and inadequate customs-appraising, and described the remedy, which was not fines, penalties, and imprisonments for importers. This is what he said of appraising officers at the great port of New York:

"Of the fifty, or thereabouts, who inspect and appraise merchandise, I find on inquiry that not one-half have been employed in the business of importation, or in buying and selling articles similar to those which they examine. Many of those who have been promoted, either by competitive civil-service examination or otherwise, to be examiners and assistant appraisers, entered the service as clerks, or in a subordinate capacity, and have had no experience in importing or jobbing, or even in the retail business. The few examiners who may have been, many years ago, large dealers, or small dealers, in articles like those which they now appraise, cannot, if continually engaged in the appraising office at New York, have had experience at home or abroad in buying and selling. The law of 1866 declares that the Appraiser 'shall be *practically* acquainted with the quality and value of some one or more of the chief articles of importation subject to appraisement.' The qualification of each assistant appraiser is described in the same language. The examiner must be *practically* and *thoroughly* acquainted with the character, quality, and value of the article or articles in the examination and appraisement of which he is 'to be employed' to *aid* the assistant appraiser.

"I have learned by inquiry respecting the range of salaries paid in New York by the large importing and jobbing houses in the city, that those who are deemed competent to successfully buy merchandise abroad or at home receive twice, or even three times, as much as is the range of salaries paid to examiners in the New York Custom-house who examine similar articles. In addition, a few of the large houses pay a pension to those of their faithful clerks or agents who have become old or physically incapacitated in service.

"*If the existing complicated rates of duty now levied upon imported merchandise are not to be simplified and made easier of application,* and if examiners are to be the responsible appraising officers who alone inspect the merchandise, then there needs to be, I think, an *immediate* legislative reorganization of the Appraiser's office at New York, and the infusion of larger mercantile experience and more self-confidence in determining foreign values."

The McKinley bill works on lines of reform similar to those pursued by the Tory party in dealing with the condition of Ireland. It refuses to remove the causes of dissatisfaction, resentment, and resistance, which could easily be removed and to the advantage of everybody, and advocates instead new coercive laws, which will inflame and increase present difficulties, making enemies of our customs laws the taxpayers who now are, and wish to be, friends.

THE INTERNATIONAL COPYRIGHT BILL AGAIN.

THE Chace Copyright Bill was passed by the Senate on May 9, 1888, but was defeated in the House of Representatives. It was again brought before Congress on December 5, 1889, by Senator Platt of Connecticut, and referred to the Committee on Patents, consisting of Senators Teller (chairman), Gray, Dixon, Hiscock, Kenna, Reagan, and Platt. The text of the bill, as reintroduced, was one which had been submitted, by request, to a joint committee of the Authors' and Publishers' Copyright Leagues, had been discussed, and, chiefly at the instance of the typographical unions, amended by that committee. The new text was an improvement upon the bill as it had passed the Senate, not only in phraseology, but in the amendment of certain clauses of importance to dramatic and musical authors and publishers. But other changes, for which the above-named committee is responsible—such as the erasure from the Revised Statutes of the stipulation that the copies deposited to perfect copyright should be of the "best edition"—may be questioned as inadvisable; and another, the prohibition of the importation of stereotyped plates, must be pronounced thoroughly bad. One improvement, however, is decidedly to be commended, and that is the insertion, for the first time, of the subject-matter of the bill in its title.

This bill was also promptly presented to the House, and, rather oddly, by two members at nearly the same time—Mr. Adams of Illinois, and Mr. Butterworth of Ohio—and referred, in the first case, to the Committee on the Judiciary, and in the second, to the Committee on Patents. On January 21, 1890, the Senate Committee reported favorably a substitute bill which contains two alterations of the text. The first of these is the erasure of a verbal amendment intended to give additional security to authors of operatic works. This was originally suggested by the legal counsel of the Publishers' Copyright League, and adopted by Senator Chace in the amended text of the bill reported by him to the Senate on March 19, 1888. The second alteration, which is also an erasure, can only be explained on the ground of a failure to comprehend the difference in status between the importation of an original, authorized edition and an unauthorized, fraudulent reprint. The seeming lack of knowledge so elementary in attempting to frame an inter-

national copyright law, together with the apparent hopelessness of securing immunity from the repetition of the sort of errors which will be presently referred to, strongly recommend the suggestion that Congress, instead of further tinkering the copyright statutes, should follow the example of European countries, and appoint three or four good copyright lawyers as a commission to draft a bill based upon their own knowledge of our present law and a thorough study of the advanced legislation of continental Europe.

By a no doubt preconcerted arrangement, an entirely new print of the bill was presented to Congress during February: on the 15th by Mr. Adams, in the House, from the Committee on the Judiciary; on the 18th by Mr. Simonds, from the House Committee on Patents, and, in the Senate, on the 21st, by Mr. Platt, as a proposed amendment to his former bill, more strictly as a substitute for it. The provisions of this substitute are identical with those of the former bill except in one unimportant particular, namely, the appropriation for the salary of an extra assistant to the Librarian of Congress. This appropriation was stricken out. But the form of the bill is considerably changed and improved by setting out the whole of each of the sections of the Revised Statutes, which it is intended to amend, as they would read after such amendment, instead of merely stating what words are to be erased or added, without giving any context, as has been the case in every previous print of this bill. But unfortunately the execution of this new idea has not been so happy as its conception. Another print of the bill will be necessary, in the first place, to correct the defects due to wretched proof-reading, which has left references standing without regard to the fact that the sections have been renumbered, so that the citations are incorrect, and has been neglectful of the fact that the new form of the bill would necessitate the references to be made to the *chapter* of the Revised Statutes and not to the *section* of the act. A necessary word has also been omitted in quoting the text of the Revised Statutes, and we may be allowed to point out that dramatic compositions should be included in the second line of section 4965 to agree with their previous insertion in sections 4956 and 4963; and this the more particularly because the word "book" in section 4964 was before understood to include dramatic compositions, but, under the new interpretation of the whole statute rendered necessary by the new interpolations, that word in section 4964 must be more narrowly construed. In the second place, section 4958 of the Revised Statutes is set out in the bill without regard to the fact that this section was amended by the Act of June 18, 1874. We assume that this must have resulted from clerical inadvertence; for it is hardly credible that it has been thought advisable to revert to the more bungling method of paying for the recording and copying of assignments at two different rates for every one hundred words, when for more than fifteen years the simpler method of charging a dollar fee for each service, instituted by that act, has been found entirely satisfactory. At least, we have yet to hear the first word of complaint in regard to it.

THE TREASURY HOARD.

THE *Financial Chronicle* of Saturday had an article on Treasury operations and bank reserves, in the course of which it gave a neat table showing that the Treasury had taken eleven millions out of the banks in the month of February. It is a particular instance of the chronic disease of surplus. For a long time past the receipts of the Treasury have averaged two millions a week the year round above its regular disbursements, and the accumulation is specially heavy in months when little interest is payable. At present the disbursements for pensions are beginning to find their way into circulation, and will mitigate the severity of current withdrawals, even if the purchases of bonds should fall below expectation. For some reason best known to himself, Mr. Windom ceased buying 4 per cents in February, when the purchases would have been very useful to trade; he has now resumed them, perhaps in consequence of remonstrances made to him by bankers and ex-officials of the Treasury.

It is the old story, so often explained in these columns, of the working of our sub-treasury system. Judicious purchases of bonds, in view of the continual surplus, do much to remedy the oppressive working of that system, and they need to be judicious; but a proper use of the system of deposits in national banks is also needed to prevent avoidable suffering. Unluckily for Mr. Windom, as well as for the country, he has declared as strongly as he could against such deposits, and he has a harder task in consequence to manage the finances without causing general mischief. He always had the power to require interest on his deposits, and has it yet, but this tolerably obvious method of doing justice in the premises has so far appealed to him in vain. He seems bent on the "rigor of the game," and it is a great pity that the counters are so large. The dangers of the sub-treasury system, in these days of large reserves, are well stated by the *Chronicle*, and we welcome its outspoken criticism of a superannuated method. We cannot agree, however, that there is any popular prejudice against depositing portions of the surplus in national banks. Some leading Republicans, and especially Mr. Blaine, committed themselves during the last campaign to the view that such deposits are illegal and fraudulent. President Harrison was also drawn into that view to some extent. The design was, of course, to discredit the Cleveland Administration. Now the business community must suffer in order to save their precious consistency.

There is one cause of absorption of money by the Treasury, and absorption on a very serious scale, to which we have often adverted, and of which we will now speak more particularly, hoping that at last it may secure the attention it deserves. We refer to the deposits of lawful money in the Treasury for the redemption of surrendered national-bank notes. This redemption fund amounted on the last of February to $64,182,864. Every dollar of this was locked up in the Treasury, since the cash in the Treasury equalled the cash liabilities of every kind, this redemption fund being counted as a cash liability and the surplus cash in the Treasury equalling the deposits in national banks. This vast redemption fund diminishes but slowly; it was $69,000,000 in the first week of January. Speaking financially, not a dollar of this money ought to be in the Treasury. The law, however, prescribes that a national bank, when surrendering circulation, shall deposit in the Treasury lawful money, namely, legal-tender coin or greenbacks, to the amount of bank-notes surrendered, receiving in return the bonds which were held as security for the circulation so surrendered. There was for many years no limit to the surrender of circulation permitted, but a sudden increase of the amounts surrendered induced Congress to pass an act restricting the amount to $3,000,000 per month. The Secretary of the Treasury at the time ought to have met the difficulty, real or imaginary, before Congress could act; he ought to have given notice that he would promptly deposit in other national banks all lawful money deposited for surrender of bank circulation. That opportunity, like many others at the Treasury, was lost. The fact remains that lawful money is still locked up in the Treasury to await the slow presentation of surrendered bank-notes, and that this just now amounts to nearly sixty-four millions of dollars.

Here is a plain case for amendment of the law. The proper place for the lawful money in question, if it is still to be deposited in advance of the presentation of surrendered bank-notes, is not the Treasury, but the national banks in the reserve cities, and especially in New York. The bank-notes should be intercepted in their usual movement, and the lawful money destined for their final redemption should not at any time be withdrawn from the channels of trade. It is a prodigious waste of strength to take large sums of money of full legal tender out of the reach of trade, and lock it up for months and years, awaiting the straggling return of bank-notes for redemption at the Treasury in Washington. The law should be changed, and changed with as little delay as is consistent with proper examination of the subject; and the cardinal point to keep in view is, that the redemption of bank-notes be effected without the withdrawal for a single day of money of full legal tender. Give us an amendment covering this point, and further accumulation of money in the Treasury for this purpose is at an end. With regard to the vast sum now locked up, probably all that can safely be done is to hasten as much as possible the presentation of the bank-notes wanted for redemption. It seems likely that something might be gained in this direction by furnishing the New York Clearing-house with a list of all surrendered circulation, particularly if it

can be arranged to have such bank-notes cashed at the Sub-Treasury in this city. But the other matter, the amendment to the law of redemption, should be attended to in Congress at once.

WHY THE CITY IS NOT WELL GOVERNED.

In discussing last week the subject of improvement in the government of this city, we took the ground that nothing could be gained by further charter tinkering, since we have already an excellent charter, and that we are not governed well "simply because the offices are not filled by the right men." This view of the case is sustained in the strongest manner by an article in the March *Century* on the government of the city of Glasgow, written by Mr. Albert Shaw. The picture which his plain, luminous narrative of the condition of Glasgow to-day presents, is of a city governed well because its offices are filled by the right men. It is governed by a Town Council of fifty members, who are elected for three years, who "come chiefly from the ranks of men of business, and are upright, respected, and successful citizens." The Councillors serve without salary, the office is deemed an honor, "party lines are seldom very sharply drawn in municipal elections," and "an efficient Councillor may, in general, expect reëlection for several terms if he is willing to serve," as the "seat of a satisfactory man who asks reëlection is, in a majority of cases, not contested at all."

The Town Council thus composed has absolute control of all departments of the city government—streets, police, fire department, markets, water and gas supply, municipal courts, sanitary arrangements, street railways, and construction of buildings public and private. It controls all appointments to office. "Heads of departments," says Mr. Shaw, "are selected with great care, and their places are practically permanent." The Town Clerk, who is the legal adviser of the city, corresponding to our Corporation Counsel, is expected to hold his position for life. The present incumbent, who has held the office for many years, is a high authority throughout Great Britain upon questions of municipal history and law. The City Architect and Master of Public Works, an office corresponding to our Departments of Public Works and of Street-Cleaning combined, is one of the most distinguished of British architects and engineers, and has held the office for nearly half a century. The Health Department has been in charge of an equally distinguished physician for nearly or quite as long a period. These officials are typical of the entire municipal administration. In every department there is employed the highest attainable expert ability, and the tenure of office is for life in all cases where fitness and efficiency are shown.

The results of a government by such officials are precisely what might be looked for in a private business controlled by them. The city is perfectly cared for in every respect, and the welfare and comfort of all citizens are ministered to in every way. The streets are well paved, are cleaned thoroughly every night, and the private courts in the thickly settled quarters are cleaned once and in some instances three times a day. The gas and water supply, both regulated by the municipality, are abundant and cheap. The street railways are leased on terms so favorable to the city that after 1894 they will yield the city a large income, and will not require a penny of public expenditure. Model tenements, lodging-houses, and abundant hospitals are provided, and every possible sanitary precaution is enforced to add to the comfort and health of the poorer classes. There are excellent public schools, public libraries, and picture-galleries for the education and recreation of all. The police protection by day and night is perfect. In short, Glasgow presents the pleasing spectacle of a city whose highest morality and intelligence are devoted to an earnest and honest effort to conduct its affairs for the benefit and happiness of all.

What is true of Glasgow is to be said with scarcely a modification of Berlin, of Birmingham, and of Manchester. The two latter English cities have been for years under town-council rule, and results similar to those which Mr. Shaw describes in Glasgow have been obtained there. The Berlin municipality, which we described at length in these columns a few years ago, is one of the marvels of the world, presenting, in fact, a unique example of a model city government. Its foundation is a municipal assembly of 126 members, who comprise the most eminent statesmen, scholars, and merchants to be found in the city limits. Many of them serve the city for life without pay. They call to the municipal service the highest expert ability to be found within the empire, and, when secured, every inducement is made to retain it for life. The result is that Berlin, like Glasgow, Birmingham, and Manchester, is a city in which scandal and corruption and extravagance in administration are unknown. Its citizens not only have their rights protected in every way, but their welfare and comfort advanced by the whole power of the municipality, and their rents and taxes reduced by the integrity and intelligence with which this city's affairs are conducted.

Does anybody doubt that with the same class of men in charge of our city government we could obtain similar results? What is our Council here who rule us as absolutely as the Town Council rules Glasgow? It is the Tammany Committee of Organization, whose twenty-four members are really controlled by the "Big Four," Bourke Cockran, "Dick" Croker, "Tommy" Gilroy, and Mayor Grant. Will anybody claim that this controlling power represents the intelligence and virtue of the community, and governs the city for the highest good of all its inhabitants? Would Glasgow, or Berlin, or Manchester, or Birmingham be well and wisely governed if its town or municipal council were to decide that they would vest the appointing and other most important administrative powers in the hands of an inexperienced and slightly educated young sporting man, who hung up his white coat and stepped out of a road wagon to assume the reins of government? Why are our streets wretchedly paved and cleaned and our public works generally mismanaged? Did Mr. Grant, when he became Mayor, seek, as Glasgow did, for high engineering skill to put at the head of our Public Works Department? We had in that place at the time the most eminent engineer in the land, who had spent a lifetime in his profession. The Mayor gave due notice before he was elected that he would not retain this man, though the city could have afforded to pay almost any price for his services; and when the people chose him, in spite of this notice, the Mayor conferred the office upon an ex-school-teacher who had left that respectable calling to become a politician, and who knew nothing whatever of engineering. The same Mayor removed from the Health Bureau the highest authority on sanitary matters that the city had, and put in his place an adventurer from another city who had never given a thought to sanitary science, who was a speculator of dubious reputation in Wall Street, and whose sole qualification for the place was that he was one of the Mayor's "cronies." The same Mayor replaced an able and experienced lawyer in the Corporation Counsel's office with an unknown and inexperienced lawyer, whose sole qualification was that he was the partner of one of the "Big Four." Contrast those three heads of departments in this city with the heads of the corresponding departments in Glasgow who have held their positions for nearly half-a-century! The wonder is not that New York is governed badly, but that it is governed at all.

Who is responsible? Not Mayor Grant and his cronies whom he puts into office, but the people who elected him. The intelligent and honest voters of this city are in an overwhelming majority if they would put aside party names and unite for the common good. Mr. Shaw says of Glasgow that "party lines are seldom very sharply drawn in municipal elections." If we could say that of New York, half the battle would be won. Until that can be said we can hope for little improvement. We cannot blame the unfit men whom we put into power for using that power badly, for we put them in knowing their unfitness and their inability and indisposition to use it in any other way. The adventurer Squire said, when asked why he accepted the appointment from Mayor Edson to the Commissionership of Public Works: "Why shouldn't I accept it? It's a good thing, and if the Mayor is willing to give it to me, I should be a fool to refuse it." All Mayor Grant's appointees might well make a similar answer were they to be charged with unfitness. We cannot get reform or good government from such men, simply because it is not in them. We can only secure it by making it impossible for them and their kind to get possession of the offices.

A FRANCO-GERMAN ALLIANCE.

PARIS, February 21, 1890.

COL. STOFFEL is a man of no ordinary stuff. We still remember the sensation which was produced when, during the siege of Paris, and

by order of the Provisional Government of the National Defence, the reports which he had written from Berlin as military attaché of France were published. These reports were a continual and most sagacious warning. At a time when the military strength of Prussia was despised at the Court of the Tuileries, Stoffel showed its importance, described its military institutions, showed how, since the beginning of the Second Empire, and especially since the Crimean war, Prussia had been preparing herself for great events and for great changes in Europe. As an Alsatian, Stoffel was well acquainted with the German language; he had, therefore, opportunities, as military attaché, which few had had before him; he was a true prophet, and, like so many other prophets, he could not make his voice heard.

When the war broke out, he was attached to the person of the Emperor, and intrusted with the secret service of the army; he sent and received the despatches written in cipher; he was in communication with the Empress till the capitulation of Sedan took place and the revolution of the 4th of September followed. Ever since the war, although the publication of his military reports proved the correctness of his judgment, he has remained under a sort of cloud. We saw him appear for a moment as a witness during the trial of Marshal Bazaine at Trianon; he was cross-examined about some despatches of Bazaine's which Marshal MacMahon had never received, and during his cross-examination he made a violent attack on the generals who had prepared the indictment of Bazaine. He was condemned to a month's imprisonment by the Court, and from that moment he vanished from sight. He leads now a solitary and retired life, mourning for the loss of his native province, and having no part to play in the new French Army, which others have reorganized and others are commanding. I often meet him in the streets. Thin and wiry, young-looking for his age, with a sad expression on his fine military face, he has the appearance of a man who cannot well bear his inactivity, and who is, as the French say, gnawing his own vitals.

Col. Stoffel has now come out of his retirement with a pamphlet which cannot but make a great noise in Europe. It is written in contravention of the almost universal opinion in France. Never has the attraction of France towards Russia been stronger than at the present moment. Our financiers have, by means of the so-called conversions, helped the Russian Government to reëstablish its credit. The Russian credit was once compared by a financier to a house built on piles; the piles were the various loans emitted at different times, and with different rates of interest, sinking funds, etc. All these loans have gradually been transformed into one vast loan, bearing only an interest of 4 per cent. The transformation was successfully made at gradually increasing prices of emission. The last 5 per cent. will in a few days be converted into a 4 per cent., emitted at 93. There will be a rush for this new 4 per cent., and the subscribers will receive only a ridiculously small proportion of their subscription. The bankers who are conducting this great movement would never have succeeded if they had not had the aid of the French capitalists. The small investors who have sold all their Italian funds have replaced them with Russian funds. Berlin has ceased to be the great market for Russian securities, and Russia feels that she can draw on French credit almost to any extent.

Now, it is idle to say that French capitalists have in this matter been led solely by interest, they have been led by sentiment; and if their interests have so far been well served, it is because this sentiment has produced a powerful coalition of capital favorable to Russia. I have at various times insisted in my letters on this irresistible attraction of France towards Russia, showing how it grew and was developed by all sorts of influences. There is no written alliance between Republican France and autocratic Russia, but the two nations believe that their interests are common in Europe, and that this community of interests is stronger than any written diplomatic document.

The title of Col. Stoffel's pamphlet is significant: 'On the Possibility of a Future Franco-German Alliance.' Against whom would such an alliance be directed? Against Russia. It is impossible to go more directly against the opinions and prejudices of the day. Let us see how Stoffel justifies what, at present, will be regarded as a bold paradox. He considers that the loss of Alsace-Lorraine has been to France more than a material loss: it has deprived her of her security. A battle lost on the present frontier would place Paris, in a fortnight, at the mercy of the conqueror; a battle lost by Germany on the Rhine would not endanger Berlin, which is separated by forty days' march and by the lines of the Rhine and the Elbe. The fate of our country actually depends on the issue of a single battle fought on the frontier; and this bare fact places France in a humiliating and intolerable condition (the words are Stoffel's). In taking Alsace-Lorraine after the war, Prussia made the same mistake as did Napoleon when he inflicted, after Jena, a humiliating peace on his adversary. The advisers of the Emperor of Germany were blind with regard to Russia; they were blinded by the personal friendship which existed between the sovereigns. Alexander of Russia had almost triumphed with the King of Prussia, who wrote to him: "It is first to God, then to you, that I owe my victory." This friendship was personal and did not survive Alexander.

Prince Bismarck foresaw some of the consequences of the annexation of Alsace-Lorraine, and, if we may believe a despatch of M. de Saint-Vallier, he expressed himself openly on the subject in 1879. He had shown, after Sadowa, a spirit of moderation which was truly statesmanlike. Col. Stoffel reports a conversation which he had with the German Chancellor two years after the peace with Austria had been signed. France had offered her mediation, and, in consequence of it, Prince Bismarck advised his King to make peace with Austria.

"If the King had refused the mediation of France, Napoleon III. might have been obliged to declare war on him. At the sight of the first red pantaloons on this side of the Black Forest, we should have seen the troops of Würtemberg, Bavaria, and the other German States re-form. We should have had to fight alone Austria, Germany, and France. It is true, Moltke was not alarmed at the prospect of such a disproportionate struggle; in a single night he made his plan of campaign. We had at this moment 660,000 men under arms and on the pay-rolls. Moltke sent 200,000 to the Rhine and opposed the remainder to Austria and the German States. However, my advice was to make peace. But I had everybody against me, and I passed some unpleasant days. When I went to see the King at Nikolsburg, I overheard people on the way call me a traitor. The Prince Royal was most ardent for continuing the war, and very excited against me."

The King, however, ended by adopting the opinion of Prince Bismarck, but with reluctance. He wrote a letter to the Prince, beginning with the words, "After having reflected leisurely on the reasons which you presented to me, I give my consent to this *shameful* peace."

Col. Stoffel laments the difference in Prince Bismarck's conduct after Sadowa and after Sedan. He believes that nobody, not even Prince Bismarck, foresaw the consequences of the Peace of Frankfort. Everybody in Germany thought that France would hasten to begin a war of revenge, and everybody thought it necessary to take a strong defensive position, in anticipation of this war. France, however, has remained at peace since 1870, and in this interval Germany has found a new and, in many respects, more formidable enemy. The alliance of the three Emperors of the north was a short dream, and what is the reality? It is the alliance of the two German Emperors against the Emperor of Russia. The enmity of Germany and Russia is every day more apparent, and it may at any time become a formidable difficulty for Germany. It may be said to be a permanent danger; and who can say with certainty that the Triple Alliance of Prussia, Austria, and Italy will last for ever?

The new German Empire is under the necessity of being constantly ready to oppose two formidable adversaries, one on the east, the other on the west. Where is the remedy? Col. Stoffel does not hesitate to say there is but one, the voluntary retrocession of Alsace-Lorraine. He maintains that this idea has been slowly gaining ground in Germany. On this point he seems to us to be under an illusion, for we have seen no sign of this transformation, except, perhaps, in the speeches of a few German Socialists. It is very unusual for a country to make a voluntary cession of territory, even of newly acquired territory. Austria did not abandon Lombardy or Venetia without a struggle, though the abandonment of Venetia was almost resolved on in principle. Col. Stoffel is not so romantic as to believe in an unconditional surrender of Alsace-Lorraine; he offers something for it. He intimates that Germany, if she consented to retrocede Alsace-Lorraine, would have a right to ask for an offensive and defensive alliance with France; and in his opinion this alliance would be the only sure guarantee for the peace of Europe.

It is not necessary, says Stoffel, to have meditated much on the state of Europe to perceive that the danger which threatens civilized nations is at the East, where it increases every day, slowly but surely. It can be affirmed that, thanks to the divisions which disintegrate nations, Russia will some day or other become mistress of the provinces of the Danube. When that day comes, she will encircle Europe from the Baltic to the Archipelago, protected on her two flanks by those two seas, in a position which nobody will be able to turn or attack from behind. Having then at her service the numerous sailors of the islands of the Archipelago, she will spread gradually, like a grease-spot, and will soon obtain the coasts of the Adriatic and Trieste. When she has at her head a conquering Czar, how will the Occidental peoples, if they are still disunited, resist the formidable pressure of the Slavic race? It will be the war of civilization against barbarism, and the moment may then come when will be accomplished for Europe the prophecy of Napoleon at St. Helena, "Republican or Cossack."

A little map accompanies the pamphlet, and shows to the eye this Russia of the future—having absorbed Turkey, the principalities of the Danube, and all the Balkan provinces—as large as the other states of Europe put together.

THE TWO SALONS.

PARIS, February 13, 1890.

THAT the vote in the Society of French Artists not to include in future Salon catalogues

the awards of the special jury of fine arts at the Universal Exposition, should have been disapproved by as many as passed it, is not surprising. Viewed in the light of patriotism and of international courtesy, this measure was a maladroit breach of propriety. It was a slight to the jury instituted by the State at the Universal Exposition and an offence to the artistic world at large—that is to say, to the artists of every nationality rewarded in Paris in 1889. If this had been the only side to the question, there is little doubt that it could have been discussed amicably; the protest of the opposition would have been understood at once, and there the matter would have ended. But in the fever of the ballot, personal grievances were directed against M. Meissonier, President of the Exposition jury, and the altercation took the character of a feud. Numerous resignations were tendered. Upon reflection the Society of French Artists, loath to lose so many of its brilliant members gathering round M. Meissonier, proffered olive branches. "Too late," answered M. Meissonier. And indeed it was too late; the dissenters had already set to casting the mould of a new artistic fraternity, so different in its forms from the one they abandoned that the episode appears like the devised excuse for a revolution long felt to be imperative.

The name of the new group is somewhat ambiguous. It terms itself "National Society of Art." The appellative "national" belongs as well to the group of the Champs Élysées. National art is but the ensemble of varied talents, and M. Meissonier and his new associates do not exemplify with their varied individual talents an art more national than when they exhibited at the Palais de l'Industrie. So, in spite of its loss, the old Salon may continue to be as national as its rival can expect to show itself. The designation has no reference to the assertion of any art principle, but is meant to convey the idea that art in the new society will be held superior to party and personal considerations. No medals there, since they give rise to intrigues; the quality of *sociétaire* must be sufficient in itself to take their place. No jury of admission either; instead, a letter of invitation to inform the would-be member that the walls of the Palais des Beaux-Arts in the Champ de Mars are at his disposal. Once open, the doors are never closed upon him. The invitation holds good for all time, and for as many pictures as he chooses to exhibit; indeed, his admission may be likened to a reception at the Académie Française, minus the speech. If more exclusive and apparently restricted, these proceedings are liberal, and, above all, they react against the administrative spirit that was creeping so fast into the Society of the Champs Élysées.

It is undeniable that the artistic spirit of the modern artist is not what that of his predecessors was. Cabanel, saying to his pupils that art is a career and a bread-winner, uttered a sentiment that would have horrified his confrères of thirty years age. Not that they disdained, more than those of to-day, to sell their work, but because they entertained a more exalted idea of their calling. For all that, Cabanel's words were a very sincere echo of the *état d'esprit* of the moderns. As to the administrative spirit prevailing in the world of art, it is not wholly due to the rules governing the association of artists, but is a direct result of the encouragement lavished upon art for the last thirty years. It is that endless series of competitions, premiums, medals, diplomas, and decorations, which have created a hierarchy comparable only to that existing in bureaucracy and the army. At first the public entered into the spirit of that hierarchy: medals had an influence on the prices art brought. But a day came when artists discovered that the coveted distinctions no longer secured the wonted valuation among dealers and amateurs, and that the little palazzi of the Avenue de Villiers were not to be furnished even with a first-class medal. The great public itself was approached without recommendation and admired according to its taste. When M. Bouguereau's spokesman (some say scapegoat) in the late affair of medals remarked that, without them, the public would be in a maze, he forgot, no doubt, that there are artists, as much *hors concours* as medals can well make them, glad to obtain the humble position of drawing-master in city schools. The last to grow sceptical as to these honors are some Americans who still regard them as transatlantic passports. Yet, vain as they may be admitted to be, every one contended for a place among the *haut-gradés*. The mere suggestion of doing away with such distinctions met with discontent from men who either had not their fill of honors, or else, crowded with them, did not care to enter on a footing of equality with those less distinguished. For if no more rewards were to be given, it would be but fair to omit any mention of past ones.

With its success, the Society of French Artists had remained stationary and neglectful of details, though the necessity of reform was suspected. The Committee knew that the system of medals was a cause of yearly altercations. Art critics repeated that the jury was too numerous; that it should not remain the same every year; that the aspirants to medals weighed too much on its conscience; that it ought to be sheltered from the unintelligent despotism of the *mandat impératif*. But the best intentioned in the Society were too closely watched by the great number to dare any reform. The authority of talent, which it seems should be the first in an artistic association, was cancelled by an undercurrent of cliques and coalitions. What better illustration of this state of things than the absence from the Salon jury of M. Meissonier, whom the inferior element, knowing what a hindrance he would be to partisan arrangements, refused to vote for?

However, it must not be supposed that the more influential members of the Society seconded the motion to refuse the immunity of exemption to artists rewarded at the Exposition solely in order to reserve to themselves a monopoly of official rewards. The Committee objected to the awards obtained at the Exposition, not because it wished to contest them, but because each of these awards insured to its holder free admission to the Salon; and, considering the number, it was apprehended that the space reserved to unrewarded artists would be insufficient. So it was officially explained. To confirm it (there were still hopes at that time that the schism could be patched up) it was resolved that all exemptions should be suppressed: great and small should have no prerogatives before the jury—their talent would have to be rejudged before every Salon. Once in the way of reforms, the Society set about improving the mechanism of its jury. First, the number of jurors will be diminished from forty to twenty, with five supplementary jurors in the section of painting. The names of fifty artists *hors concours* will be selected by universal suffrage. These will be divided into five series, comprising ten names each; and four names will be drawn by lot out of each series. The five supplementary jurors will be drawn in like manner, one from each series. Then, after the close of the Salon, lots will be drawn to decide which ten members out of the twenty shall be ineligible for the next year, since the same jurors are not to appear annually. The same plan of organization will be observed in the section of sculpture.

This is already good, but not good enough. The protection granted by the State to artists has no excuse for being, since no official art flourishes. Its aid, instead of fostering the development of modern art, proves in many ways a hindrance. The help it proffers is too much at the expense of independence; talents are too apt to curb their personal impulses in order to be on the side of those remnants of tradition which continue to gauge their worth. The evil begins with the artist's education. Take, for instance, a pupil sent by his native town to the school of the Beaux-Arts: to prove himself worthy of the free education offered him, he must show himself a worker. He must show that he can hold his own with the other young official workers of the same academy. Success in competitions will gratify his friends of the provincial town, so he inscribes himself in every one. If gifted, medals are showered upon him: medals for study of expression, for anatomy, perspective, etc. The result is printed in the papers, and proudly reiterated by the townsmen of the young laureate. Henceforth he is in the toils of a premature glory, and will be incapable of returning to studies more fitted to his temperament. Furthermore, his record, graded by the number of medals obtained, entitles him to pecuniary help if he is in need of it. During the Empire, assistance to needy Beaux-Arts students was disguised under an artistic form; they were given two or three copies of the Emperor's portrait to make. Now the subsidy is reduced to a hundred francs, voted from time to time. When this student competes for the *prix de Rome*, he knows exactly what advantages are at stake: four years at the Villa Médicis and the income of 4,000 francs a year for the three years that follow his return from Rome. He knows to a nicety the sum of concessions and abdications needed to win it. His education has taught him through what channels rewards are obtained, and disposed him to abdicate personality for official protection.

Between the decisions of the two societies, a step has been made towards liberty in art. Both will vie with each other in giving an example of liberality. The new Salon will be certainly the most select, for it will have the preference of the best artists, tired at heart of the crowd of the Champs Élysées. The old will continue what it has been, a field devoted to novelty and surprises. If new altercations arise—as they are bound to do—it is not in the societies of art that the next modifications will have to be wrought, but in the system of education itself, beginning at the foundation with the Beaux-Arts. When of this institution, which has rendered great services, nothing shall remain but the palace, artists will view themselves in a different light.

LE COCQ DE LAUTREPPE.

Correspondence.

WANAMAKER'S CAMPAIGN CONTRIBUTION.

TO THE EDITOR OF THE NATION:

SIR: In No. 1222, the *Nation* said that Wanamaker's rise was due "to the fact that he has made an enormous contribution in money to Quay's campaign fund, and to a successful attempt to extort $400,000 for it in the last week of the canvass, the full nature of which we trust to see revealed when Congress meets."

Please inform your readers if Congress has

taken any steps to discover the nature of this contribution, or if any attempt was made by the minority to do so, and defeated by the majority. The little episode in the Senate anent Dudley's "blocks of five" is known.

SUBSCRIBER.

CHARLOTTE, N. C., March 3, 1890.

[We regret to say that neither the majority nor the minority in Congress has as yet taken any steps in the matter.—ED. NATION.]

BLACK AND WHITE ON SOUTHERN RAILROADS.

TO THE EDITOR OF THE NATION:

SIR: C. F. Adams writes you: "In the South the negro must ride in a separate and filthy railroad-car or in the smoking-car."

Six months ago I should have believed that Mr. Adams knew what he was talking about, had I then read his letter in the *Nation*. For the last half year I, a Northern man, have travelled in the States of North and South Carolina, Kentucky, Tennessee, and Georgia. What the laws of these States are with relation to negroes riding in first-class cars I do not know; I do know, however, that in this State negroes ride in first-class cars if they buy first-class tickets, and I have seen them in such cars in South Carolina, Tennessee, and Georgia.

My impression is that South Carolina forbids any but whites to ride in first-class cars. Anyway, let me relate an incident I personally witnessed a few weeks ago in South Carolina: A negro woman with two children, all well dressed, entered a first-class car on its way to North Carolina. The conductor ordered her into the second-class car. She refused to go, saying it was only a few hours' ride into North Carolina, where the conductor acknowledged he could not discriminate. Now Mr. Adams doubtless expects to hear that the woman was thrown off the car, burned at the stake, and the brains of her children dashed out against the nearest telegraph-pole. His idea doubtless is—I once had that idea—that in the South there is always at hand a band of men (ex-rebels, of course, and more or less Kukluxy in dress) whose business it is to kill negroes, or at best insult them, on the slightest provocation. As a matter of fact, this negro woman kept her seat; not only that, she kept her tongue going, and she routed the conductor all along the line, to the great amusement—not indignation, Mr. Adams—of everybody in the car. He retired in as good order as could be expected, and the negro woman, her head well up, rolled into North Carolina in a state bordering on the triumphal entry of a victorious general.

Now let me add—it is so characteristic—that though this negress routed the conductor, she was totally unable to resist the blandishments of the train-boy, who sold to her several dollars' worth of stuff she could have no possible use for.

R.

NORTH CAROLINA, March 3, 1890.

THE RELIEF OF THE SUPREME COURT.

TO THE EDITOR OF THE NATION:

SIR: Your notice of my paper intimates that I should have suggested a scheme. I do not propose to do anything so presumptuous. This measure should be intrusted to a commission of five lawyers appointed by the President at the request of Congress. It is evident, judging from the specimens we have had, that neither the importance nor the difficulty of the subject is appreciated. The existing statutes, I have endeavored to show, prove that Congress overlooked entirely the chief object of having a Supreme Court, for general jurisprudence, while they carefully preserve its functions for constitutional and statutory law and the rights of the Government.

It is unreasonable to expect that any one should volunteer the adequate labor and time for drafting a proper statute without some prospect of its being read, and it is quite improbable that Congress will accept unasked-for advice of a mere private person. When England began its law reform fifty years ago, it did it by commissions, and by them inquiry was made of every State of the Union as to their experience in the matters proposed to be dealt with. It is supposed some of our plans were imitated. Would it not be well to follow this example, and ascertain how it is that they have solved the very difficulty we are laboring under?

Solved it they have. It may be that the litigation in the British Empire is smaller than that of the very limited jurisdiction of the Federal courts. If so, why it is so is a most pertinent question for the Commission. Is it brought about by artificial means or natural? It will be remarkable if this is the fact, when we consider that the appellate jurisdiction includes the three kingdoms and all the colonies, whatever be the cause. They have no constitutional questions, but we have no divorce suits or ecclesiastical causes. They even consider the propriety of granting a new trial in a colonial court. They weigh the evidence in admiralty; we prohibit any inquiry into the conclusions of a single judge, however unfounded. They evidently know no limit of amounts in controversy; we hold that if the plaintiff, though entitled to nothing, is content to accept so small a sum as $5,000 and costs, the constitutional guarantee of an appeal is lost.

I do not propose to suggest the remedy. I think any one can see the difference between the presumption of framing a statute for Congress, and pointing out the mode of obtaining the proper kind of ability and information for the task. No one but a practising lawyer can fully comprehend the evil as it now exists, and the impossibility of curing it, except by some system that we know nothing about. The result of the experiment we did make is quite sufficient, I should think, to prevent one whose self-conceit has any limit, from venturing on untried plans, spun out of the cobwebs of his own brain; and the Pennsylvania practice of pretending to hear counsel, provided they will not speak long enough to enable any one to ascertain what they are after, has not proved entirely satisfactory.

It is only in the hope that somebody will be induced by the recommendation of your paper to get the attention of Congress or the Government called to the subject, that I have ventured to make these suggestions.

R. C. MCMURTRIE.

THE TYRANNY OF THE STONECUTTERS' UNION.

TO THE EDITOR OF THE NATION:

SIR: I enclose a cutting from yesterday's Boston *Daily Globe*, which doubtless you may have seen, with regard to the lockout in the stonecutters' trade due to the first combined action of the Freestone Contractors' Association of New England, an association of recent organization. The outrages from which the employers of stonecutters have suffered seem to me among the most heinous and unjust ever suffered by employers at the hands of unions. That the abuses should have been tolerated so long, and been allowed to grow to their present enormity, is matter for the greatest surprise; and that the employers, now that they have been forced at last to combined action, should publish a manifesto so wise, so just, and so moderate as the one I enclose, speaks most strongly in their favor. It is to be hoped they will not give in until they have forced the Union to the adoption of every one of their most temperate proposals.

But it is not to enlarge upon the statement of the employers' grievances that I write to you, though I might mention individual cases that have come to my knowledge of employers paying such fines as $100 to the Union because they did not get their men all paid off by exactly twelve o'clock. I wish to call attention to one phase of the trouble which affects all those interested in the advancement of art in this country. By the brute power of the Stonecutters' Union, the carvers of all stone and marble used in any way in buildings—men who are some of them thorough artists—are forced to belong to the Stonecutters' Union, to class themselves with mere artisans, and help them fight their battles, however unjust. Hitherto the majority of them have tamely submitted to this slavery under the mistaken notion that it was to their advantage. There are not enough carvers of real ability in the country to do all the work for which there is demand, yet the New England Stonecutters' Union has refused to allow any more men to join the unions or to work in the yards, and it includes the carvers in this refusal, for it makes no distinctions. Its aim is rather to reduce all to the level of the lowest. Previous to this it charged every man the outrageous admission fee of $100 to the Union, or would not let him work.

These carvers were ordered to strike without any reasons given. Telegrams were sent to different cities in the United States where they were at work, and they meekly dropped their tools and came back to Boston. The carvers all admit the entire justice of their employers' position, they regret having to give up profitable work for reasons they know to be utterly unjust; but they dare not disobey the tyrant's commands. The cause of the enforced strike was the employment of carvers belonging to the Marblecutters' Union to carve certain marble for the Boston Public Library, enough carvers belonging to the Stonecutters' Union not being obtainable. The animus of the Union is shown by its president remarking, "He was not there to discuss the justice of the matter: that was not his affair; the Union had the power and meant to use it." It is, in short, a mere exhibition of brute power for the mere sake of using it and glorying in it.

Of late years some of our architects have been making strenuous efforts to improve the quality of the carving on our buildings—to make the carving, as it should be, real work of art. The great improvements that have been made in the last ten years testify to the partial success of these efforts and to the admirable way in which they have frequently been seconded by the master carvers and their men. More, much more, remains to be desired. But how, under the present conditions, is any advance possible? Truly, Pegasus is yoked with an ass.

ARCHITECT.

BOSTON, March 5, 1890.

FAS EST ET AB "HOSTE" DOCERI.

TO THE EDITOR OF THE NATION:

SIR: At the meeting of the Typothetæ at St. Louis, in the autumn of 1889, the Chace Copyright Bill was discussed, and a leading printer

of St. Louis opposed it in a long speech, during which he did me the honor to make extensive quotations from a published lecture of mine, for which he gave me due credit; but I was grieved to find that, while using my arguments against the excessive claims of the extreme school of authors'-rights advocates, he did not state that the whole drift of my lecture (delivered in 1882) was in favor of granting copyright to all authors who, by publishing their books in any country, acquired thereby a moral right to the protection of the municipal law of that country. To have stated this would have traversed the line of his speech, and neutralized any force which his quotations may have had. I was, however, glad to find that the vote went in favor of the bill; and, St. Louis being a long way off, I did not trouble myself about the matter until last week, when I found, in the St. Louis *Stationer and Paper and Printing Trades' Journal*, some of these same quotations doing duty again in opposition to the principle of international copyright.

Before the meeting, during the summer of 1889, the gentleman referred to called on me at Montreal, and we had a long conversation upon this question. Our views were divergent, but I hoped to have impressed him in favor of international copyright. I saw by the printed report, in October last, that I was mistaken. To quote, however, from my lecture in the way reported was like seething a kid in its mother's milk. Possibly he made some qualification which does not appear in print.

It always seemed to me that the chief cause of refusal of international copyright has, for very many years, been the extreme ground taken by the advocates of absolute authors' rights who persisted in ignoring certain economic principles which the United States (rightly or wrongly) had adopted. My theme was, that an author who manufactured his book in England acquired no rights in foreign countries by any absolute law; but that a book upon being manufactured in the United States should be protected as any other property, without inquiry as to where the writer was born. In patent law the principle is familiar.

My argument in the conversation also referred to at the meeting in St. Louis was purely from a United States standpoint (a position which Canadians, from their constant intercourse with the United States, are capable of taking), and it ran in this line:

The people of the United States have adopted the policy of protection to home industry. Therefore the proposed Copyright Bill demands that all books to be protected shall be manufactured in the United States. You are careful of the printers, the engravers, the binders, the paper-makers; but you, who oppose this bill, are forgetting the authors. I mean your own authors—bone of your bone and flesh of your flesh—born and brought up under your own institutions. What have they done that the works of foreigners should be brought into untaxed competition with their works? The American author has to live, and sometimes, when he is very imprudent, he has a wife and children; for that reason his books are charged with copyright. In short, he gets paid for his work just like the printer and binder, and the babes of the printer and paper-maker and author are thereby nourished into active adult citizens of your great republic. But, as your law stands now, you are bringing in the work of foreign authors to the detriment of your home authors; you are selling their books less the cost of authorship; and you are taking the bread out of the mouths of your own literary producers, because you are underselling their productions with free foreign literary labor. You would not do that with the paper-makers. You say books must be cheap—the people of the United States demand cheap books. If so, be consistent and take the duty off paper and printing materials and give the people cheaper books; but you protect every kind of labor in a book except intellectual labor. In books alone free foreign labor is encouraged to supplant American labor.

And it does supplant it to an amazing degree. The American mind is not nourished upon American literature, but upon British literature. Look through the immense lists of books in the cheap libraries: you will find no American names. It is nothing to the point to say that British authors receive nothing out of that enormous mass of literature; neither do American authors, for it takes the place of American literature and displaces just so much of native work. Your wives and daughters read of deans and canons, and dukes and lords, of kings and queens and courts, and their ideas are formed, in spite of their surroundings, upon a state of society eminently un-American. The British author is teaching them gratis. The men are saved by the daily newspapers—for the Sunday newspapers are now largely occupied with foreign-syndicate matter also.

It seems to me that, in this respect, the United States people are yet in the Middle Ages. In old times the foreigner was always an enemy, and the same word was used for both. The last people in the other hemisphere who nourished such ideas were the Barbary States. Commodore Decatur explained matters to them in 1815, and ever since that time the property of the foreigner has been everywhere respected—provided it were not literary property; but in literature the stranger is still the enemy in the United States.

But this objectionable foreign author is by the Chace bill to be domiciled among you. He brings the produce of his brains and prints it on American paper with American type and ink. He will submit to all your laws and regulations, if you will allow him, so far as to make his book entirely in your country; but even then you must ask where he is residing and where he was born. In literature the foreigner must still be the enemy, and, on the high sea of the intellect, his property is the common property of the "faithful." But the British author is of your own race and speech and religion; and Algiers never preyed upon Tunis or Tripoli.

All this does not concern me. If my unfortunate lecture had not been quoted to contradict its main object, I should not have said a word. In spite of everything, American literature is advancing—not as the literature of a nation of fifty millions ought to advance, for its discouragements are many, but yet it is advancing, and Canadian printers will every year have more and more of a selection to reprint from. The population of Canada is about four millions, while your population is over fifty millions. We have more of a literature than you suppose; but much of it is French, and the same causes which have retarded your literary growth so long are acting with redoubled force upon ours, so that we shall have nothing to lose in comparison to you. We shall be able to give the people of the United States cheap editions of their own authors upon Canadian paper, as Belgium did for a long time to France, and all your custom-houses cannot keep them out, for the intercourse between Canada and the United States is incessant, and you say the people must and will have cheap books. We shall become public benefactors to that needy nation, and enable the poorest American citizen to nourish his intellect with pure American thought uncontaminated with the monarchism of Europe—free from the influence of deans and canons and dukes and peers and such like people—disturbing to American ideas. What a career you are preparing for the Canadian printers when you oppose the Chace bill.

These and similar considerations formed the staple of my argument in the very pleasant chat I had the honor of having with my St. Louis friend. My poor lecture looked at the question almost solely from a legal aspect, having been prepared eight years ago for a course in a law school; but my argument, even there, was in favor of the present Canadian principle, which exacts only that the book should be printed here, and leaves the tariff to settle the matter of paper and type. The Chace bill goes much further, and, in the interest of the United States people, material as well as intellectual, should become law. I think that in the long run it is expedient to do right, even for a great nation, and that if the United States people continue to inquire into the nationality of the author of a book printed in their own country before granting it the protection of their laws, they will not be, in matters of the intellect, much in advance of the Roman people long before the Christian era, who used the same word, *hostis*, for both enemy and foreigner.

S. E. Dawson.

Montreal, March 3, 1890.

ANTI-AMERICAN BRITISHISM.

To the Editor of The Nation:

Sir: Though some time has elapsed since, in your issue No. 1255, you published a letter on "The Reputed Ignorance and Ambition of Americans," I hope you will allow me to return to the subject of it, the story related in that letter having a highly instructive sequel.

According to Sir William Fraser, Gen. Grant, when dining with the late Duke of Wellington, addressed his host in these words: "My Lord, I have heard that your father was a military man. Was that the case?" But, nearly a hundred pages further on, in the book from which this is taken, we read:

"In an earlier part of this work I told the story of President Grant dining at Apsley House. I regret I asked the second duke what really took place. However, as the reader has had the full enjoyment of the story, I must now, in the interests of truth, state what the Duke told me happened. He said that, during dinner, Gen. Grant kept trying to get him to say what was the greatest number of men that his father had commanded in the field. The Duke added: 'I saw what he was at: if I had said forty or fifty thousand men, he would have replied, Well, I have commanded a hundred thousand. So I was determined not to answer his questions as to this; and I succeeded.'"

Now, if one of our countrymen were to express regret at having taken measures resulting in the discovery that a defamatory anecdote vented by him was baseless, an Englishman would, almost certainly, exclaim: "How very American!" But circumstances are often, with him, all in all. Significant, too, is Sir William Fraser's assumption that a tale injurious to the character of an eminent American is sure to contribute to his British readers' "enjoyment." In his eyes, this kind of "enjoyment" must be, as one sees, a thing which it is patriotically meritorious to pander to, while the choice of instrumentality securing it does not in the least matter, the end justifying the means. Let us look a little closely at what the titled gentleman does. First, by way of ministering to national animosity, a feeling conducive, in his estimation, to "enjoyment," he prints what he apparently knows to be a malicious invention,

or, bluntly, a lie. Secondly, by and by, when the lie has had time to root itself firmly in the memory of the reader, he talks, just as an honest man would do, about "the interests of truth"; takes back, as being avowedly false, his calumnious story, which he permits us to suspect that he may himself have devised; and substitutes for it something entirely different, its disparagement apart.

As to the late Duke of Wellington, unless he has been misrepresented by his professed colloquist, there must have been a peculiarity about him not much more respectable than Sir William Fraser's sense of historical veracity; but this I am loth to believe; and the succedaneous anecdote quoted above, seeing that the person on whose sole authority it rests has shown his hand, seems to call for no farther comment.

That Gen. Grant was only a vulgar and illiterate soldier I have heard contended by many Englishmen. And no wonder, since, the minutest minority excepted, none of us are here credited with having yet advanced beyond the mere rudiments of education. Not long ago, in my own study, a learned clergyman, on my saying that I was a graduate of Harvard College, remarked: "But, in America, small things are called by large names. Your colleges, no doubt, would rank with our Board Schools. The elements of Latin are taught in them, I suppose, provided you can get over instructors from England?" Nor did this surprise me, considering that I have, more than once, been asked, by those who knew nothing more of me than my nationality, whether I could read and write.

Your obedient servant, F. Hall.

Marlesford, England, February 20, 1890.

THE NEW ENGLAND FARM-VILLA.

To the Editor of The Nation:

Sir: I have just been reading the article on pp. 195-6, entitled "A Suggestion for Summer." I have read it with interest, as I have an earlier one, because it strikes in me a sympathetic chord, and because I know something practically about "living in such conditions as are there outlined." Let me, then, venture to suggest two practical questions, which must be answered satisfactorily in every family which attempts so to live.

(1.) How will you induce one hired girl—not to say "two or three house servants"—to stay in the place described during the three months of each year in question?

(2.) How will you induce a gentleman—and especially his wife—of means sufficient to keep up an establishment on the scale described, to spend more than one night in that "house of seven rooms" on an abandoned farm in New Hampshire or Vermont?

The travel and observation of the writer of the article must suggest the thought that one of the first things the new owner will be sure to do, will be to pull down that farm-house and erect something more tolerable in the eyes of ladies city bred, at a probable cost at least three times the selling value of the whole farm, including the new improvements.

Very truly yours, H. A. Harman.

Rutland, Vt., March 7, 1890.

THE WASHINGTON PEDIGREE.

To the Editor of The Nation:

Sir: In your issue for January 23 you printed a letter signed "C.," quoting Mrs. Cotton's tract, wherein she tells Mr. C. H. of Yardley, Northamptonshire, about Col. [John] Washington, "him whom you have sometimes seen at your house." It was inferred that this house was in England, and that this letter connected Col. Washington with Northamptonshire.

I have just done what I should have done before, viz, read Mrs. Cotton's letter throughout. I find she also says to Mr. C. H., on p. 10, that among the rebels killed were "James Wilson, once your servant," Lieut.-Col. Page, "one that my husband bought of Mr. Lee, when he kept store at your house," and Anthony Arnell, "the same that did live at your house." Also, p. 7, she mentions four members of the Council and six other leaders, "all persons with whom you have been formerly acquainted." On p. 4 she says that Nathaniel Bacon was "nearly related to your late wife's father-in-law."

These citations seem to show very strongly that Mr. C. H. had lived in Virginia, and therefore it is probable that it was in this country he met Col. Washington.

As to Mr. C. H. of Yardley—could he be a Harrison? Some coincidences point that way. At all events, the Bacon pedigree ought to be searched. W. H. Whitmore.

Boston, March 7, 1890.

Notes.

Language fails us when it comes to characterizing our abominable tariff on knowledge. Here is the third volume of Mr. B. F. Stevens's splendid series of 'Facsimiles of MSS. in European Archives relating to America,' just arrived. The undertaking is one proper for the Government of the United States, and would be an honor to it. In default of its initiative or patronage, how ought the Government—*i. e.*, the people—of this country to regard the patriotic American who takes the risk of the enterprise commercially? Might it not fitly send a national ship for the volumes, if that were needed as a token of its appreciation? On the contrary, it does what it can to exclude them, and to insure Mr. Stevens's failure to recover his outlay. It imposes (except in the case of public libraries) a duty on each portion of the work, and increases for any collector or student the subscription price by one-quarter. There was question whether the 'Facsimiles' might not come in as periodical issues: at home we allow the Pirates' Own libraries to circulate through the mails at periodical rates of postage. But mark the determining consideration: these precious 'Facsimiles' must be somehow enveloped in order to avoid destruction in transit, and they are actually placed in "substantial boxes made of cloth and leather," thus, though they are unstitched, being assimilated to books. Hence the Treasury finds that the true (and we may as well relieve ourselves by saying the infernal) intent of the law is, that a tax should be clapt upon American—not foreign—disinterestedness, devotion, arduous application, skill, scholarly research, and popular knowledge of the history of these United States.

At the same time we receive from a London firm an inquiry how to send to this journal the catalogue of an important English library without making us chargeable with the duty. We are obliged to reply, with shame, that we know of no way, though the work has of course no commercial value, is beyond the dreams of American pirates or the jealousy of American paper-makers, type-founders, printers, and publishers. We could add that, as a critical journal, we are constantly in receipt of foreign works for review, on which we regularly pay a tax according to the caprice of the postal customs; yet it is only by our examining and reporting upon such works that our public can (for the most part) learn of their existence and value. We can give still another instance, of a different class, within our cognizance, where the son of an eminent American was obliged to pay a paltry tax on a volume bestowed by a foreign author by way of homage to his ancestor.

The sixth publication of the Filson Club, whose publishers are John P. Morton & Co., Louisville, Ky., is announced to be 'The Political Beginnings of Kentucky,' by the late John Mason Brown.

The Dunlap Society, now four years old, announces that it proposes to issue this season the third part of Mr. William Winter's 'Brief Chronicles'; a brief biography of the late John Gilbert, with extracts from his autobiography and letters, to be prepared also by Mr. Winter; and the 'Occasional Addresses of the American Stage,' to be edited by Mr. Laurence Hutton and Mr. William Carey, and to be supplementary to Mr. Hutton's former collection of 'Opening Addresses.' These books are to be printed by De Vinne in limited editions of less than two hundred, and are not for sale. They will be forwarded, when ready, to any one who pays the annual subscription of five dollars. The Secretary of the Dunlap Society is Mr. Brander Matthews, No. 121 East Eighteenth Street, New York, to whom subscriptions should be forwarded.

Those interested in the French stage will be glad to hear that a new and complete edition is in preparation of the works of the late Émile Augier, and also that M. Alexandre Dumas, *fils*, is collecting his scattered writings of recent date to form a fourth volume of 'Entr'actes' (Paris: Calmann Lévy; New York: F. W. Christern). M. Dumas once threatened to publish the plays of others which he had revised and made profitable—"Le Supplice d'une Femme," "Les Danicheff," etc.—under the title of "Le Théâtre des Autres"; but of this there is as yet no announcement.

Prof. Perrin, formerly of Göttingen and now of Boston University, is engaged upon an English translation of Heinrich von Sybel's 'History of the Founding of the German Empire by Wilhelm I.' It will be published by Thomas Y. Crowell & Co., New York.

'Jefferson Davis, ex-President of the Confederate States,' a memoir by his wife, is to be published, by subscription, by Belford Co., New York.

Harper & Brothers will shortly issue 'Maria: A South American Romance,' by Jorge Isaacs, translated by Rollo Ogden; 'What I Remember,' a second volume by T. Adolphus Trollope, covering the period 1865–1889; and 'Two Years in the French West Indies,' by Lafcadio Hearn.

'Easter Gleams,' hymns and poems, by Lucy Larcom; 'In a Club Corner,' by A. P. Russell; and 'Indigenous Flowers of the Hawaiian Islands,' by Mrs. F. Sinclair, with forty-four water-color plates, are in the press of Houghton, Mifflin & Co.

John Wiley & Sons announce as in preparation a translation, by Prof. R. H. Thurston, of Sadi-Carnot's 'Reflections on the Motive Power of Heat'; 'Sugar Analysis,' by F. G. Weichmann; and 'The Logic of Algebra,' by Ellery W. Davis.

A handy 'Medical Dictionary,' by George M. Gould, M.D., will be published directly by P. Blakiston, Son & Co., Philadelphia, a small octavo of 520 pages.

The February number of the *Library Journal* enumerates a long list of bibliographies on the way to completion before the new century —like Sabin's 'Dictionary of Books Relating to America,' with its promised index volume— and the following much nearer to getting into print: a list of bibliographies on all subjects, by J. L. Whitney of the Boston Public Library; a list and index to the printed volumes of our historical societies, by A. P. C. Griffin of the same library; a list of New York imprints before 1784, by C. R. Hildeburn; another of North Carolina imprints before 1800, by Dr. S. B. Weeks; a bibliography of New Jersey by W. R. Weeks; a list of books relating to State constitutions and conventions, by J. R. Hickox; a bibliography of the United States Constitution, by Prof. A. B. Hart and Paul Leicester Ford; a list, by the American Historical Association, of the historical writings of its members, etc., etc.

Miss Coe, the librarian of the New York Free Circulating Library, contributes to the tenth annual report some very interesting lists of favorite reading, as, for example, that of fiction, where 'Uncle Tom's Cabin' leads all competitors in the main library as well as in the three branches. Miss Coe says: "It will be noticed that in most cases the favorite book of a class or of an author is a representative one. Specially is that noticeable in the list of the Ottendorfer Library, where it is evident that Americans of foreign birth or parentage are reading the best, or, at least, best known books in American literature, and that American history, biography, and miscellany are taking the lead. It is certain that Germans read better books than Americans, and boys than girls."

Mr. J. R. Hickox, in his Monthly Catalogue of United States Government Publications, criticises bills introduced by Senators Wilson and Hoar for the distribution of the United States Statutes, the *Congressional Record*, and other public documents. He thinks the designation of libraries should not be confided to Congress, but to the Department of the Interior.

At its meeting in St. Louis last May, the new Association of State Librarians passed a series of resolutions for the improvement, right conduct, and ample support of State libraries, the regulated distribution of public documents, the exchange of duplicates, etc., as well as for assistance from Congress in the direction of free exchange through the mails, lower postage on books, and exemption for State libraries from duties on books imported. These resolutions commend themselves to every intelligent person.

Ten years ago the libraries of the Legislature and the Historical Society of Nova Scotia were amalgamated, and a hurried catalogue of the joint collection has just been published, with omission of the pamphlets. It affords a somewhat curious study of what we may call drift in this continental "pocket." Among the newspaper files, but two are from "the States," viz., one year of the *New England Weekly Journal*, published in Boston (1727–1728), and one of the New York *Spirit of the Age* (1859). Among the individual biographies only fifteen are of natives of the United States, counting Lord Lyndhurst and the Loyalist Curwen. The rest are Channing, Choate, Franklin, Abbott and Amos Lawrence, R. E. Lee, Longfellow, W. H. Prescott, Bishop Seabury, Ticknor, Washington, and a missionary family. The fortuitous group of our histories is equally curious and antiquated.

The latest edition of Gay's Fables is published in connection with the "Chandos Series" (Frederick Warne & Co.). An ardent Devonshire collector, Mr. W. H. Kearley Wright, borough librarian, Plymouth, produces a new biographical sketch of Gay which for the first time gives the true date of Gay's birth, viz., 1685, and likewise takes advantage of the bicentenary celebration at Barnstaple in 1885, two years after Mr. Austin Dobson had edited the Fables for the "Parchment Library." Mr. Wright also adds a completer bibliography of the oft-reprinted work than has ever been attempted—considerably fuller than the editions named in the British Museum Catalogue. Numerous illustrations, reëngraved from William Harvey's drawings of two or three generations back, embellish the present edition, which is clearly printed in large type and is altogether presentable. Mr. Wright's literary execution falls short of Mr. Dobson's, but he seems to be reserving himself for a longer biography of Gay.

A timely little book on 'Eggs: Facts and Fancies about Them,' by Anna Barrows (Boston: D. Lothrop Co.), leads the reader insensibly through egg-lore and commercial statistics to consideration of eggs as medicine and as food, with recipes for preserving and for cooking in a great many forms; the author's aim being to promote the consumption of this article of diet, and even the raising of eggs for market by women.

The first volume of the Messrs. Longman's *New Review* is very handsome, its single-column page masking the magazine. The list of contributors is not lacking in stars, from Gladstone to Bret Harte, from Cardinal Manning to George Jacob Holyoake, from Max Müller to Vámbéry, from Henry James to Lord Randolph Churchill, from Pasteur to Tennyson. The symposium has been employed for such debatable topics as the character of the German Emperor, the great London strike, the new Radicalism, the South African problem, the progress of coöperation, anonymity, etc., etc. Tennyson's "Throstle" is, we believe, the only verse of the volume.

The Syracuse *Academy* for February is wholly occupied with the official report of the fifth holiday conference of the Associated Academic Principals of the State of New York on December 26 and 27, 1889.

Meteorology is a favorite subject for loose theorizing. *Science* is very liberal in giving five and a half pages to an unconsciously humorous effort by Frank A. Velschow to explain the "Cause of Rain." The *American Meteorological Journal* has, with equal liberality, devoted parts of several recent issues to a series of articles on cyclones by Faye, "Membre de l'Institut, etc.," with more yet to follow on tornadoes. They serve as illustrations of the ancient school of meteorology, but they have small bearing on the modern status of the science.

A copy of the better of two etchings of George Eliot made by Rajon is given in the *Studio* for March 1, in which we remark also Mr. Edward Robinson's comments on a bust of Tiberius in the Boston Museum of Fine Arts, likewise pictured here.

"The Ethnography of the Peloponnesus," by Dr. A. Philippson, is the principal paper in the last *Petermann's Mitteilungen*. In the accompanying map, so colored as to show the different nationalities and the language of the inhabitants, it is surprising to note how very considerable a part of the peninsula is inhabited by Albanians, or those who speak the Albanian tongue. Prof. G. Schweinfurth contributes a review of Mr. Flinders Petrie's work in the Fayum, Egypt. He criticises with some severity his lack of proper preparation and the careless manner in which the various excavations were conducted, in consequence of which great quantities of valuable material were lost or destroyed. In this number is the first part of a bibliography with notices of the most recent works and articles in the leading periodicals upon Africa. An idea may be obtained of the amount of literature on this subject from the fact that, though only the general works and those relating to the continent north of the Equator are given, 292 different titles are recorded. Some of the most important of these are the first volume of Dr. Junker's account of his travels between the years 1875 and 1886, Capt. Wissmann's journeys in the Congo Basin and across the continent, Gen. Faidherbe's 'Senegal,' and the third and concluding volume of the late Gustav Nachtigal's great work on the Sahara and the Sudan.

The *Scottish Geographical Magazine* for February contains papers by Prof. James Geikie on the "Evolution of Climate," accompanied by several geological maps, and by Mr. H. J. Mackinder on the "Physical Basis of Political Geography." There is also an interesting account of a recent journey in northwestern Persia by Mr. J. Theodore Bent. Many of the nomad tribes of this region live with their flocks in underground houses during the winter months, just as their ancestors did in the days of Xenophon. "They are detected only by mud domes with holes at the top, over which the road passes, and at the top of which the village life is carried on. Not unfrequently accidents happen, and a donkey or horse descends through the ceiling on to the family below." In other places these subterranean habitations have slanting roofs, appearing above ground, made of thatch. At Baba Nazeyr Mr. Bent found a religious sect having rites which "contain many elements of Christianity." He suggests that they are "one of the decayed Christian sects of this region, who, to avoid persecution, have substituted the name of Ali for that of Christ." Mr. Delmar Morgan contributes a biographical notice of Sir Henry Yule, with a list of his writings, and a portrait.

The Hon. Geo. Curzon, M.P., has written to the London *Times* an account of the Karun River, which was opened to commerce in October, 1888, through the instrumentality of the British Minister at Teheran. This stream, the only navigable river in Persia, can be ascended by vessels of light draught from the Persian Gulf a distance of 177 miles to Ahwaz, where there are rapids which can only be passed at certain stages of the water. From this point the river is navigable for 100 miles to Shuster, an important town whence caravan routes go to different parts of the kingdom. Great expectations were aroused at this concession of the Shah, both because the river flows through a country which, though now almost without inhabitants and destitute of vegetation, is of extraordinary fertility, and because the land journey to Ispahan and Teheran may be shortened nearly three hundred miles. Mr. Curzon, however, found that the local authorities had hitherto prevented the commercial development of the privilege. An English company had put a boat upon the river which makes fortnightly trips to Ahwaz, though at a steady loss. It has not been permitted to construct either wharves, warehouses, or sheds, nor is the steamer allowed to take in or discharge either cargo or passengers at any intermediate point between the mouth of the river and Ahwaz. The opposition comes from all classes. Still, the Government has built a large custom-house at Mohammerah, at the junction of the Karun with the estuary of the Tigris-Eu-

phrates, and is running a telegraph line between this place and Shuster.

A long extract from Col. Stoffel's pamphlet, 'The Possibility of a Franco-German Alliance,' of which our Paris correspondent speaks on another page, is given in the enterprising Boston *Transatlantic* for March 1. Robert Browning's is the portrait of the number.

—We lately noticed a remark attributed to Mr. Spofford, librarian of the National Library at Washington, to the effect that his colored readers (a superior class) eschewed fiction for works of a serious and improving character. A correspondent writes to us from North Carolina that this is not at all remarkable, but a wise and beautiful dispensation of Providence, seeing that the available fiction "excludes their own race type." She adds that "a chaste and fitting fiction for the African must grow out of his own civilization and social progress." In view of the prevailing taste among white Americans for French and Russian novels and Danish plays, and of the continued wide circulation of 'Uncle Tom's Cabin,' together with fresh productions involving the colored American's "race type" by Mr. Harris, Mr. Page, Miss Murfree, and other Southern writers, we do not profess to be able to follow our correspondent's argument. She may, however, be interested in proof that the colored people formerly indulged in fiction regardless of race types. In the perhaps sole contribution of John Brown to periodical literature, "Sambo's Mistakes," published about 1848 in the (colored) *Ram's Horn*, we find the following passage. Sambo *loquitur:*

"For instance, when I was a boy I learned to read; but instead of giving my attention to sacred and profane history, by which I might have become acquainted with the true character of God and of man; learned the true course for individuals, societies, and nations to pursue; stored my mind with an endless variety of rational and practical ideas; profited by the experience of millions of others of all ages; fitted myself for the most important stations in life, and fortified my mind with the best and wisest resolutions, and noblest sentiments and motives, I have spent my whole life devouring silly novels and other miserable trash, such as most newspapers of the day and other popular writings are filled with; thereby unfitting myself for the realities of life, and acquiring a taste for nonsense and low wit, so that I have no relish for sober truth, useful knowledge, or practical wisdom. By this means I have passed through life without profit to myself or others, a mere blank on which nothing worth perusing is written."

—We gave, last year, at the time of the setting up of the tablets in memory of the slain of Bunker Hill, some account of this undertaking on the part of the city of Boston. Out of it has grown a bulky 'Memorial of the American Patriots who fell at the Battle of Bunker Hill,' issued as a city document in elegant form, with admirable illustrations from nature, old prints, and old maps. It first records the official acts and proceedings relating to the preparation and dedication of the tablets, following these with an anniversary sermon, and then coming to the real historic kernel of the book in a series of appendices which we owe to the zeal and antiquarian learning of Mr. William H. Whitmore. Here the order is an abbreviated sketch of the battle, a list of the Americans killed, English opinion of the Colonial troops (particularly Burgoyne's opinion), and a history of the erection of the monument, with Webster's two orations (1825, 1843). A curious completeness is given to all this by reproducing the Revolutionary army regulations, with contemporary illustrations of the manual exercise. Mr. Whitmore observes in passing that he is informed, by high authority, "that portions of Steuben's rules still stand unchanged in the present United States Manual." A political souvenir of no little interest is the view of the cavalcade of the Whig Convention of 1840 as it passed the half-finished monument, from an engraving preserved on a musical composition of the time. Noteworthy, too, is the panorama of Boston and its environs. Since the tablets were erected, one error in company assignment and five omissions have been discovered, as is duly set forth by Mr. Whitmore. This important work should have a wide distribution among our public libraries.

—Students of the Elizabethan drama will gladly welcome the appearance of Marlowe's "Faustus" in a worthy shape ('Doctor Faustus: Historisch-kritische Ausgabe, von Hermann Breymann.' Heilbronn: Henninger, 1889). For the first time we have verbatim reprints of the texts of 1604 and 1616, with variants from other texts. One feature of Breymann's method we cannot approve. He has altered the quarto-texts where they offer "absoluter Unsinn oder andere, offenbare Verderbniss," marking the alteration by * or [], and giving the original form in the footnote. This we deem a faulty method, and all the more faulty because purely gratuitous. Why not have given the original in every instance, blunder and all, literatim, leaving the reader to make his own emendations, or merely suggesting them in the notes? The use of * or [] in the text only puzzles the eye. It would also have been better to print the list of abbreviations on p. lv. at the beginning of the Introduction. On the page indicated, Ward's second edition of "Faustus" is correctly dated 1887. In the Table of Contents and at p. xli. it is cited as of 1881 (with a ?). The heading *Einzelausgaben* (p. xli.) is misleading; what Breymann means is not separate editions of the drama, but editions (or publications) not in Marlowe's collected works. The Introduction discusses almost exhaustively the bibliography of "Faustus," and other textual matters. Especially interesting is the discussion (pp. viii.–xv.) of the edition of 1611 and 1663, and the discovery that Collier's alleged copy of 1611 is only a copy of 1663 with the date 1611 *written* on the title - page! Those conversant with Collier's idiosyncrasies will know what that implies. In Breymann's discussion of the relations between Marlowe and the German Faust - book we miss all reference to Pantin's letter in the *Academy* of June 25, 1887. Pantin's view does not differ essentially from that of Zarncke-Breymann ; but it has the merit of citing half-a-dozen passages where Marlowe follows closely the variations of the English translation of the Faust-book. Taken all in all, Breymann's edition of "Faustus" is a great boon; we can only thank the editor for his patient zeal.

— The new Weimar edition of Goethe (New York: Westermann) has been making fair progress since our last reference to it, though there is little in the latest volumes which seems to call for extended comment. Volumes vi. and vii. of Part I. are devoted to the "West-Östlicher Divan," the former giving the text and variants, the latter the exegetical matter published by Goethe himself in 1819 under the name of 'Noten und Abhandlungen.' The large amount of manuscript material that had to be collated makes the critical apparatus of the "Divan" more bulky than that of any of the other works except "Faust." We note that seven in all of the Suleika poems of book viii. are credited by the Weimar editor, either positively or doubtfully, in whole or in part, to Marianne Willemer. Volume viii. contains "Götz von Berlichingen" and "Egmont," the former in the edition of 1773, the earlier version of 1771 and the stage version of 1804 being reserved for a subsequent volume. In volume x. we have the three iambic plays, "Iphigenie," "Torquato Tasso," and "Die Natürliche Tochter," while volumes xxvi. and xxvii. give us the first ten books of 'Dichtung und Wahrheit.' It is to be hoped that the authority of the Weimar edition will have some influence in popularizing the correct title of Goethe's memoirs as against Riemer's unlucky emendation, 'Wahrheit und Dichtung.' Riemer says ('Mittheilungen über Goethe,' i., 397) that he made this suggestion on grounds of euphony (he liked the collocation "und *D*ichtung"), and because he wanted to counteract the misconception that the work was primarily fiction, with but a sprinkling of truth. He tells us, too, that his emendation was received by Goethe "with approval." It is clear, however, that this approval cannot have been very decided, since the "Ausgabe letzter Hand" has, like all the preceding prints, "Dichtung und Wahrheit." It would seem clear, therefore, that this title is not only the one originally chosen by Goethe, but is also the one preferred by him upon reflection. That the form of the title gives us any far-reaching information as to the relative prominence of the "poetry" and the "truth" in the book, no sensible person would now contend; still, it is well to remember that Goethe did actually put the "poetry" first. One of the merits of the Weimar edition is that it will enable the reader to distinguish between Goethe on the one hand and his coadjutors—editors, printers, and proof-readers—on the other. The other volumes thus far received are volume iii. of Part III., containing Goethe's diaries from 1801 to 1808, and volumes iv. and v. of Part IV., containing letters from 1779 to 1782.

THE FUTURE OF SOCIETY IN ENGLAND.

Individualism: A System of Politics. By Wordsworth Donisthorpe. Macmillan & Co. 1889.

Free Trade in Capital. By A. Egmont Hake and O. E. Wesslau. London: Remington & Co. 1890.

Socialism in England. By Sidney Webb. London: Swan Sonnenschein & Co. 1890.

Fabian Essays in Socialism. Edited by G. Bernard Shaw. London: The Fabian Society. 1889.

Humanitism. By W. A. Macdonald. London: Trübner & Co. 1890.

THERE is a good deal of vigor in Mr. Donisthorpe's book. Many of the criticisms are keen, many irrelevant, but they are all spirited. Like some of the ancient philosophers mentioned by Plato, the author goes on his way without caring very much whether his auditors follow him or not, and he is certainly no respecter of persons. He corrects Smith, McCulloch, Mill, Spencer, and many lesser writers with the same positiveness and in the same superior tone. So confident is he in his own political economy that he concedes substantially all that the Socialists complain of, although he denies them their remedy. He declares that he has "grounds for believing that the employer pockets *more than half* the workmen's just share" of the product of their joint labor. This plunder amounts in England to about £375,000,000 per annum, which is certainly a sufficient iniquity to justify the wildest of socialistic outcries. But, according to Mr. Donisthorpe, the whole trouble is with the present system of paying wages fixed in advance. It is only necessary to substitute for

wages "a certain prearranged percentage of the gross produce" in order to attain justice. Then "the receipts of the hands would vary, like the profits of other capitalists, with the success of the venture and the state of trade." It is not important to state the advantages which the author conceives will follow from this change; nor is it worth while to suggest objections to an author who meets them by saying that he does not believe them. We fear that his attempts to promote the cause of individualism will only excite the ribald mirth of its opponents.

"Non tali auxilio, nec defensoribus istis,
Tempus eget."

'Free Trade in Capital' is much more conventional in tone, and contains a number of sensible observations. The introductory chapters are especially judicious. But the reader has hardly settled himself to enjoy a really scientific discussion of money, currency, and banking, when he becomes conscious of the buzzing of a bee in the authors' bonnet. A very good case may be made against the prohibition by Government of the issuance of promissory notes payable to bearer on demand, but to attribute all the evils that afflict society in England to Peel's Act of 1844, is ridiculous. Hence, the authors say, the divorce of capital and labor; hence the destruction of profits; hence the sweating system; hence the threatening growth of Socialism and the horrors of the Irish question. The abuse of free note-issuing is, they declare, an economic impossibility. Only let it be established, and every one that needs to use capital will be able to obtain it; obscure talents will be brought forward, enterprise stimulated, and universal prosperity follow. There is no confusion, we ought to state, of money and capital. The authors are not guilty of the folly of supposing that anything is to be gained by increasing the quantity of money used in trade; but they conceive that if note-issuing were general, credit would be obtained by those who ought to have it, but who cannot now get it. Unfortunately, they derive scarcely a single argument from experience, and as they warm to their work their assertions become more and more extravagant. Without positive proof to the contrary, we shall continue to believe that even at present more people get credit than deserve it, and that if note-issuing were free, the number would be increased. The attacks upon national education, the factory acts, and Socialism in general are in the main irrelevant, and, as they are unsupported by argument, only add to the futility of the book. It is a pity that its wise suggestions should be drowned in a sea of absurdities.

To read many of the diatribes against Socialism with which the English press teems is like listening to the screams of frightened old women, and almost creates a prepossession in favor of the Socialists. But this feeling is very soon altered by the perusal of their writings. They have advanced far beyond the half-hearted measures of Henry George, and will have nothing short of a confiscation of capital as well as land. So intoxicated have they become with their theories that they imagine them already realized, and, like Alnaschar the glass-vendor, in the 'Arabian Nights,' they dream that they are spurning the great ones of the earth as they are prostrate in supplication at their feet. The red cap appears, the sansculottes gather, and "Ça ira" rings once more in the air. The era of universal fraternity has arrived, primitive virtue is restored, and the way is open to the guillotine, the Goddess of Reason, and the Carmagnole.

Even now discordant notes are heard, and there are signs that human nature is only imperfectly purified. So close at hand is the division of the spoil that the army begins to flag in its pursuit of the enemy and to quarrel over the camp equipage. Some would put the prisoners to the sword, others hold them for ransom. Some are for having Government undertake everything, some for having no Government at all. The latter—the Anarchists—are characterized in one of these essays as being too good for this world, an opinion in which Chicago juries practically concur. Harsher terms than these, however, begin to be used, and it is obvious that unless discipline can be maintained, the prey may after all escape. No pirate ship ever had a successful cruise without union among the crew, and honor is indispensable, to a certain extent, even among thieves. It is not very easy to determine what Socialists understand by justice; but they will find it impossible to accomplish anything without maintaining some inflexible rule in dividing their plunder. Their essayists might wisely inculcate among their followers the simple morality of the Cornish clergyman who, when a wreck was announced as he was preaching, and the congregation bolted for the door, entreated them to give him time to doff his surplice and get down from the pulpit, so that they might all start together.

In 'Humanitism' we have quite the most consistent, complete, and altogether satisfactory scheme for the reformation of society which we have hitherto met with. Most of these plans do not go far enough, so that the majority of mankind reject them because they are apprehensive that the thing will have to be done over again. Thus the land-reformers affirm that perfect justice was attained under the early Teutonic village system, and that all subsequent changes have been corruptions, but, as we have seen, these land-reformers are already behind the times. Mr. Macdonald has observed the cause of this weakness and avoided the danger. The ideal State is to be found, not in the Mark, nor among the cave-dwellers, but among our simian ancestors. There was the true Garden of Eden, and human ills came in, not from eating apples—which, as we understand the author's theory, is an act of meritorious character—but from eating flesh and cooked food. If we can ascertain the natural food of the ape, we determine the best food for man, for his structure is substantially identical with that of the ape, and if we cannot adopt this diet, we are doomed to extinction. This natural food is, of course, seeds and fruits.

As the author observes, it is unfortunate that there are two schools of vegetarians, the chemical school and the biological school, the former of which, in most unprincipled fashion, alleges that its disciples are "moral vegetarians," although "the products of the cow and the hen are found in their bills of fare." But if these products be rejected, as they ought to be, the difference between the schools becomes practically immaterial, as the amount of land required by each would be the same. The individual ration is scientifically determined to be two ounces of shelled nuts, thirty-two ounces of fruit, and thirty ounces of grain—all of which are of course to be consumed uncooked and unground. Dried fruit may be used in case of emergency, but "dietetic perfection cannot be attained until nothing is drunk except fruits." It is computed that three acres of land will produce sufficient food of this kind for five persons, so that the present population of the United Kingdom could probably be supported upon one-fourth of its area. If this population subsisted on meat, it would require an area twenty times as great. No one can say that over-population is not easily preventable after this showing, especially since the basis of the land system of the apes is communal ownership.

From this vantage ground the refutation of the Socialists is easy. They are endeavoring to perpetuate "economicism" and "politicism," regardless of the fact that "the people build the nation, and the State is the author of its destruction." Labor destroys values instead of creating them; economic values are created by the destruction of scientific values. As manual labor can never be performed without robbing posterity, it is plain that the Socialistic millennium is only an aggravation of the present ills. As the individualistic system has committed suicide, the way seems to be open for a return to the happy condition of uncivilized man, by which we may escape from "the immoral tendency adhering to the development of all abstract conceptions."

Some hasty objector may raise the point that there are necessities of man which are not satisfied by nuts and fruit, but the author is ready for him. Our ancestors "had no conception of clothing, and their only sources of heat were food-combustion within—and the rays of the sun without." Two other elements of warmth were subsequently discovered, fire and clothing,

"both of which are unnatural, and must be consigned to the same category as the art of cookery. Clothing tends to destroy the functions of the skin in the same way as cooked foods tend to destroy the functions of our teeth, jaws, and internal organs, and can never take the place of the natural covering of hair. . . . The bodies of many civilized people would still be densely coated with hair were it not partially worn off by the friction of their clothing. . . . The wearing of clothes has been the source of more immorality and crime than all other habits combined."

We regret extremely that the squeamishness "adhering to the development" of our civilization, does not permit us to quote more liberally from this new Teufelsdröckh in his denunciations of the "shame idea." Nor does space allow us to explain how clothing and hot food check the "vito-electric current," or to expound the fascinating theory of "chronops"—as to which word we feel sure the author is right in contending that "the accent may rest on the first or second syllable, or both." And it is certainly more reverential to the new divinity "Mellos" and the religion "Melloism" to say nothing rather than to speak inadequately of them. But for the details of the author's theory, both on these points and on many others of equal interest to which we have been unable to allude, the reader must go to the book itself. The Messrs. Trübner have certainly made a new departure in admitting this work to the list of their publications.

RECENT FICTION.

Jupiter Lights. By Constance Fenimore Woolson. Harper & Bros.

The Master of Ballantrae. By Robert Louis Stevenson. Charles Scribner's Sons.

Metzerott, Shoemaker. T. Y. Crowell & Co.

A Little Journey in the World. By Charles Dudley Warner. Harper & Bros.

Sforza. A Story of Milan. By William Waldorf Astor. Charles Scribner's Sons.

The Romance of Dollard. By Mary Hartwell Catherwood. The Century Co.

Alexia. By Mary Abbott. Chicago: A. C. McClurg & Co.

The Catholic Man. By Mrs. Lawrence Turnbull. Boston: D. Lothrop Company.

Miss Woolson must have been dominated by an evil spirit when she conceived the central situation of 'Jupiter Lights.' It is more easy to believe that she was "possessed" than that she deliberately chose to write a long novel about the stupid and obstinate attachment of a silly woman for a man who, every few months, became insanely drunk, beat her, turned her out of doors, and tried to kill both her and her child. In real life we occasionally hear of such instances of infatuation, but never that the fascination which men of Mr. Morrison's unpleasant habits exercise over their wives extends to other people, particularly to the wife's relations. In real life the wife's relations are generally coarse enough to combat her clinging affections, and, when possible, to deliver the husband over to the police. Such matter-of-fact behavior would, however, never do for high-flown romance. Miss Woolson's Mr. Morrison casts his spell upon his wife's grandfather, a Southern judge, upon her maiden aunt, and all but captures his natural enemy, Miss Bruce, the sister of Mrs. Morrison's first husband. His own relations and friends have been his bond slaves from his birth.

Excepting frequent references to his physical beauty, no clue to the secret of his charm is discoverable. He appears in person very seldom, and is prominent in one scene only. In this scene, armed with a knife, he is chasing his wife, Cicely, the child, and Miss Bruce across a plantation, in the middle of the night, intent upon killing any or all of them. Here he is so far from charming that we fervently hope the shot fired by Miss Bruce may have ended him. On the contrary, it does no one less harm than Mr. Morrison. He is picked up carefully and cherished as a martyr to the gratuitous malice of unknown negroes.

Miss Bruce herself is the person who suffers for a deed which was justifiable and courageous. By her presence of mind she saves the exasperating Cicely, and effects her escape from the island in the South where the charming Morrison is temporarily practising his art of enchantment. Her behavior in this emergency is consistent with the preconceived idea of her character, but, from that moment, she goes to pieces, and rivals Cicely in excess of folly. When the reason for Cicely's flight is explained to her grandfather, in Charleston, and to Mr. Morrison's half-brother, from whom, on the distant shore of Lake Superior, she demands protection, Miss Bruce says not a word about the pistol shot. She is represented as the victim of a remorseful terror which might be felt by a sentimental or religious woman—a woman who, in any case, would not have checked so promptly the pursuing Morrison. Even when Morrison is pronounced out of danger, when his brother, his fond wife, and her grandfather, the Judge, are all foaming with wrath against wanton negro outrages, Miss Bruce conceals the truth and suffers agony in reflecting on her crime. She seems to lose every atom of her intelligence and self-control, for, in addition to scourging herself for imaginary sin, she falls violently in love with Morrison's half-brother, Mr. Tenant, who is barely civil to her, and her passion sweeps her into a declaration.

All this is sheer romantic nonsense, and in every problem of conduct the people involved are as nearly irrational as possible. Their misunderstandings and their false way of looking at facts are so exasperating that there is danger of overlooking what is worth telling and well told, of including all in a sweeping condemnation. Miss Woolson is very familiar with the country round about the Jupiter Lights of the North and of the South, and with the people who dwell there. Her description of scene and local character is the straightforward expression of close and sympathetic observation. By dwelling upon these pictures the reader may soothe his indignation against the preposterous people struggling in a sea of self-inflicted trouble.

The charm ascribed by Mr. Stevenson to the 'Master of Ballantrae' is, for the first half of the story, almost as inscrutable as that of Miss Woolson's Mr. Morrison. The power exercised by him over his family is not felt emotionally, nor understood intellectually. He is selfish, sullen, treacherous, unscrupulous, malignantly vindictive, with no appreciable virtue excepting physical courage. Not until the story is well advanced, until the Master has driven his long-suffering brother to America, and come back to Durrisdeer to torment the faithful Mackellar, do we begin to recognize qualities which might command devotion even from those who hated and feared him. Henceforth to the end, though he is none the less detestable, and gives free rein to all the evil in his nature, the frankness of his impudence, the humor of his malice, and the ingenuity of his devices to accomplish his aims, all go far to proclaim a personality bound to work its will on weaker and on better men. He is the incarnation of force that makes for evil. Wherever he goes (and after the fatal field of Culloden he roams the world over), his path is marked by the material or moral ruin of those who balk his desire.

Yet the wickedest thing he does is probably unintentional, for, though one of the chief joys of his existence is to torment his brother, Henry Duree, he could never have foreseen the destruction of Henry's moral fibre which is brought about by his incessant persecution. Nature gave Henry none of the Master's brilliancy and none of his depravity. He is slow, honest, patient—with the Master, angelically patient. He, the faithful son and devoted husband, accepts without open resentment the second place in the affections of father and wife, and tolerates without rebuke their unconcealed adoration of their vagrant and worthless idol. Yet the Master's deviltry is always slowly, steadily eating out the heart of Henry's virtue. His patience is gradually exhausted, his intense family pride is shattered, his heart and soul are convulsed with hatred of the man who has made his life a long bitterness. At last this hatred, completely possessing him, becomes insanity, and is responsible for the scheme to murder his enemy which results fatally for both. The subtlest work in the book is in this sorrowful picture of the insidious vitiation of a just and tolerably righteous man.

It is, indeed, the only work which entitles the 'Master of Ballantrae' to rank with the author's best. As a story of adventure almost any one of his well-known books is better. Mackellar, the steward of the Durees, tells his tale awkwardly. He tells what he has heard, what he has found in written record, what he has seen and experienced. His method compares unfavorably with that of swift, direct narrative to which Mr. Stevenson has accustomed us. Then the Master's career is really fatiguingly erratic, a trifle incoherent, not steadily and increasingly exciting. As for the trick by which he is removed from earth, it is the trick of a literary juggler as well as of an Indian juggler. It is a tawdry catastrophe, infecting the whole story with its artificiality.

There is an impression abroad that life for the multitude is just now a most dolorous business, that there is no joy anywhere excepting that, of fiendish quality, which abides exclusively in the breast of the great capitalist who has earned bliss by defrauding and oppressing his fellow-men. Whether the impression has any solid foundation or not, it is extremely useful to novelists who understand the commercial advantages of timely writing. Their zeal in setting forth the wrongs and woes of one class for which another class is responsible is already reaping its reward. The novel-reader feels that he is being educated to higher things, and may even flatter himself that his sympathy is equivalent to efforts to alleviate the sorrows for which his heart bleeds and his tears fall. 'Metzerott, Shoemaker,' is a strong and thoughtful specimen of the timely novel. It may have been suggested by that now famous vision of Arcadia, 'Looking Backward,' but it is in no sense an imitation or an echo. Mr. Bellamy describes a society from which injustice and poverty have long been eliminated, a state of things that leaves nothing to be desired, excepting the spice of variety, by the wicked. He even guards against the survival of that unholy yearning by showing ingeniously that the wicked must of necessity vanish from the earth with the poor. The author of 'Metzerott' is not a dreamer. She attacks existing conditions and only points the way to Arcadia. For our political and social instruction, she has modestly restricted herself to the primer, the A B C of a new idea. The one essential difference between her scheme for establishing Paradise on earth and Mr. Bellamy's is, that she makes faith in Christ and prayer equal factors with work and human intelligence. In her vision of the future, man is made perfect by practice of Christian ethics and belief in Christian dogma. Novelists have been so busy of late trimming and adjusting Christianity into conformity with the supposed demands of developed intellect, that it is refreshing to come across one who, without bitterness or bigotry, flies the flag of the ancient faith, armed to defend it, scorning surrender, and rejecting compromise.

The author separates Christianity from creed idolatry very clearly, and her own spirit is perfectly impartial, but the kingdom of Christ will surely have come in the fulness of power when one city can boast of a group of clergymen so tolerant, so charitable, so amenable to persuasion as that of Micklegard. The idealized clergymen are, however, far from objectionable—on the contrary, most attractive when most extravagantly idealized: that is, when they are talking to and at each other in a clear, crisp, direct way, avoiding phrases which suggest the cant of the cloth. One feels that the cleverness of the clergy is really the author's, while that of the other people is individualized, as indisputably personal property as is the nose on each face. The distinct characterization of a great many men and women of widely contrasted disposition and condition shows that the author is as good a novelist as if she had never given a thought to any subject half so serious as those bestowed on the art of writing a novel. The plot, too, denotes that she is first of all a story-teller. It is very firmly constructed, and implies from the beginning a tragic dénouement. The skill and power expended on the story will have reward in the appreciation of all who read it, and if by reading one sceptic should be returned to the fold of the faithful, one capitalist converted into a Socialist, let the story-teller, not the controversialist or political reformer, take to herself the credit of victory.

Mr. Warner is a bold man and brave. 'A Little Journey in the World' is, we think, his first novel, and instead of feeling his way with artists and writers and all the humble lot, he rushes right at the biggest man in the field, the railroad "wrecker," the "corner smasher," the mystical creator of unrighteous trusts. Success justifies experiment, and it may be said at once that Mr. Warner's novel is an unqualified success. The first chapters are the work of a brilliant, humorous, gently satirical essayist rather than of a practised writer of fiction, but once he has his Margaret, the flower of New England's intellectuality, married to Henderson, the forced blossom of New York's materialism, once he has launched her in the world, the story goes, and goes splendidly, to the end. There is a tolerance that condones iniquity and a tolerance that condemns it more strenuously than does scornful censure. Mr. Warner's tolerance is of the latter sort. One of the beautiful qualities of his work is kind and thoughtful charity, never verging upon sentimental or deliberate moral obliquity. No one can make a mistake about his private opinion of Henderson and his pal, Uncle Jerry, and of their methods of amassing wealth. This assurance has no direct expression of judgment for foundation, but is an inevitable inference from the history of the struggles and triumphs of that genial pair.

Mr. Warner gives himself many opportunities to be dramatic or harrowing in a commonplace way, but resolutely rejects them all. No vengeance, swift or tardy, overtakes the relentless "operators." Margaret Henderson does not discover too late that she loves the worthy though priggish English Earl and give way to introspective agonies. More remarkable still, the New England conscience does not vanquish Satan in the guise of worldly pleasure and power; and its suggestions that he should "get behind" are faint and far between. Mr. Warner does not stand in awe of the New England conscience. He treats it with no more respect than if it were the common, generally distributed conscience, just as likely to succumb as not when pressed by the lusts of the world and the pride of life. The gradual extinction of Margaret's conscience, the easy, natural falling away from joy in the simple life of her girlhood, with its high thinking and unselfish doing, are depicted with unflinching truth, yet with rare tenderness. In cold reason she is no object for pity. She was lucky enough to have a choice in life, and she chose the sensuous delight of material luxury—chose it, absorbed herself in it, and came to be a more conscienceless worldling than the frankly earthy Carmen, who had never pretended to "care for things of the mind," nor, indeed, had any opportunity to soar. But judgment of an individual formed exclusively by the light of cold reason is not infallible. "It is one thing to be tempted and another thing to fall"; yet reflect on the kind and quality of her temptations, and who can be hard on her? Who can help feeling profoundly sorry for her? Mr. Warner does not ask what it profits a woman to gain a palace and a four-in-hand and lose her own soul. The question is in the plain story of Margaret's life, and the answer to be found in the heart of the reader.

'Sforza' is Mr. Astor's second venture in Italian historical romance. The good qualities of the first, 'Valentino,' are equally evident in the second, while defects are less conspicuous. Ludovico Sforza, Duke of Milan, at the end of the fifteenth century, is as patiently studied as Cæsar Borgia, and, having several characteristics in common with other human beings, he makes a more appropriate and interesting figure for romance. The most important incident is well chosen, but not well developed. It is a pity that the author did not contrive to hinge the whole interest on the oath taken in youth by Ludovico and Barberigo, afterwards Doge of Venice, never to do mischief to each other. But his weak points are deficiency in constructive power and an almost fatal inability to narrate clearly. Valentino is utterly inconsequent, and Sforza's backbone is spongy. There is no concentrated force, and the good bits lose in effect by isolation. The particulars of the treachery of Bernardino Corti are so involved that deep meditation may hardly make them clearly understandable. As for the long episode about the Milanese and Swiss soldiers in the convent, it is impossible to make head or tail out of it.

Mr. Astor's study would probably show better results in sketches of life and manners in the Italian Republics than it does in novels. He describes external life fluently, makes excellent pictures of streets, forts, palaces, of what people did and ate. In what may be called the millinery of the period he is really great. But the spirit of the age and of the individual eludes him. There are only two scenes in which one feels that the actors are alive and accords at once the sympathy due to real distress. Narvaez, the young fencer, bears himself before the Doge in a manner that stirs admiration for his courage and pity for his threatened doom, and the denial of Duchess Isabelle that she freely promised to marry Bernardino Corti is given with genuine spirit and passion. These two scenes show sparks of creative fire, and the death of Ludovico is told with admirable effect. It would be hard to find in any novel a simpler and more pathetic description, one in which emotion is better expressed by restraint of language, than that on the last page of 'Sforza.'

A laudable desire to rescue an obscure hero from oblivion may excuse the extravagantly romantic tale woven by Mrs. Catherwood about the exploit of seventeen Frenchmen who, led by the Sieur Adam Dollard, or d'Aulac, in 1660, saved the miserable French posts on the St. Lawrence from extermination by the Iroquois. The incident illustrates signally that reckless bravery for which no men were ever more distinguished than those nobles, priests, and peasants of France who planted the fleur-de-lys and the cross side by side in the Canadian wilderness. The real story of the voluntary sacrifice of Dollard and his companions is simple, stern, heroic, in the highest degree. It is told in French, with full detail and deep tenderness, by Father Doller de Casson, writing in Montreal a few years after the event. Mr. Parkman's English version leaves nothing to be desired for life and picturesqueness. A powerful imagination and discreet literary method might surround such a story with a fictitious glory which should enhance the native splendor. Excepting, perhaps, popularization, nothing is gained by Mrs. Catherwood's rendering, and much is lost. The great, real event is hustled out of sight by an hysterical love affair and a melodramatic mystery. Dollard is a theatrical, artificial person. The things that he is represented as doing are preposterously at variance with the things that we know him to have done. An impetuous, passionate man, already sworn to almost certain death, might, under the circumstances imagined, marry the woman he loved, heedless of the great sorrow before her, but he never imperilled her life by taking her over the Lachine Rapids by night in a canoe, or committed the imprudence of permitting her to sit on his knee during the run. The safe shooting of the rapid is much more incredible than the feat of arms at the Long Saut. A romance writer is permitted much latitude in the treatment of historical characters, and not infrequently abuses the privilege, but few fare so badly as Dollard in the hands of an admirer.

After Dollard, the most sadly misrepresented or misconceived person is Father de Casson. The slight anachronism of introducing him in Canada six years before he touched her shores is pardonable. But if Mrs. Catherwood had read with any care his guarded utterances on ecclesiastical matters in his history of Montreal, she would have hesitated to place in his mouth such candid expressions of hostility to the Jesuits of Quebec. Altogether, though the author's intentions are doubtless good, she fails to make the 'Romance of Dollard' half as entertaining or inspiriting a narrative as is the achievement of Dollard in the garb of unadorned truth.

'Alexia' is a mere bit of a story, hardly too long for a magazine, but it is of a very satisfactory quality. What is it that makes one novel a painful patching together of incidents, and which transforms another, with every appearance of artlessness, into a piece of real intellectual work? The critic can never say how either result is accomplished; he must be content if he has a sure feeling for the difference when the book is not very far removed from the border line. His decision will be very likely to be right, if he has fitted himself for his task; but, like a famous English judge, if he attempts to give his reasons he will be very likely to fall into error. This book, in spite of the blasé character of the hero at the beginning—what other hall-mark of distinction can we have in a country where rank does not afford an easy criterion?—and in spite of the exaggeration of the *secunda donna* in her middle scenes, the critic pronounces to be a good book.

It is seldom that one and the same person is enabled to foster the growth of a poetic spirit in his country in two ways—by endowment and by achievement. Mrs. Lawrence Turnbull's 'The Catholic Man' is less a novel than an affectionate study of a highly poetic nature when surrounded by circumstances favorable to its free expansion. It is an open secret that the poet described in 'The Catholic Man' is the late Sidney Lanier. The real Sidney Lanier had a hard struggle with life; poverty and ill-health (induced by being taken North as a rebel prisoner in thin Southern clothing) embittered the closing years of his short life, when at last he was beginning to find recognition and friends. The poet and musician of the book, Paul, meets with no obstacle—or only a temporary one, in the reluctance of the woman he marries—to the carrying out of his ideal scheme of a poet's existence. A human character, when shorn of its actual circumstances and invested with different ones, is so much a pure work of the imagination that those who knew Mr. Lanier will find it difficult to say whether this is a faithful working out of his inner being or not. It is in any case an interesting study of a poet and a poet's life, and especially of the joyousness and high courage with which the poetic nature is capable of looking upon its surroundings, and so transforming them into a fit country for it to live and breathe in. The struggle with the father, whose one absorbing passion was that Paul should succeed him in his pastorate, and who finally became capable of taking in Paul's wider horizon, is well worked out. The closing scenes give a picture of a well-ordered life, wrought through with sacrifice to its commu-

nity. The children lend them a strong touch of reality, and they remind one not a little of an old but not wholly forgotten New England book, 'Margaret.' This novel has not the structural perfection, the fused, organic completeness which Edmund Gurney says is the one sure mark of great creation, but the object which it has in view it accomplishes in a very satisfactory manner.

Fort Ancient: the Great Prehistoric Earthwork of Warren County, Ohio, with an account of its Mounds and Graves. By Warren K. Moorehead. Cincinnati: Robert Clarke & Co. 1890. 8vo, pp. 129.

THERE is but little new in this book, and its merit consists in the numerous photographic views which it contains, and in the fact that it furnishes us with what purports to be an accurate survey of the great earthwork of which it treats. Upon this latter point it would seem as if there were nothing more to be said. The stations—more than four hundred in number—the bearings and distances, are all set down in an orderly fashion; and, so far as we know anything to the contrary, the calculations are correctly given. Assuming this fact, Mr. Moorehead is to be congratulated upon the fidelity with which he has performed his task, and we cheerfully accord him our meed of praise.

But while conceding this much, we must be permitted to say that, like the accounts that have come down to us of the serpent mound in Ohio and the Cahokia mound in Illinois, there is a wide difference between the measurements here given and those of other and, presumably, equally careful explorers. Thus, for instance, we are told by one writer that the walls around this fort are 5 miles in length; another puts them at 4½; while our author says they are only $3\frac{3553}{5000}$ miles long. So, too, in regard to the contents of the walls. Prof. Thomas of the Bureau of Etymology tells us that 154,000 cubic yards of material were used in their construction. Prof. Locke, who was followed by Squier, says there were 628,800, and this figure our author thinks is about right, though he admits that a few hundred yards more may have been used. In the face of such discrepancies, it is difficult for any one, who has not been "in the field," to know what to believe. Probably the safest course is to accept each new measurement conditionally, since, as a rule, they are all said to have been carefully made, and in some cases with mathematical instruments. For this reason, then, we shall stand by Mr. Moorehead's figures (except as to the cubic contents of the walls, which can, we think, be shown to be largely overestimated), until some other practical explorer comes along and upsets his calculations.

In this connection it may not be out of place to suggest that, however important "work in the field" may be, it does not necessarily include such a knowledge of the early records as will enable us to discuss the origin of these works intelligently. Take, for example, the statement on p. 34, and we are very sure that if our author had given a few hours of the time he passed "in the field" to a study of the early writers, he would not have fallen into the mistake of saying that the Shawnees "were not in Ohio previous to the year 1710," when Perrot, Charlevoix, or Colden could have told him that fifty or a hundred years—the date is uncertain—before this time the Shawnees were driven from the region south of Lake Erie by the Iroquois. Now, we do not wish to be understood as asserting that the Shawnees built this work. Unquestionably, they may have done so during the indefinite period that they lived in Ohio prior to their expulsion; but for that matter so may the Quapaws and Osages, both of whom claimed to have lived there at one time in the dim and distant past, just as did the Mandans and Cherokees. What, however, we do assert is, that if the early records are as trustworthy as they are admitted to be, and if the Iroquois have "writ their annals true," as we believe they have, then the war which they waged against the Shawnees at the close of the sixteenth or beginning of the seventeenth century, will furnish all the conditions asked for by our author when he undertakes to account for the origin of this work. We will even go further, and maintain that the stone graves which he found are of the same character as those in which the Shawnees and their congeners, the Kickapoos, buried; and that the implements and ornaments found in them and on the surface, within and about the fort, do not differ from those that these Indians made and used. Nothing that he tells us indicates a different civilization from that which these tribes are known to have attained, or throws any additional light upon the ethnology of the Ohio Valley.

In regard to the skulls of which he speaks, there is not much to be said. He does not give us any measurements, and, of course, we cannot know to which class they belong. We may, however, remark in closing that except, perhaps, in the case of an abnormally small cranium, neither shape, size, nor thickness can be taken as a basis for judging intellectual capacity. Indeed, so little do they tell us that it is impossible to say of any given specimen whether it belonged to a man or a woman; and while, as a matter of fact, skulls do differ in all conceivable ways, yet, considered as an indication of race, it is probable that there are today but few American craniologists who do not accept Prof. Flower's conclusion as to the unsatisfactory character of this kind of evidence. According to that eminent authority:

"The various groups of mankind, owing to their probable unity of origin, the great variability of individuals, and the possibility of all degrees of intermixture of races at remote or recent periods in the history of the species, have so much in common that it is extremely difficult to find distinctive characters capable of strict definition, by which they may be differentiated. . . . The best argument for the unity of the American race—using the word in a broad sense—is the great difficulty of forming any natural divisions founded upon physical characters." There are "skulls from Vancouver's Island, from Peru, and from Patagonia which are almost undistinguishable from one another."

Life and Works of Antoine Louis Barye. By Charles de Kay. Illustrated. New York: The Barye Monument Association. 1889.

THE second paragraph in the first chapter of this book reads as follows:

"Speculations on the existence of beings superior to men had been pushed to great lengths in the century that produced Swedenborg. The time came for an examination, on more solid ground, of the tangible inhabitants of earth, ranged below human beings, but placed so far beneath that few thinkers were prepared to acknowledge any connection whatever. Buffon had made a taste for natural history the fashion, without alarming the men of faith. Linnæus opened vistas into the nature of plants, and in England the elder Darwin seized on the romantic side of vegetable existence and tried to give it poetic expression. Cuvier was sufficiently practical and conservative to escape the hostility of those wedded to the narrower view that looked only toward heaven; but Lamarck first sowed the seed which Charles Darwin and Alfred Russel Wallace have fostered into the modern doctrines of evolution. And because he sowed it Lamarck was rejected by his generation and might still be unknown, had not Darwin, with a magnanimity rare among scientific men before his time, distinctly affirmed that it was his neglected work which gave the hint for the view of animal and plant nature known as Darwinism.

"Barye," continues the author, "was therefore born into an atmosphere electric with curiosity as to the mental if not the moral character of animals, and before he became of age to handle clay with mastery the path of the century as regards natural history was set."

Mr. de Kay thus starts out at the very beginning of his book with ideas about Barye and the influence of his works which show us that he is thinking of science and morals more than of pure art. To regard the life work of Barye from such a point of view is fundamentally wrong. Lamarck and Darwin have nothing to do with the art of Barye. It is not a question of Barye helping to break down "the barrier which was supposed to rear itself impassable between human beings and the lower creation," nor of Giordano Bruno and other thinkers who first dared to break down such a barrier. And if Barye's work was not popular because of his choosing animals as subjects, it was not for the reason the author affirms it was when he says, "The underlying cause which furnished steady fuel for the attacks of ill-wishers and of persons honestly ignorant of his meed, was hostility to any movement that looked towards a lessening of the gap between man and beast." As a matter of fact, what has Barye's work done to lessen it? Do the "Jaguar Devouring a Hare" and the "Lion Crushing a Serpent" suggest human passion? Do these animals appear any the less the beasts they are since Barye has made wonderful sculptures of them, or since Darwin has shown us the truth of evolution? Even if they were, would they for that reason be any the more fit for choice as subjects for works of art? And what have the facts gravely stated here, that "members of the grouse family enjoy dancing; ravens and magpies are affected by obscure gropings after the beautiful, shown by collecting brilliant objects, and the bower-bird constructs elaborate huts, connects them by arbors, decorates the huts and arbors with berries, feathers, and shining stones, and uses the building for a sporting ground"—what have such facts as these to do with art?

Mr. de Kay contends that "the men of ancient times and the middle ages failed to obtain from animal life a tithe of the material offered thereby to the fine arts," and that "it is to Barye that we owe enlightenment in this respect." Probably we do, and so we should also if Barye had been only half as good a sculptor as he was. His range is a little wider and his compositions are novel. Animals have not been neglected, however, by eminent artists of other ages. No sculptor of our time has produced such an equestrian statue as the Gattamelata by Donatello at Padua, or the Coleoni by Verrocchio in Venice. The Greek and Roman sculptors and painters represented horses and many other animals. Are there any horses finer than those on the frieze of the Parthenon? Who has not seen the horses of St Mark's? They are Greek. Who has not heard of Myron and his bronze cow? Myron was an early Greek sculptor. The Egyptians pictured animals principally as objects of worship, and the Assyrian artists were more noted for their animals, which they modelled in a naturalistic manner, than for their human figures, which they conventionalized.

Barye was remarkably gifted as an artist, and his temperament suited the branch of art he followed. His work is not intended to instruct in natural history, teaches no lesson, inculcates no moral. Barye made his lions and tigers and

jaguars simply and solely for one reason: *parceque c'est beau*, is the way the French put it. It is grand, it is fine, it is beautiful; that is sufficient reason for doing it, and that is the only reason why we have ever had, or ever shall have, any great works of art. No really great artist has ever cared a penny for anything else. Barye was not appreciated at first, just as Delacroix and Géricault and Corot and Millet were not. They tried to speak simply and naturally as the Greeks and the great artists of the Renaissance spoke, but they appeared at a time when the world was full of affectation. Their honest voices sounded harsh and their manner seemed uncouth to people who had never heard anything but bombast. We have found out that it was bombast, and that the new men spoke truth; therein lies the secret of our appreciation of Barye.

Throughout the biography, Mr. de Kay seems to be more occupied with what he thinks is the scientific side of Barye's character than with the purely artistic side, and much space is given to the discussion of questions in natural history, and to the recitation of scientific facts and inferences drawn therefrom. The comparative importance and rank of bears, foxes, dogs, and horses in mythology and history are considered at length, and a very large portion of the book is extraneous to the subject, though it is interesting enough in itself. The great figure of Barye, the artist, is too often lost sight of. In those portions of the work where the story of Barye's life is told, details are given with exactness, and the anecdotes of the sculptor and his contemporaries form very pleasant reading. In the comment that accompanies the story, however, almost everything is pushed into shape to prove that Barye's aim was something other than a purely artistic one, and we are led to infer that Mr. de Kay thinks his work is of greatest importance with respect to science and ethics.

Some such opinion leads him not unfrequently to take a distorted and unjust view, as in the case of the medal of "Milo Devoured by a Lion." Here he disagrees with such a clear-headed critic as Gustave Planche, who thinks that in this early work may be found "the germ of his after-greatness as the sculptor of beasts." Our author thinks that "the critic's imagination has carried him away," and finds that

> "on the contrary the medal has in germ what Barye's detractors denied him—the power to express the human figure. . . . The best of the medal is the Milo. Both hands caught in the tree-trunk he has undertaken to split with a vain-glorious trust in his superhuman strength, he turns his head and looks down on the lion with the air of a man accustomed to vanquish the king of beasts, and therefore unable to realize that his own death is near. He is devising means to kill the lion, instead of giving way to despair. We shall find about his human figures in later life the same invincible calm of human superiority."

As we see it, M. Planche was quite right, and there *is* in the lion a suggestion of Barye's after greatness; and as to the Milo, he is like most of the human figures Barye did afterwards—not very good and not very bad. Barye did them fairly well only, as he did his horses; and in the case of both he exaggerated and distorted, with bad results, as he did also in his cats, but with admirable results. An artist may do one thing better than another (it is a question of temperament always), and we should be content to say so and leave theories and fancied intentions aside.

The book contains eighty-six artotypes, woodcuts, and prints. Some of the artotypes are very good, as the "Bear Surprising Owl," No. 31; most of them are unsatisfactory as reproductions, because bronze is colored, and by photographic processes clearness and precision in the forms are lost to some extent. The "Tiger Walking," No. 3, is a notable instance of this; here the strong modelling of the original does not appear, and the general effect of the picture is soft and greasy. The woodcuts are better, but a mistake has been made in not printing them on more suitable paper. Fine Holland paper is used in the book, and the fibre is crushed down to receive the impression from the block. But the rib and the watermark show in the print with disturbing effect. The cut of "General Bonaparte," No. 47, may be cited as one wherein this unsuitability of the paper to the purpose is particularly apparent. Much the best illustrations, as giving the spirit of the original, are the drawings by Mr. Kenyon Cox. A far better idea of the "Jaguar Seizing Alligator," for example, is given in the drawing, No. 44, than of the "Jaguar Devouring a Hare," which it resembles in spirit and technique, reproduced by the woodcut No. 59. The four portraits of Barye are excellent.

The book is very handsomely bound and well printed, but the page would be better if the running title were in larger type. The table of "dates relating to A. L. Barye" at the end of the book will be found of value and interest to amateurs, and the pictures are well chosen and intelligently arranged to fit the text. It is surprising that a book so costly in its make-up should be sold for the low price of ten dollars, and we should think it might well have been dearer. The new work by Roger Ballu, 'L'Œuvre de Barye,' published by Quantin, has fewer illustrations, and costs $20 in Paris and $30 here. There is so much in Mr. de Kay's book that is of interest that every collector ought to have it, and it should be borne in mind, also, that it is published for the benefit of the fund for the monument to Barye that is to be erected in Paris.

The Old Hospital, and Other Papers. By D. B. St. John Roosa, M.D., LL.D. Second revised and enlarged edition of 'A Doctor's Suggestions.' Wm. Wood & Co. 1889.

THE main building of the old New York Hospital, whose ivy-grown walls were a landmark on lower Broadway, was first occupied in 1791, and the demolition of all that belonged to it was the occasion of the title-paper of this collection. Those who have only known New York in the twenty years last past have never seen the old Hospital, for it was razed in 1869, its trees destroyed, and its turf hidden and oppressed by the brick and mortar of trade. The House of Relief, in Chambers Street, is its only representative that remains in that region.

"The Society of the Hospital in the city of New York" was chartered by the King in 1770, and for years its buildings and its work were the centre from which issued, and the standard by which was measured, the advance of practical medicine, and especially of surgery in this city. Notwithstanding its younger rivals, or more properly allies, up town, and the vast wards of Bellevue on the East River, the New York Hospital, now, in modern guise, on Fifteenth Street, still justifies its name. But on the old spot generation after generation of young physicians received their most valuable education, and scores upon scores of thousands of patients found relief. The combined traditions almost sanctified the old halls to those whom good fortune and their own ability had made "house" (*i. e.*, resident) physicians, and in their eyes it was little less than sacrilege to sweep all that away. That a hospital ought to be maintained in the crowded lower town seems evident, but what is done is done.

Dr. Roosa's sympathetic sketch is partly the outcome of sentiment, and partly due to the conviction that it was a mistake in public policy to abandon the old locality, and it is made the occasion of explaining that, important as are their functions in connection with hospitals, physicians are generally excluded from their management. Most persons assume, as a matter of course, that the medical profession is well represented among the governors or trustees, while many believe that the visiting physicians, "the head doctors" of common parlance, control the policy of the institutions for whose patients they prescribe. The rule, to which there are few if any exceptions, is exactly the reverse. The author believes that this exclusion depends upon a presumed unfitness of physicians for administration; and cites, to oppose it, the experience of the war, justly insisting that "the best hospitals we have ever had in this country were those that were exclusively controlled by the medical officers of the United States Army." Probably other reasons, or presumed reasons, for this proscription also operate, but it is certainly rational to believe that if medicine had equal authority with commerce, both hospital construction and hospital management would be improved. This grievance is also presented in other of these papers, and it is one well to be considered by those self-perpetuating bodies whose ultimate object is the public benefit.

All the papers are only such as could be written by a physician, but they are addressed to the secular rather than to the medical world, and are instructive over the broader lines of medical philosophy. We particularly commend two addresses to the students of the Union Theological Seminary on the "Maintenance of Health," and one on "Human Eyes." Dr. Roosa's style is good: he says what he has to say plainly, and nearly all of it is worth saying. The volume is beautifully published.

Sylvie and Bruno. By Lewis Carroll. Macmillan & Co. 1890.

NOBODY but the author of 'Alice in Wonderland' and 'Through the Looking-Glass' could have written 'Sylvie and Bruno,' and yet the marvel is that he did write it, and allow it to go out with his name attached to it. He is, however, a clergyman, and it is quickly seen that 'Sylvie and Bruno' is a tract. In his preface he urges the need of a Child's Bible, a book of pieces selected from the Bible, a collection of passages (both prose and verse) from books other than the Bible, and a Shakspere for girls. He introduces in the same place a little sermon on theatre going, rather raising the question than settling it: "*I* also go to the play," he says, "whenever I get a chance of seeing a really good one"; and, "if Shakspere was not inspired, one may well doubt if any man ever was." In the course of the story he delivers himself forcibly on the sin of hunting, against the Puritan Sunday for children, against the preaching of religion as a commercial speculation, and the immunity of the pulpit to talk "shallow twaddle that, if it were addressed to you over a dinner-table, you would think, 'Does the man take me for a *fool*?'"

These intrusions, if we must regard them as such, may win friends for the author's personality, but they quite defeat any aim on his part to make a continuously amusing book. No human being can read 'Sylvie and Bruno' with smile or grin from beginning to end. It is in his old and proper vein of phantasmago-

ria, but his love story works in badly with his elfin children, and ends withal, like a bad dream, in the wrong match being consummated. Considered piecemeal, there are humorous conceits equal to anything Lewis Carroll has invented—such, for example, as the "outlandish watch." All the verse is capital—the stanzas, "He thought he saw" (in the metre and spirit of "The Walrus and the Carpenter"), the song of the three badgers, the legend of Peter and Paul and their loan transaction, etc. There is a clever new monster, the "changed crocodile," which could "go round and walk on the top of its tail, and along its back, all the way to its head." Another humor of the book is its seriocomic index. The great American people, hugging its protectionist delusion, is aptly figured in the mob of the opening chapter shouting, "Less bread! more taxes!"

Religion, and Other Essays. By Schopenhauer. Translated by T. B. Saunders. London: Swan Sonnenschein & Co. 1889.

No doubt one of the causes of Schopenhauer's pessimism was personal. He could not forgive his contemporaries, and especially his countrymen, for practically ignoring his great work, 'Die Welt als Wille und Vorstellung,' during his lifetime, while they went into ecstasies over Fichte and Hegel, his pet enemies (next to priests), whose "charlatanry" and "effrontery" he gibbets on every possible occasion in his later writings. His principal work appeared in 1818, and has even to-day reached only five editions, although Hegel has long since been dethroned and Schopenhauer set up as the philosopher who best represents the *Zeitgeist*. The expensiveness of this diffuse work of 1,376 pages no doubt largely accounts for the fact of its small sale in these seventy years; but it must not be forgotten that its ideas have been scattered broadcast by a hundred essayists and by "Lichtstrahlen" and other selections from his six volumes—published separately. Perhaps the most convenient way of getting at the essence of Schopenhauer, in these busy days when no one has time to read a big book, is from Frauenstädt's 'Schopenhauer-Lexicon,' which contains in alphabetical arrangement Schopenhauer's utterances on every topic that engaged his attention; and there were few topics on which he did not throw new light. This Lexicon contains extracts not only from his collected writings, but also from his MS. remains, which are sometimes equal to the best things in his principal volumes.

A few years ago 'Die Welt als Wille' was translated into English, and there is also a little volume containing the essays on Genius, Love, etc., taken from the same work. But in Germany the "Parerga," which followed that work, are much more popular, because there is in them less abstruse discussion of metaphysical principles and a greater variety of everyday topics. Mr. Saunders has done a useful service in giving a few samples of these later volumes in his present booklet, which, besides a prefatory note, contains "Religion: a Dialogue"; "A Few Words on Pantheism"; "On Books and Reading"; "On Physiognomy"; "Psychological Observations"; and "The Christian System."

One half of Mr. Saunders's volume is taken up with the "Dialogue on Religion." It is held between Demopheles and Philalethes, who is told in the opening sentence that "Every one thinks his religion sacred, and therefore you ought to respect it;" whereupon Philalethes retorts: "I don't see why, because other people are simpletons, I should have any regard for a pack of lies." Philalethes, of course, represents Schopenhauer himself, yet he tries hard to be just to Demopheles, and to put into his mouth all that can be said in defence of religion. His bias, however, is with Philalethes, and is decidedly anti-Christian and especially anti clerical. "You may always observe," he says, "that faith and knowledge are related as the two scales of a balance: when the one goes up the other goes down." Again:

"It is easy to let adulation of the Deity make amends for lack of proper behavior towards man. And so we see that in all times and all countries the great majority of mankind find it much easier to beg their way to heaven by prayers than to deserve to go there by their actions. In every religion it soon comes to be the case that faith, ceremonies, rites, and the like are proclaimed to be more agreeable to the Divine will than moral actions; the former, especially if they are bound up with the emoluments of the clergy, gradually come to be looked upon as a substitute for the latter."

These sentences indicate the keynote of Schopenhauer's essay. He is especially disgusted with the hold of the clergy on the English mind:

"Here is a nation favored before all others by nature; endowed more than all others with discernment, intelligence, power of judgment, strength of character: look at them, abased and made ridiculous beyond all others by the stupid ecclesiastical superstition, which appears among their other abilities like a fixed idea. For this they have to thank the circumstance that their education is in the hands of the clergy, whose endeavor it is to impress all the articles of belief at the earliest age, in a way that amounts to a kind of paralysis of the brain," etc.

Between Schopenhauer and Christianity there is at least one bond of sympathy, namely, terrestrial pessimism. In the case of Judaism, even this bond drops, and he has little respect for that optimistic religion. "When I take up the writings even of the best intellects of the sixteenth and seventeenth centuries (more especially if I have been engaged in Oriental studies), I am sometimes shocked to see how they are paralyzed and hemmed in on all sides by Jewish ideas." The Oriental studies refer, of course, to Buddhism, in praise of which he always grows eloquent. Like most men of genius, Schopenhauer was a great lover of animals, and one of the grounds of his preference for Buddhism lay in the great contrast between Buddhistic kindness and Christian cruelty to animals. "The main reason why we take so much pleasure in looking at animals is that we like to see our own nature in such a simplified form. There is only one mendacious being in the world, and that is man. Every other is true and sincere and makes no attempt to conceal what it is, expressing its feelings just as they are." Had Schopenhauer lived half-a-century later, he would no doubt have been an ardent champion of Darwin. He snorts at those who "are bigoted and stupid enough to offer a zealous opposition to their honest and rational colleagues when they class man under the proper head as an animal, or demonstrate the resemblance between him and the chimpanzee or orang-outang." He differed from Darwin in not believing in the anatomical or biogenetic relationship between man and ape, but in a sort of pantheistic identity of being.

The most valuable essay in this collection is that on Physiognomy, which contains some admirable remarks on the art of deciphering faces, and a most ingenious explanation of the fact that first impressions commonly lead to more correct estimates of character than later ones.

Life of Gotthold Ephraim Lessing. By T. W. Rolleston. London: Walter Scott; New York: W. J. Gage & Co. 1889.

Lessing is the fourth German to find a place in Mr. Robertson's series of "Great Writers"; Goethe, Schiller, and Heine having been already disposed of. We have read Mr. Rolleston's little book with pleasure, and can commend it as a good piece of work. As in the other volumes of the series, the story moves rapidly, the aim being to spend little time on matters that are not of living interest or of vital importance for the understanding of the writer under consideration. The thoroughness of the German biographies is judiciously used, though not copied; so that, in a book of two hundred pages, we find nothing to skip, and get a picture of Lessing which is vivid and truthful, and has enough of detail for all ordinary purposes.

As an illustration of Mr. Rolleston's critical manner we may take his comments upon Lessing's lyric poetry. In so small a book it would have been easy to say simply that the great critic was without the lyric gift; but Mr. Rolleston endeavors to analyze the defect. He first observes that there were three important characteristics of the new poetry that arose in the latter half of the eighteenth century—the poetry of which Lessing is usually counted a precursor.

"In the first place," says he, "we note that its ideas are often obscure, and this is the great secret of its power. Men were living in the narrow, well-explored region of logically verifiable truth. The new literature was one of experiment and adventure; it opened out vast horizons on every side; its meanings were often impalpable as perfume; it made men feel without always troubling itself to make them understand."

Here we may note in passing Mr. Rolleston's remark "that nowhere, perhaps, has this characteristic of the modern spirit been better expressed than by Walt Whitman, himself a great representative of the modern spirit, in his poem on the patient spider." Next to this "love of the indefinable" came the wonderful rhythmical beauty of the new poetry. (One queries if the English critic regards Whitman as a great representative of the modern spirit in this particular also.) Finally, the most striking of all the features of the modern renascence of literature is its passion for external nature. After this exposition, Mr. Rolleston continues:

"Now, as regards these three traits of modern poetry, Lessing's poems do not give the least hint of what time was so soon to bring forth. He is never indefinite; one never feels in reading him that he is trying to indicate, to suggest, an idea too vast, too subtle for utterance. Nor has he a note of music in him; his metre is correct and solid, but, in spite of his felicity of expression (always greater, however, in prose than in verse), it is as unlike music as walking is to flying. And as for Nature, in the sense of woods, mountains, seas, and the like, its beauty and significance simply did not exist for him."

All this is good as far as it goes, and it would be finical to find fault with it because it really does not go very far towards explaining that defect of endowment which was a subject of anxious meditation on the part of Lessing himself, and which he once gave account of in the figure of the water which must be pumped up instead of rising and overflowing naturally as in a living spring. It is really strange that, with all our science, we can do so very little towards actually telling what makes a poet. Young Goethe thought it was a heart altogether filled with one feeling, but this obviously will not do. As to Mr. Rolleston's analysis, it hardly tells us, for example, why Lessing was no lyric poet, while Schiller, to a degree, was one.

Schiller was hardly more susceptible to external nature than was Lessing. He is, indeed, sometimes vague, but this is hardly a source of power. The most ardent lovers of poetical *chiaroscuro* would probably admit that where Schiller is vague he is bad. On the other hand, we find Lessing quite capable of highly impassioned thought. He has a sense, too, as we can see from passages in his plays, for the subtle, fleeting, indeterminate movements of human feeling; and his own range of spiritual experience was probably no less wide and deep than that of Schiller. Where, then, lay the difference? What can any one do except to restate the x in terms of y? Lessing could not make the German language sing. He could make it reason, could make it analyze with wonderful subtlety, or cut like a knife; but he could not put words together into such rhythmic form that the thought expressed or the picture presented, simple enough in itself, perhaps, should, like music, set going in the soul of the reader harmonic chords that tell of things too deep for words.

Is not this the only unintelligibleness which is a real constituent of the best modern poetry, or defensible where we find it? We should say that the first of Mr. Rolleston's "three characteristics" is not so much "a love of the indefinable" as a heightened feeling for the mystery of the world, coupled with a fervid sense of the connection of all things with the inner life of men. Where to this is joined the power of so putting the isolated fact of nature or of spiritual experience that it becomes the suggestion or the symbol of depths beyond, we have the poet. This power Lessing had scarcely a trace of; Schiller possessed it in a much higher degree, Goethe preëminently. Vagueness of the kind here described undoubtedly pertains to a large part of the best modern poetry, and is, of course, obscurity to those whose inward experience does not fit them to understand what the poet means. A very different thing, it seems pertinent to say, is that kind of obscurity which has its seat in intellectual subtlety disporting in tortuous syntax.

Mr. Rolleston's exposition of and comments upon the great works of Lessing are, within the limits imposed, admirable. The book will form for collegians and others an excellent introduction to the study of a man whose life and works are one of the best tonics in the world. Apart from his acuteness as a thinker and the wide range of his intellectual interests, there is, as his biographer says, no manlier character in the whole history of literature.

A Midsummer Drive through the Pyrenees. By Edwin Asa Dix, M.A. Illustrated. G. P. Putnam's Sons. 1890. Pp. 332. 8vo.

It is singular that, considering the many and varied attractions of the Pyrenees, so few Americans visit them. The Alps must, of course, hold the preëminence with all lovers of mountain scenery, yet we are not sure that in the somewhat indefinite quality of picturesqueness they are not excelled by the more southern chain. Certainly Switzerland cannot show finer contrasts than are to be seen in the Pyrenees between the rich, almost tropical, verdure of the foot-hills and the stern barrenness of the higher peaks; while it would be difficult to find in the Alps a spot which could equal in savage grandeur the Amphitheatre of Gavarnie. The Basques, also, are in many respects more interesting than the cosmopolitan Swiss, their individuality and independence having as yet suffered but little from contact with the foreign tourist. An even stronger individuality characterizes the principal watering-places, which barely find room for their hotels and bath-houses in the narrow mountain valleys, Eaux Bonnes, for instance (to which ten thousand visitors come in a summer), occupying an area of "a little over half an acre." The historical associations of this region, moreover, surpass in number, interest, and romance those of Switzerland.

These and other claims of the Pyrenees to the attention of intelligent travellers are very well set forth by Mr. Dix in his entertaining account of his summer's tour among them. His description of Bayonne, Biarritz, the frontier Spanish towns, and Pau, together with his rather grim tales of Count Gaston Phœbus, Henry of Navarre, and their contemporaries, serves as an excellent introduction to the actual "drive," which began at the entrance to the valley of Eaux Bonnes. From these hot springs he went, by the Route Thermale, a magnificent carriage-road a hundred miles long, built by Napoleon III., to Cauterets, Bigorre, and Luchon. Each place had its peculiar charms, either from its romantic situation, its numerous excursions, or the characteristic customs of its inhabitants. Barèges, only, a village of "merely one long, shaky street crouching in along the side of the mountain" and "lamentably near the torrent," was an exception from its persistent gloom. Very interesting also was the tiny "principality" of Goust, a collection of eight hoary, gray-stone hovels, with a population of about seventy persons, "governed by a little council of old men." Mr. Dix was invited into one of the houses, in which, above the stable, was the living room,

"long, dark and low-ceiled. The rafters are discolored with smoke, the board-floor with wear, the walls with strings and festoons of onions and native herbs. Ears of maize and great sides of beef and pork hang drying from above. In the dim rear are two pine bedframes, with spreads of sackcloth and plaid canopies; nearer are sets of shelves lined with trenchers and earthen crockery in formal array, while a wood fire smoulders on the wide hearth in front between the window openings, fortified with a primitive crane and kettle of strange designs and unrecorded antiquity, and with various pots and pans."

Mr. Dix's somewhat affected style, with his too free use of "dictionary" words, is at first a little irritating, but most readers will soon become accustomed to it, and possibly find that it gives an added charm to an attractive book. He shows considerable power in word-painting, while his evident familiarity with the history and literature of the Pyrenees makes him an admirable guide to the region. The illustrations are nearly all good, some of them being of unusual excellence, and the volume itself is a very praiseworthy specimen of an American book.

BOOKS OF THE WEEK.

Bellamy, Mrs. Blanche W., and Goodwin, Mrs. Maud W. Open Sesame: Poetry and Prose for School-Days. Part I. Boston: Ginn & Co.

NO. 5 WALL STREET, NEW YORK.

THE OPEN COURT—A WEEKLY Magazine of Philosophy, Science, and Ethical Religion. The all-important want of our time is the foundation of a purely ethical religion. This religion must rest upon a scientific basis. Its principles must be derived from the scientific investigation of the facts of human soul-life, and the relations of the world and the circumstances of society that determine human conduct. One of the most important topics of investigation, in the columns of *The Open Court*, directed towards the establishment of such a religion, is that of the facts of human soul-life, or the science of PSYCHOLOGY. The most eminent investigators of Germany, France, the United States, and Great Britain supply original psychological articles to our magazine; and authorized translations are made from the leading Continental periodicals devoted to this special branch of science. The essays are popular, concise, and pervaded by the spirit of true philosophical criticism. Subscription Price one year $2.00; for six months $1.00. Specimen Copies free. THE OPEN COURT PUBLISHING CO., 1735 La Salle St., Chicago, Ill.

LITERARY NOTES. By LAURENCE HUTTON.

Books Just Published.

I.

God in His World.

An Interpretation. BOOK I. From the Beginning.—BOOK II. The Incarnation.—BOOK III. The Divine Human Fellowship. Post 8vo, pp. xli., 270, Cloth, Gilt top, $1.25.

It is not a theological work, nor in any way controversial. It is a consideration of Nature and Humanity as an unfolding of the Divine life, without reference to any outward authority—a view of the truth of life as unfolded from the life itself—a view in which Christ takes the central place not only in what we call the Gospel revelation, but also in all true explication of Nature and Society.

II.

Hearn's West Indies.

Two Years in the French West Indies. By LAFCADIO HEARN, Author of 'Chita,' &c. pp. 517. Copiously Illustrated. Post 8vo, Cloth, Ornamental, $2.00.

This volume contains some of the literary results of a voyage to the island of Martinique and a sojourn there of two years. Mr. Hearn's glowing, vivid style is well suited to the portrayal of the picturesque, half-savage, half-poetic life of the tropics. In an Appendix to the volume are given some Creole melodies.

III.

Maria: A South American Romance.

By JORGE ISAACS. Translated by ROLLO OGDEN. An Introduction by THOMAS A. JANVIER. 16mo, Cloth, Ornamental, $1.00. (Uniform with "*The Odd Number*," by GUY DE MAUPASSANT).

W. H. Bishop, in *Scribner's Magazine* for February, says: "'Maria: Novela-Americana' is one of the most charming stories I have ever read, and worthy the leading author of any country. It is an idyll of the valley of Cauca, in Colombia, which would seem a sort of earthly Paradise."

IV

Trollope's Further Reminiscences.

What I Remember. By THOMAS ADOLPHUS TROLLOPE, author of 'Durnton Abbey,' 'Lindisfarn Chase,' 'Siren,' etc. Vol. II. 12mo, cloth, $1.75. (Uniform in style and price with the first volume.)

Mr. Trollope's first volume extended over a long period, and was devoted to personal and exceedingly entertaining reminiscences of some of the most famous men and women of Europe and America, with whom in his wanderings he had become acquainted, . . . In the second volume he preserves more of what he recollects of places and events. No library in any way devoted to the collection and preservation of current biography can afford to permit itself to forget *What he Remembers*.

The above works are for sale by all booksellers, or will be sent by HARPER & BROTHERS, *postage prepaid, to any part of the United States, Canada, or Mexico, on receipt of the price.* HARPER'S NEW CATALOGUE, *a descriptive list of over 3,000 volumes, sent, postpaid, on receipt of Ten Cents.*

APRIL NUMBER
NOW READY:

SCRIBNER'S MAGAZINE

PUBLISHED MONTHLY
WITH ILLUSTRATIONS
CHARLES SCRIBNER'S SONS NEW YORK
PRICE, 25 CENTS.

"A Book of Romantic Interest."

The Story of the Barbary Corsairs. By Stanley-Lane Poole, author of 'The Story of Turkey,' 'The Moors in Spain,' etc. With the collaboration of Lieut. J. D. Jerrold Kelley, U. S. Navy. (No. XXVII. in the Story of the Nations Series.) 12mo, illustrated, $1.50.

"The style is characterized by a splendid swiftness of motion that is eminently suited to the stirring events that are recounted."—*New Orleans Picayune.*

"No volume of this excellent series is so strange in its scenery, so curious in incident, so novel in its interest, and at the same time written with equal vivacity, freshness, and vigor as the 'Corsair Nations.' The numerous illustrations include many that are very curious."—*Unitarian Review.*

"Entrancingly interesting."—*Rochester Herald.*

"The most important book that has yet appeared in that valuable series, 'The Story of the Nations.'"—*Kansas City Times.*

"A stirring bit of human history . . . heretofore strangely neglected. . . . The volume is creditable alike to the literary sense and to the historical knowledge of the author, and is of absorbing interest."—*N. Y. Times.*

G. P. Putnam's Sons,
27 and 29 West 23d St., N. Y.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

THE AUSTERFIELD, 502 BEACON Street, Boston, Mass.—Elegant apartment-house in the immediate vicinity of Harvard College, and commanding a splendid view on the bank of the Charles River. Especially desirable for parents having sons in college. Address the PROPRIETOR.

MACMILLAN & CO.'S

NEW CLASSICAL PUBLICATIONS.

A SHORT COMPARATIVE GRAMMAR OF GREEK AND LATIN for SCHOOLS AND COLLEGES.

By VICTOR HENRY, Deputy-Professor of Comparative Philology in the University of Paris, Doctor of Letters, and Doctor of Laws. Authorized Translation from the Second French Edition by R. T. ELLIOTT, M.A., late Classical Exhibitioner of Worcester College, Oxford, etc. With an Introductory Note by HENRY NETTLESHIP, Corpus Professor of Latin in the University of Oxford. 12mo, $1.90.

Professor Benjamin I. Wheeler, Cornell Univ., writes: "I am glad it has been translated, for it is the handiest of the manuals that have appeared, presenting the largest body of reliable matter for the given space."

"No better introduction to classical etymology than this has yet appeared. Prof. Henry has the advantage of writing in a language of such unrivalled lucidity, that in it the most abstruse subjects seem plain and simple; and he is himself a master in whose hands we may feel safe, who is conversant with the latest philological literature, and can take a connected view of his science."—*Classical Review.*

THE ANCIENT CLASSICAL DRAMA:

A STUDY IN LITERARY EVOLUTION. Intended for Readers in English, and in the Original. By RICHARD G. MOULTON, M.A., late Scholar of Christ's College, Cambridge University (Extension); Lecturer in Literature, author of 'Shakespeare as a Dramatic Artist.' 12mo, $2.25.

AN INTRODUCTION TO THE COMPARATIVE GRAMMAR OF GREEK AND LATIN.

By J. E. KING, M.A., Fellow and Tutor of Lincoln College, Oxford, and C. COOKSON, M.A., Late Scholar of Corpus Christi College, Oxford; Assistant Master at St. Paul's School, London. 12mo, $1.40.

THE ATTIC THEATRE.

A description of the Stage and Theatre of the Athenians, and of the Dramatic Performances at Athens. By A. E. HAIGH, M.A., Late Fellow of Hertford, and Classical Lecturer at Corpus Christi and Wadham Colleges, Oxford. With Facsimiles and Illustrations. 8vo, $3.00.

"A book more thorough and more trustworthy can seldom have been issued by the Clarendon Press. It is unlikely that for a long time to come so good a book as the present will be superseded."—*The Academy.*

"Mr. Haigh's acute and laborious work is a substantive contribution to Greek Archæology and a very creditable example of English scholarship."—*St. James's Gazette.*

A COMPANION TO SCHOOL CLASSICS.

By JAMES GOW, M.A., Litt.D., Head Master of the High School, Nottingham. Late Fellow of Trinity College, Cambridge. Second Edition, Revised. With Illustrations. 12mo, $1.75.

"Mr. Gow has presented a vast amount of information in a small compass; yet it is so well arranged, and so clearly stated, that, notwithstanding its condensation, it is read with ease and pleasure. Indeed, we do not know where to look for so good an account of Athenian and Roman public affairs in a form at once clear, concise, and full enough for ordinary students, as Mr. Low has here given us."—*Science.*

"He has made use of the most recent authorities, and the young student will find the pith of many books in the space of less than 400 pages. . . . Much of the information would be sought to no purpose in the ordinary manuals, and what is given is conveyed in its true connection."—*Nation.*

THE ISLANDS OF THE ÆGEAN.

By the Rev. HENRY FANSHAWE TOZER, M.A., F.R.G.S., Fellow and Tutor of Exeter College, Oxford. With Maps, etc. 12mo, cloth, $2.25.

The following islands were visited: Delos, Rheneia, and Tenos; Crete; Naxos, Ios, and Sikinos; Santorin, Antiparos, and Paros; Lesbos; Chios; Samos; Patmos; Rhodes; Lemnos; Thasos; Samothrace.

THE STUDENT'S CICERO.

Adapted from the German of Dr. Munk's 'Geschichte der Römischen Literatur.' By the Rev. W. Y. FAUSSET, M.A. With a frontispiece portrait. 12mo, $1.00.

"Eminently the sort of book that a student will find profitable and stimulating."—*Spectator.*

MACMILLAN & CO., 112 Fourth Avenue, New York.

TWILIGHT PARK
IN THE CATSKILLS.

The author of the recent editorial in The Nation, "*A Suggestion for Summer,*" *must surely have had Twilight Park in mind when he wrote of the delights of owning "a real country-place full of natural beauty, a paradise for children, with convenient means of wholesome living, secluded, yet not cut off from the necessaries or even the conveniences of life," with "the unfaltering companionship of nature" as a constant solace, and "with something like wonder as the time goes on at the little outlay required as the price of so much comfort and pleasure."*

Every one will echo his wonder "that so many people should be willing to spend the summer in close rooms when they might have, at no more expense, a commodious house and all out-doors besides, with entire freedom or chosen companionship at their will, and the sense of proprietorship in fields and streams and woods and hills which in almost every class of society is one of the deepest and longest abiding pleasures."

But why go to the White Mountains for these delightful resources when they may be had close at hand in the Catskills? There, everything is provided—picturesqueness, health, seclusion, social life, unpretentious comfort—even to "beds of the best; on the floors the sweet simplicity of rag carpets." "Trimness and care" are wanting, because incompatible "with the careless beauty of the wild growths from the time of spring flowers till the glory of the golden-rod in midsummer." In short, this Earthly Paradise is within five hours of New York and ten minutes from a railroad station, and it is called Twilight Park. Two successful seasons have demonstrated that it truly "fills a long-felt want," and the third season is close at hand.

Plans, photographs, etc., at my office.

CHARLES F. WINGATE,
Sanitary Engineer and Inspector of Houses,
119 Pearl Street,
New York.

The Nation.

NEW YORK, THURSDAY, MARCH 20, 1890.

The Week.

THE general summary of results of the local elections in New York State during the past few weeks, which is made by the Albany *Argus*, is very striking. Town officers have been elected in about two-thirds of the counties of the State, and the totals of the changes in the boards of supervisors show conclusively that the Democrats have made uniform gains. They have 424 members now against 341 last year, while the Republicans have 441 now against 522 last year. The *Argus* attributes the Democratic gains to two causes, dissatisfaction with the Administration of President Harrison, and the growth of Democratic belief in agricultural New York. The Republican press was at first inclined to regard the assertion of a spread of tariff-reform sentiment among the farmers as rather amusing, but we observe that it is not treating it in that way any longer. The news from the Northwest, harmonizing perfectly with this from rural New York, is visibly depressing.

There is a wide difference between the two ballot-reform bills whose passage is now assured by the Legislatures of New York and Maryland. The New York bill is a genuine reform measure, which has been revised and amended solely with a view to making it as effective as possible in practice. It is in every way superior to the two preceding bills which the Governor has vetoed, that is, so far as minor details are concerned. Its vital principles, which are those of the Australian system as embodied in the Massachusetts and eight other American State laws, are the same as those of the two preceding bills. That the Governor will veto this as he did the others is now generally anticipated, but he will have to do so in the face of more widespread opposition than ever, and it may be that a sufficient number of Democrats in the Legislature will bow to the popular demand to secure the passage of the bill over a veto. The Maryland bill has been amended into such shape as to destroy a great deal of its usefulness, the Gorman influence having been exerted to that end through the instinct of self-preservation. Just how good or how bad a bill it is, cannot be ascertained from the meagre reports which are published concerning it, but there is little doubt that it is a sham measure in many respects. The opponents of genuine ballot reform in Rhode Island have been hoping that the new law, which goes into effect there at the election next month, would prove unsatisfactory, but they must prepare for as bitter a disappointment as they suffered in Massachusetts, for the new law had a preliminary trial in an election on Block Island last week, and worked with complete success. Block Island has been for some years the rottenest borough of the State, and if the system will work well there, its success elsewhere is certain.

The platform which the Rhode Island Republicans adopted at their Convention on Thursday contains the following owlish deliverance on the tariff: "A reform of the tariff, based not merely upon theory, but upon the actual needs and conditions of our whole industrial community, and having in view the strengthening of the American principle of protection to home labor, has been successfully inaugurated." No key is furnished to this mysterious deliverance, but we should think that the Republican manufacturers of Rhode Island who have signed so generally the petition for free raw materials which has been sent to Congress from New England, would ask for specifications of the "reform which has been inaugurated." The Providence *Journal's* terse comment on the platform is, that it "was machine-made but hand-painted," which seems to exclude the human mind from any share in its construction. The McKinley bill is the only tariff reform which has been inaugurated thus far, and if that is "based upon the actual needs and conditions" of an industrial community which is on the verge of financial collapse only to be averted by free raw materials, nobody has been able to discover the fact.

One of the very bad effects of a protective tariff is the stimulus given to lying among the beneficiaries of it. Let it be known that there is a revision going on—and there always will be revisions as long as we have a tariff—then straightway all sorts of people, who were doing very well before, and indeed bragging of their prosperity, rush to Congress and declare under oath that unless they get an increase of duty on their products, they will be ruined and all their neighbors will be ruined too. This is the case with the fruit-growers of Florida and California at the present time. We know for a certainty that the production of oranges, prunes, raisins, olives, etc., has been steadily increasing in this country under the existing tariff. We read from time to time in the agricultural and horticultural journals glowing accounts and statistical reports showing the large profits made in the business—so much larger than any profits made in the growing of wheat, corn, or cotton that the contrast is almost painful. Yet no sooner is a new tariff bill announced than these highly favored people come to Washington swearing that they shall have to go out of the business altogether unless they get more protection. It happens in the case of these orange, prune, and raisin-growers that their products, owing to advantages of soil, climate, nearness, skill, or other reasons, are actually better than the corresponding imported articles, and command a higher price in the market. Does that fact abate their demands? Not a jot. Does it bring any redness to their cheeks when they tell about their impoverishment and impending ruin? Not a blush.

The introduction of a bill in the House proposing a duty on coffee equal to the export duty laid upon it in any foreign country, will be to the South Americans a good instance of the perfect deference with which we propose to treat their countries, in this era of pan-American good-feeling, and of our entire unwillingness to interfere in the slightest degree with their systems of taxation. Brazil's export tax on coffee, for example, is purely a matter of internal administration, with which we have nothing to do. Brazil has no land-tax: under the present conditions of land-holding it seems impossible to lay one. She has no income tax: to collect one would cost more than it would come to. She has no internal-revenue system. And so, to meet the expenses of the Government, in addition to the customs duties on imports, she lays a small, easily collected, more or less equably diffused and steadily diminishing tax on her great article of export. For us to object to that, and to propose to interfere with her manner of raising an income, is not only ungracious, but exceedingly impolitic at this time, when Brazil's relations to the United States promise to become much closer than they ever have been. What is true of her case is true, in a degree, of the other countries against which the bill is aimed.

The Pan-American Conference has at last reached the subject of its *raison d'être*, viz., steamship subsidies. The Committee having this subject in charge have agreed to report recommending to the several Governments

"that aid be given one or more lines of steam navigation between the ports of the United States and those of Brazil and Rio de la Plata, the companies receiving Government aid to establish a fast bi-monthly service between the ports of the United States, Rio Janeiro, Montevideo, and Buenos Ayres, and the vessels to have the accommodations and capacity necessary for the transportation of freight and passengers and to carry the mails. These steamships shall only touch at one port of the intermediary countries on the trips to and from Buenos Ayres. The Committee also recommends aiding an auxiliary line of freight steamships, which shall sail twice a month, making not less than twelve knots an hour, and touching at ports of the United States and Brazil. The United States of America and the republic of Brazil shall pay one-half each of the amounts paid to these vessels, taking into due consideration the contract of the existing line with the latter Government. The contracts shall last ten years. The States shall have the right to impose their flag and register upon the vessels to a number proportionate to the percentage of the aid they pay. In that case it is understood that the quota of each nation shall be paid directly to the vessel or vessels carrying its flag. The contracting States shall accept only vessels constructed in the United States in consideration of the higher aid by that Government. Bolivia and Paraguay agree to the plan on condition that the companies agree to establish subsidiary lines of river navigation."

How this plan will work in with the bill of

the American Shipping League, which proposes to pay a bounty of thirty cents per ton per thousand miles sailed to everybody in the shipping business, we do not see. We suppose, however, that South American trade is to be made a special case, and that the ships that take subsidy under the Pan-American plan are not to be allowed bounty under the thirty-cent plan. Whether either plan can pass Congress, in view of the rapid encroachments on the Treasury surplus and the still unsatisfied demands of other beggars and grabbers, is extremely doubtful. Inasmuch as two Democratic members of the Committee on Merchant Marine are said to be in favor of subsidies, the Republican side of the House are not necessarily committed to the plan as a party measure. And it seems to us that unless carried as a party measure under a vigorous use of the lash, the chances of its passage are very dubious.

In an interview with Senator Allison, recently published, the Iowa statesman, being asked whether he was in favor of "helping the shipping interest," replied:

> "In a reasonable way I am. There was a curious thing about shipping came to my knowledge a few days ago. Corn is worth from 10 to 12 cents a bushel less in Iowa than it was last year. The rates of inland freight are substantially the same now as then—they have not been increased, certainly. Yet the difference between the price of corn now and last year in Liverpool is only 4 cents. In other words, the ocean freights upon all agricultural products have immensely advanced within the last year. Our people should take hold in some way of this question of ocean freights, as it seems to me they have advanced without any just cause, especially as respects all farm products. This is illustrated, as I have already shown, by the difference in the price of corn in Iowa and in Liverpool, without any corresponding difference in the price of railroad transportation, which shows that the people of the United States are interested in improving our shipping facilities. Just how it will be done I am not prepared to say, but that it ought to be done I am sure."

This problem ought not to be a difficult one to a Senator representing a corn-growing State. The question being how to get the bounty into the pocket of the farmer, the Illinois State Board of Agriculture replied the other day by a resolution asking that it be paid to the farmer directly, and not by the roundabout process of paying it to a ship-owner, and trusting to luck that it will eventually get around to the farmer. Mr. Allison cannot ponder that resolution too seriously. What is good for the Illinois corn-grower, must be good for the Iowa corn-grower. The two States are alike in all the particulars of corn-growing, except that Iowa is a little further from market, and therefore ought, perhaps, to have one cent per bushel more in the way of bounty than Illinois. Of course, if a liberal bounty were paid for growing corn, the farmer could pay better wages to the ship-owner for carrying it.

Mr. John M. Forbes of Boston told Mr. Farquhar's Committee the other day exactly how to get American ships into business. He said that he bought steel ships on the Clyde and put them under the British flag or the Hawaiian flag (since our laws do not permit him to put them under the American flag), and hired American captains to navigate them. If he were allowed to put them under the American flag, he would buy a lot more ships. He scorned bounties in any case, but he thought that the Government owed protection to his property afloat on the high seas. The sagacious Farquhar thought that this indicated gross selfishness, "wanting to use the American flag for his own personal benefit." The public-spirited plan would be to come straight up to the Treasury and take your bounty.

The Boston *Journal* very carelessly calls attention to the large immigration which is constantly poured into New England from the British provinces to compete with the home laborers. Speaking of New Brunswick, Nova Scotia, Prince Edward Island, and Cape Breton, as ranking with Ireland and the province of Quebec "among the great sources of supply from which New England recruits the foreign contingent in its vast army of workers," it shows that from points east of Vanceboro' there came over the Maine border by rail alone in 1889 38,989 passengers, the vast majority of whom, it says, were "seeking employment in Uncle Sam's domain." If all of New England's industries were booming, wages were going up, and workers scarce, the working classes in New England already would have no fault to find with this situation. But under existing circumstances it is not surprising that the "tariff scare" would not work in the New England manufacturing centres in the last Presidential campaign. Mills are closing, industries moving to new fields, manufacturers themselves declaring that the burdens of the tariff must be lightened lest they perish; and all the time there is free trade in labor, and the surplus population of the provinces is pouring in to share with the native workers what wage fund there is to be divided. Of course the laborers ask, Why should we not be allowed to work with the coal and the ores of Canada if the laborers of Canada can come in free to compete with us?

We are glad to be informed by Mr. John T. Morse, jr., that he was not in the least responsible for the views upon the teaching of political economy at Harvard which were contained in the report of the Committee of which he was Chairman. It appears that the report was not intended for publication, that it was "carefully stated not to be an expression of my [Mr. Morse's] personal views," and that Mr. Morse was not a member of that portion of the Committee to whom the inspection of the Department of Political Economy (as distinguished from history) was intrusted. None of these points could have been inferred from what was published as the report of the Committee on Political Economy in the *American Economist* of February 7, whence we derived our knowledge of the report. As our article was, of course, not at all a personal criticism of Mr. Morse, we need only say that it is pleasant to find that the unenlightened views which we criticised cannot claim him as their sponsor; and we should have been pleased if he could have gone further than make a mere non-committal disclaimer in regard at least to one remark in the Committee's report, upon which we refrained from commenting before. Did it not seem somewhat humiliating to a gentleman and scholar like Mr. Morse to sign—with a merely general disclaimer of personal responsibility—a report which expressed surprise that Harvard's teaching should be absolutely uninfluenced by the consideration that she owes so much of her wealth to "a community of protectionists," and to "gifts of money earned in protected industries"? We feel sure that Mr. Morse must agree with Mr. Putnam, who made a minority report, in regarding this allusion as "an extraordinary and unworthy one."

While the decision of the Circuit Court at St. Louis in regard to the Anti-Trust Law of Missouri is destructive of that law so far as the authority of that Court is concerned, the decision shows that the law was badly drawn, but does not touch the legality of Trusts as such. The demurrer is sustained, in other words, as regards a particular authority conferred by the law on the Secretary of State, not on the point that a Trust is an unlawful conspiracy. This Missouri law authorized the Secretary of State to revoke, of his own will, the charter of any business corporation in the State which refused to send him an affidavit stating whether or not it had done any act prohibited by the statute. The State Constitution provides that no person charged with the exercise of legislative, executive, or judicial power shall exercise any power not belonging to his department. As the forfeiture of a corporation's charter is a judicial act, the Court holds that the authority conferred on the Secretary of State, an executive officer, by the Anti-Trust Law is contrary to the Constitution. The drag-net which this law put into the hands of a single State officer was so open to abuse that, aside from the question of its constitutionality, it seemed designed to bring the law into disrepute; and it is currently reported that the law was framed in this shape because it was deemed easier to overthrow an unconstitutional law in the courts than to defeat anti-Trust legislation at the capital.

That Bismarck's resignation was sure to come before long, most people have believed for some time. Bismarck is not a man to divide responsibility with anybody. He got on well with the old Emperor because he was always sure of having his way in the end, but it was considered certain that he would have to go when the Emperor Frederick ascended the throne. The matter can hardly be considered of great importance in any case. Bismarck's retirement from the active control of affairs could not be

far off in the ordinary course of nature, and only leaves the young Emperor in undisputed possession of the field a few years earlier than he would otherwise have had it. The German people have now a fair prospect of what are called "lively times." With a majority hostile to the Government in the Reichstag; with Socialism growing every day, and undoubtedly by this time making itself felt in the army, and with an inexperienced young man in command of the army, who considers the whole community "a talent" committed to his keeping by Almighty God, we may fairly look forward to that state of things in Germany described in the old English saying as "wigs on the green."

The Turkish question on which the French Ministry has been beaten and resigned, consists in M. Tirard's failure to negotiate a new treaty of commerce with Turkey, to take the place of that of 1861, which is now expiring. A new treaty was negotiated in 1887, and signed on both sides, but was never submitted to the Chambers, in the belief that it would be defeated, as the new treaty with Greece had been. On the 27th of February M. Tirard made an explanation of the position of the Government in the matter, declaring that they did not mean to try to negotiate a new treaty at present, and were going to rely, as far as the treatment of French goods in the Ottoman custom-houses was concerned, on the most-favored-nation clause in the treaty of 1802. To make assurance doubly sure, they got this clause confirmed by an exchange of notes with the Porte, in January of this year. As matters then stood, France was, in his opinion, on exactly the footing which Germany and England have just secured by treaties recently negotiated and now ready to be signed, and he therefore proposed to wait until 1892 before opening any fresh negotiations for a new treaty in behalf of France. What seems to make this situation unpalatable, and has probably led to the overthrow of the Ministry, is the discontent of the French wine-growers over the heavy importation of raisins from Turkey, which now goes on for the manufacture of a cheap wine that competes formidably with the French grape juice, and the doubts of a considerable portion of the Chamber whether the most-favored-nation clause of 1802, even when fortified by a note, really gives French trade in the Levant all the *ad-interim* security it needs.

M. Freycinet is back in power in France with as good a cabinet as the times will permit. M. Constans, whose resignation (for reasons suggested by our Paris correspondent on another page) shook the Tirard Ministry to its centre, is back in his old post. M. Ribot, a first-rate man in every way, is Minister of Foreign Affairs. He is one of the few Frenchmen who speak English perfectly, has an American wife, and has made frequent visits to this country. He is or has been a professor in the School of Political Sciences in Paris. M. Freycinet, the chief, is an able man, but has fully half-a-dozen sources of weakness (or, rather, unpopularity) about him, beginning during the war of 1870 and running down to our own day. It would be unsafe, therefore, to predict a very long life for his Cabinet. The "group" spirit evidently still reigns among the French Deputies.

Lord Randolph Churchill's experience as a politician during the last four years has had a great deal of variety in it. He became prominent by the vigor of his invective and his hostility to the old fogies, as he considered them, of his own party. He was, when Lord Salisbury came last into power, considered formidable enough and able enough to receive the Chancellorship of the Exchequer; but he had not held it many months when he began to attack his own party again, and threw it up in disgust. Since he left office, he has, on the whole, stood by the Tories, but his friendliness towards the Home-Rulers has been, at the same time, very ostentatiously displayed, and he occasionally said a good word for them. Almost every one of his speeches, however, furnished ammunition to both sides, and he gradually destroyed all chance of returning to office under Lord Salisbury. But his last outbreak has apparently taken everybody by surprise, and has been thoroughly characteristic, for, instead of supporting Gladstone's amendment, which would have furnished him with the proper occasion, he reserved himself for a little amendment of Mr. Jennings's, but in supporting it so frightened Mr. Jennings by his anti-ministerial violence that Mr. Jennings himself did not vote. The speech has apparently destroyed all hope of an official career for the orator. Neither party would now trust him round the corner; but some of his last strokes must have told on the Government. The funeral discourses delivered over his political remains by the Conservative press are very amusing reading, and make the earlier attention paid to his utterances difficult to understand. He was one of the small batch of young aristocrats who brought themselves into notice between 1880 and 1886 by their savage attacks on the Grand Old Man, but Balfour is the only one of them who has come to anything.

The death of Baron Dowse, the Irish judge, reported by cable on Friday, must be a relief to Mr. Balfour. Dowse had an extraordinarily sharp tongue and a rich vein of cynical humor, and he used them both in appeal causes mercilessly on the stipendiary magistrates who are charged with the duty of executing the Coercion Acts. The annoyance this gave to the Irish Secretary was very great, and it could not be mitigated by the reflection that Dowse was a poor lawyer, for he was by general confession one of the ablest on the Irish bench. His overhauling of the decisions of the "Removables," as the Home-Rulers call them, was often very entertaining. His observation to one of his brethren who was directing one of the magistrates to "state a case" for the court above on an appeal—"State a case! You might as well ask him to write a Greek ode"—amused the public mightily and had a great run. His satire was all the more poignant because the stipendiary magistrates are one of the great blots on the present government of Ireland. They are to a very large extent either half-pay officers of the army or needy men who have failed in life, and for whom their relatives have to provide in some way. They rarely have any knowledge of law, or much other knowledge, belong to the landlord class, are bitter Tory partisans in politics, and have not a particle of sympathy of any sort with the people over whom they rule under the present régime. In fact, it is hardly too strong to say that as a body they are a disgrace to the British Government.

That the immense coal-miners' strike in England is the direct result of the support given by the London public, and especially by the clerical and philanthropic part of it, to the dock-laborers' strike, there can be little question. Londoners are now thoroughly cured of their philanthropic rage excited by the last-mentioned strike, but they have raised Frankenstein and they cannot lay him. The gasmen's strike, which followed soon after, showed the consequence of exciting unreasonable expectations among ignorant men. On Tuesday there were 30,000 turbulent strikers parading the streets of Liverpool, and putting the whole town in terror, and keeping even the military garrison on the alert, in the firm belief, which people who ought to know better are spreading every day, that there is a great fund somewhere available for the diffusion of comfort and leisure through the community, which the well-to-do are keeping from the poor, and that the notion that temperance and industry and economy are necessary to prosperity—or, in other words, that success in life depends in any large degree on character—is all humbug. The German Emperor's Labor Conference is likely to have the same effect. In fact, it would not be at all surprising if, within the next few years, we were to witness, owing to the follies of philanthropy, the greatest disturbance of industry the modern world has seen, followed, of course, by the usual subsequent increase of misery. The labor problem will pursue every civilized country like a scourge of Providence until people recognize its simplicity. It consists simply in the collection at certain points of more mouths than there is provision for, and the highest law of all says that wherever this is the case there must be suffering. No solution which does not make population lag behind production will ever be of any value. The story which comes from every strike, that thousands stand ready to take the places of the strikers, if they can be protected, contains the secret of the labor problem.

PIG-IRON AND WOOL.

THE advocates of a high tariff, or of protective rates of duty, so called, upon pig-iron and wool, appear to have been somewhat dismayed by the positive proofs which have lately been given by Mr. David A. Wells, that in ten years the difference in price of iron and steel in this country, as compared with the prices which have been paid by the consumers of those metals who have been supplied from British mines and works, amounts to not less than $560,000,000, and has doubtless been a good deal more.

In the attempt to meet this statement, the only reply which the advocates of heavy taxes on imported metal can make seems to be, that, through the application of their policy, the actual prices of iron and steel have been lower than they would have been had not the policy of protection tended to stimulate the construction of iron and steel works in this country. They ask, "What would have been the actual price of pig-iron if the pig-iron industry had not been rapidly developed in the United States by the duties imposed upon foreign metal?" and they impute the reduction, both in this country and in Europe, to the stimulus which has been given in this country by this policy.

This question of what the price *would have been* is a mere subterfuge. No one can prove or disprove their allegations. But every man of common sense is aware that the process of making pig-iron has been subjected to a complete revolution within the last few years, the effect of which has been a great reduction in the cost throughout the world. In the period which Mr. Wells treats, 1878-1887, the reduction in the price of pig-iron was greater in Great Britain than it was in the United States; and it is well proved that the art has not ceased to be profitable, because the product has been well sustained in Great Britain, while it has been rapidly increased in this country. Yet in both countries old furnaces which were misplaced have been put out of blast, and new modern furnaces of greater capacity to produce iron at constantly lessening cost have been constructed.

The admission, however, on the part of the advocates of high tariff, that through their policy the price of iron in Great Britain has been reduced and kept at a much lower point than it would otherwise have been, is the most complete surrender that could be made. In this admission they give up every point on which their policy could be justified. This will become very plain when the relative importance of the production of pig-iron and the consumption thereof are brought into view.

Again, the advocates of a high tariff on wool may be challenged to justify that tax on the same grounds by which they attempt to justify the tax on foreign iron. Do they dare say to the farmers, "Our object in putting a duty upon foreign wool in 1867 was to *reduce* the price of the domestic wool of the United States; our purpose was to exclude the wool of South America and Australia from this country, to throw it all on the markets of Europe, and to put down the price of wool in Europe as well as in this country"?

The moment they presented such an argument as this to the wool-growers of the United States, they know that the wool-growers would instantly turn upon them and scout their policy with contempt; and yet that is exactly what they did. That has been the exact effect of the duties on wool. And this malignant influence of the duty on wool has now gone so far, and has reduced the price of South American wool to so low a point, that the great plains of the Argentine Republic, which had been devoted to pasturage and to the product of wool, are now being ploughed up and planted in wheat. Hence the malignant effect, depressing the price of wool in Europe by excluding South American wool from this great market, will presently be to establish a competition in the production of wheat which, in a very few years, will grow to great proportions, and will be more dangerous to the interests of the wheat-growers of the United States than an East India competition ever has been or ever can be.

Let the advocates of duties on these crude materials tell the farmers, if they dare, that the object of their policy is and has been to depress or put down the price of wool in this country and in Europe; yet that is their only justification of the duty on pig-iron.

What, then, is the relative importance of the production of pig-iron, and what advantage has it been to reduce the price—even if that has been the result of the protective system—as compared to the disadvantage of maintaining the price of pig-iron in this country from $50,000,000 to $75,000,000 a year above that at which the consumers of other countries have been supplied?

This policy originated in Pennsylvania. The impression has been made that the people in Pennsylvania would become paupers were it not for the artificial stimulus and support which have been given to the production of pig-iron by taxing the consumers; and yet even in Pennsylvania the product is utterly insignificant in ratio to the aggregate product of the State. In 1880, when Pennsylvania produced half the pig-iron of the United States, the whole number of men and boys occupied in the production did not exceed 40,000, and their earnings were low—far below the average earnings of those engaged in the higher branches of the iron and steel industry. At the present time the population of Pennsylvania approximates 6,000,000 of people. The product of pig-iron approximates 4,000,000 tons, worth at the mines only $65,000,000 to $75,000,000; possibly giving employment, under rather bad conditions, to 60,000 or 70,000 men and boys. On the other hand, the tax on pig-iron in this country protects the ship-builders, the machinists, the engine-builders, the rail-makers, and the hardware-manufacturers *of Great Britain, France, and Germany*, and tends to give employment in those countries to a force far larger than the petty little force which is occupied in the production of pig-iron in this country.

The advocates of this system cannot deny that invention and science applied to the production of crude iron would have reduced the price in some measure, even had there been no tariff or duty upon it in this country. What would probably have happened under such conditions would have been such a rapid development of the product of iron in Great Britain as to have led, many years ago, to the exhaustion of the fine ores and the coking coals which is now creating such alarm on that side of the water. No one can deny that in such event the iron mines and iron works of this country would have been opened and would have been rapidly developed. The only thing that has been accomplished by the policy of the United States, even if it has accomplished all that is claimed for it by its advocates, has been to delay by ten or fifteen years the time when the paramount control of the production of pig-iron would have passed from Great Britain to this country, as it is now passing under present conditions.

Let it be admitted that, during the ten years under consideration, the actual price of iron here and abroad has been a little lower than it would otherwise have been, and that our consumers, in their vain attempt to retain the home market for the products in which pig-iron is the chief component material (in which they have not succeeded fully), have paid a little less for their iron. But what does it come to, compared with the disadvantage of having been required to pay a great deal more than their competitors each and every year?

If the abatement of the duty should result in giving us more iron at less cost, or even in giving us more iron at a little higher cost, but at the same price as the price at which our foreign competitors are supplied, the stimulus to the machine shop, to the ship-yard, to the engine-builder, and to the higher arts would be so great that the little change in the occupation of the people who are now forced by our tariff to work in the mine or the iron furnace, would be forgotten almost as quickly as it became apparent; the rise in the wages and in the conditions of those who are now occupied in these undesirable branches of work would be so great.

We therefore welcome the admissions with which have been met the unquestioned figures by which it has been proved that the price of protection to the domestic pig-iron furnace in ten years—1878–1887—amounts to far more than the entire value of all the iron mines and iron works of the United States put together. When this fact is generally understood, the duty on pig-iron will go; and that day is not far off.

PRESIDENT ANDREWS ON TRUSTS.

PRESIDENT ANDREWS of Brown University read a paper on Trusts before the Social Science Association at its last annual meeting, which has just been published in the journal of its transactions. The title of the paper is the "Economic Law of Monopoly." It is original in its line of thought and extremely well expressed, being much superior to the paper on the same subject by Prof.

Foxwell before the British Association last year.

It is Mr. Andrews's belief that the law of competition, which has been relied on to deliver mankind from every kind of monopoly not created and enforced by the State, can no longer be considered efficient in all cases. State monopolies are no longer tolerated in civilized countries, or, if tolerated, the proceeds go into the common treasury, and the monopoly becomes a special form of taxation, against which no objection lies. *Laissez-faire* monopolies are the dangerous ones, and these are multiplying on every hand, mostly in the form of Trusts; but the object sought by a Trust may in some cases be accomplished by a different organization or even by a common understanding.

An effective organization of a majority in interest in any trade, like sugar-refining for example, may, as Mr. Andrews shows, and as has been shown before, contain all the bad features of monopoly, even when a considerable minority remains outside the Trust. In such a case the minority participates but does not compete. Real competition begins only when the minority is able to make, and does actually make, a serious inroad into the market controlled by the monopoly. Those outside of the combination are as much interested in keeping up prices as those inside. They will do nothing to break the market knowingly. If the combination will let them alone, they will let the combination alone. As was said of the small mills outside of the Canadian Oatmeal Millers' Association, they will "avail themselves of whatever advantage the combination gives them to keep up prices."

But if prices, and consequently profits, are unreasonably high, will not new capital be attracted to the business and thus prices be forced down to the proper level? It is one of the maxims of political economy that this result will follow. This tendency Mr. Andrews admits, but he points to certain facts counteracting the tendency. In the first place, all the parties to the gains of the monopoly, both those inside and those outside of the combination, are interested in keeping their rate of profits secret. They can keep it secret even from their own certificate-holders. They are not amenable to law in the sense that joint-stock corporations are. They are not liable to investigation. They can arrange their book-keeping to suit themselves. New capital is not "attracted" in the way that one body is attracted by another in physics. It requires knowledge, and generally of a very detailed kind, before it feels the attraction.

Again, the amount of capital required to compete with an established Trust must be at least as great as that of the Trust itself. Any less sum is exposed to destruction. Sometimes people will put their money into a venture whose avowed purpose is war with another concern (like the West Shore Railroad against the New York Central); but generally the expectation is to sell the new plant at a profit to the old concern. Such experiments on a large scale are not likely to be repeated; but, supposing them to be repeated again and again, how is the public benefited thereby? Are the prices of commodities reduced to a fair level by the process of putting up new capital to be bought out by old? If there is no buying out, if the new fights the old and the old fights the new to the death, says Mr. Andrews,

> "it is a battle of Titans, of bull-dogs. The signal for letting go is likely to be death, not pain or a little blood. So vast the stake, each side is pushed on by every economic consideration to make the struggle one for victory or annihilation. . . . Either of two results must take place: faint-heartedness may bring truce, or one or the other of the two gladiators may utterly succumb. In either case monopoly is resumed again."

In short, the economic laws which govern when the case is that of blacksmiths and cobblers and gardeners, or of any vocation in life as it existed fifty years ago, do not apply to modern trades in which machinery plays the greater part in production, and where millions of dollars are required to bring the machinery into existence and into play.

Mr. Andrews does not enter into the ethical considerations involved in the subject of Trusts. He denies with emphasis, however, that Trusts and combinations have any tendency to invent or to practise economies, or to share such economies as they may make with the public. They may do so in isolated cases, but there is nothing in their constitution, or in the constitution of things, that can be called a tendency that way. On the contrary, the tendencies are exactly the opposite, for "monopoly prices are determined not by the cost of production, but by the tolerance of the market, by what the market will bear"; and, moreover, "prices, under the law of the tolerance of the market, while never lower than cost, range more or less above, according as the articles approach more the nature of necessities or that of luxuries." Necessities will, of course, bear the higher price.

While Mr. Andrews's paper seems to give us a pessimistic outlook, he is by no means alarmed. "Our sole present needs," he says, "are information, courage, and willingness to take new steps in industrial evolution so soon as they are proved to be wise. In the ages past, society has never gotten itself into an imbroglio without somehow finding a way out. It will be so now."

THE NEW TAMMANY'S TRIBULATIONS.

It is less than a year since *Harper's Weekly* (of July 13, 1889) astonished its readers by publishing portraits of Tammany's Big Four —"Dick" Croker, Bourke Cockran, "Tommy" Gilroy, and Mayor Grant—accompanying them with a highly eulogistic article on the "Tammany Hall of To-day." The readers of the *Weekly* were informed that "there is a new Tammany of to-day, and the people know it not," and that this new Tammany was the Big Four whose portraits were published. A column of most flattering biography was devoted to Croker as "a silent, self-contained man," who had "power and personal strength of character, political sagacity, political honesty, great knowledge of individuals, and spotless personal integrity." Almost equal space was given to Cockran, who was said to have "ripe judgment and thorough knowledge of principles and men, handsome presence, polished manners, and a rare gift of eloquence." Gilroy was extolled as a "genial, pleasant, and obliging man, as well as remarkably gifted with business ability," whose "judgment is recognized as invariably sound and excellent" in all matters coming before the Tammany Committee on Organization. Mayor Grant, the public were assured, not only possessed an "established reputation for personal honesty," but also "for trustworthiness as a public official." Finally, the *Weekly* gave a comprehensive certificate of character for the Big Four by saying that the "extent of the power held by the men mentioned as the representatives of Tammany Hall is just now very great," which, being left without any intimation that they had ever done anything to indicate that they would use it for the public good, was perhaps the most extraordinary statement of a most extraordinary article to be found in the columns of *Harper's Weekly*, of all papers in the world.

What is the condition of the new Tammany to-day, just eight months after it was thus handsomely presented to the public? Croker, having used his power as Boss of the new Tammany to get himself appointed to the office of City Chamberlain, the most lucrative sinecure position in the Mayor's gift, has resigned and gone away, because, according to general belief in political circles, he feared he might be summoned to appear before the Senate Investigating Committee, where he would reveal his ignorance of the duties of his office. Gilroy, whom the *Weekly* declared to be so "remarkably gifted with business ability," has been exposed and convicted by the *Evening Post* of an attempt to let the city's paving contracts in violation of the law, and in the interest of a single company, by framing his specifications in such a way as to preclude competition from all other sources. Only after such exposure and conviction did he change his plans. Bourke Cockran's achievements, in demonstration of his claim to the title of a man of "ripe judgment and thorough knowledge of principles and men," have been to get his law partner appointed Corporation Counsel, while he himself is the counsel of the enormous claims which the aqueduct contractors are bringing against the city for work which they have been compelled to perform in accordance with their agreements with the city.

As for the Mayor, what is the condition of his "established reputation for personal honesty and trustworthiness as a public official"? He promised, before taking office, that, in the "exercise of public duties, all my acts must be for the benefit of the whole people"; that, "in the selection of municipal officers, I shall prescribe no other test than honesty and special capacity for the offices to be filled"; that, "profoundly conscious of the importance to my party and to myself of a judicious application of the appointing power, I pledge myself to be guided solely by a determination to secure for the people the very highest order of public servants that the citizenship of the county will afford"; and that, "in exercising the appointing power, I will not be moved by considera-

tions of personal friendship, nor will I be affected by my individual preferences." He has made about twenty important appointments to salaried positions, and with a single exception every one of them has been a Tammany man, many of them have been mere personal cronies, and all of them have been more or less unfit. He has not made a single choice from the "highest order of the citizenship of the county," and it is a moderate statement to say that nine-tenths of his selections have been from the lowest order. His one reputable appointment, that of Mr. Loomis for Street Commissioner, he completely neutralized by forcing with it the choice of "Eddy" Hagan, a liquor-dealing politician of the lowest type, as Deputy. The result of this performance, which is now universally regarded as a cheap trick, is that Mr. Loomis is on the point of resigning in discouragement and disgust, while our streets are in a worse condition than ever.

In addition to these failures of the Big Four to live up to the handsome "characters" given them by *Harper's Weekly*, there are the tribulations of Tammany's former Grand Sachem, the Sheriff. Not only is he on trial in court on a charge of criminal conspiracy for seeking to get a divorce from his wife by methods forbidden by the law, but his deputy has also been indicted for bribery, in company with another Tammany leader, the Warden of Ludlow Street Jail. In fact, the office which has charge of the city's criminals is itself shown to be conducted by criminals and to be in league with criminals.

There is nothing surprising in all this. The new Tammany, like the old Tammany, is merely fulfilling its mission. It exists solely for the control of offices and patronage. Nothing else is thought of or talked of in its committees or at its meetings. Questions of municipal administration and government are never discussed there. The only object of the society is to make politics as extravagant and corrupt as possible in order that there may be more "plums" to divide. Every public work and improvement is looked at, not from the point of view of the city's interests, but simply as a job for the benefit of Tammany. These are such trite truths that it ought not to be necessary to repeat them, and it would not be if every now and then reputable journals like Harper's *Weekly*, and reputable men like Mr. Loomis, did not give sanction to the idea that in some way something good and of public usefulness might come out of Tammany if honest men would encourage it with their approval or alliance. Mr. Loomis has learned the folly of it by bitter experience. No reputable man can ally himself with it and not repent of his mistake. All its leaders are of the same calibre and character. The Sheriff, who is on trial, was its Grand Sachem. The Warden of Ludlow Street Jail is a member of its Committee of Twenty-four on Organization, whose executive officers are the Big Four. From top to bottom, the men are all of the same character—they are all political speculators and gamblers; most of them have never had any occupation except politics; many of them have been and still are liquor-dealers, and the great majority are ignorant, vicious, corrupt, and depraved. To pretend that decent government can spring from such sources is worse than foolish.

A SAMPLE OF TAMMANY GOVERNMENT.

THE Senate Committee demonstrated the wisdom of its new departure in investigation methods at its session on Saturday. The revelations which it extracted from Mayor Grant concerning the way in which the business of the Sheriff's office was administered during his term therein, are precisely what the public needs and what it is the first duty of such a committee to furnish. Nobody cares for the views of Mayor Grant or any other Tammany statesman upon the structure of the municipal government, but it is of the greatest public interest to have a clear showing made of the manner in which Tammany's highest municipal official conducted one great office before he was promoted to another. This is what was done on Saturday, and the revelation was so important as an object-lesson for our citizens that we shall sum up its chief features in as concise and dispassionate a manner as possible.

The magnitude of the office of Sheriff appears in the Mayor's testimony that the suits against the Sheriff sometimes aggregate $10,000,000 a year, and that his receipts from fees aggregate somewhere between $25,000 and $30,000 a year. Yet there was no book kept which would tell exactly what the receipts were. While he was Sheriff Mr. Grant kept none. It was possible that all the books in the office might give the total if a bookkeeper were to go over all of them. When Mr. Grant became Sheriff, there were forty-two deputy sheriffs, but he reduced the number to thirteen. Did he do that "because he thought it was better to have thirteen well-fed men than forty-two hungry and thirsty ones"? "Well, that's about it," said Mr. Grant. The fees of the offices were divided by the Mayor with these thirteen deputies after the latter had collected them. No books or records of any kind were kept of the amounts collected. Mr. Grant himself made no distinction between his private and official bank accounts. He had a schedule of fees which the deputies were to collect, which he had had prepared by his counsel, Bourke Cockran, for their guidance. He took the money which they brought to him, deposited it, and kept what remained after he had paid over their shares to them. He had no check upon their operations, but kept a close watch upon them, and if he caught one of them charging illegal fees, he discharged him. The deputies attended to all cases in which the execution was on judgments not exceeding $20,000. All others were attended to by the Sheriff or the Under-Sheriff.

The law allows that in certain cases the deputies may receive as "extra compensation" such sums as may be agreed upon between them and the attorney for the judgment. Mr. Grant kept no record of transactions of this kind. He was aware that great abuses, and even systematic blackmail, might be practised by the deputies under the pretence of "extra compensation," but he kept no check upon them and no record of their receipts from this source. If there was any controversy between a deputy and an attorney over such a charge, the deputy took the advice of Bourke Cockran, and for this service each of the thirteen deputies paid Mr. Cockran $35 a month. If after Mr. Cockran's advice had been followed, the attorney for the judgment still objected, Mr. Grant sent the matter before a judge for decision.

When Mr. Grant became Sheriff, he found that there had been many complaints about the way in which Sheriff's sales were conducted. He thereupon summoned an old auctioneer, Mr. Topping, and told him he wished to put all these sales in his charge, guaranteeing him adequate compensation and taking for himself half his fees. Was he as Sheriff aware of the fact that he had no legal right to charge auctioneers' fees? Technically, he knew, he had no such right, but the "auctioneer generally disposed of the goods to such advantage that the creditor was usually willing to pay him something for his services." As Sheriff he received between $4,000 and $5,000 from this source during the last year of his term. He was not certain whether or not it was the custom to charge auctioneers' fees in all bills—he was inclined to think not, but would not swear that it was not. Yet he had made an agreement at the beginning of his term that he should receive half of them. When asked by Mr. Ivins, "Was it not your duty as Sheriff under the law to sell the goods without fee?" Mr. Grant hesitated for some time, and finally replied: "I understand that it was the Sheriff who done the sale. It was the services that the Sheriff rendered for which we were compensated." This was the clearest explanation which could be obtained.

These were the main points of the Mayor's testimony. What they revealed is too plain to need much comment. They showed, in the first place, that utter lack of ordinary business methods which is always found in a department in which there are transactions that will not bear the light. In the second place, they show that in two most important respects the law was violated, in one case somewhat indirectly and in the other openly. Every lawyer in the city knows how uniform the charge of "extra compensation" has become, and what an organized system of blackmail it is upon all legal business which comes before the Sheriff's office. That it is directed by Bourke Cockran, who receives from the deputies who levy it about $6,000 a year as "counsel fees," is a new revelation. The income of a deputy is about $3,000 a year, and of this amount he must hand over $35 a month, or more than one-seventh, to Mr. Cockran, as counsel, not for services actually rendered, but as a retaining fee. This disclosure throws a strong light upon Mr. Cockran's functions in the municipal govern-

ment. To how many other employees does he hold this relation of compulsory counsel, and what is the gross income which he receives in that way? He was the Mayor's counsel while the latter was Sheriff, and it now appears that the Mayor made Mr. Cockran's law partner Corporation Counsel not because of the partner's services, but because of Mr. Cockran's. In addition to being general counsel for the Mayor and innumerable Tammany employees, Mr. Cockran has his partner as the city's official legal adviser, while he himself is the counsel of the heaviest claimants against the city.

The auctioneers' fee revelations are full as damaging as those of the "extra-compensation" practice. The Mayor admits that he made himself the partner in a plan to levy such fees when he recounts his bargain with Mr. Topping, and in doing so he seems to have committed an indictable offence. The two practices together place the city in the attitude of levying illegal tribute upon all its Sheriff sales, and upon all litigants who are forced to transact business through the Sheriff's office. In this respect the conduct of the office, which is nominally a county office, becomes a matter of the highest municipal interest, for the city and county are one, and the sufferers from such abuses are the inhabitants of the city.

CLERICAL JESTING.

A SURPRISING feature of the Presbyterian debates on the revision of the Creed has been the great number of witticisms evolved in the discussions. In the New York Presbytery in particular many of the debaters seemed to feel that they must be funny in direct proportion to the awfulness of the doctrines they were considering. Doubtless the presence of a throng in the galleries, where it was so easy to awake the convincing approval of a laugh, had something to do with this; but it is not to be supposed that men with such good stories and witty epithets struggling for utterance would have kept them all down even if the public had not been there. Especially is there reason to believe that the amusing illustration of the dog having eaten up his tag, and all the ingenious turns given it by successive speakers, was bound to furnish all the diversion it did whether men would hear or forbear. The thing itself is of no great importance except as a striking instance of what is a new and important thing—the intrusion of humor into pulpit oratory. To what an extent this has gone may be pretty clearly inferred from the fact that ministers could not rise to discuss what they all believed to be the most solemn subjects, before a miscellaneous audience, without adorning their remarks with jokes.

Of course, there have always been clerical humorists, men born to see the laughable aspects and relations of things, known far and wide as jolly story-tellers or inveterate jesters. The very sacredness of their profession, and the traditional sedateness to which it was supposed to bind them, have lent piquancy and the merit of unexpectedness to their wit. Occasionally they may have indulged in some quip in the pulpit itself, though this was surely very seldom, and would have been esteemed wholly irregular and out of keeping. Indeed, the whole class have always been looked upon, till lately, as a doubtful honor to the cloth, more to be tolerated than commended. But we have changed all that. Nothing is commoner in a church nowadays than the subdued and decorous ripple of laughter at some witty observation of the preacher. We do not allude to the isolated instances of ministerial buffoons, but to the general freedom which a minister now may feel to say "bright" things in the pulpit, if he can, and to excite the risibilities of his hearers in a way that would certainly have called the indignant tithing-man down upon them two centuries ago.

The growth of this tendency is no doubt partly due to the slow secularization of the ministry all along the line. It can no longer stand apart from all other callings, as upon a pedestal of peculiar sacredness. As it becomes more assimilated to the prevailing conditions of life and society, it naturally assumes more and more of their tone and methods. Partly, and perhaps more, the tendency is due to the desire to win attention which cannot any more be commanded. It is all of a piece with the entire recasting of the minister's personality that has come about. The historical figure of the New England parson, stalking majestically along the street, at once the dread and awe of childhood, has given way, in large degree, to a romping, tennis-playing personage, whose advent the children hail with delight as that of a jolly big brother sportively inclined. Bound to be agreeable and amusing all the week, what wonder if he puts the spice of a jest also into his Sunday's discourse?

Certainly he has to face no popular condemnation for so doing. Commendation rather is the result. No ministers are more secure in their positions than those who have the reputation of being witty in the pulpit—"so bright" or "so lively," as they are admiringly declared to be by attached parishioners. Hence it gives one a sort of shock to read in the *Christian Union* a rebuke of those Presbyterians who are giving such a mirthful turn to the discussions about their creed. Of course, in the eyes of Presbyterians, the religious journal named stands for all that is radical and dangerous in doctrine, and so it is to be feared that the rebuke will pass by them unheeded. Yet they ought to give attention to it. The *Christian Union* is right. Call it mystery, reverence, awe, or what one will, there is something of the kind necessary to the preservation of the religious instincts, and those sentiments cannot long survive flippant treatment. Prophets do not play tennis nor make jokes. The Jews were much given to punning, but it was all meant most seriously, and has had, in fact, most serious consequences. The Apostolic prohibition of foolish talking and jesting is not greatly honored in general, but it might well be observed in the pulpit for a while yet.

PUBLIC DEMANDS AND THE MEDICAL EDUCATION OF WOMEN.

BALTIMORE, March 7, 1890.

THE present condition of that department of higher education known as the medical education of women offers a curious instance of social congestion, consequent upon the rapid growth of advanced popular views on the practical side, without a corresponding expansion of opinion on the scientific and academic side. At the moment of writing, two State Legislatures, those of New York and Kentucky, have before them bills requiring the appointment of women assistant physicians in all insane asylums where women are confined, while in Massachusetts and in our neighboring State of Pennsylvania such appointments have for some years been provided for by law. In as many as ten other States, where legislation has not as yet enforced such action, appointments of women physicians in insane asylums have been voluntarily made, and in instances too many to enumerate, in different parts of the country, popular agitation has secured the services of women in the female wards of city almshouses, in prisons and reformatories, and in some hospitals and dispensaries, as well as in infant asylums and girls' homes.

But while the public is thus on all sides demanding, with no uncertain sound, the appointment of women physicians in institutions where women and girls are received, and is proving its honest conviction that the employment of women physicians is right and decent by using the services of such physicians in domestic life, it has neglected to offer medical women the same careful preparation and advanced instruction that are provided for the corresponding class of men. The contest is now no longer for the right of women to practise medicine, but for their right to be properly trained to practise it. The number of State and other appointments above instanced, and the statistics in regard to the number (over 2,500) of women practising medicine in the United States, together with their respective positions and incomes, sufficiently demonstrate the attitude of public opinion in regard to the desirability of women as physicians. These same facts can be shown to prove that it is clearly the interest of the community to give to women medical students and women physicians the same apprenticeship and instruction that it provides for men.

Similar responsibilities require similar preparation. Neither common sense nor justice sustains the public in insisting by law on the selection of specified members of a profession whom in its social and educational functions it pronounces incompetent and inferior. If women physicians are to be given their proportion of State appointments, if the female wards of the State are entitled to the services of physicians of their own sex, then those medical women have a right to exactly the same opportunities for training that medical men have. That they have not these opportunities merely shows that we have allowed zeal to outrun discretion. What we need is a little less zeal and a quickened sense of justice.

"The positions open to women in institutions to-day far outnumber the available women who are properly prepared. The most urgent need of to-day is the opportunity for women to study in the best colleges for men, and in hospitals which admit all cases. Men respect a diploma from a school which also graduates men much more than one from a school exclusively for women, and I believe that those women who study with men are best fitted to work beside and under them afterwards. Women educated by themselves are less broad in their ideas, I am sure."

These words of an able woman physician indicate the lines on which the battle for the medical education of women must be fought. They point, first, to the opening of the medical departments of our great universities, with all their scientific and clinical advantages, to properly qualified women, and, secondly, to a fair division between men and women of hospital and dispensary appointments.

At present the half-dozen medical schools whose endowment and equipment enable them to demand a high standard from their students, and to provide a scheme of instruction abreast of the scientific knowledge of the age, still say sternly to women, "Go and get the best instruction you can somewhere else." Were they to reverse their verdict, they would merely be following tardily in the tardy footsteps of the principal degree-conferring medical bodies of Great Britain, and the existing schools of medicine on the Continent. Many well qualified judges of the matter in this country already hold that separate laboratories and dissecting-rooms, with separate instruction in one or two special subjects, are all that is needed in order to admit women, without friction or complication, to the best-equipped medical schools. But hospital appointments are where the shoe pinches with men, even the most liberal. Such positions are so coveted, and their value so keenly appreciated, that only a growing sense of justice and the outside pressure of public opinion will secure for women and men an equal share in their distribution. Of the hundreds of American hospitals and dispensaries, both public and private, where women and children are treated, few employ women physicians, yet such minor posts as those of interne and assistant physician are the natural stepping-stones to the more important places on a medical staff, and are indispensable for post-graduate study. As internes and as assistants in institutions, women physicians present no more difficulties to honest and competent authorities than do boys and girls in the same families, and with different rooms and habits, to wise and capable parents. The proper arrangements can be and have been made to accommodate and train members of both sexes under the same central administration.

Higher medical education in general is a very recent movement. It was only in 1872 that Harvard announced an extended and graded course of instruction. Not until 1878 did the University of Pennsylvania follow suit, being only enabled to do so then by the endowment of several chairs, the first of which, that of surgery, owed its existence to the liberality of a woman, who gave $50,000 for its foundation. Johns Hopkins has not yet perfected the plans for its medical school, but it is admitted that until some additional or special endowment be received, none but post-graduate instruction and some undergraduate biological and chemical courses will be offered to medical students.

A survey of the advances and recoils of medical education for women discloses two salient forces to be routed and conciliated, namely, the spoils system of politics, which makes it easy to oust or put down a woman, and endowment. The purification of office-holding will progress slowly with the general increase of civic virtue and intelligence. Endowment is the more certain hope of those who are impatient to force our university schools to retire from their present position towards women medical students. Recent information from Harvard foreshadows willingness on the part of both Overseers and Faculty to receive such gifts as would permit them to take action on the final hedging resolution of 1879 over Miss Marian Hovey's offer of $10,000, *i. e.*, "That, in the opinion of the Board of Overseers it is expedient that, under suitable restrictions, women be instructed by Harvard University in its Medical School." The Johns Hopkins Hospital, in organic connection with the University, has this year admitted several women to its post-graduate instruction.

Women need not despair. The trend of university movement and development is on their side. It is the interest of the public to hasten this development by such additional endowment as will secure for its medical servants, irrespective of sex, the best training.

C. B.

THE GOVERNMENT AND THE OPPOSITION IN PARLIAMENT.

LONDON, March 5, 1890.

THERE is a general impression that the present session of Parliament may probably be more critical and exciting than its immediate predecessors. The last two sessions have been chiefly occupied with schemes of local government for England and Scotland, the main principles of which were, to say the least, as acceptable to the Opposition as to the followers of the Government. The Opposition desired to extend the application of these principles much further, and there was abundant material for controversy in detail, but there was no serious party contest over those measures, and no practical possibility of the Government being either forced or having any inducement to appeal to the country.

The situation is now different. The present Parliament has attained or passed its climacteric. Willingly or unwillingly, the Government are now about to take a forward step in their Irish policy. They always announced from the first, with varying degrees of precision, that while they deemed repressive legislation to be indispensable, it would be accompanied, or at least closely followed, by constructive measures of reform in the direction of giving facilities to occupiers to become owners—land purchase as it is commonly called—and more particularly of local government on the same principles as were to be applied, and now have been applied, to Great Britain. Those promises were doubtless made, among other things, as a condition of the Liberal-Unionist alliance. It was a form of marriage to soothe the scruples of these new allies, and enable them with a calm conscience to live under the protection of the Tories. The disturbed state of Ireland even more than the pressure of other business has hitherto been the excuse for doing nothing to redeem those pledges. But now the Government boast that their administration of the Crimes Act has been successful in restoring order and tranquillity. Accordingly, whether the Liberal Unionists, as a compacting party, are pressing for a fulfilment of the compact or not, the Government could no longer evade the task of attempting a constructive policy, and measures of Irish land purchase and local government were announced in the Queen's speech.

The first important business of the session, however, is the debate now proceeding on the report of the Parnell Commission. I dare say your readers are almost as familiar with the report as people in England, and as able to draw their own conclusions from it. The findings of the Commission do not contain anything that is new, and the report has not in itself produced any excitement in the public mind. Mr. Parnell and his colleagues are acquitted of the gross charges of personal complicity with murder and other crimes, and association with criminals, which were persistently levelled at them by the *Times*, and were the sole origin of the Commission. This acquittal was partly discounted after the exposure of the Pigott forgeries, but it is more complete and emphatic than was generally expected. Not a few of the accused persons are found guilty of a treasonable purpose to establish the independence of Ireland. But that purpose and their conversion from it have been avowed, and by public opinion in this country even beyond the limits of the Liberal party the treason is long ago excused, forgiven, and almost forgotten.

There remains the condemnation passed by the Commissioners on the part which Mr. Parnell and his friends took in the Irish agitation, under such heads as incitement to intimidation which in fact was followed by crime, and acceptance of aid from the Physical Force party in America, and, as the price of such aid, abstaining from any condemnation of the action of the party. Of this part of the report it is enough to say that, so far as it carries general conviction, it deals with facts which have always been perfectly well known, and for which, in loss of estimation and damage to their cause, the Irish Nationalist party has, whatever over-zealous supporters may say or think, already paid a heavy and probably the full penalty. But the most marked result of the publication of the report is this: with a few honorable exceptions which throw the conduct of the majority into darker relief, Tory politicians and the Tory press, including the *Times*, instead of frankly acknowledging that what was new was not true, and what was true was not new, represent that the report practically affirms the charges of the *Times*, and proves the Nationalist members to be a pack of traitors and scoundrels. The warm indignation which this attitude has excited among the Liberals is reflected in the amendment which Mr. Gladstone moved on Monday, and it is possible that the debate will cause a more active interest in the report than its publication has yet excited.

But the chief interest and business of the session will be the Land-Purchase Bill. The Local-Government Bill, as was to be expected, is also mentioned in the speech from the throne. If land purchase is specially acceptable to some supporters of the Government, local government is the favorite panacea of others who will prescribe anything for Ireland except what she wants. The bill is described in the speech as one for "extending to Ireland the principles of local self-government which have already been adopted in England and Scotland, so far as they are applicable to that country." But it is not believed that the Government hope to pass a local-government bill this session, if they even expect to do so during the present Parliament. There are many reasons which may have disposed the Government to give land purchase the precedence. It is true that a measure of local government which proceeded honestly and fully on the lines of the English and Scotch Acts, establishing county councils on a popular franchise, would not be opposed by the Liberal party. Mr. Gladstone has repeatedly said that he would welcome and do what he could to assist such a bill. Liberal politicians might even be found who think that a good bill of that kind would take some wind out of the sails of the Opposition. But it would be looked upon with great alarm and suspicion by many followers of the Government, Irish and English, and, so long as they are sincerely bent on opposing any rational form of self-government, it is obvious that in a genuine system of local government they might be setting up a Frank-

enstein, and providing an organization for securing home rule stronger than the Land League ever was or could be.

Land purchase, on the other hand, has solid attractions for the Irish landlords, a class which includes not a few influential members of the English aristocracy and other wealthy men on this side of the Irish Channel. They are not disinclined to be bought out by the British taxpayer. It is at least possible for the Tory party to believe that the establishment of the tenants on the soil as owners would draw them away from the desire for home rule. And the discussion of a land-purchase bill even more than a local-government bill promises chances of embarrassment to the Opposition. The Liberal leaders are committed to the expediency of a general scheme of land purchase. The Land-Purchase Bill of 1886 was an essential part of Mr. Gladstone's Irish policy. The plan was based primarily on Irish credit, but it was secured by British credit involving in theory a contingent liability which was estimated at a hundred and fifty millions. The scheme was not universally accepted even by Liberals throughout the country. In some Liberal constituencies it was emphatically condemned. So that the Government approach the question with this tactical advantage, that while the Opposition are committed to the principle, they are also identified with a plan which they are not likely to propose again. The Government, however, will have their own difficulties in framing a plan. In 1885 they obtained five millions by the Ashbourne Act for this purpose, and again other five millions last year, in spite of the opposition of the Liberals, who objected to making the State the immediate creditor of the farmer, and also to the money being doled out by Parliament in driblets, which led to partiality in the operation of the Act and the incidence of its benefits, without the result of any general improvement in the situation of the occupiers. The Government are also so far hampered by their own criticisms on Mr. Gladstone's bill. The opposition which their supporters, especially the Liberal Unionists, helped to raise against the employment of British credit on a large scale for Irish purposes, contributed materially to the rejection of Mr. Gladstone's policy as a whole. To devise an effectual scheme which will throw no contingent burden on the British taxpayer, will not be an easy task.

In entering on a new phase of the struggle, the two armies find themselves with forces within the House of Commons and fighting arrangements practically unchanged. The Cabinet has been increased, by the appointment of Mr. Chaplin to the new Ministry of Agriculture, to the unusually large number of seventeen. So unwieldy a Cabinet almost necessarily implies the existence of an inner Cabinet, which some observers think is silently developing into an established institution, just as the Cabinet itself did. Mr. W. H. Smith continues to lead the House, *tant bien que mal.* The frequent rumors of his approaching retirement are probably without foundation so long as his health stands, and it now appears to be excellent. If he comes short of an ideal leader in a position certainly unsought by him, yet it would be difficult for his party to replace him. Mr. Balfour, who could fill the place well, cannot be spared from Ireland, and, notwithstanding Mr. Goschen's great abilities, it is not believed in any quarter that his leadership would tend to the smooth transaction of business. On the other side, Mr. Gladstone is exceptionally vigorous, and evidently full of confidence and hope. His followers are extremely anxious that he should spare himself, and, in his necessary absence from the House during long and late hours, there has occasionally been a slackness in the leadership, and the party have felt themselves like sheep without a shepherd. This was likely to happen when there was no single lieutenant who would or could assert an unquestioned claim to be second in command. There are signs, however, that this session, under the joint lieutenancy of Sir William Harcourt and Mr. John Morley, the party will be better led when in front of the enemy.

In the present situation, at the opening of a critical session, there are certain points which the Government may reasonably count as being in their favor. The Liberal-Unionist alliance is unbroken. It is not likely to be tried by a severer strain than it has already more than once resisted. Here and there the Liberal Unionists may have made their influence felt in the legislation of the past three years, but they have fully realized that their political existence depends on their supporting the Government through thick and thin. This advantage the Government have always had, though they may reckon on it now with more confidence. Another point is the freedom from serious foreign complications which the country enjoys. The foreign policy of the Government has been fairly successful. Another point of still greater importance is the improvement of the revenues. After a long period of depression, trade is reviving and the revenue is expanding. The revival has already enabled the Chancellor of the Exchequer to present two budgets which were open to criticism on important points, but which had the great attraction of showing a balance on the right side. This year the budget will be better than its predecessors, and the country, after discussing next month the disposal of a surplus of three millions, will come in a good humor to the consideration of the Government bills.

Another point is a certain improvement in the condition of Ireland. The Government will maintain that they have restored tranquillity and prosperity by a policy of firm government. It is quite true that agrarian crime, which did not stand at a high figure when the Crimes Act was passed, has still further diminished, and that there are signs that farmers are beginning to have better times. So far as social order is concerned, coercion acts have always been successful in putting down crime for the time, but they have naturally deepened the disaffection of the people to the Government. Another cause of improvement is that the Irish Nationalists now hope everything from the good will of the English and Scottish people, and their leaders exert all their influence in the direction of conciliation. As to the farmers, a cycle of bad harvests has been succeeded by two good harvests and improved prices, and in a purely agricultural country like Ireland the general prosperity is immediately dependent on the harvests and the prices of agricultural produce. Thus, in fighting the battle of their policy in Ireland, there are certain not unimportant respects in which surrounding circumstances, so far as any aid can come from them, are at this moment favorable to the Government. This aspect of the situation, together with the difficult and delicate character of the proposed Irish bills, was enough to suggest the probability of a dissolution at the close of this session, and the rumor has more than once been current. The Government might think that no more opportune moment was likely to come, and that if they could again obtain a majority, they would be able to deal with Ireland with a much more confident hand.

There is, however, another side to the picture which may and probably does prevent the Government from forming any definite purpose of dissolution. The belief that the cause of Irish home rule is gaining ground in the country has, I think, been more general during the last few months than it ever was before. The growth of this belief has been partly due to the general success of the Liberal party in a representative group of by-elections which took place in the autumn in various parts of the country. By many people, not all on the same side of politics, conclusions which were probably too hasty were drawn. It was thought that the boat which had been moved on the beach by inches with great effort, was now to slide to the sea with a rush. Even the result of the recent vacancy at Partick, where, in a constituency under 11,000, the Unionist majority was reduced by 600 and the Liberal vote increased by 1,000, was felt to be a check. Expectations are already more sober. But the victory in St. Pancras, by which another seat has been wrested from the Tories, is a great encouragement to their opponents. In London many seats were lost in 1886, and if the tables are to be turned, many seats in London must be won by the Liberals at the next elections. The poll was much heavier than at either of the last two elections, and in a comparatively small constituency a minority of 261 was transformed into a majority of 108. The majority is not large, but it is taken by the Liberals as a hopeful indication that the tide in London has turned, and it has some special importance as expressing the first verdict of the electorate after the publication of the Parnell Commission. Two other by-elections are impending, one a Conservative, the other a Liberal seat. But the majorities at the last elections were so large in both cases that it is hardly probable that the result will alter the numerical strength of parties.

C. D.

ON THE EVE OF THE NEW CABINET.

PARIS, March 7, 1890.

IT is not very easy to analyze exactly the political situation in France at the present moment. Last year the election of Gen. Boulanger in Paris by an overwhelming vote marked the downfall of the radical Cabinet presided over by M. Floquet. The radicals had, so to speak, invented Gen. Boulanger; they had put him in the Ministry of War and given him popularity; they considered him as their right-hand man. They had unconsciously prepared the way for his programme by advocating a revision of the Republican Constitution. This word "revision" became the cry of all factions of the Opposition, and when Boulanger turned against his old friends, he used it freely. Under this vague and equivocal word, the Boulangists, the royalists, and the Bonapartists made war together upon the Government; they formed a coalition which had no avowed object, no definite aim, but which was all the more dangerous on this account.

How was the danger averted? The radical Administration gave place to a new Administration, in which the most important leader was M. Constans, who had been one of the followers of Gambetta, and had placed himself among those republicans who call themselves Opportunists. He had for some years been Governor of our colonies in Cochin China, in Tonquin, and in Annam, and had learned there to govern with decision and with an unopposed

authority. Among so many lawyers and orators, he was thought to be a man of action. Many stories were told of his youth, of the years spent in Spain during the Empire; but these stories, whether true or false, all went to confirm his reputation for a certain courage not unmixed with contempt for formalities and even for legality.

When M. Constans took the Home Office, his task was not easy. He had a two-fold object: he had to make war on Boulanger and on Boulangism, he had to preside over the general elections; and whoever is familiar with our history and our institutions knows how influential the prefectoral administration is in the general elections. He would probably not have succeeded if the republican party had not abandoned the *scrutin de liste* and returned to the *scrutin d'arrondissement*. No amount of administrative pressure would have prevented the success in a number of departments of general tickets headed by the then popular name of General Boulanger. The Chamber felt the danger; not only did it return to the district ticket, which prevented the sort of plébiscite that Boulanger was aiming at, but a law was passed which made it illegal for a candidate to stand in more than one arrondissement. These measures were not sufficient; it was thought that no amount of legislative precautions could prevent the final triumph of Boulanger, if he remained free to go about and speak in every city of France, to agitate the country without intermission, here giving hope to the royalists, there encouraging the radicals, and everywhere threatening a total revision of the present Constitution. It was resolved to proscribe him, and to accuse him of conspiracy against the Government. "Morte la bête, mort le venin," says an old French proverb. The *bête* was not killed, it simply fled.

I will not here discuss the legality of all the proceedings which ended in the final and almost complete discomfiture of Boulangism; one fact is certain, the Home Minister, Constans, was the man who conducted the campaign. He can say, "Ecce, adsum qui feci." He was rewarded by republican successes in the elections. The monarchical minority is not as strong in the new Chamber as it was in the last; it is, besides, somewhat weakened by the memory of the coalition of the Conservative party with Boulanger, and not only with Boulanger, but with Rochefort and the Communists.

The trial of Boulanger and the Exhibition were the two great events of 1889. The Exhibition certainly helped M. Constans; it marked a sort of truce during which passions were allowed to cool. It seemed also like a triumphant apotheosis of the Republic. M. Carnot performed with great dignity his Presidential function, and received all the visitors of France in a way becoming our country. It seemed really as if we were entering on a new era of progress, of union and peace. The proverb "Sic vos non vobis" was, however, soon justified. When the new Chamber met, it seemed as if the Cabinet had nothing to do but to watch quietly over its deliberations. Nobody was prepared to upset it or to undertake to succeed it. The only man of mark in the republican camp who could have presumed to be ambitious of the premiership, M. Jules Ferry, had lost his election. M. Floquet, the radical ex-Premier, had been elected Speaker. There were no greater stars in the House than the present Ministers, and it seemed as if the period of perpetual ministerial changes had come to an end.

The character of the new Chamber was not at first clearly defined—was it moderate, disposed to be tolerant of the minority? or was it, like its predecessor, inclined to be arbitrary, unjust, and even violent? Many people had hoped that the moderate republicans would be the leaders of the new Chamber. Some of them are men of great talent, good orators, and have at their disposition papers which rank among the best in the country, such as the *Journal des Débats*. Nobody had attacked the radicals with more eloquence and force than this last paper, which is generally inspired by one of its proprietors, M. Léon Say, the ex-Minister of Finance, the grandson of the famous economist. The London *Times* had gone so far as to announce that M. Léon Say and his followers would come to power as a natural consequence of the general elections.

The Cabinet in which M. Constans was the Home Minister was not quite homogeneous. Some of its members were Opportunists—republicans of the Gambetta and Jules Ferry school; some of them were radicals. They had, however, worked harmoniously during the struggle against Boulanger and during the period of the Exposition. But, now that they confronted a new Chamber, was it possible for them to remain united? M. Carnot, the President, was unwilling to change the Cabinet, probably from a feeling of gratitude for the services which it had rendered, probably also because he could not well divine the exact temper of the new House, and again, people say, because he feels a great sympathy and affection for M. Tirard, who holds the Premiership.

The temper of the Chamber was first shown in what is called here the validation of the elections. The greatest severity was exhibited towards some of the Conservative, and especially the Boulangist, deputies elected in Paris. On the most futile pretexts, the election of many deputies was invalidated. The new elections which were thus rendered necessary did not always change the verdict of the electors. In Paris, for instance, all the invalidated deputies were reëlected. It is a great pity that there is no special tribunal for these electoral disputes; the Chamber has no qualification for the performance of this delicate office, and, in almost every contested election, its decision is inspired merely by party spirit.

Meanwhile, the divisions in the Cabinet, which had long been occult, became more manifest; the Chamber became aware, a short time after its meeting, that M. Tirard, the Premier, and M. Constans, the Home Minister, disagreed on many questions. An incident brought this antagonism before the public. The Duke of Orleans, on arriving at the age of twenty-one, came to Paris, and offered himself as a "conscript" with the young men of his age. He was placed between two laws, one personal to him, which exiled him from France, another, a general law, which subjects every Frenchman to military service, with a few exceptions in which he was not comprised. He had lost his political rights, but he preserved his civic rights; and the right to do military service may be called a civic right. I will not argue here a question which the lawyers employed by the Duke of Orleans did not themselves argue at length before the tribunal. I will look on the question only from the point of view of the Government. M. Constans from the first moment felt that if the judgment of the public would not be with the Duke of Orleans, at least the sentiment of the public would be with him. He thought it unwise to treat with severity the act of a young man, an exile, who chose the best way he could to return for a moment to his country. M. Constans wished to take the Duke of Orleans immediately to the frontier, and not to give him the advantage of being a victim of the law of exile. On this delicate question the division of the Cabinet became apparent; it became even more so when the question of pardoning the Duke of Orleans had to be discussed after the tribunal had condemned him to two years' imprisonment. The Duke had eleven days if he chose for putting in an appeal, and during those eleven days the question of pardon was constantly discussed. It was finally decided against the opinion of M. Constans, and, when the delay of eleven days was over, the young Prince had to leave the Conciergerie, and was conveyed to Clairvaux, a prison for common criminals.

During all this period, the Chamber manifested its hostility to the Duke of Orleans, and M. Constans soon felt that he was losing its confidence. He seized the first opportunity, the nomination of the President of the Court of Cassation, and offered his resignation to M. Carnot. To the surprise of all, this resignation did not become the signal for a ministerial change. M. Constans was immediately replaced, and by whom? By a M. Bourgeois, a radical deputy, who, before he accepted, asked permission of M. Floquet, the present Speaker, whose under-secretary he had been when M. Floquet was Home Minister. The radical element is therefore strengthened in the Cabinet, especially as M. Bourgeois, on assuming office, made a declaration to the Chamber which had a decided radical tinge.

All the details I have given tend, therefore, to the same end: the new Chamber will not be a moderate Chamber in comparison with its predecessor; it is really more radical; it contains more mediocrities; it is no longer under the guidance of such men as M. Ferry or M. Constans. It wants new leaders, new radical leaders.

Correspondence.

COMPULSORY EDUCATION IN WISCONSIN.

To the Editor of The Nation:

Sir: The last Legislature of Wisconsin certainly, if it did nothing else, secured itself from oblivion when it passed the Bennet Law. Unwittingly and unsuspectingly, in the last days of the session, it passed this law without debate or question. It went to its third reading without comment or opposition, and received the prompt and ready acquiescence of the Executive. Yet this measure has raised an issue fraught with more bitterness, more of race animosity, more of religious antagonism, than was ever known in Wisconsin before. It has unsettled political values, placed the re-election of a Republican Executive in jeopardy, and has caused the leaders of the dominant party the gravest uneasiness.

To understand the situation clearly, it must be recollected that there are 350,000 Roman Catholics in this State; that, with a total Presidential vote in 1888 of 354,514, there are from 50,000 to 60,000 Catholic votes and about 40,000 Lutheran votes; that the German Lutherans and a large proportion of the German Catholics have been unwavering adherents of the Republican party. Yet here we have a law against which every Lutheran synod, every Lutheran minister, every German paper (secular and religious), almost without exception, is up in arms. We have the Archbishop and the Bishops of Green Bay and La Crosse issuing

their solemn manifesto against the law, and calling upon the believers in the Catholic faith to vote and work for its repeal. The children of Luther and the children of the Pope have for the first time made common cause, and, under a common flag, declared war against what they call an unjust, unnecessary, and unlawful enactment.

The law which has caused all this commotion is said to be mainly a copy of the Illinois law, which in turn is said to have been taken from the New York and Massachusetts enactments. Its purpose, so the person who drafted it has told me, was to turn the children from the workshop into the schools, and to provide authority for the school boards to force truant children into the schoolhouses. Its title is "An Act concerning the education and employment of children." Briefly summarized, its provisions are as follows:

Section 1 provides that children between seven and fourteen shall attend some public or private day school at least twelve weeks in each year *in the city, ward, or district where he resides.* Attendance to be consecutive; number of weeks, to be fixed by the Board of Education, *not to exceed twenty-four.*

Section 2 provides a penalty for non-compliance, and allows an excuse from the school authorities on the ground of inability of the parents, physical or mental incompetence, *and on proof being shown that instruction has otherwise been given for a like period of time in the elementary branches commonly taught in the public schools*, or that the child has acquired such elementary branches.

Section 3. Penalties.

Section 4 provides for prosecutions by the Board of Education.

"Section 5. No school shall be regarded as a school, under this act, unless there shall be taught therein, as part of the elementary education of children, reading, writing, arithmetic, and United States history in the English language."

Section 6 provides that prosecutions shall be begun only by the school boards, etc.

Section 7 gives jurisdiction to justices of the peace and police magistrates.

Section 8 defines what is a "truant child," and provides for forcing it into educational institutions.

"Section 9. No child under thirteen years of age shall be employed or allowed to work by any person, company, firm, or corporation at labor or service in any shop, factory, mine, store, place of manufacture, business, or amusement, except as hereinafter provided."

Sections 10, 11, 12, and 13 provide for the execution and proper administration of section 9.

Such is the law. Its supporters argue that it is purely American in its tendencies; that, English being the language of the country, every child should be compelled to acquire a knowledge of it before he comes to the age of fourteen; that it will tend to do away with the clannishness of our foreign element and Americanize our foreigners. They point to the fact that, in this the metropolis of the State, the proceedings of the Common Council and Board of Supervisors, and the legal notices, have to be published both in German and in English. They deny that the law is in any way aimed against the Germans or against the German language, and call attention to the fact that the Turners have declared in favor of the act.

It is impossible within the limits of this communication to detail the numerous arguments urged against the law. It is said that the power given to the boards of education is too autocratic, that the fines are onerous in the extreme, that the provision confining the education of the children to the district wherein they reside is restrictive and unjust, etc., etc. The opponents of the law do not object to compulsory education—indeed, we have had compulsory education in this State since 1879; but they object to being compelled to educate their children in a certain *way*. The opposition to this law may be summarized as follows:

(1.) The Roman Catholic Church objects to it as the entering wedge against, and a covert attack upon, their parochial-school system, which is supported by voluntary contribution. They have submitted to the mill tax for general education, they support the public schools, they support their own parochial schools too, wherein they allege that English is taught fully within the requirements of the law. They protest against their parochial schools being placed under the supervision of the State. They claim that it interferes with the rights of the parent.

(2.) The Lutherans object to the law because it will destroy many of their parochial schools, wherein lack of funds makes it impossible to keep a corps of English teachers, and because it transfers to the State the rights and duties of the parent. The Lutheran does not object to the compulsory teaching of reading and writing in English, but he does to arithmetic and history, on the ground that it is unnecessary, because the struggle of the German parent is to keep the child to a knowledge of his mother tongue, and he acquires English anyway.

(3.) The religious press, for obvious reasons, support their parochial schools.

The underlying feeling through all this is that the law is paternal legislation, undemocratic and unrepublican. And this last objection is not confined to dogmatic lines, but it is the main objection which tends to unite the foreign-born element against the law.

In the meantime an immense amount of "trimming" is being done. The State press is filled with personal opinions on the merits or demerits of the law. The press itself is badly at loggerheads. The *Sentinel* has steadfastly supported the Governor and the law; the *Evening Wisconsin*, the leading Republican evening paper, is equally opposed to the law, and makes it the basis of a vigorous attack upon Gov. Hoard. *Der Herold*, the most important non-sectarian German Republican daily in the State, while professing not to oppose the principles of the measure, demands amendments, and condemns the Governor for having approved it. The *Germania* and the *Seebote*, respectively the organs of the Lutherans and the Catholics, oppose the law for the reasons before mentioned. Small-bore politicians are trying to trim their sails to the rapidly shifting winds, hoping to derive some personal advantage out of the general disturbance.

The Republicans may be able to patch up a peace before the general elections in the fall, but, at the present writing, political graves are yawning on every side, and were a general election held to-day, Wisconsin would be a "doubtful" State of the most approved uncertainty.

BRADLEY G. SCHLEY.

MILWAUKEE, March 15, 1890.

INSTRUCTION IN GERMAN AND IN AMERICAN UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: From Prof. Francke's letter to the *Nation* of February 13, one not acquainted with the facts would get some mistaken ideas as to the matter treated of. Though the writer takes pains to designate work done in German universities as "general" and "special," and that done in American universities as "elementary" and "advanced," the impression made throughout is that our elementary corresponds to their general, and our advanced to their special. Of course such an idea is not to be entertained. The *ordentlicher* professor is responsible for his department, and is anxious that the fundamental and most important subjects in his branch be regularly taught. Under the German system, or lack of system, the professor in charge of a department cannot direct that any of this work be done by the *ausserordentlicher* professor or by a *Privatdocent*, and consequently he must do it himself. Still, in most cases he prefers to do so, for he desires to give the stamp to the instruction of the institution he represents. The courses we have in mind are encyclopædic rather than compendious, occupying four or five hours a week, and are by no means to be confounded with elementary work.

Still, though a professor cannot tell a *Privatdocent* what to teach, he can, practically, tell him what not to. It is common in this country to picture the bright young German *Privatdocent* as lecturing on the same subject as the professor, and drawing a full house, to the great discomfiture of his antiquated superior. Nothing could be more false. A *Privatdocent* knows well enough that it would be very poor policy on his part to openly set up a rivalry with the professor. He almost always carefully avoids the courses the latter is in the habit of reading, and is consequently, for the most part, restricted to special courses. If he does lecture on the professor's favorite subjects, he takes pains to do so some other semester. Years ago a now famous German professor was *Privatdocent* at one of the larger universities, and had announced a course of lectures for the following semester. But before the semester opened, a new *ausserordentlicher* professor was appointed, who wished to make his début with a course on the same subject. At his request the *ordentlicher* professor asked the *Privatdocent* not to lecture on that subject. As the latter had already made his announcement, he declined to yield to the request, and a struggle ensued, which ultimately resulted in his favor; but his persistence brought upon him the lasting hostility of not only the *ordentlicher* and the *ausserordentliche* professors, but also the whole "school" to which they belong—a hostility that makes itself felt whenever his name is proposed for a better position than the one he now holds.

Moreover, it is by no means generally true that the full professor does comparatively little special work, and that what there is of elementary work is mostly done by him. There are at least three considerations that invalidate Prof. Francke's calculations.

In the first place, the most truly special work is done in the seminary; a course of lectures on some division of a subject surely cannot be supposed "to train investigators" in anything like the way a course of work in a seminary does. With what feelings would Prof. Zupitza at Berlin look upon the most special of all special work, that done semester after semester in his English seminary, should he be informed that "it is universally felt . . . that the *Privatdocenten* . . . are best fitted to reach out into new fields and to train investigators"! But Prof. Francke does not take the work done in seminaries into account at all; he says, "As every university teacher without exception conducts a seminar, or a course corresponding to it, this element also was omitted from the comparison." This is about as logical as it would be to reason as follows: "I want to find out

what is the proportion between the cultivated land on A's farm and that on B's. A has less acres in corn than B, but they both have sown the same number of acres of wheat. As the wheat is equal in both, we may neglect that, and the proportion of A's corn to B's corn will be the proportion of A's cultivated land to B's cultivated land."

Secondly, to "select the two largest German universities as specimens to illustrate what is a general tendency of German university education," is surely a strange proceeding. Would one select London and New York as specimens to illustrate what is a general tendency of life in cities large and small? To say nothing of other considerations, the number of *Privatdocenten* that crowd these universities,* and are forced, in order to get auditors, to offer something novel or a specialty not offered by another—this alone is sufficient to make figures obtained there not true of the average university. It is not my intention to attempt such a classification of work done at other universities as Prof. Francke has of that at Berlin and Munich; but I would give as a fairer sample the work done in the German department at Göttingen during the semester I spent there some years ago.

Prof. ordinarius Müller:
(1.) Hist. Gram. der deutschen Sprache, fünf Stunden.
(2.) Seminar: Hartmanns "Iwein."

Prof. ordinarius Heyne:
(1.) Deutsche Wortbildungslehre, drei Stunden.
(2.) Lessing und seine Zeit, zwei Stunden.
(3.) Seminar: "Kunst Küstner" (an attempt to establish the origin of the text).

Prof. extraordinarius Goedeke:
Über Goethes Leben und Schriften, eine Stunde.

Prof. extraordinarius Bechtel:
Über althochdeutsche Dialekte, eine Stunde.

Privatdocent Roethe:
(1.) Gesch. der deut. Lit. (1200–1500), drei Stunden.
(2.) Erklärung Goethischer Gedichte, eine Stunde.
(3.) Deutsche Übungen für Anfänger (gotisch und althochdeutsch), zwei Stunden.

Here we have general work, special work, and elementary work. Whether Prof. Francke would classify it as I should, I do not know. Only two of the courses seem to me to be "general": the five-hour course in Germanic grammar by Prof. Müller, and Privatdocent Roethe's three-hour course, treating of the first three centuries of German literature (the course was carried down to recent times in the following semesters). The other courses offered by the professors I should class as special. All the elementary work done was done by the *Privatdocent*.

Thirdly, Prof. Francke seems to forget that it is not the *Privatdocent* that corresponds to our instructor, but the *Lector* (and in some scientific work the *Assistent*). Perhaps the oversight was due to the fact that the name and work of the *Lector* are not always published in the catalogue, which is usually the case when the University does not appoint the *Lector* directly, but through the professor. As the Gymnasium course is longer than that of our high schools, there is less elementary work done in the University, and, therefore, the sphere of the *Lector* is limited, and sometimes (as in the case of instruction in the mother tongue) wanting. But the *Lector* is engaged at a salary, as is the American instructor, and does all the elementary work that somebody else does not care to do—and so does the American instructor. That the latter may, in time, rise to a professorship, while a German *Lector* seldom does, is rather an advantage inherent in the American position.

But the burden of Prof. Francke's letter seems to be the desirability of the introduction of the *Privatdocent* system into our universities. If this means the granting to young men of ability who can live without a salary the privilege of lecturing or conducting other courses, and thus an opportunity to show their fitness to occupy a higher position, and does not mean that this is to be the only way open to aspirants (for I need hardly mention that most German *Privatdocenten* nearly starve before they get a professorship or throw the thing up), I do not see that any one can find fault with it; indeed, much would, without question, be gained, and a start of the kind seems to have been made at Clark University. But if it practically means that instructors engaged at a salary are to conduct most of the courses in special or advanced work, not even "encumbered with conducting examinations," while the bulk of the elementary work is to be assigned to the professors, as "through wider experience and practical efficiency best adapted to represent the foundations and the system of their science in their accepted form," why, we should all want to stay instructors.

GEORGE HEMPL.

UNIVERSITY OF MICHIGAN, March 4, 1890.

* I have by me only the *Universitätskalender* for the winter of '85–'86. According to this, there were in active service in the "Philosophische Fakultät" 37 *ordentliche* professors at Berlin, 28 at Munich, 17 at Jena, and 32 at Göttingen; 44 *Privatdocenten* at Berlin, 30 at Munich, 9 at Jena, 15 at Göttingen. The per cent. of *Privatdocenten* to *ordentliche* professors was thus at Berlin 118, at Munich 107, while at Jena only 52 and at Göttingen 46. As the universities at Berlin and Munich have since grown very rapidly the proportion is now even greater.

WHEAT-RAISING IN NEW ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: Familiar, long ago, as a New England boy, with rye bread, I agree with Chisholm that "in a large part of that region, wheaten bread did not early come into general use." I hold that your reviewer of Chisholm (No. 1286) would not have controverted Chisholm's statement if he had not himself forgotten a notable passage in Dwight's 'Travels'—the best description of New England some ten decades ago. In 1796 Dr. Dwight made a journey on horseback from New Haven to Maine. His ride was leisurely, and his notes, in their exactitude, often recall the incomparable Samuel Pepys. He declares that "the country lying eastward of a line which may be fixed about thirty miles east of Connecticut River, is unfavorable to the production of wheat. The cause," he says, "I have in vain attempted to investigate." He talks about several assigned causes, in which he has no faith, as soil, ocean, fertilizers, and the barberry bush, and adds, "Whatever may be the cause, the effect is certain."

"A traveller will scarcely see a field of wheat in this tract during a journey of one hundred miles. The general opinion of the farmers is that wheat cannot here be cultivated with success. . . . In consequence of this fact, the bread generally used in this region is made of rye. Rye bread is used in considerable quantities on Connecticut River [that is, in a district where wheat would grow]. A stranger can hardly be persuaded that this bread is preferred by the inhabitants who have been used to it to the best wheaten loaf" ('Travels,' i., p. 376.)

It was those who did not prefer it who migrated to the Connecticut valley and filled its intervales with wheat fields, and so westward to the Connecticut Reserve, raising crops there to fill the boats on the Erie Canal. Their motto was that of Gen. Sherman's Old Shady, "We're going up North, or out West, where they eat *white bread* and get a dollar a day."

B.

[We are grateful to our correspondent for calling our attention to this interesting passage in Dwight's 'Travels,' but we doubt whether it wholly supports the idea which Mr. Chisholm's words would convey to the average reader. All that can be certainly deduced from Dr. Dwight's testimony is that in 1796 rye bread was generally used in the eastern half of Massachusetts. If we turn back to p. 373, we see that his remarks on the pages immediately following are a general comment on Worcester County. In the paragraph following that quoted by our correspondent, he says: "The white bread served up at the tables in this county, and in the country further east, particularly in the inns, is made in the form of large biscuits, dry and hard, but agreeable to the taste." Dr. Dwight also tells us he has seen rye bread on the most richly spread tables in Boston, "preferred both by the host and the guests to the finest white bread."

We will note, very briefly, some of Dr. Dwight's other statements on wheat-growing. Vol. i, p. 48, wheat grows well west of the White Mountains, "and in very many places eastward of that limit"; p. 108, the average crop of wheat in Connecticut, fifteen bushels to the acre; p. 195, wheat flour in New Haven market $6 to $9 a barrel in 1810, lower in 1820; vol. ii, p. 110, northern New Hampshire—the land yields wheat and other grains in abundance; "wheat yields ordinarily from twenty to thirty bushels an acre." The average yield of wheat over the whole country is to-day about twelve and a-half bushels per acre. On p. 340 is a discussion "why the lands in New England which formerly yielded wheat surely and plentifully," now suffer from the blast. On p. 342 he says: "All the lands in this country which were not too wet, originally yielded wheat easily, surely, and, so far as they were rich, abundantly." "This country" would seem to mean New England, from the context.

As regards eastern Massachusetts, in vol. iii., p. 75, we find that in Sandwich wheat "not uncommonly yields well"; in vol. iv., p. 159, Dr. Dwight notes that for a hundred years it has been a popular belief that wheat could not come to perfection in eastern Massachusetts; but Mr. Bartlett of Methuen (Essex County) deserved the credit of having shown that "this gray-haired prejudice" was "without foundation." The "Father of American Geography," in his descriptions of the different New England States (Morse's Geography, *passim*), would lead one to suppose that, with the exception of eastern Massachusetts, New England could easily grow enough wheat for the home demand. The export of wheat flour from Boston would seem to indicate that some of the consumption of rye must have been for some other reason than the lack of wheat flour.

If we are correct in interpreting the pas-

sages our correspondent quotes from Dr. Dwight as applying primarily to Worcester County, it is obvious that the Erie Canal could have afforded little relief to the situation before the completion of either the Boston and Worcester Railroad in 1835, or of the Western Railroad (B. & A.) in 1841. Upon further reflection, we incline to attribute the increased use of wheat in New England rather to general economic improvement than to any specific cause like the Erie Canal, for the cultivation of Western lands and the modern transportation system have reduced the price of corn and rye far more than of wheat. In 1810 a barrel of flour cost about the same as eight bushels of corn or rye, while to-day a barrel of flour costs about the same as fifteen bushels of corn and twelve bushels of rye.—Ed. Nation.]

THE FARM VILLA.

To the Editor of The Nation:

Sir: I have been much attracted by your article suggesting to city people buying up deserted farms for vacation residences. I see, however, many reasons which will prevent any rush of applications for them. First, there is but little taste among our young people for a quiet life. They demand excitement; they like to take their country pleasures in company with many of their mates. A summer without tennis parties, riding parties, boating parties, would be no fun at all. Many of them do not have very lively winters. They look forward to the life in summer hotels to make up for it. In reading stories of English country life among the gentry who do not go to London, I fancy almost every American girl feels that such a slow, uneventful existence would be impossible to her. But if mothers with young families would take their children year by year to these quiet places, no doubt a taste for simple country pleasures and fine scenery might be developed.

Then comes in another set of difficulties. Very few husbands and fathers can leave their business to stay with their families. A young mother in an isolated farm-house, without her husband, is in a very lonely position, not to speak of the real danger from tramps, which would haunt her nights and banish sleep. The difficulty of getting servants to stay in such places would prevent her filling her house with friends, even should her purse allow such hospitality (and we are considering the needs of those who must find an inexpensive way of taking a vacation). And so, though when I first read your article I felt I must immediately begin to save up the $500 for that farm under Chicorua, further reflection has dampened my ardor.

But, as I write, a new idea flashes into my mind. Why could not two families of friends combine in one farm-house, or two neighboring farms, and thus find society and mutual protection, in addition to the other charms which you put forward so attractively?

Hausmutter.

Salem, Mass., March 8, 1890.

THE SPOILSMAN AND HIS PICTURE GALLERY.

To the Editor of The Nation:

Sir: In a recent letter from Washington, the correspondent of the Boston *Herald* (March 10) endeavors to show that a great injustice is done to some of our high officials by political attacks and caricatures. He gives instances of strangers to the capital who had conceived that certain statesmen were little better than demons with forked tails, but who have returned from a visit thither full of admiration and wonder at the virtues and attractions of the accused. Then he draws two or three charming pictures of the "homes" of politicians. We learn that one Cabinet officer is a highly moral, cultivated, and refined man, with taste in art, and that his first assistant has a pleasant domestic circle and a fine picture gallery. It is called little less than an outrage that such persons should be the butt of political satire and contumely.

The correspondent does not reflect that the more virtuous and refined a man may be, so much the more shameful to him are acts which might be expected from immorality of character or unenlightened Philistinism. What consolation is it to the people that their officials can appreciate masterpieces of Corot, though not the worth of a long-tried and honest public servant? "The fact of their possession alone (*sic*) showed the nature of their owner," says the correspondent. What must be thought of him who loves truth in art, but clings to a policy exactly opposed to promises made before election to office? What of him whose domestic life is pure and undefiled, but whose public acts are stained with offences against political morality? Nothing for such an one but to cry, like the weakling that he is,

"Video meliora proboque:
Deteriora sequor."

Nothing but a blunted moral sense or the ingenuity of perversity can discover in fine personal qualities excuse for public wrong-doing.

M. H. M.

Cambridge, March 12.

MR. BISHOP'S SPANISH ARTICLE.

To the Editor of The Nation:

Sir: I was not at all surprised to hear that Spanish women wrote, but I am surprised that your paragrapher should have read my article carelessly before commenting upon it. (The article is that on "Literary Madrid" in the February *Scribner's*, mentioned in the *Nation* of February 6.) I referred to the gallant saying that Spanish women do not write nor read many books, because they are satisfied with their influence in inspiring them. I have told the story before in the *Nation*, and it was a Spaniard who said it. Thereupon, I said, a few lines later, that Emilia Pardo Bazán was *one* Spanish woman at least who wrote, and that exceedingly well, meaning the emphasis to be got by connection with the former statement. I do not think this slight attempt at a jocose turn ought to be so misleading as to make it appear that I supposed there was absolutely only one Spanish woman in existence who wrote.

I am further taken to task for mentioning as "last" works two that were in actual fact the last at the time of my visit to Madrid, *i. e.*, in the spring of 1889. Naturally enough there has been opportunity for others to appear between that time and the moment of your critic's sending his "copy" to the press. As to Galdós's "first" book, I should have done better to say that 'Doña Perfecta' was his first pronounced and high-grade success, or, perhaps, the first of the novels proper, for a pronounced distinction is made between the novels and the 'Episodios Nacionales,' and the publishers in their list put 'La Fontana de Oro,' dealing with the events between 1820 and 1823, in a department by itself, much nearer the latter than the former.

And now, as to the matter of putting words together, it seems as if your paragrapher had been at some pains to frame his in such a way as to let it be implied that I had derived some important advantage of information about Galdós from the little Spanish pamphlet in the 'Celebridades Contemporáneas' series, instead of getting it from him personally. I do not care very much about this, but it gives me the opportunity to add, if you are willing, still another curious trait of Galdós, in virtue of which trait it will be seen, too, that it would have been absolutely impossible to get information about him from the pamphlet in question. Indeed, this little brochure is worthy of a place in a museum, as probably containing less on its subject, in proportion to its size, than any similar publication ever put forth. I happened upon it, I think, in the railway station just as I was leaving Madrid.

Its author, Leopoldo Alas, "Clarin," prides himself upon being one of those journalists who most enjoy Galdós's intimacy and confidence out of all Spain. This he says himself. "But what veritable labors it cost me," he exclaims, "to draw out of him the bare admission that he was born at Las Palmas." It seems that it is one of the most marked peculiarities of Benito Pérez Galdós not to want to tell anything about himself.

"He has a history," says Clarin, "yes, he has one, but he keeps it under lock and key. Having set out to prepare this series of biographical notices," he goes on, "and anxious to make the first one as taking as possible, I availed myself of my friendship with Galdós, and begged of him the data necessary for his case. After a long and most amiable correspondence, it appeared that he did not know in any determinate way what that kind of data was, or what was demanded of him. In any case, as the upshot of it all, it was duly admitted and agreed that he was, in fact, born at Las Palmas. If I exaggerate a little, it is very little indeed, as the reader who has curiosity enough will see in the end."

This, in truth—and I think I begin to admire the model for its refreshing rarity—is all that the reader does find in the whole closely printed thirty-nine pages.

To this same spirit I fear it was due that Galdós did not send his photograph over to America, as I had every reason to believe he would do, and that the photo-lithographed portrait and facsimile page from the 'Celebridades Contemporáneas' came to be used at the last moment as illustrations. Galdós knew of the possible use of that portrait, in default of one more satisfactory to himself.

William Henry Bishop.

Villefranche, Alpes Maritimes, Feb. 23, 1890.

PROTESTANTISM AND LOTTERIES.

To the Editor of The Nation:

Sir: The New York *Times* of March 10, in an editorial on the establishment of a State lottery in North Dakota, says:

"The public sentiment about lotteries is very largely a matter of geography, or, at least, of race. In Protestant and Anglo-Saxon countries lotteries are looked upon as devices of Satan."

Now, Prussia is a Protestant country, yet in all its principal cities a handsome office on the ground floor of an important street bears across its plate-glass windows, in letters to attract the passer-by, "Royal Lottery." The institution is not "dedicated by permission" to royalty, but is under Government management. The old Emperor William is said to have been opposed to its continuance, yet he

nevertheless found its abolishment not advisable.

The newspapers publish advertisements of various private lotteries for every conceivable object, such as repairing a cathedral, etc., and benevolent ladies organize a lottery among their friends as they here get up a concert. In German novels a poor but worthy man is often started on an upward career by winning a lottery prize. While in Germany, I came across a magazine article which, urging the wisdom of keeping a systematic account of the family outlay ranged in appropriate columns, included under its headings of personal expenses lottery tickets; and although the author wrote in the interests of economy, he said not a word about eliminating that column.

An old gentleman asked if we had lotteries in America, and I thought I was to be taunted with the Louisiana one, but found myself mistaken. "Ah, only one! We manage things much better in this country. Here, Government establishes a lottery in all the towns, thus giving every poor man a chance to grow rich"; and a look of serene superiority appeared on the faces of my German convives. I never found it possible to make my German acquaintances understand the Anglo-Saxon feeling towards lotteries, and if the German element preponderates in the population of Dakota, I should think the passage of the obnoxious bill highly probable. There would be nothing incongruous in the existence of a lottery in a State whose capital is Bismarck. J. C. N.

CINCINNATI.

Notes.

G. P. PUTNAM'S SONS have in press 'The Poetry of the Anti-Jacobin,' edited by Charles Edmunds, with Gillray's designs—a limited edition; 'The Trials of a Country Parson,' by Augustus Jessopp; 'The Sayings of Poor Richard,' being Franklin's prefaces, proverbs, and poems extracted from his almanac (1733 1758), by Paul Leicester Ford; 'American Farms, their Condition and Future,' by J. R. Elliott; 'The Story of Russia,' by W. R. Morfill, and 'The Story of the Jews under Rome,' by W. Douglas Morrison, in the "Story of the Nations" series. They also announce a new series, edited by Evelyn Abbott, to be called "Heroes of the Nations," dealing with "historical characters about whom have gathered national traditions, and who have been accepted as types of the several national ideas," as Nelson, Gustavus Adolphus, Pericles, etc.

John Wiley & Sons have in preparation a 'Handbook of Problems in Direct Fire,' by Capt. James M. Ingalls, First United States Artillery; and 'Constructive Steam Engineering,' by Prof. Jay M. Whitham.

Henry Holt & Co. will shortly publish an 'Introduction to Systematic Botany,' by Prof. Charles E. Bessey of the University of Nebraska; and 'The Idle Thoughts of an Idle Fellow,' by Jerome K. Jerome.

'The Future of Science,' by Ernest Renan, will be produced in English in May by Roberts Bros., Boston.

The third volume of the 'Sketches of War History,' issued under the auspices of the Loyal Legion of the United States (Ohio Commandery), is about to appear, with the imprint of Robert Clarke & Co., Cincinnati. Twenty-two papers are enumerated, mostly on operations in the Southwestern field, but there are also papers on the critical engagements of the Army of the Potomac, and diplomacy and the navy are not neglected.

We have received from Rand, McNally & Co., Chicago, a complete English version of the 'Journal of Marie Bashkirtseff,' in which passages omitted or condensed in other translations have been restored. The only effect is to give the reader more of the wearisome repetition of this selfish victim of her own vanity, and to draw out more tediously a disagreeable tale.

The issue of the "Knickerbocker Nuggets" which is entitled 'The Garden' (G. P. Putnam's Sons), gathers those pieces upon the subject, by Bacon, Temple, Addison, Pope, Goldsmith, Walpole, and others, which have become classical, and makes a brief and delightful history of the English taste in gardening. An introduction, admirably done, is furnished by Mr. Walter Howe, and passages from the two Plinys agreeably open the volume. The conception of the work was happy, and the result is a charming book of out-of-the-way literature very welcome to a refined taste.

The extent to which Spenser was much more than a story-teller is illustrated by a little volume of 'Tales from Spenser' (Macmillan), on the well-known model of such popularization of the narrative element in literature. Only a comparatively small portion of his poetical fables is dealt with, and the result is as excellent as the nature of the case permits; but the interest is slight, the adventures seem very shadowy, and perhaps the best use the book can be put to is to point the moral of how little, after all, Spenser owed to his poetical "machinery."

Mr. William Davenport Adams, encouraged by the reception of his 'By-Ways in Bookland,' publishes a second series of these slight essays under the title of 'Rambles in Bookland' (A. C. Armstrong & Son), of the same agreeable but trifling quality. The topics are such as allow of liberal quotation and abundant literary anecdote, but are not so fresh or varied as in the previous volume. The papers, however, are meant only to while away a moment of idleness, and they attain their unambitious end with commendable lightness of touch.

T. Y. Crowell & Co. have brought out a new edition (the third) of Prof. R. T. Ely's 'Labor Movement in America.' It is unchanged, except for an appendix on the relations of the temperance agitation to the labor movement, a very characteristic piece of writing. "I think," he says, "that absolutely temperate strikers, fleeing all associations with saloons, opening every meeting of any sort with prayer, and holding a prayer-meeting, or some kind of religious service, every day, would inspire an unscrupulous individual or corporate employer with a new terror."

A stout volume, the report of the Commission on Industrial Education made to the Legislature of Pennsylvania, comes to us from Harrisburg. As a repository of facts bearing on the subject it appears deserving of attention, and a large edition has been ordered by the Legislature. Very little has been done as yet by the States to foster industrial education. The Commission cite statutes only of Massachusetts, New York, New Jersey, and Pennsylvania.

The Channing Club of Boston, of which the Secretary is Mr. George Peirce, No. 70 Water Street, has a Committee which reports annually upon the books for boys published during the year. Such as it approves it makes a classified and descriptive list of, and that for 1888 is now before us, and is procurable of the Secretary for a postage stamp. Every title has a brief comment attached. We remark that most of them are as well fitted for girls as for boys, and that not a few were composed and issued with a view to adult reading—for example, Prof. Masson's 'Story of Mediæval France,' and Tolstoi's 'The Long Exile.'

We are glad to see a second edition, enlarged, of Prof. B. G. Wilder's wholesome 'Health Notes for Students,' a volume for the side-pocket (G. P. Putnam's Sons). Among the "Aphorisms" at the beginning, we find this from Prof. Goldwin Smith, which has a cis-Atlantic validity: "The mania for athletics in England seemed to me to have perverted, so far as a good many of the students were concerned, the objects of the University, set up a totally false standard of excellence, and almost misdirected the aim of life."

A translation of the Swiss Constitution, by Prof. Albert B. Hart of Harvard College, has been added by D. C. Heath & Co. to their "Old South Leaflets." Other European constitutions will follow, and some representative American, like that of Ohio, which has already been printed in the above series.

In a rather untidy pamphlet, with rough and quite needless sketches by M. Gorguet, a French musician who calls himself "Benedictus" has collected the strange native airs performed in Paris during the Exhibition of last summer. Among the exotic tunes written out in 'Les Musiques Bizarres à l'Exposition' (Paris: Hartmann; New York: F. W. Christern), are airs of Javanese, Japanese, Algerian, Annamite, Persian, and Rumanian origin. There are a dozen in all, of which perhaps the most curious is the famous "Danse du Ventre."

M. Auguste Vitu continues the steady collection of his theatrical criticisms from the *Figaro*, and the latest volume of 'Les Mille et Une Nuits au Théâtre' is the seventh (Paris: Ollendorff; New York: F. W. Christern). It extends from January, 1879, to March, 1880, and the most important play criticised is "Daniel Rochat." There is an interesting and learned excursus about the origin of "Ruy Blas"; M. Vitu does not seem to have discovered the likeness of the fundamental situation of Hugo's play to that on which the "Lady of Lyons" is based. A glance through his pages shows that the present sterility of the French drama had begun ten years ago: revivals and dramatizations of novels were almost as frequent then as now.

M. Jules Claretie, a dramatist himself, and now the director of the Comédie-Française, contributes a pleasant preface to a little collection of puppet-plays, 'Le Guignol des Champs-Élysées,' by MM. Adolphe Tavernier and Arsène Alexandre (Paris: Delagrave; New York: F. W. Christern). The ten tiny dramas herein contained are adapted for performance by puppets like those familiar to us in Punch-and-Judy shows and animated by the human thumb and fingers—a form of puppet capable of far more humorous acting than the marionette manipulated by wires from above. The French Punch-and-Judy show is not confined to one monotonous drama; it has a varied repertory, sometimes calling for two operators, that four figures may appear at once. The plays in the present volume are a little literary and less pantomimic than those actually acted in the best of the *guignols* in the Champs-Élysées; but they may be recommended to the American juvenile amateur. The illustrations have one fatal defect: they are illustrations of the plot as literature; they are not illustrations of puppets in a puppet-show, as were the unequalled sketches in which George Cruikshank once explained the British Punch-and-Judy.

The third volume of the *Forschungen zur Deutschen Landes- und Volkskunde*, edited by Prof. Dr. A. Kirchhoff of Halle, is lately issued. It contains essays by Borggreve, on the dis-

tribution and value of the more important trees of Germany; by Jäschke, on the Meissnerland between the lowlands of the Werra and the Fulda; by Burgkhardt, on the Erzgebirge in their anthropological relations; by Bezzenberger, on the Kurish lowland and its inhabitants; and by Krones, on the German settlements in the Eastern Alps. The essays are all of serious and thorough character, but are not well provided with maps, diagrams, and views. Dr. Kirchhoff is also editor and in part author of *Länderkunde des Erdtheils Europa*, in which several competent geographers coöperate with him. Several finely illustrated parts have appeared. The work appeals to a highly intelligent circle of readers.

Prof. Georg Gizycki of the University of Berlin has translated, with the author's permission and revision, five ethical discourses by William M. Salter: 'Moralische Reden' (Leipzig: W. Friedrich).

A new sixteen-page periodical will be launched directly in Boston, by Benjamin R. Tucker, called *Five Stories a Week*. The stories will be short and from writers of all countries.

Garden and Forest for March 12 contains a notable bibliography of landscape-gardening in English, French, German, and Italian, by Henry Sargent Codman of Brookline, Mass. It has been prepared with the aid of the library of the British Museum, the National Library in Paris, and of other public and private libraries, and fills nearly five pages of *Garden and Forest*. It begins with Bacon's essay "Of Gardens," 1625. The second work is French, 1638. Milton's 'Paradise Lost,' Book iv., 1667, stands fourth on the list. Walpole has several entries. Rousseau contributes from the 'Nouvelle Héloïse.' Loudon cuts a great figure; Downing likewise, from 1841 on. Other American names than the latter pioneer's are H. W. S. Cleveland, Wilson Flagg, F. L. Olmsted, R. M. Copeland, Charles Follen (the younger), Donald G. Mitchell, etc. The list merits separate publication, and perhaps will get it after the present issue of it has served its purpose as a proof-sheet.

From last year's *American Field* Dr. R. W. Shufeldt has reprinted in a brochure a series of popular articles, 'Remarks upon Extinct Mammals,' with illustrations of the skeleton and some restorations from the author's own pencil. They make a convenient grouping.

Profs. W. B. Scott and Henry F. Osborn of Princeton have reprinted from the Transactions of the American Philosophical Society their memoir, 'The Mammalia of the Uinta Formation,' descriptive principally of a collection made by the Princeton Scientific Expedition of 1886 in the Bad Lands of the White River, northeastern Utah. Prof. Scott leads with an exhibition of the geological and faunal relations of the Uinta Eocene formation, in comparison with the Bridger and White River basins particularly. Prof. Osborn reports utter confusion in the nomenclature, both foreign and American, of the Eocene Perissodactyla, which include the interesting series of the many-toed horses. Five full-page lithographic plates accompany the text.

Mr. A. F. Bandelier has been publishing in the New York *Belletristisches Journal* since the new year a serial story, "Die Kö-Sha-Re," illustrative of the life of the Pueblo Indians of New Mexico. The rôle of novelist is somewhat new for this scholar, but it cannot be said that he is going beyond his last. In fact, no one is so competent as he to attempt this portrayal. The *Journal* has just entered its thirty-ninth volume, under the editorship of Dr. Julius Goebel. Its range is wide, from politics to music, literature, and current events. The form of the paper is inconveniently large, judged by American standards, and in the finer type the Gothic letter becomes sufficiently trying.

Anglia, entering upon its thirteenth volume, loses the editorship of Prof. Wülker, leaving Dr. Ewald Flügel in sole charge. To the quarterly issue it is intended to add a monthly critical paper having special reference to American literature, and the first number will appear about April 1. This review department should not be overlooked by American publishers whom *Anglia* is capable of serving. The magazine is issued at Leipzig.

Armenia is the subject of a valuable paper in the *Scottish Geographical Magazine* for March, by Col. M. S. Bell. In the course of an account of a journey through that country he points out the most available railway routes by which it may eventually be connected with the Mediterranean and Black Sea. His observations also led him to believe that Russia, which was then completing military roads from the Caucasus to the Turkish frontier, could easily occupy Armenia in three weeks, and that her ultimate approach to Constantinople may not impossibly be from this direction. The Turkish army which was being collected to oppose this advance, he characterizes as "little better than a military mob." He adds, in words confirming somewhat similar impressions of Mr. Curzon in Khorassan, that the humanity shown by Russia to her prisoners of war has made a lasting impression upon the Turkish soldiers, many of whom, in consequence, "expressed themselves as ready to be made prisoners of war rather than to fight" under their present conditions. While censuring the British indifference to the sufferings of the Armenians, notwithstanding the treaty obligations of the Government to see that certain reforms were carried out, he pays the highest tribute of praise to the American missionaries, who, by their educational and religious work and by their "exemplary and honorable lives, [are] introducing the elements of a higher civilization among both Turks and Armenians." Mr. J. Abercromby describes the once famous "Wall of Derbend," which stretches from the Caspian westward some twenty-five miles. Tradition attributes its construction to Alexander the Great, and says that it formerly extended to the Black Sea. The best authorities, however, believe it to have been built in the sixth century by Khosroes I., a contemporary of Justinian, "with the object of checking the incursions into Persian territory of the Khazars from the north."

— A writer in the March *Macmillan's* discusses the matter of the choice of titles for novels with a good deal of interesting literary detail. Authors differ very much in this faculty of naming their offspring, though the fortune of a book is often materially affected by their happiness in the selection. Some choose the title first, as Gautier, who announced 'Le Capitaine Fracasse' thirty years before composing the story; Dickens, too, was ill at ease and could not go on smoothly with his tale until the title was ready, though he sometimes changed it at the end. On the other hand, readers of Wilkie Collins will remember how hard he strove for the title of 'The Woman in White' after the novel was completed. Historically the hero first gave the name, as in 'Tom Jones'; then sprang up the name of the locality, as in 'The Castle of Otranto' and its numerous brood, down to the most successful of such titles, Victor Hugo's 'Notre Dame.' Historical novels of the best sort, the writer observes, do not take names from the period or the great personages: we find rather 'Quentin Durward' and 'The Three Musketeers' as typical successes in this department. 'Kenilworth' was Constable's title, which is less good than 'Cumnor Hall,' but to Constable we owe 'Rob Roy' and 'Redgauntlet,' two of the best of Scott's always happy names. The proverb form, 'Red as a Rose Is She,' and the interrogative form, 'What Will He Do with It?' are very properly set down as poor, being unsatisfactory and plainly sensational. The best title is that which does not disclose the story or reveal its leading character or topic, but suggests a real invention; among the most excellent, for example, are 'The Scarlet Letter' and 'Wuthering Heights.' In plays a different rule would seem to hold, possibly because Shakspere's greatest plays are called by the hero's name. Titles for long poems are, perhaps, the most difficult of all, and the failure of modern epics has been foreshadowed by the dismal failure of their names. 'The Idylls of the King' is good, but it is an evasion of a title, in fact.

—A recent instance of library cataloguing is worthy of notice from several points of view. This is the 'Alphabetic Catalogue of the English books in the Circulating Department of the Cleveland (Ohio) Public Library,' a quarto of some 1,400 pages. A less cumbersome title for the work might have been preferred, certainly, as a matter of taste, yet an examination of the limitations observed in its construction vindicates its truthfulness. The successive developments in library administration and coöperation from year to year are not without their influence upon the prevailing types of library catalogues. Thus the great catalogues of Mr. Cutter and Mr. Noyes, begun as they were before the completion of Poole's Index, and giving exceptional space to analyzing the contents of volumes of essays, periodicals, etc., are of extraordinary service. Yet no catalogue now would index the contents of periodicals at so great length, and thus duplicate the work of Poole's Index. The size, moreover, of a library has some important bearing on the type of catalogue to be chosen, as have also the character and comparative rarity or commonness of the books composing it. Taking all the conditions into account, Mr. Brett, in deciding on the details of a catalogue for this library of 58,000 volumes (about 54,000 when the printing was begun), appears to have chosen wisely. A catalogue of the Reference Department had already been made, in 1883, on the alphabetico-classed plan of the Brooklyn Library. In this one, however, the dictionary catalogue is adopted as the type (author, title, and subject in one alphabet); the classification is that of the Dewey system; and the catalogue entries are made on the basis of Cutter's Rules. Several attempts have been made within the past few years to fix upon a standard size of page for a library catalogue. This is a question which, if any proper proportion be observed, holds a very intimate relation to the other question of the size of the library and the consequent number of pages required. Mr. Brett's page is undeniably large, though certainly not too large if the thickness of the book be considered; yet we can but think that he would have modified his plan to advantage, particularly when the future policy of the library as to catalogues is considered, if he had been willing to forego the entry of contents of books in so many instances. No one can doubt the serviceableness of this kind of information; and yet the question of unnecessary duplication has become a practical one here, as in the

case of the periodicals included in Poole's Index. It is possible, of course, to discriminate in this matter. Thus, it is hardly worth while, in each one of the many library catalogues all over the country, of which this may properly be taken as a type, to devote more than two columns to minutely enumerating the contents of Daniel Webster's works, when each library may number among its works of reference the Brooklyn Catalogue, which has done this at length. On the other hand, the similar analysis made in the case of Tolstoi's works serves a really useful purpose, since not so obviously accessible elsewhere.

—*Le Droit d'Auteur*, the official organ of the Bureau of the International Union for the Protection of Literary and Artistic Works, has completed its second year. The treaty for the creation of this important Union was signed at Berne, Switzerland, September 9, 1886, and went into force on December 5, 1887. Its sixteenth article provided for the organization of an international office for the collection, arrangement, and distribution of information relative to the protection of the rights of authors over their literary and artistic productions. It also provided that the information so obtained should be published in a periodical to be printed in the French language. With commendable promptness, the first number appeared on January 15, 1888, and regularly, on the 15th of each month since, there has been issued a thin number of this valuable journal. Typographically it presents an attractive appearance, with a page somewhat larger than that of the *Nation*, and also of three columns, but with larger type. The contents is divided into two parts, "official" and "unofficial." Into the first division falls anything directly relating to the International Union, the text of the treaty, and articles commenting on or explanatory of its provisions, together with the texts of the more recent copyright laws of various countries; while the unofficial portion contains a variety of articles of interest and value in relation to literary or artistic property. Notable copyright decisions rendered in European courts are printed at length, with comments, and there is a bibliographical section in which books on copyright are reviewed and articles in current journals noticed.

—Of contributions of more than usual importance published in the two volumes, may be mentioned an anonymous series on the retroactive clause in the international treaty; three papers analyzing the different articles of convention to determine the legal status of each, from the very competent hand of Prof. d'Orelli of Zurich, who was one of the framers of that document; and a third series of articles, also unsigned, on the registration of titles and the deposit of copies. In the two years which have slipped away since the formation of the Union, but two additional countries have been admitted into it, namely, the Grand Duchy of Luxembourg, May 23, 1888, and the diminutive principality of Monaco, May 30, 1889. Of more importance is the formation of a similar union among the States of South America. An international treaty for the protection of literary and artistic property, modelled after the Berne Convention, was signed on January 11, 1889, by the Argentine Republic, Bolivia, Brazil, Chili, Paraguay, Peru, and Uruguay, an occurrence which the United States delegates to the Pan-American Congress might make a note of, in view of the fact that our Congress has placed copyright upon the list of subjects for discussion at the present Conference. The Director of the International Union is also the editor of the official journal, and the duties of this position have been acceptably performed by Mr. Henri Morel, formerly President of the Federal Assembly of Switzerland. We should be glad to see this excellent journal widely distributed in the United States, and doubt not that it would have good results in helping to bring about the much-desired international copyright law.

—A package of private papers belonging to Alexander Hamilton has been lately brought to light in a loft of the Treasury Building at Washington. The greater part of these are declarations, pleas, etc., filed in the Supreme Court of this State during the years 1785 and 1786. Some of these bear the endorsement of Aaron Burr, calling on Hamilton, as defendant's attorney, to plead in twenty days or permit judgment to be taken. Besides these and other legal papers, are a few letters addressed to Hamilton, requesting his professional services. The most interesting of them is one dated Charleston, S. C., February 27, 1786, from Mr. Charles Goodwin, who encloses a letter of attorney authorizing Hamilton to collect a debt due from Barent Roorbach, and a penal bond upon which the indebtedness arose. This bond, executed by Roorbach (who is styled "Captain of the First Battalion of Delancey's Regiment") on the 12th day of March, 1782, "and in the twenty-second year of his Majesty's Reign," required the payment of a certain sum of "good and lawful money of Great Britain" to Salina, Countess Dowager of Huntingdon, in the penalty of a certain larger sum. Charles Goodwin of "Charlestown," attorney-at-law, was joined as surety, and payment in full had been made by him. He writes to Hamilton: "I would wish you to make an Application to him by letter first & as the suretyship I entered into for him was for a Negro boy he bought here, if he will give him to me I will take him for the money I have paid [seventy pounds], provided you think him worth it." Mr. Goodwin further says, that although he has not the honor of being acquainted with Hamilton, "yet from your Character I am induced to trouble you," etc. After reading this declaration, Hamilton must have been somewhat chagrined to observe that at the lower left-hand corner of the letter he is addressed as "Wm. Hamilton, Esqr." The same error occurs in the letter of attorney, but the "William" has been cancelled and "Alexander" written above.

THE CONSTITUTION OF 1653.

The Constitutional Documents of the Puritan Revolution, 1628-1660. Selected and edited by Samuel R. Gardiner. Oxford: Clarendon Press; New York: Macmillan. 1889.

Mr. Gardiner has revealed to the mass of English readers the Constitution of 1653. The Instrument of Government which embodies the political ideas of Cromwellian Puritanism has long been accessible to any one who chooses to turn to the Parliamentary history, and has no doubt been read by more than one historical investigator. But Mr. Gardiner's 'Constitutional Documents of the Puritan Revolution' will now, it may be hoped, make the Constitution of 1653 as well known to ordinary students as Magna Charta or the Bill of Rights. His excellent book has scores of claims to notice, but to constitutionalists its chief interest for the moment lies in its bringing into the light of public day the document which, above all others, embodies the ideas of government entertained by the most capable among the Puritan leaders.

To any one who studies the Constitution of 1653 in the light of a lawyer and a politician, the fact soon becomes apparent that the constitutionalism of the Commonwealth differed radically from the sort of government which the course of events and the influence of the Whigs finally established in England. The Instrument of Government is the work of men who, compared with the Whigs of 1689 and their successors, were both Revolutionists and, strange though the expression sounds, Conservatives. In some of its provisions the Cromwellian Constitution anticipates ideas which, as far as they have been realized at all, have found their realization rather in the United States than in the United Kingdom. Some of its provisions, on the other hand, are a revival of Elizabethan ideas. Here, as elsewhere, you are met by the paradox, which pervades the whole history of Puritanism, that the heroes of the Rebellion were at once innovators and conservatives. Their eyes were fixed: they were so much occupied with their hopes of the future and their dreams of the past, that they hardly suited their own time, and were forced ultimately to yield the guidance of England's destinies to men who could adjust their policy to the wants of the day.

Any reader of the Instrument of Government will do well to note its two different sides, and to understand how it is connected, on the one hand with the eighteenth or the nineteenth century, and on the other with the sixteenth. The very framework of the Instrument of Government connects it with modern times. It is the first of those written constitutions of which, since the foundation of the American commonwealth, Europe and America have produced so many. It is, again, an essentially democratic constitution; for its very first article refers indirectly to the "People" in a way utterly alien to monarchical ideas. The Constitution, again, is what Mr. Bryce has happily called "rigid." Mr. Gardiner, indeed, believes that the Instrument of Government was intended by its authors to be not only unchanged, but unchangeable. On this subject his opinion is of such weight as to be almost decisive; but a merely legal critic might be inclined to suspect that Mr. Gardiner has not fully appreciated a distinction which would certainly occur to the mind of any court which might be called upon to interpret the articles of the Constitution. A careful study of their terms suggests that while some "fundamentals," to use Cromwell's expression, embodied in articles 35 to 39, and having reference mainly to religious liberty, were meant to be legally immutable, the other articles of the Constitution could not, indeed, be amended in the way of ordinary legislation, by laws passed by Parliament without the consent of the Protector, but were capable of amendment by bills passed by Parliament and assented to by the Protector. However this may be—and we must again repeat that, to our minds, Mr. Gardiner's opinion is in itself of such weight that its correctness hardly admits of question—one thing is certain: the Constitution of 1653 is marked by a kind of rigidity foreign to the Constitution of England, but characteristic of both the Constitution of the United States and of polities modelled upon it. It is also noteworthy that the Constitution established by Cromwell contains, as regards religious liberty, just such an enunciation of general principles as might form part of those declarations of rights which have appeared in most of the democratic constitutions created during the last hundred years.

The nature and position, again, of the Parliament created by the Instrument is in con-

formity with the democratic notions of to-day. It consists of a single house, which can, except as regards the amendment of the Constitution, pass laws of its own authority without the necessity for obtaining the assent of the Protector. He can remonstrate, he can slightly delay legislation, but he possesses nothing equivalent to a veto. The Protector himself might fairly be described as a President elected for life: he is not removable; he has large executive powers; he appoints every official of the Government; he is secured a revenue and an army. But he is compelled to act more or less in harmony with a permanent Council, consisting of from fifteen to twenty-one members, who themselves are irremovable, except for misconduct, and who, when a vacancy occurs, are nominated by the combined action of Parliament and the Protector. The Council, moreover, form the body which elects succeeding Protectors. It is hardly fanciful to find in the Council a certain vague likeness to the American Senate. It is assuredly not fanciful to trace in the Constitution of 1653 marked points of resemblance with the institutions of the United States.

Under the first Constitution of the Protectorate, the Constitution becomes, in England as it is in America, the supreme law of the land; all the authorities which it creates—Protector, Council, Parliament—derive their powers from its articles; the Council, as has been said, distantly resembles the Senate; the Parliament bears a striking resemblance to Congress; the whole polity is pervaded by the influence of the doctrine to which Montesquieu, a century later, gave world-wide currency under the name of the "separation of powers." If the Instrument of Government had continued in force, that blending of the executive and the legislature which is accomplished in modern England by the creation of a Parliamentary Cabinet, would have been impossible, and the Parliament of England would, like Congress, have remained a law-making body of limited powers, which could legislate but did not pretend to govern. The Protector is a President appointed for life. His powers are greater than those theoretically possessed, and still more than those practically exercised, by President Harrison, but they are of the same kind; for the Protector, like the President, was the real head of a real executive. It is not at all certain that, had a first-rate soldier occupied the position of President Lincoln, his powers would have fallen much short of the authority conferred upon Cromwell in 1653. It has been said with considerable truth that an American President is a copy of an English King in the time of George the Third; he was meant to exercise, during his tenure of office, all the powers which, in the opinion of Englishmen, could be rightly exercised by an English King. It is not untrue to say that the Protectorate was, so to speak, a copy of the English Kingship during the sixteenth and seventeenth centuries. The Protector was endowed for life with the prerogatives which the Puritan leaders believed rightly to belong to an English King, for it must always be remembered that the original aim of the Puritan movement was, not to curtail the constitutional prerogatives of the crown, but to prevent the encroachments of despotism, and to insure that the royal prerogatives were used for the benefit of the nation. In the earlier stages of the conflict with Charles, no one maintained that the King's legal prerogatives were too great, but that, under the advice of bad Ministers, he both exceeded his legal powers and used his prerogatives for the destruction of the nation. Here, however, we come across the conservative, we might almost say the reactionary, side of the Puritan Revolution.

To Puritans, the ideal of an English monarch was Elizabeth. To understand this, we must remember that the great Tudor Queen is known to us in some respects more truly than to the statesmen of the seventeenth century. Her vanity, her dishonesty, her parsimony, and her meanness have all been unfolded to us by the diligence of inquirers who, in their zeal for research, are too prone to delight in the discovery of small facts while neglecting to recognize large truths. To the Puritans, who had suffered under the incapacity, the selfishness, the narrowness, the treachery, and the stupidity of the Stuarts, and who knew that Charles at his best could not understand the spirit of Englishmen, Elizabeth naturally became a model ruler; she was the Queen who had defeated the Armada, and who had placed England at the head of the Protestant interest. She was the Queen who, with all her faults, could, at a crisis, give up her whims in deference to the demand of the nation, and who, like her father, while determined to be a strong ruler, felt that the support of Parliament added to the strength of the Crown. The aim of the men who framed the Instrument of Government, therefore, was to place at the head of the State a man who, under the articles of the Constitution, should exercise for life the prerogatives of Elizabeth, and exercise them in accordance with both the interest and the will of the nation.

The constitutionalists of 1653 had not the least idea of creating a ruler who should reign and not govern. The powers conferred upon the Protector are ample. He is provided with an army and with a fixed revenue; he possesses even a legal power of temporary legislation. He is surrounded, however, by a council which undoubtedly was meant to play much the part of the Privy Council at the time when the Privy Council formed, so to speak, the administration. But if the Protector is not intended to be the servant of Parliament, neither is he intended to dispense with the advice of Parliament. The Constitution establishes a "triennial" Parliament, *i. e.*, a Parliament which must meet once in every three years, and which, during the first five months of the session, cannot be prorogued against the will of Parliament. The Protector, in short, is intended to be exactly such a strong and wise monarch as was Elizabeth—at any rate in the imagination of the men who detested the Stuarts. The Protector governs, but he governs with the aid of a Council composed of experienced statesmen. The Protector rules the State, but he is compelled to hear the voice of Parliament. The Protector can make ordinances, but he cannot legislate. He is, in short, not a constitutional King in the modern sense of that term, but a true ruler, who, like the best English Kings, governs in harmony with the Houses of Parliament because he, no less than the Houses, represents the nation.

Nor are the main points in which the written Constitution of 1653 differs from the unwritten Constitution as it existed under Elizabeth so vital as they might at first sight appear. Let it be granted, in deference to Mr. Gardiner's opinion, that the Constitution was legally unchangeable; still, this element of immutability was in reality no novelty. It may well be doubted whether any lawyer or statesman of the sixteenth or seventeenth century would have admitted to the full the now acknowledged authority of Parliament (including in that term the Crown) to alter the foundations of the English polity. The maintainer of the dogma that the English Constitution recognizes no fundamental laws, would at any time prior to the Revolution of 1689 have placed himself in conflict not only with public opinion, but very possibly with the law of the land as interpreted by judges and jurymen. The real though limited toleration secured by the articles of the Constitution for "all who profess faith in God by Jesus Christ" marks, no doubt, a decided advance in ideas of religious freedom. But, after all, the Puritan constitutionalists of 1653 had not progressed much beyond the principles maintained by Elizabeth. They tolerated sects whom the Queen would have condemned, but, to make up, they excluded from their toleration Prelatists, whom she would have favored. Under the rule of the Protector, as under the rule of the Queen no religious liberty is extended to Catholics. We shall not, therefore, go far wrong if we hold that the framers of the Puritan Constitution meant to found a government which should realize the best traditions of the Tudor monarchy.

To modern English Liberals, imbued as they are with the doctrine of Parliamentary sovereignty, the position of statesmen who wish to establish at once a strong Legislature and also a strong and independent executive, appears chargeable with inconsistency. To Americans, who are accustomed to the action of non-sovereign legislative bodies, it easily becomes apparent that the political aspirations of the Puritans were in no sense self-contradictory. Any man, moreover, whether Englishman or American, who examines without prejudice the Constitution of the German Empire, will see clearly enough that modern Germans desire and have, in fact, obtained very much the kind of government which the men who framed the Constitution of 1653 wished to establish in England. The German Emperor could not, if he would, omit to summon the Diet. He could not legislate except by means of laws passed and approved by the Imperial Diet. But the Diet or Federal Parliament, while it is a real Legislature, is nothing like a sovereign power. It could not, if it wished, dismiss Bismarck from office, nor could it restore Bismarck to office if he were dismissed by the Emperor. In Germany, as in the England of Cromwell, Parliamentary government is not identified with government by Parliament. The more carefully, in short, the reader studies the Constitution of 1653, the more clearly he will become convinced that the Puritans aimed at establishing a form of Government radically different from the Constitutional Monarchy or Parliamentary Democracy which the course of events, rather than the foresight of statesmen, has produced or developed in England. The Instrument of Government resembles, from one point of view, the Constitution of the United States. It resembles, from another, the Constitution of England as it existed, or was supposed by the men of the seventeenth century to have existed, in the time of the Tudors. But it has little real similarity to the Constitutional Monarchy founded by the Whigs of 1689 and democratized by the Whigs and Radicals of the nineteenth century.

Remarks and Collections by Thomas Hearne. Edited by C. E. Doble, M.A. Oxford: Clarendon Press; New York: Macmillan. 1889.

HEARNE again! May not one wonder what there is in this Hearne that volume after volume of choosings from his hand-written books of jottings is given to the world, in good paper and print? Indeed, the great number of American reader-folk need not take any shame to themselves if they cannot recall the

man to mind. His editions of Leland's 'Itinerary' and 'Collectanea' (in which what he put there of his own was thought, by some, to be better than his much-praised author's) were for English people, and for a generation of them who, with their children and their children's children, are all ghosts. Moreover, Englishmen, in flesh and blood, are nowadays only a few of those who read our tongue; and furthermore, Hearne's Livy and his Younger Pliny and his Justin and Eutropius, which in their day were very good, have been pushed off to darkness and dust a good while since.

Yet, after all, it is not hard to see how this same Thomas Hearne, the assistant keeper of the Bodleian Library, nearly 200 years agone, may be of some account—even of much account—to a considerable class of English people, and to some among ourselves. He was an honest man, a scholar, and an antiquarian; he cherished in his heart "the good old cause," in an age, too, when it was easier than it is now to keep on believing that one family had a right indefeasible, from foolish father to bad son, to rule all others, in at least one country, while the earth shall hold together. He had a strong feeling, too, for "the non-jurors"—the men who chose to lose their places in the Church and in the State rather than take the oaths to what they counted an usurping dynasty.

England has a great many scholarly men, and a great many lovers of old things and searchers for them; and it has, also, a good many who are fain to lay hold of, and hold fast, some one or other broken (and *well*-broken) strand of history flying in the wind and wasting, as that of the turned-out Stuart family, for an example, and are sorry that they do not see the way to fasten it to the moving world, or make the moving world once fast to it. We, too, have men who are, by instinct, antiquarian, and we are not wanting, altogether, in those who profess a sacred liking for the Charles the First that Van Dyke painted, and the Young Chevalier of the songs; and who, in our freedom-nursing American air, maintain for Stuarts and others, selfish, narrow-minded, little-hearted, cruel people, a "right divine to govern wrong," if they wish to govern so, and find their chance.

Moreover, there are many churchmen in both countries who believe the "Erastian" rule of the State over the Church to be no whit more right, and to be to the full as bad, as "sacerdotal" rule of the Church over the State; and that, under the Dutch William and the German Georges, the religiousness of the English people was dulled, and beaten down, and deadened, and that its ways were made coarse and low. To these it seems that, in those times, the worse and wrong had the upper hand in both Church and State, and that the honest, true men—bishops, priests, and laymen—who, having everything snatched from them that greedy and unfeeling hands could tear away, met their fate meekly, and went into it and under it because they ought, have good claim to be righted by true, honest men of after times. So that able scholar, known to every classic man, Prof. John E. B. Mayor, writes: "Perhaps . . . the time has come when one may venture, without offence or loss of intellectual caste, to challenge the vulgar verdict upon the non-jurors, and may at least call upon their censors to name any English sect as eminent, in proportion to its numbers, alike for solid learning and for public as well as private virtues."

Now, at Oxford, about six generations of breathing men behind us, in the "Bodlejan" Library (as he, like a scholar, wrote the name), and while the "rightfu', lawfu' king" was out, and the faithful were non-jurors and at the bottom, was day after day, and year by year, our Thomas Hearne; in the very eye of one of the great political and religious centres of England; misliking things as they were, and those who handled them; hearing, seeing, and writing down. Often he was vexed in his soul; sometimes he took in a mouthful of sweet comfort. So, looking at the days in which he lived, and at the people that he lived among, and at the sort of man that he was, and at what he was about, in his by-times, with his pen and pocket-book, we do not wonder that Englishmen can be found—and a few Americans—to welcome him in print. The rest of us, too, who believe that the gaining of freedom to think and to do is the gaining of something which is worth all price, even though, at first, it should be coupled with unworthy conditions (for these are to be righted in time), can feel for others if they stood by what they saw to be a truth, though, as we look at it, it was a sham.

Our man, we think, was rather picturesque, perhaps. We can make him so to ourselves, as his likeness slowly settles in our minds; and we incline to use some phrase like Klearchus's "ὤφελε μὲν Κῦρος ζῆν!" though not to the spoiling of those still-living words. We may say that we should like an etching of this steadfast, trusty, possibly a little crabbed, "Jacobite" and (half?) "non-juror." There are many chances to one that he was not handsome, or "distinguished"-looking, or well dressed; he may have been ungainly, even rawboned and coarse-skinned; but, being a shrewd man, with eyes quick to watch those about him, and the comers and goers, in times when it was "touch-and-go" with any man of any account, we should like a glimpse of him, caught in a twinkling. His wig might be a little awry; a grim smile might float about his tightened lips as he wrote, glibly, how "that old smooth-booted, self-interested, ambitious, paultry Lancaster" (the Vice-Chancellor of the University—and a Whig, of course) had met a rebuff, or mortification; or his brows might have been knitted, and his teeth set, while he put down, in black and white, what "that sneaking, snivelling" wretch, and his likes, were plotting.

Besides what he saw and heard of living men, and of things at his hand, there are here some curious passages gathered in his scholarly researches among books: altogether, a pouch from which we may take some good things—though not this time.

Five Thousand Miles in a Sledge: A Midwinter Journey across Siberia. By Lionel F. Gowing. D. Appleton & Co. 1890. 8vo, pp. xx, 257. Illustrated.

THIS is a story of a journey from Shanghai by two young Englishmen, who went by the usual route to Vladivostok, and thence sledged it across Siberia. The story is told in a brisk and pleasant fashion, and will entertain many readers. Nothing extraordinary occurred. For Americans the most interesting paragraphs are those in which the author expresses his opinion on the diverse views upheld in regard to the exile system (p. xi.), one of which we quote:

"But the opinion strongly impressed upon the mind of the present writer—an opinion which was completely shared by his companion of the voyage—is, that although Dr. Lansdell has dispelled some erroneous ideas and disproved some false stories in regard to Russia's treatment of her prisoners, political and social, he has been misled into presenting a picture of Siberian prison management which is far too roseate-hued, and which does infinitely more credit to the Russian Government than is deserved. Having first heard, when in the heart of Siberia, of the great and noble work in which Mr. George Kennan had then been so recently engaged, the author cannot omit the opportunity of bearing testimony to the high opinion entertained there as to the unsparing pains which Mr. Kennan had taken to arrive at the truth, and as to the value his work was likely to have in placing before American and English readers a reliable account of the sufferings of Siberian prisoners."

Coming from a personal friend of Dr. Lansdell, and one to whom Mr. Kennan was personally unknown, the above-cited testimony is highly gratifying to all interested in the reform of barbarous penal systems and in the brave and gifted traveller referred to.

Literature and Poetry. By Philip Schaff, D.D., LL.D. Charles Scribner's Sons. 1890.

THE main part of Dr. Schaff's bulky volume is occupied with a history of the great Church Hymns, the Dies Iræ, Stabat Mater, and hymns of St. Bernard, with many translations in English and German which it is interesting to compare with one another, though none of them are successful in rendering the sonorous and direct Latin with real adequacy. A Scriptural interest also governs the remainder of the essays, one of which is devoted to a learned and instructive account of the poetry of the Bible, its forms, characteristics, power, etc. This on the whole is the most valuable of the entire contents. Other essays are upon the English language and the types of universities old and new, and upon Dante. In none of these is there anything specially noteworthy in knowledge or treatment. They are, in fact, elementary studies in their various spheres; but the seriousness which pervades them, and the nearness at all times of a religious spirit, give them a certain distinction which makes an impression on the mind. Literary culture throughout is overborne and not infrequently displaced by the mind of the theologian, to a degree which removes the work as a whole from the department of miscellaneous criticism of literary subjects to that of religion. The spirit is more than earnest, the matter is laboriously set forth, and seriousness takes the place of taste as the arbiter of judgment. This, however, does not materially affect the value of the volume, especially in that portion of it which is devoted to the Church hymns and the Biblical poems; of which we shall hardly find a better account elsewhere.

BOOKS OF THE WEEK.

Abbot, Prof. F. E. The Way Out of Agnosticism. Boston: Little, Brown & Co. $1.

HAVE JUST PUBLISHED:

I.

A Naturalist's Voyage around the World.

JOURNAL OF RESEARCHES INTO THE NATURAL HISTORY AND GEOLOGY OF THE COUNTRIES VISITED DURING THE VOYAGE AROUND THE WORLD OF H. M. S. "BEAGLE." By CHARLES DARWIN. New illustrated edition. With Maps and 100 Views of the places visited and described, chiefly from sketches taken on the spot, by ROBERT TAYLOR PRITCHETT. One vol., 8vo. Price, $5.00.

The object of this edition is to aid the author's descriptions by actual representations of the most interesting places and objects of natural history referred to in them. This has been effected by securing the services of an artist who has visited the countries which Darwin describes.

"One of the most interesting narratives of voyaging that have fallen to our lot to take up, and one which must always occupy a distinguished place in the history of scientific navigation."—*Quarterly Review.*

II.

Djambek the Georgian.

A TALE OF MODERN TURKEY. From the German of Von Luttner, by H. M. JEWETT. Appletons' Town and Country Library. 12mo, paper. Price, 50 cents.

The translator of this romance, the Hon. H. M. Jewett, is the American Consul at Sivas, Turkey. Mr. Jewett's long residence in Asia Minor enables him to testify to the accuracy of its pictures of social and political life. It is mainly a love story, full of interest, with experiences and incidents comparatively new.

III.

A History of Egypt.

FROM THE EARLIEST TIMES TO THE CONQUEST BY ALEXANDER THE GREAT. By F. C. H. WENDEL, A.M., Ph.D. New Volume History Primers. With Maps. 18mo, cloth, flexible. Price, 45 cents.

For sale by all booksellers; or any volume sent by mail on receipt of price.

1, 3, & 5 Bond Street, New York.

A Trip on the Thames with the rising English Humorist.

THREE MEN IN A BOAT.

FYFFE'S HISTORY OF MODERN EUROPE.

8vo, $2.50. The set, $7.50.

HENRY HOLT & CO., New York.

Diary of a Southern Refugee During the War.

By Mrs. JUDITH W. MCGUIRE. Third edition, with corrections and additions. Paper, $1; cloth, $1.50; half Turkey, $2.50.

J. W. RANDOLPH & ENGLISH, RICHMOND, VA.

ORDER IS THE FIRST LAW OF NATURE.

Why have your office papers in confusion, when they can be arranged in a neat, compact manner, always ready for immediate reference?

AMBERG'S

CABINET LETTER FILE

Is recognized by more than 25,000 users, in every part of the civilized world, as the only perfect system of letter filing.

Read what the house of ex-Mayor Grace of New York says, and this is only one of many thousand similar testimonials:

W. R. Grace & Co., New York.—We have used the Amberg Cabinet Letter File for years and consider it the simplest and most serviceable method yet devised for the preservation of letters, papers, etc., for ready reference. The chief merits of the system in our opinion are: (1.) That each letter or document filed can be at the same time classified under some letter or descriptive heading, obviating the need for any endorsement or description on the paper itself. (2.) That each paper is preserved intact and separate, and can be referred to, taken out of the file and reinserted without in any way being mutilated, torn, or disfigured.

Note our proposition. We will send any cabinet selected from our Illustrated Catalogue (a copy sent on application) arranged suitable to the wants of purchaser, he may use it for sixty days, if not satisfactory at the expiration of that time, can be returned at our expense.

AMBERG FILE AND INDEX CO.,

Chicago. 69 Duane Street, New York. London.

Little, Brown & Co.

HAVE JUST PUBLISHED:

Myths and Folk-Lore of Ireland.

By JEREMIAH CURTIN. With an Etched Frontispiece. 12mo, cloth, gilt top, $2.00.

It is believed that this volume is the most valuable contribution which has ever been made to Irish folk-lore. The myth tales it includes were collected personally by the author during 1887 in the west of Ireland, in Kerry, Galway, and Donegal, and taken down from the mouths of men, who, with one or two exceptions, spoke only Gaelic, or but little English, and that imperfectly.

To this is due the fact that the stories are so well preserved, and not blurred and rendered indistinct, as is the case in places where the ancient Gaelic language in which they were originally told has perished.

The Way Out of Agnosticism,

Or, The Philosophy of Free Religion.

By FRANCIS ELLINGWOOD ABBOT, Th.D., author of 'Scientific Theism.' 12mo, cloth, $1.00.

Fifth and Final Volume of Palfrey's History of New England.

By JOHN GORHAM PALFREY. 8vo, cloth, $4.00. The complete set, 5 vols., 8vo, cloth, $18.00; half calf, extra, gilt top, $30.00.

Five Hundred Dollars,

And other Stories of New England Life.

By HEMAN WHITE CHAPLIN. New Edition. 12mo, cloth, $1.00; paper, 50 cents.

The stories embraced in this volume—"Five Hundred Dollars," "The Village Convict," "Eli," "Saint Patrick," "By the Sea," "In Madeira Place," and "The New Minister's Great Opportunity"—have obtained considerable fame, and delighted and amused many readers. Col. T. W. Higginson pronounces the collection "*the best volume of New England stories ever written.*"

LITTLE, BROWN & CO., PUBLISHERS, *253 Washington Street, Boston.*

BOOKS on Linguistics, Archæology, Indians, Ethnology, Science. Catalogue free. A. S. GATSCHET, Box 333, Washington, D. C.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

THE OPEN COURT—A WEEKLY Magazine of Philosophy, Science, and Ethical Religion.—The all-important want of our time is the foundation of a purely ethical religion. This religion must rest upon a scientific basis. Its principles must be derived from the scientific investigation of the facts of human soul-life (PSYCHOLOGY), and the re ations of the world (PHILOSOPHY) and the circumstances of society (SOCIOLOGY) that determine human conduct.

These three topics are discussed in *The Open Court* by the most eminent investigators of Germany, France, the United States, and Great Britain. Correspondence from Continental critics. SPECIMEN COPIES FREE. Subscription one year $2.00. THE OPEN COURT PUBLISHING CO., 173½ La Salle St., Chicago, Ill.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.
NO. 5 WALL STREET, NEW YORK.

E. W. NASH, 80 NASSAU ST., NEW York, has just issued Catalogue 25, relating to America, Local History, Genealogy, etc. Sent to any address on application.

History of the United States.

By HENRY ADAMS. Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. $4.00. Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"It would be difficult to speak too highly of the work. Mr. Adams has exhibited all the qualities of the ideal historian. He is thorough in research, exact in statement, judicial in tone, broad of view, picturesque and impressive in description, nervous and expressive in style."—*N. Y. Tribune.*

Emigration and Immigration.

A Study in Social Science. By RICHMOND M. SMITH of Columbia College. 12mo, $1.50.

Prof. Smith's book is a popular examination of one of the most urgent of present-day problems from historical, statistical, economic, and social points of view, the information being full and exact, and the author's style being a model of terseness and clearness.

Literature and Poetry.

By PHILIP SCHAFF, D.D. 8vo, $3.00.

The essays which make up this volume treat of "The English Language," "The Poetry of the Bible," "The Dies Irae," "St. Bernard as a Hymnist," "The University, Past, Present, and Future," "Dante Alighieri," and other interesting literary topics, revealing throughout the breadth of the author's learning, the acuteness of his critical faculty, and the popular character of his method and style.

"A brilliant contribution to critical and historical literature."—*Brooklyn Times.*

English Lands, Letters, and Kings.

By DONALD G. MITCHELL.

Vol. I.—From Celt to Tudor. 12mo, $1.50.

Vol. II.—From Elizabeth to Anne. (*In press.*)

"A bright, pleasant, chatty record, true to history, and full of useful hints and suggestions."—*Boston Saturday Evening Gazette.*

"A most charming book for lovers of the purest and best literature."—*Hartford Post.*

The Religious Aspect of Evolution.

By JAMES McCOSH, D.D., LL.D. 12mo, $1.00.

An able critique of the Evolutionary doctrine from the standpoint of Christianity.

"One of the best epitomes of the relation of the Creator to his earth, in the process of creation, that have been written."—*Hartford Courant.*

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

"The volume addresses the cultivated tastes of all who love a true poetry. It is the fruit of years of appreciative study of the poet. We owe the author a debt of thanks for giving us this estimate, so careful, so scholarly, so full of true devotion to poetry in its largest meaning."—*Rev. James O. Murray, Professor of English Literature in Princeton College.*

CHARLES SCRIBNER'S SONS,

743-745 Broadway, New York.

The Contemporary Science Series.

Edited by HAVELOCK ELLIS. Most of the volumes will be illustrated, containing between 300 and 400 pp. Others to follow at short intervals. Crown 8vo, cloth, $1.25 per vol.

"The Contemporary Science Series" will bring within general reach the best that is known and thought in all departments of modern scientific research. All the questions of modern life—the various social and politico-economical problems of to-day, the most recent researches in the knowledge of man, the past and present experiences of the race, and the nature of its environment—will be frankly investigated and clearly presented.

NOW READY:

Electricity in Modern Life.

By G. W. DE TUNZELMANN. With 88 illustrations.

"The work is well illustrated, and on the whole it would be hard to suggest how it could be bettered as a brief popular exposition of its subject."—*Scotsman.*

The Origin of the Aryans.

By DR. ISAAC TAYLOR. With numerous illustrations.

A fresh and highly interesting account of the present state of speculation on a much debated historical question.

The Evolution of Sex.

By Prof. PATRICK GEDDES and J. ARTHUR THOMSON. With 104 illustrations and 322 pp.

"A work which, for range and grasp, mastery of material, originality, and incisiveness of style and treatment, is not readily to be matched in the long list of modern books designed more or less to popularize science."—*Scottish Leader.*

Physiognomy and Expression.

By P. MANTEGAZZA, President of the Italian Society of Anthropology. Illustrated.

Prof. Mantegazza is a brilliant and versatile author, and this work has been already translated into several European languages.

The following Writers, among others, are preparing volumes for this Series: Prof. E. D. Cope, Prof. G. F. Fitzgerald, Prof. J. Geikie, G. L. Gomme, E. C. K. Gonner, Prof. J. Jastrow (Wisconsin), E. Sidney Hartland, Prof. C. H. Herford, J. Bland Sutton, Dr. C. Mercier, Sidney Webb, D. Sims Woodhead, Dr. C. M' Woodward (St. Louis, Mo.), etc.

The Uncollected Writings of Thomas De Quincey.

With a Preface and Annotations by JAMES HOGG. 2 vols., 12mo, $3.50.

CONTENTS: Greek Literature—Moral Effects of Revolutions—Malthusian Doctrine of Population—Ricardo's Political Economy—Abstract of Swedenborgianism—Storms in English History—The English in India—On Novels—The Dake Dialect—The English in China—Shakespeare's Text—Suetonius Unravelled—How to Write English—Casuistry of Duelling—The Love Charm—Last Will and Testament—Anglo-German Dictionaries, etc., etc.

*** These Writings are not included in any other Edition of this author.

Ibsen's Prose Dramas.

Authorized translation. Edited by WILLIAM ARCHER. 12mo volumes. Each, $1.25.

Volume I. now ready, containing Biographical Introduction, Portrait, A Doll's House, The League of Youth, and The Pillars of Society. Other volumes to follow shortly.

This series is published by arrangement with the author, and is the first uniform and authoritative edition in English of these noted and much discussed dramas.

NOW PUBLISHED FOR THE FIRST TIME.

The Early Diary of Frances Burney, 1768-1778.

With a selection from her Correspondence and from the Journals of her Sisters, SUSAN AND CHARLOTTE BURNEY. Edited by ANNIE RAINE ELLIS. 2 vols., demy 8vo, $12.00.

This is believed to be the only published, perhaps the only existing, record of the life of an English girl, written by herself, in a century before that which is now in its wane. Such a portrayal of a young English woman and her times would be interesting even if the girl had not been (as was this one) a born author, who lived among men and women more or less distinguished, herself became famous, and was admired by the admired, as well as praised by the common voice.

MADAME D'ARBLAY.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. Seeley, author of 'Horace Walpole and his World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

"A handy book (and as handsome as it is handy), which should make Dr. Johnson's 'Little Burney' as popular with the desultory reader as she has been with literary persons ever since Macaulay wrote his essay."—*St. James's Gazette.*

BY FRANCES BURNEY (MADAME D'ARBLAY).

Evelina; or, The History of a Young Lady's Entrance into the World.

With an Introduction and Notes by ANNIE RAINE ELLIS. $1.40.

Cecelia; or, The Memoirs of an Heiress.

With an Introduction and Notes by ANNIE RAINE ELLIS. 2 vols., each $1.40.

AT GREATLY LOWERED PRICES.

Baedeker's European Guide Books.

Latest Editions always on hand. Illustrated with numerous Maps, Plans, Panoramas, and Views. Unquestionably the very best Guides published.

*** There being no duty to pay on carrying these Guides to Europe, travellers will find it very advantageous to procure them before starting.

*** *The above books sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested.*

MR. KNAPP'S HOME SCHOOL FOR Boys.—Twenty-third year begins Oct. 1, 1889. Mrs. Knapp, Principal; A. M. FREEMAN, A.B., H'd Master.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY, PREPARATORY and Boarding School for Boys.—Boarding-house entirely reorganized; a few good rooms still vacant. For all information apply to WILLIAM EVERETT, Ph.D.

NEW YORK, Syracuse.

MRS. ALFRED WILKINSON'S School for Girls. Reopens September 17, 1890. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.

Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

GERMANY, Berlin.

THE AMERICAN HOME SCHOOL for Young Ladies offers to a limited number the protection and comfort of an American home, together with the chaperonage so necessary to young ladies studying abroad. The best masters in Music, Art, German, and French. Vacation trips to Russia, Italy, France, and through Germany. The school begins its fifth year September 24, 1890. A branch will be opened in Paris at this date also. Applications should be made before July 1. Address for circulars Miss R. I. GILBERT, 161 Lasalle St., Chicago, Ill., or the Principal, Mrs. MARY B. WILLARD, Nettelbeck Str. 21, Berlin, Germany. Mrs. Willard refers by permission to Mrs. Grover Cleveland, and the Hon. William Walter Phelps, U. S. Minister to Germany.

Teachers, etc.

A LADY INTENDING TO SPEND one or two years for study and travel in Europe with her two daughters, would like to take charge of three young ladies. References given and required. Address for particulars, K., care of *Nation*.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality. A. M., care of the *Nation*.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

HOLMES HINKLEY, A.M., 11 EVERETT St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

INDIANA UNIVERSITY SUMMER Outing in Europe. Unique, inexpensive. Best scenery and art of Europe for $400. Address President DAVID S. JORDAN, Bloomington, Ind.

THE SUBSCRIBER WILL RECEIVE at his summer home in South Duxbury on Massachusetts Bay, during July and August, a few boys completing their preparation for College or Institute of Technology. E. A. H. ALLEN, C.E. (R.P.I.), Principal of Friends' Seminary, E. 16th St., New York.

VISITING GOVERNESS, SKILLED in English, Mathematics, and Languages, has now and for next winter good hours to fill. Address Box 49, Purdy's, N. Y.

School Agencies.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 120½ South Spring Street, Los Angeles, Cal. 100-paged Agency Manual free. EVERETT O. FISK & Co.

Wants.

GERMAN GOVERNESS WANTED.—Can any lady recommend first-rate Governess to take entire charge of a young lady of fifteen and a boy of nine during their mother's three months' absence, and to remain in the family afterwards? Must have highest personal references; first-rate German and French; perfectly qualified to teach arithmetic and science; also elementary Latin and algebra desirable. Good musical knowledge, to superintend practising. Highest salary to suitable person. No replies to agencies. Apply to G. D., care of W. B. CLARKE & Co., 340 Washington St., Boston, Mass.

TEACHERS WANTED.—FOR ENSU- ing school year, two masters for a first-class military school in Ohio, one for German and one for sciences principally. Salaries, $1,000 and living. Must have had successful experience in boys' boarding school. SCHERMERHORN'S TEACHERS' AGENCY, 3 East 14th St.

WANTED—A TEACHER OF SCI- ence (lady) for next September in a girls' school preparatory for college. Salary begins at $1,000. Must be a college graduate of experience. Address L. M., care the *Nation*.

Professional.

ONE-HALF INTEREST AND PRIN- CIPALSHIP in a large and prosperous Collegiate Paeparatory School for Boys, situated in Milwaukee, for sale at reasonable price and on easy terms. Address Mr. WM. A. GILES, 2537 Michigan Avenue, Chicago.

ORDER IS THE FIRST LAW OF NATURE.

Why have your office papers in confusion, when they can be arranged in a neat, compact manner, always ready for immediate reference?

AMBERG'S

CABINET LETTER FILE

Is recognized by more than 25,000 users, in every part of the civilized world, as the only perfect system of letter filing.

Read what the house of ex-Mayor Grace of New York says, and this is only one of many thousand similar testimonials:

W. R. Grace & Co., New York.—We have used the Amberg Cabinet Letter File for years and consider it the simplest and most serviceable method yet devised for the preservation of letters, papers, etc., for ready reference. The chief merits of the system in our opinion are: (1.) That each letter or document filed can be at the same time classified under some letter or descriptive heading, obviating the need for any endorsement or description on the paper itself. (2.) That each paper is preserved intact and separate, and can be referred to, taken out of the file and reinserted without in any way being mutilated, torn, or disfigured.

Note our proposition. We will send any cabinet selected from our Illustrated Catalogue (a copy sent on application) arranged suitable to the wants of purchaser, he may use it for sixty days, if not satisfactory at the expiration of that time, can be returned at our expense.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. Clark, 34 Park Row, N. Y. City

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of The Nation has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in The Nation.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

Henry M. Stanley,

perhaps the foremost living American in pluck, endurance and achievement, has just completed successfully his last and greatest undertaking, the rescue of Emin. The story of his adventures and discoveries, "In Darkest Africa," will be published shortly by Messrs. Charles Scribner's Sons. It will be a thrilling and instructive narrative. Stanley is entitled to the fruit of his labors, and this the American sense of justice will secure to him by purchasing

"In Darkest Africa"

the only book in which he will have a personal interest. Intelligent and well-meaning people will not buy the bogus "Stanley books" offered under false and misleading representations, to no one of which has Stanley contributed a line. They will wait for the only authentic book on this subject, written by Stanley himself, and in buying it they will put into his pocket a share of the proceeds of its sale. "In Darkest Africa" will be in two octavo volumes, replete with maps and amply illustrated from Mr. Stanley's own photographs and sketches. Price $3.75 per volume in cloth. Sold only by subscription. Look on the title page for the imprint of

Charles Scribner's Sons

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S

Breakfast Cocoa

Is absolutely pure and it is soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.

Sold by Grocers everywhere.

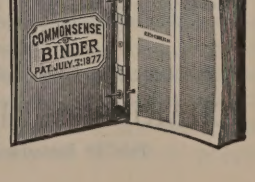
W. BAKER & CO., Dorchester, Mass.

9% What is better than a first Mortgage on improved property in a growing city. Loans placed at nine per cent., having for security property that is worth at least three times of amount loaned. Large business in this line, with years of experience gives my clients best advantages. Correspondence solicited. Best references furnished.

J. C. BROCKENBROUGH, Jr., Tacoma, Washington.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.



Charles Scribner's Sons'

NEW BOOKS:

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

The scene of this story is Arkansas in the last year of the Civil War, when the country was infested with plundering and murderous "gray-backs." The character portraiture and the pictures of the adventurous life of the time are given with strength and vividness. The movement of the story is rapid, and the reader's interest is maintained throughout.

THE PROPOSED REVISION OF

The Westminster Standards.

By W. G. T. SHEDD, D.D., Professor in the Union Theological Seminary, New York. 12mo, paper, 50 cents *net*.

Dr. Shedd's pamphlet gives, with all of the argumentative force of which he is the acknowledged master, the conservative, anti-revision view of all phases of this great question.

The Negro Question.

By GEORGE W. CABLE. 12mo, 75 cents.

The address which Mr. Cable delivered in reply to the memorable speech by the late Henry W. Grady is the leading feature of this volume, which also contains the "open letters" by Mr. Cable on various aspects of this timely and important subject.

History of the United States.

By HENRY ADAMS. Vols. I. and II. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. $4.00. Vols. III. and IV. THE SECOND ADMINISTRATION OF THOMAS JEFFERSON. $4.00.

"It would be difficult to speak too highly of the work. Mr. Adams has exhibited all the qualities of the ideal historian. He is thorough in research, exact in statement, judicial in tone, broad of view, picturesque and impressive in description, nervous and expressive in style."—*N. Y. Tribune.*

Emigration and Immigration.

A Study in Social Science. By RICHMOND M. SMITH of Columbia College. 12mo, $1.50.

A popular examination of one of the most urgent of present-day problems from historical, statistical, economic, and social points of view.

"One of the most thoughtful and useful books of the year. The political and social effects of immigration are carefully studied."—*N. Y. Sun.*

Literature and Poetry.

By PHILIP SCHAFF, D.D. 8vo, $3.00.

The essays which make up this volume treat of "The English Language," "The Poetry of the Bible," "The Dies Irae," "St. Bernard as a Hymnist," "The University, Past, Present, and Future," "Dante Alighieri," and other interesting literary topics, revealing throughout the breadth of the author's learning, the acuteness of his critical faculty, and the popular character of his method and style.

"A brilliant contribution to critical and historical literature."—*Brooklyn Times.*

The Religious Aspect of Evolution.

By JAMES MCCOSH, D.D., LL.D. 12mo, $1.00.

An able critique of the Evolutionary doctrine from the standpoint of Christianity.

"One of the best epitomes of the relation of the Creator to his earth, in the process of creation, that have been written."—*Hartford Courant.*

The Nation.

NEW YORK, THURSDAY, MARCH 27, 1890.

The Week.

AFTER eight years of misdirected effort, Senator Blair has met final and condign defeat in his endeavor to pass his "Bill to Promote Mendicancy." At first nearly everybody was in favor of the bill. It was said that the South had been impoverished by the war. It was shown that illiteracy shadowed large sections of the Southern States. The reasoning was short and simple. It appealed to the magnanimity of the North. The fact that illiteracy growing out of the conditions of slavery—the illiteracy of plantation-hands already past the school-age—was beyond cure, a thing to be accepted and made the best of, was not at first perceived. The fact that if the South had been impoverished, she had had nearly twenty years in which to repair the ravages of war, with incomparable resources of soil and climate, forests and mines, was likewise unheeded. The North was rich. Illiteracy was a common enemy. Nothing was wanting but dollars to expel it from the land. The Federal Treasury had dollars in abundance. Therefore, let us pour out $77,000,000, and have done with it. The syllogism seemed perfect. Public opinion at the outset was strongly for the Blair bill.

By and by the facts became known that the South had really recovered in a material point of view from the disasters of the war, that she was not stinting her contributions to public schools, that she saw the need of educating the black children as well as the white, and that the old score of illiteracy, the inheritance of the slave period, could be wiped out only by the passage of time. When these things became better known and appreciated, the public mind was ready to receive impressions touching the general policy of appropriating Federal money to the States for State purposes and objects. When the discussion turned upon policy, the Blair bill was doomed. The more this subject was examined, the less support was given by the press and the fewer votes were obtained in Congress. The conviction gained ground everywhere that to pour money out of the treasury for local education was to change insidiously our form of government, and weaken the principle of self-reliance which is the strong fortress of all our institutions. Latterly the fact has come out that the agricultural classes of the South are really more prosperous than those of the North, and better able to pay local taxes. Cotton pays better than corn, and is better able to support common schools. Mr. Blair in one of his recent speeches said that if his bill did not pass this present Fifty-first Congress, he would abandon the Republican party. Perhaps this threat had some influence in securing the defeat of the measure. We are sure that the Republican party is stronger without the Blair bill than with it. We suspect that it will be stronger without Mr. Blair than with him.

The distinguishing and decisive feature of the new tariff bill (we speak of the first edition) is the taxing of raw materials. We find this in the increased duties on wool and hops, in the new duties on hides, raw silk, silver, lead ores, zinc, tin-plate, and cabinet woods, and in the retention of the duties on coal and iron ores. This proceeding runs counter to the course of public opinion as we read it. It runs counter also to the old theory of protection, which aims at the building up of new industries. Wool-growing, hop-growing, cattle-growing, iron and coal-mining cannot be considered infant industries in this country, if indeed we have any infant industries now. But, on the other hand, the protection of raw materials is a natural evolution of the protective idea, and one which cannot be resisted by a party that makes protection a political issue. As early as 1824 the wool-growers saw the vantage-ground that their votes gave them in the distribution of tariff favors, and they said then what they have been saying ever since: "Give us our share, or down comes your system. Our arms are on the pillars of your temple, and unless you want to see the whole thing in ruins, please to put wool on the list of things protected." That is what they are saying now in louder tones than ever. No wonder that other producers of raw materials have learned the lesson. And thus it has come about that the producers of copper, lead, iron ore, hops, barley, lumber, and finally hides, have joined the procession. They heap contempt upon the idea that anything is a raw material upon which human labor has been bestowed. What is raw material to one man, they say, is the finished product to another; in this they are right.

The inevitable consequence of the adoption of this principle in the framing of tariffs is a conflict of interests. It has broken out with something like fury in the hide-and-leather trade. For nearly twenty years hides have been on the free list, with great resulting advantages to the tanning and leather industries and the boot-and-shoe trade. Our exports of leather have risen from nearly nothing to upwards of $10,000,000 per annum. Now it is proposed to put a duty of 1½ cent per pound on raw hides at the instigation of the ranchmen and the cattle syndicate, and this at the very time when we are negotiating with the South Americans for more liberal trade arrangements. Our imported hides come principally from South and Central America and the East Indies. They amounted in value to $18,370,973 in 1887, the chief sources of supply being as follows:

Argentine Republic	$2,246,674
Uruguay	2,101,896
U. S. of Colombia	1,314,518
Mexico	959,195
Chili	473,450
Venezuela	7 1 430
Brazil	852,690
Cuba	263 688
East Indies, direct	1,317,220
East Indies, via England	3,438 838
Canada	357,176

The imports from South and Central America alone amount to more than $10,000,000, and, as we have said, we are at this moment negotiating with those countries for some enlargement of trade facilities. All at once, and without warning, comes this proposition to put a tax ranging from 10 to 35 per cent. ad valorem on this article of South American export, this raw material of one of our greatest industries. It is almost incredible, and yet is not a whit more unphilosophical than the existing duty on wool, and is considerably less ad valorem than the present duties on wool, not to speak of those proposed in the new bill.

The *Tribune* made the mistake of worshipping the wrong tariff bill on Friday. This is a kind of mishap that a muzzled, office-holding organ is always liable to. It gets hold of something that is labelled official and it bows down at once to the label. It may be any Birmingham idol, or even an old shoe—it makes no difference. The tariff bill it published and endorsed on Friday contained, among other things, a duty of a dollar a pound on raw silk, than which nothing could be more disastrous to a very highly protected industry. The very suggestion of a duty on raw silk threw the silk-manufacturers into a spasm, and the President of their Association posted off to Washington to wrestle with the Committee on Ways and Means to get the duty cast out of the bill, and he succeeded in doing so. The *Tribune* will bow down to the bill that leaves raw silk free as readily as to one that taxes it a dollar a pound. The same may be said of the duty on hides. The *Tribune's* bill had hides dutiable at 1½ cent per pound. New England was convulsed by this application of the Chicago platform to one of her leading industries. Off goes the duty on hides. Does this make any difference with the *Tribune's* loyalty? Not a jot. It is just as much in favor of free hides as of taxed hides, and of taxed hides as of free ones, if you only put on the right label. It is as easily satisfied as Mark Twain was with his bottle of wine when the waiter brought him the wrong brand, and then made it right by removing the freshly pasted label with his thumb and putting on another before his eyes.

When Señor Peña made his argument for free trade between the American republics in the Pan-American Congress the other day, and declared that the tariff of this country was the effectual barrier to the *enlargement* of our foreign trade, the American delegate

who replied to him thought it sufficient to say that 87 per cent. of our imports from South America came in free of duty. This is, of course, the official answer put forth by the Department of State. How perversely it misses the point is very clear. The Spanish-Americans say that they want us to buy their copper and wool and sugar and lead ores, and that there is no chance of an enlarged trade if we do not. What our reply amounts to is, that we have chosen to restrict our buying to coffee, fruit, rubber, woods, and dye-stuffs, and that we put no tax on those articles. The reply does not touch the complaint in the slightest degree, since the subject under discussion is not the present trade, but an increase of trade. And then we talk patronizingly about our intention to meet the difficulty by means of reciprocity treaties, just as out comes the new tariff bill putting a tax on two South American products which were free before—hides and lead ores. If Mr. McKinley has his way, that 87 per cent. will be lowered very rapidly. Besides, Señor Peña's argument, we understand, took up the question of selling as well as buying, and maintained that our tariff incapacitated us from competing with Europe in the South American markets. That such is the fact, many of the foreign delegates have repeatedly stated, the spread-eagle assertions of our students of maxims to the contrary notwithstanding.

We observe that our pious friend Rising-Sun Stove Polish Morse is in "favor of free coal, provided Canada would reciprocate, in which event," says he, "we would sell them more than we would buy." But how would you manage this, you rising statesman? You would want the Canadians to give you the worth of your goods in their coal, would you not? You do not mean to say you are going to give them more value in your goods than you will get back in coal?—and yet this seems a fair construction of your language. Our advice to you in dealing with the Canadians is to try and make a little profit on every transaction—that is, make them sell you more than you buy—or, in other words, get more than you give. This is the way the members of the Cobden Club have made their fortunes, and this is the way you must have carried on the stove-polish business in order to become as rich as you are, and as good and unctuous as you are.

The debate on Senator Sherman's Anti-Trust Bill is an advantage to the country independently of the merits of the bill itself. It was an advantage, for example, to expose Gen. Russell A. Alger in his character as head of the Diamond Match Trust, a combination to control the production and sale of friction matches in the United States and Canada. After this exposure it is pretty safe to say that Gen. Alger's chances of ever being nominated or elected President of the United States are very slim. It should be remarked in passing that the McKinley Administrative Bill plays into the hands of the Diamond Match Trust by making the boxes and coverings of imported goods dutiable. As the matter stands now, there is a considerable importation of matches from Sweden, in spite of a duty of 35 per cent. ad valorem. If a duty is put on the match-boxes also, the protection afforded to the Alger match monopoly will be prohibitory. The tariff has not come into the anti-Trust debate very much as yet, but it is sure to drift that way, as was shown by the "side-winder" that Mr. Sherman gave to Senator Hoar. The latter had said that he did not believe that every time the price of wheat went down, every time that there was a bad year in agriculture, or that the manufacturers were pinched, or that the mines were unprofitable, it was good policy for Congress to hold out to the people quack remedies or pretended cures. To this Mr. Sherman replied that if the duty on cotton cloths or woollen cloths was a little too low to protect the manufacturers of Massachusetts, not a month nor a day would be allowed to pass before he (Mr. Hoar) would demand a remedy in the way of raising the duty.

It is hard work to keep track of the Windom Silver Bill in its various permutations in the Committee on Coinage in the House, and we shall not attempt to pass judgment on it until we see the whole of it in print. We judge, from the votes taken in the Committee, that no bill will pass Congress this session. Whether the Windom bill as amended ought to pass is, as it were, a choice of evils—a choice between that bill and the present two-millions-per-month law. That the real "friends of silver" are opposed to the Windom bill in any form is made clear by the vote of Mr. Bland against it in committee, and also by the comment of the last number of the *Silver Dollar*, of Cleveland, O., which says:

> "Windom says he is a friend of silver. That is all bosh. If so, Benedict Arnold was a friend of American liberty. He has the power now to befriend silver, if he wished to do so, by coining four millions a month. The law permits him to do it. It has permitted him to do it ever since he came into office. Has he exerted himself in that direction? Decidedly not!—he has done, is doing, and proposes to do all he can to stop the coinage, and to *assassinate silver* in the interest of the gold-bugs—a friend of silver, bah!"

To be the Benedict Arnold of silver and the assassin of silver is to be a false knave. If Mr. Windom is both of these, he ought to be "comprehended" by the police at once.

There could be no more striking illustration of the harmful facility with which campaign "endorsements" are obtained, than is afforded by the certificate of character and fitness which members of the Bar Association signed in October, 1888, in behalf of Hugh J. Grant (who was running at that time as the Tammany candidate for Mayor), when read now in the light of Mayor Grant's own account, on the witness-stand, of the manner in which he administered the Sheriff's office. The certificate says, that his administration of the office was characterized by "broad intelligence and great personal care and supervision." He himself says, that though the business of the office aggregated sometimes $10,000,000 a year, and his receipts from fees aggregated between $25,000 and $30,000 a year, he kept no record or account of any kind, and there was none in the office which would tell what the receipts were. The certificate says that under his administration "long-standing abuses have been abolished and needed reforms have been effected." He himself says, that the only reform which he effected was the reduction of the deputy sheriffs—mainly organized extortionists—from forty-two to thirteen, and that he did that because "he thought it was better to have thirteen well-fed men than forty-two hungry and thirsty ones"; he himself says, that one of his first acts on taking the office was to enter into an agreement with an auctioneer for an equal division between them of the fees from auctioneer's sales, though he was aware that such fees were forbidden by law; he himself says, that in addition to sharing this illegal fee from each auctioneer's sale he exacted also another illegal fee for himself from the lawyers of the creditors, in all cases where the execution was on judgments exceeding $20,000, under the name of "extra compensation," the lawyers being ignorant of the fact that he shared also in the auctioneer's fee. It is quite plain that the gentlemen who signed this document really knew nothing, or next to nothing, about the way the Sheriff's office was administered.

There are many things brought to light now every day about this "new Tammany" which recall vividly our experience twenty years ago with the old Tammany. Who can read, for instance, this gorgeous endorsement of Sheriff Grant without being reminded of the deputation of highly respectable financiers and property-holders who, a few days before the exposure of the Tweed Ring, audited the books of Connolly, the Comptroller, and certified to their correctness and order, when the rascal had actually stolen $6,000,000 of the city's money? No lesson seems to be of any use in this city for over ten years. The old tricks are always available for further fraud, while the very generation which has witnessed their exposure and punishment is still on the scene. The "new Tammany" is probably the worst bit of repetition we have ever had. It is like robbery of the same farmer by the same confidence man, by the very same "game" by which he had previously been stripped of his watch and money; the only difference being that the performer has put on a young wig and dyed his whiskers.

When the present investigation of our city government was proposed in the Senate, one of Tammany's errand-boys in that body sought to make sentiment against it by calling upon the Comptroller of the State for a detailed statement of moneys which had been paid for the expenses of investigating committees during the past ten years. The Tammany Senator's idea was that he could impress the taxpayers of the State with the unwisdom

of further investigations by showing them how much previous ones had cost. The Comptroller has sent in his reply, and it shows that the grand total for ten years is a little more than $404,500. Of this amount $147,000 was for counsel fees, and the remainder for clerical and members' expenses, room-rent, etc. The largest items were, of course, for inquiries into the manner in which the government of this city is administered. Thus the inquiries of 1883 and 1884, which resulted in the Roosevelt reform bills and subsequent laws, cost nearly $34,000. The inquiry by the Comstock Committee in 1885 cost over $26,000. The Broadway Railway inquiry in 1886 cost over $45,000; and the aqueduct inquiry cost $43,000. It cannot be denied that in all these instances the money was well spent. The reforms secured by the Roosevelt bills were worth to the city many times what they cost, in the more economical and reputable conduct of several of our great departments which they made necessary. The Broadway Railway inquiry resulted in removing from the Board of Aldermen all powers over railway franchises, thus making it impossible for any one to repeat the wholesale bribery perpetrated by Jacob Sharp and his allies. The aqueduct inquiry resulted in relieving us of a disgraceful Commissioner of Public Works and an incompetent Aqueduct Commission, and the appointment of our present upright, able, and efficient Aqueduct Commission, who have saved the city ten and twenty times over the money which the inquiry cost.

It seems to us as if the Flack divorce case, as a divorce case, were attracting more attention from our esteemed contemporaries and filling them with far more horror than it calls for. The thing that should shock and alarm the public is not that a man like Flack should get a divorce in this way, but that a man like Flack should be elected Sheriff of the city and county of New York. Flack belongs, if not exactly to the criminal class, to that worthless, shiftless, vicious class to whom a regular and honest calling is distasteful, and who readily abandon it in this city for ward "politics," and in other cities for gambling or other aleatory pursuits in which money can be made without much labor or moral responsibility. We believe he was at one time a bookbinder, but he probably found bookbinding, as Tweed found chair-making and John Kelly grate-setting, a dull pursuit, in which the gains were small and the work hard. So he took to politics for the sake of more fun and leisure and larger profits. For precisely the same reasons, he probably tired of his wife, and determined to get rid of her in order to marry another woman with whom he had long had illicit relations. To hasten the process, he got, as hundreds of others have got, a fraudulent divorce. Now, there is nothing at all amazing or alarming or blood-curdling in this when one knows the kind of man Flack is. It does not shake the institution of marriage or the framework of society. What is amazing and serious in the whole matter is, that this worthless, brutal, characterless creature should be able to become the chief executive officer of a county containing the third largest and second richest commercial city in the civilized world. But for this, Flack would be simply an ordinary criminal acting out his criminal nature. So do not let us talk of it as if a really leading citizen or a minister of the Gospel had been caught in some gross immorality.

The passage of the bill providing for State care of the insane in the Assembly by the decisive majority of 69 to 50 is one of the most notable triumphs of well-directed effort in a righteous cause that we have ever had the happiness to chronicle. Such a vote, after such a struggle, now more than three years prolonged, and gained over the petty spoilsmen of the rural districts, renews our confidence in the soundness of the social and political fabric. To the State Charities Aid Association this advance along the line of humanity and social elevation is due. It is one of a long and honorable list of advances and benefactions which that society has conferred upon the State and people of New York, and it brings freshly to mind the charge of Holy Writ, "Be ye not weary in well doing."

The appointment of Gen. von Caprivi to succeed Bismarck as Chancellor of the Empire is chiefly remarkable for the fact that Gen. von Caprivi is a soldier now in the army, and has never been anything else. He has had no training but military training. Bismarck, on the other hand, was all his life a civil servant of the Government, and had served as a diplomatist for a considerable period before he became known to the world as a parliamentarian and administrator. We do not say that he was a very fine specimen of a constitutional politician, but he had had great experience in persuading or getting the better of other men in debate; if not in winning people over to his ways of thinking, at least getting them to accept his conclusions without using force. Gen. von Caprivi has had no such training. He has been all his life a soldier, and presumably has only learned two things thoroughly—to command and to obey. In his present place he will still be under the orders, in a military sense, of the Emperor as Commander-in-Chief of the army. This may not turn out as badly as seems likely on the surface, for there are rumors both that Gen. von Caprivi is only a stop-gap, and will soon be succeeded by somebody else, and that he is really a man of liberal views, and will meet opposition with more candor and civility of manner than Bismarck. The *National Gazette* makes the curious suggestion, apropos of the succession of a soldier to the Chancellorship, that there is nothing more threatening in this than in the Duke of Wellington's becoming Prime Minister in England, forgetting that prime ministers in England are appointed by the House of Commons, that the army in England lives in strict subordination to the civil power, and that the last monarch in England who thought himself as "big a man" as the Emperor William thinks he is, lost his head on the scaffold two hundred and fifty years ago.

The honors offered to Bismarck by the Emperor are as high as he can bestow, but, nevertheless, they have, when offered to a man like Bismarck—at the age of seventy-five—a somewhat ludicrous air, and bring out strikingly the impoverishment of modern sovereigns in the presence of real greatness. Bismarck's contempt for German Dukes and Grand Dukes is well known. He could make or unmake them by the half-dozen, and was amused by their squeals when he was making experiments on them. It must amuse him now more or less to be offered as a great favor the privilege of being "Duke of Lauenburg." He probably relishes more the rank of Colonel-General of cavalry and Field-Marshal General. He liked to figure as a soldier, and made his great speeches in the Reichstag always in cavalry uniform, and relied on "blood and iron" as the two great solvents of political difficulties. But even if the Emperor has no adequate means left of honoring the retired statesman, he does well to offer whatever he has. He can hardly do or say too much to mark the passage from the stage of the greatest figure—this is hardly too strong a phrase—in German history. Frederick the Great and Luther were certainly his only competitors. The country will pass through many a phase of untried being, and many generations will come and go, before it looks upon his like again.

Mr. Balfour introduced the long-promised Irish Land Bill on Monday. It is intended to assist tenants in purchasing and landlords in selling the fee of their farms. The telegraphic summary of its contents is almost incomprehensible, and it would be useless to try to offer a full explanation of it until the arrival of further details. What appears to be clear is that the Government is to advance about $165,000,000 to enable the tenants to make their purchases, and the tenants are to pay 4 per cent. on the advance, and the landlords are to get Government stock bearing 2½ per cent. interest in payment; but how much of this 4 per cent. from the tenants is to constitute a sinking-fund for the payment of the principal, and how much to furnish the interest on the landlords' stock, does not yet appear. The summary of the Associated Press is a model of obscurity. The bill is said to be very complicated, and would probably have to be set working before a proper judgment could be passed on its value. The Parnellites generally object to it, first and foremost because it has been drafted and introduced without consultation with any Irish representative, and apparently with total indifference to Irish opinion—which is, however, nothing new in legislation relating to Ireland They object to it, secondly, because it furnishes, they say, a market for the landlord's property in inflated values, and imposes a portion of the burden of its operation on the Irish taxpayer; but what this last objection means we cannot make out from the summary of the bill now before us.

THE LODGE ELECTION BILL.

We believe there is not much question that the design of the framers of the Constitution in giving Congress the power to regulate "the times, places, and manner" of holding Congressional elections, was to provide against the danger of a State or States refusing to hold any Congressional election at all, or holding it at an inconvenient or useless time, with the view of breaking down or embarrassing the Federal Government. Full confidence was by no means felt at that time in the continuing loyalty even of the States which most readily accepted the Constitution; and among the contingencies which were thought of as possible, if not probable, was an attempt of a State to withdraw virtually from the Union by refusing to send representatives to the House. This power of the Congress over the elections was, therefore, created as something to be held in reserve and used, if the worst came to the worst, in defence of the existence of Congress itself.

This view is fully supported by the fact that during a whole century of experience the power of Congress over elections has never been used. The reason it has never been used is simply that the contingency for which it was to provide has never arisen. No State in time of peace has shown any disinclination to be properly represented in the House, or to hold suitable and orderly elections for that purpose. It is true that there has been a great deal of corruption and often a good deal of disorder and even of violence at Congressional elections as well as at State elections in various parts of the country; seats in the House have often been wrongfully obtained by all the methods known to political jobbers. But nobody until now has suggested that for this reason Congress should take charge of the elections itself, because for these evils the power of the House to pass on the qualifications of its own members was held to be an ample remedy. Nobody until now has suggested that American State authorities were incompetent to conduct Federal elections, because everybody who has considered the subject before Mr. Cabot Lodge, has seen clearly enough that a charge of incompetency to conduct one kind of an election involves a charge of incompetency to conduct any kind, State or national, and in fact lays the axe to the root of the whole Federal system.

If we admit the necessity of Mr. Lodge's bill, we make a long step towards admitting the total failure of the Republic as at present constructed. Federal morality, either political or other, is no better than State morality. Federal laws are administered by precisely the same class of men as State laws, with, however, this difference in their situation, that State officials are responsible to and controlled by local opinion, an important guarantee for good behavior which, in the case of Federal officials, is wanting, and which in the matter of conducting local elections is extremely valuable. Mr. Lodge's bill proposes a departure from this practice, of one hundred years' standing, not because any State refuses to hold orderly elections for members of the House of Representatives, or because the House has lost or finds any difficulty in exercising its constitutional right to pass on the qualifications of its own members—that is, on the fairness of the election—but because in certain States of the Union there are not as many votes cast for the party now in power as he thinks there ought to be. We have no disposition to cover up the state of things at the South by a play of words, or to pretend that the negro voters in those States do not suffer, as so many voters at the North do, from ignorance and intimidation. What we say is, that nobody knows what the exact extent of this corruption or intimidation of negroes is; that it is probably grossly exaggerated; that it is diminishing, and must continue to diminish as the intelligence of the negroes increases, and that the only remedy for it which Mr. Lodge offers is the very kind of electoral reform which the several States are one by one adopting. In other words, his proposed interference is based on uncertain premises, and offers nothing which the States are not themselves likely to supply without any violent departure from long-established and until now unquestioned usage. He proposes registration and ballot reform, but that is what all the States are proposing. His bill would be executed by Tom, Dick, and Harry, while the State bills will be executed by Harry, Dick, and Tom. Where would the difference appear? What should we gain by this tremendous departure from our present time-honored custom?

In one respect, the Lodge bill is not only unnecessary, but in the highest degree mischievous, in that it proposes to strike a deadly blow at one of the most valuable features of our Federal system—the independence of the judiciary. If there be one provision of the Constitution which experience has justified and glorified, it is the tenure during good behavior of the judges. This has to a remarkable degree secured them the respect and confidence of the country by exempting them from the necessity of taking any part, open or covert, in party politics. We do not say it has been completely successful, because we cannot say this of any rule or regulation which governs or shapes human conduct. It has not done everything, but it has done wonders. It has kept alive among us a standard of judicial propriety and integrity which the legislation of some States has done much to dim or destroy. Hardly less important for the respectability of the Federal judiciary is its strict confinement to judicial functions—that is, to the work of interpreting the law as distinguished from the work of administering it. Now, Mr. Lodge actually proposes to impose on the district judges the task not only of appointing the officers of registration and election, but of counting the vote and certifying the result to Congress. This would of course convert them at once in the popular eye into party politicians, expose them to imputations of unfairness in the choice of the election officers, and make them responsible for the conduct or misconduct of these officers, and for the correctness of the count which might next day come before them in their judicial capacity. The popular rage over charges brought against them would be made all the more furious by the fact that, for any malfeasance as administrators, there would be no remedy except impeachment at the hands of the very majority in the House whose purposes the malfeasance might have served. Nothing more monstrous for the benefit of our negro fellow-citizen has yet been proposed. If he deserves it, and ought to have it, the United States Government, it is not too much to say, has been constructed in vain.

OUR MAYORAL CURIOSITY.

The *Evening Post* printed on Monday some letters addressed by our Mayor, and the Chairman of the World's-Fair Committee, to certain appointing officers in the years 1883–'4, when he was in the Board of Aldermen. The same paper, indeed, printed them during the canvass in 1888, but they probably then had the not unfrequent fate of such literature in a Presidential campaign, and passed comparatively unnoticed. Their authenticity has never been questioned. They are applications for places in the public service for "workers" and "bummers" of various degrees of unfitness. The manner in which the Mayor prepared for the Mayoralty while Sheriff, is being revealed little by little in the investigation now going on before the Fassett Committee. These letters show the way in which he was preparing for the Shrievalty while in the Board of Aldermen.

The grammar and spelling would at first sight lead most people to suppose that they were the composition of a hotel porter or of an office-boy trying to fill his first place. To neither of these classes of persons would they be discreditable. One does not expect a hotel porter or an office-boy in his first place to write or speak English correctly. One readily forgives all deficiencies of this sort to any one whose poverty has prevented his getting any schooling in his earlier years, and whose occupation does not call for literary training. But one does not forgive them readily in a man who has had the means in his youth of getting as good an education as the country affords, and least of all in a man who, having pecuniary ease, has in his early years set public office before himself as an object of ambition. We say that when such a man not only fails to cultivate himself in the ordinary sense of that term, but fails to acquire the rudiments even of a plain English education, who spends the time necessary for that purpose on the trotting-course or the base-ball grounds, or "going round with the boys," while thirsting for employment in the public service, it furnishes an indication of character which no honest and conscientious voter ought to overlook.

No civilized State in our day ought to have any places for such men to fill except those of manual laborers. No places of trust and responsibility have been filled by such men in recent years, except some of those awarded to negroes at the South during the carpet-bag régime. We believe some South-

ern States at that time enjoyed the services of sheriffs whose equipment for the office and whose manner of discharging its duties closely resembled those of Sheriff Grant. And yet his shrievalty was the most important of its kind in the country. According to his own story, $10,000,000 passed through his hands annually, and he played a more important part in the administration of justice in a great city than any other officer not on the judicial bench. And yet this really great function we put without inquiry into the hands of an illiterate and evidently idle youth, who had never learned or followed any calling, or had, in a business community, acquired any business experience.

More astonishing than all, after having shown in the transaction of the Sheriff's business absolute incapacity, disorder, and corruption, Mr. Grant found no difficulty in getting a testimonial to his eminent fitness for it from 121 prominent members of the bar, in order to recommend him for the Chief Magistracy of the greatest American city! And he got the Chief Magistracy. He was made Mayor in spite of it all, with the power of appointing Police Commissioners, Police Justices, Commissioners of Public Works, Excise Commissioners, Health Officers, and so forth. More than this — before he had been six months in the Mayoralty he was allowed to present himself to the world as the leader of an organization which was to invite foreign nations to come here and see American civilization at its best, which was to honor in a grand fête a man who was one of the greatest glories of the human race. And he presided at the banquet in this city which celebrated the hundredth anniversary of one of the greatest achievements in American history — the framing and adoption of the American Constitution. If some ingenuous youth were to ask us where he could find a precedent or parallel for this, we should send him not to the works of Gibbon, or Hume, or Sybel, or Henri Martin, but to those of the vivacious and entertaining Offenbach. There must have been episodes like it during the destruction of the Roman Empire by the Barbarians, but the poor Romans did not elect the Barbarians to municipal offices. They let them take what they pleased, in order to save their own necks.

Our present aim, however, is not simply to expose or depreciate Mayor Grant. One of the shames and sorrows of our present situation is that public journals have to discuss anywhere but in the police reports the history and qualifications of these annual swarms of Mikes, Jakes, and Barneys, who issue forth from the haunts of vice and crime and folly to waste our substance and burlesque the Government. We recur to the subject, in the hope not of reforming the Mayor or his cronies, or of making any impression on them, but of calling the attention of decent men in this city, and especially of Republicans, once more to the consequences of sacrificing the interests of the city to the exigencies of Federal politics. Of those who do this thing, many are honorable men. They really care for the health and comfort of their fellow-citizens and for the good name of the city, and yet every now and then they act as if these were matters of no more importance to them than they are to "Barney" Martin or "Fatty" Walsh. At the three last Mayoral elections they have put up and run candidates confessedly without any expectation of electing them, well knowing that they were thereby contributing powerfully to the election of the Tammany nominee, if, indeed, they did not make it certain. They did this, too, with the full knowledge, of long experience, that this city contains what no other city in the world contains, an organization of its ignorance and vice under the control of criminal and nameless adventurers. Every city contains in its population a large modicum of ignorance and vice, but this is the only one in which ignorance and vice have been organized for public plunder, and have their General Committee, and their Executive Committee, and their Committee on Organization, and their vice-presidents, and secretaries, and clerks, and halls, and sergeants-at-arms, and claim a share in the Government. There is no more discussion of public interests in Tammany Hall than there was in the "Burnt Rag" when that "dive" was kept by "Barney" Martin, the Deputy Commissioner of Public Works. There is there no talk or thought of public offices as anything else than instrumentalities for getting money out of the public treasury, or extorting it, under color of law, from the honest and industrious. To Tammany men offices are "plums," to be distributed among the lazy, the disreputable, and vicious portion of the community in return for services largely of a criminal nature. So much work as is necessary, and no more than is necessary, to cover up theft and embezzlement and extortion is done in the various offices which Tammany controls. No respectable man would employ in any place of private trust most of the men whom it selects for salaries. It is, in fact, in most of its aspects an astonishing product of our democracy. Its composition, it is true, is largely foreign, but it contains no element which may not be found in every great city. What is peculiar about it here is, that the decent, industrious, tax-paying portion of the community does not unite against it, keep a watch on it, denounce it, expose it, prosecute it, and drive it out of sight, and allow no business or excuse to stand in the way of its extinction. On the contrary, every now and then we see alliances with it, and even apologies for it, on the part of men calling themselves "patriotic Americans." It is this tolerance or connivance, rather than Tammany's corruption, which to-day disgraces the city and State.

THE ECLIPSE IN WEST AFRICA.

CAPETOWN, January 30, 1890.

PERHAPS some account of the total eclipse will interest the *Nation*. As is known, it became necessary to establish the Expedition on the immediate coast, near Cape Ledo, and about three hundred miles below the mouth of the Congo. Here I found an ideal station—a point where the total phase would last the longest; the best of meteorological prospects; safe anchorage for the *Pensacola* in the little bay, so that the resources of the ship were at the command of the Expedition; surf so light that the instruments could be landed without too great risk; abundance of rock on the beach to build foundations with; a region where hostile natives rarely came about, and withal perfectly healthy.

It was the 8th of December when the Expedition landed there, just a fortnight before the eclipse. The work of preparation began at once and went vigorously on. The weather by day was in no sense disappointing—perfect in fact: very little rain to interfere, the intense heat of the sun screened every morning by dense clouds, while the afternoons were for the most part clear. This was most encouraging, as the eclipse would take place during the middle of the afternoon. At night, however, there was great difficulty in getting star-observations enough.

A fraction of a mile from our station was the camp of the English Expedition, in charge of Mr. A. Taylor, sent out by the Royal Astronomical Society; and near the *Pensacola*, at anchor in the bay, was the H. M. S. *Bramble*, a gunboat attending upon the Expedition, in command of Capt. Langdon, R. N. The preparations of the party were confined to the use of two instruments during the total eclipse, the lesser one having already made itself famous in the total eclipses of 1882 in Egypt, of 1883 at Caroline Island, of 1886 at Grenada, while in 1887 it was unsuccessful in Russia through clouds. The larger instrument was a silver-on-glass mirror of 20-inch diameter, and the very short focal length of 45 inches. It was constructed by Mr. Common, and was expected to afford photographic evidence of the reality of the outer extensions of the sun's corona. The men-of-war were of the greatest imaginable assistance to the Expeditions. The courtesies extended by the *Bramble* were not a few, while without the constant and hearty coöperation of Captain Yates, U. S. N., in command of the *Pensacola*, all the work of our own Expedition could never have been done.

The eclipse instruments were very numerous —some of them of unusual proportions—spectroscopes, photometers, and polariscopes for the corona, and a great variety of photographic telescopes suited to the specific ends sought in investigating not only the inner corona, but its extreme outer extensions into interplanetary space. For the most part these instruments must be kept accurately pointed on the sun. I therefore adopted the plan of securing them all between the double-fork of a huge polar axis, which was itself moved with the greatest precision by clock-work.

Then arose the problem of operating so many pieces of apparatus, for the sensitive plates must be changed, the shutter of each instrument must be opened and closed at the proper times, and a great variety of other movements must be made at the right time and over the right space. Obviously the usual method of doing it all by hand was out of the question, as there were on the one axis about five-and-twenty telescopes and cameras.

It occurred to me that the pneumatic-valve system, covered by the letters-patent of Mr. Merritt Gally, and largely used by him in the automatic playing of musical instruments, afforded an easy way out of the difficulty. Only rig the little collapsible pneumatics or bellows so that, by suitable mechanical connections, they shall do the small work required; replace the reed-pockets by flexible tubes leading to the various bellows; for the long strip of per-

forated paper ordinarily doing music-duty substitute a like strip with perforations suited sidewise to the number of the bellows, and lengthwise to the exact time the pneumatic movement is desired; then wind up the strip on a chronograph-barrel so that it shall unreel with perfect uniformity, and a pneumatic commutator is at hand whose capabilities are limited only by the size of the main exhaust-bellows and the number of independent valve-ports. The instrument I am describing had forty-eight such ports; and each small current of air, a tenth of an inch in diameter, controlled the action of an exhaust current through the connecting tubes of about twenty-five times this volume. This was the plan carried out; all the various forms of mechanical movements were built, the telescopes were adjusted into parallelism with the greatest nicety, the air tubes were connected, the control-sheet suitably perforated, and the chronograph in readiness to be set going at the precise second.

Like those before it, eclipse-day opened with a cloudy morning. The air was very damp, and a few drops of rain fell. By eleven the sky was about half clear. Less than an hour before the beginning of the eclipse, the west was perfectly clear where the sun would be at the critical period of totality. Now and then, thin cirro-cumulus nearly covered the sky, drifting slowly towards the southeast; but there were still large patches of blue. At the time of first contact, half-past one, the sun was occasionally visible through rifts in the clouds. A quarter hour later there were decided signs of clearing. All the intervals of blue sky were promptly utilized by Prof. Bigelow in getting pictures with a telescope, forty feet long, and pointed directly at the sun, the necessary and precise motion of so weighty an instrument being secured through a sand-clock having some novelties of construction.

At two o'clock, an hour before totality, the large patch of blue had moved over to the east, the clouds near the sun were thinning out, and, a quarter hour afterwards, two long strips of sky cleared in the north. Ten minutes before totality, the light of the sun was so much diminished that all the portentous conditions attending the phenomena of mid-totality began to make their appearance. Of course, these are largely of no scientific moment, and in the eager watching of the clouds few observers saw them. A minute before the beginning of the total obscuration, the light grew suddenly less, and then over the sea swept the blue-black shadow of the moon from the southwest with astonishing rapidity.

Totality was then complete. But the total eclipse was itself totally eclipsed, for a big black lazy cloud had sluggishly drifted between our camp and the beautiful corona, and stubbornly refused to move aside until the bright sunlight was again upon us. The horizon was like that of early morning, with the sun rising in dense clouds. All the southern sky was aggravatingly clear—a deep blue verging on black. Could the instruments have been suddenly transported bodily two or three miles south, the entire eclipse would have been assured in a cloudless sky.

A vessel twelve miles or more off in the southwest, and plainly in sight before totality, was invisible during the greatest obscuration. Bird-life was accurately watched for totality effects. Crows were evidently bewildered, wydahs ceased calling to each other, and swallows, which had been very numerous before the eclipse, disappeared, although the light was quite sufficient to have shown them. The diffused light of totality, by the way, was something most unusual—greatly in excess of the other total eclipses I have seen, in Texas in 1878, and Japan in 1887. At the darkest moment, the time to the second could be read with ease from the face of any ordinary watch, and the finest print would not have been hard to make out.

After the moon's shadow had swept by, on climbing above the telescopes to investigate the working of the exposing-disks, I found a mantis (*M. religiosa*) mounted in contemplation on the objective of the duplex photometer. It is matter for regret that no record of his observations is accessible, owing to our neglect to supply this entomological oddity with pencil and paper. His notions of a total eclipse would have been original, if not valuable.

But the photographic apparatus had all been set in operation at the commencement of totality, and the automatic programme played through from beginning to end with the most gratifying success. The exposures exceeded 300 in number, though the total phase lasted but a little over three minutes. No opportunity comes again till April, 1893, when, in the northeast of Brazil, a fine total eclipse will be visible for four and a half minutes, with the sun nearly overhead. Our satisfaction with this last eclipse must be largely in the fact, now demonstrated, that on like occasions in the future fifty or sixty photographic instruments can all be operated with the ease of one or two in eclipses heretofore. The field of coronal research may thus be vastly extended, and it will be entirely possible to get out of one totality in the future as much as could be learned from five or six in the past.

Another instrument of the Expedition deserves mention here on account of its unusual proportions. The 40-foot, having so excellent a clock, was rigged for corona work, of course; but, in addition to that, Prof. Langley had lent to the Expedition a 20-inch silvered mirror of the extraordinary focal length of 75 feet. This was so mounted as to throw an image of the corona into a huge camera-box set upon a cliff which lay fortunately just beneath the sun at the time of totality. Here a 10-inch image of the sun was formed with beautiful definition, and plates 20 inches by 24 of the highest sensitiveness were prepared for exposure. During totality, however, both these unusual instruments were rendered inoperative by clouds. But we were not alone in our disaster. A half hour later a messenger came across from the English camp; and it then became known that the same cloud had completely occluded their station too.

A few hours before the eclipse came on, the *Pensacola* went out to sea and stood in the centre of the eclipse-track at the time of totality for the purpose of auxiliary observations. Atmospheric conditions were slightly more favorable there than at the main station of the Expedition; but during the total phase the clouds were so thick that it is very doubtful whether the true solar corona was seen at all.

The eclipse station was completely dismantled by the 27th of December, and the *Pensacola* left Cape Ledo in the afternoon of the same day. Returning to Loanda, it was found that all three of the detached parties of the Expedition sent into the interior had also been unsuccessful: at Cunga, at Dondo, at Oeiras, and at Cazengo, clouds—also at Muxima, the location first chosen for the Expedition.

Meanwhile the collateral work of the Expedition goes steadily and successfully on, though with more vigor in some departments than others. In terrestrial physics, in meteorology, in philology, and in natural history there is already an excellent showing, and the return of the Expedition will insure large additions still. While Mr. Preston is swinging the pendulums at the Royal Observatory for determining the force of gravity, and the *Pensacola* is getting ready for the long journey of about 8,000 miles homeward, other members of the Expedition are variously engaged. Prof. Abbe is studying the striking meteorological phenomena of the world-famous Table Mountain, the naturalists are getting ready for a fortnight's stay in the interior, the philologist is deep in his researches in West African tongues, and Prof. Bigelow and myself are, by the kind courtesy of her Majesty's astronomer, Dr. David Gill, fully occupied at the Observatory. To-morrow all ordinary avocations are suspended for the unveiling of the Jubilee statue of her Majesty the Queen, at the Parliament Houses.

DAVID P. TODD.

MANÁOS, AND THE ROUTE INTO AMAZONAS.

MANÁOS, Brazil, January 1, 1890.

IT has been more than once remarked that Pará should have been situated sixteen miles nearer the sea, where stands the present town of Pinheiro. Here is a splendid harbor, capable of admitting vessels of any draught, whereas ships of 1,500 tons can now come to the anchorage ground in front of the city only when the waters are high. Moreover, all vessels bound up the Amazon must pass eastward to this point in order to enter the main estuary which leads into the west. The city of Pará is really not on the Amazon at all, but stands at the junction of the Rio Capim and one arm of the estuary of the Rio Tocantins, commonly called the Rio Pará. Having entered the estuary at Pinheiro, the great island of Marajó, called after a family whose name remains to this day familiar in Pará, is seen forming the northern shore. About seventy miles southwest of this point, the Rio Tocantins empties into the great estuary, bearing in its tide the waters of many tributaries which drain a region rich in the natural products of a tropical forest. Eighty miles west of the Tocantins are two narrow channels, each about seventy or eighty yards wide, which turn abruptly northward, forming the western boundary of the island of Marajó, and connecting with the Amazon, whose waters flow to the sea through two great channels, the Canal do Sul and the Canal do Norte, along the north of Marajó. These two narrow channels at different periods are traversed by currents flowing at one time northward, and at an another southward, depending upon the tide and upon the varying height of the rivers they unite. On the eastern channel, called Paranán, is the town of Breves, a place of much local importance, having a saw-mill and a sugar-mill, and being the centre of the rubber trade of a considerable area. Paranán having silted up to a depth of only five fathoms, large vessels now follow the western channel, Boiussu Furo, whose very existence even is not indicated upon any maps. Just where these two narrow *furos* depart northward towards the great Amazon, the estuary attains an unusual width, and stretches away to the west like a vast sea, with the horizon traced in an arc upon its bosom. This is the Bahia Portel, which, expanding and contracting many times, ends at last abruptly one hundred miles away. On its shores are the towns of Melgaço and Portel, little centres of rubber trade.

The ride through Boiussu Furo is a splendid introduction to the Valley of the Amazon, a portal enriched with all the luxuriance of

palms and vines and gorgeous foliage which the tropics can produce. Here and there against the massive forest walls will be façades of palms, columns upholding green roofs of such graceful arabesques as an Oriental monarch might waste his kingdom to reproduce. Ever and anon a delicate but enormous dome, constructed of a material which, against the clear blue sky, looks like matchless lace, rises above the level forest. These are mammoth sama-umas, the grandest and most conspicuous trees in the sylva of Brazil. The smooth white trunk towers more than a hundred feet without a branch, expending its whole strength there in this crowning effort of lace-like architecture. It is also known for the pods of silky fibre which it bears, and which has gained it the name of "cotton tree." At places where a tree has fallen one can see into the forests, but not far. Within all is black, like a cavern in which reigns the gloom of eternal night. Elsewhere the palms and vines close up the sides, embellished with blooms of many hues, which fill the breeze with delicious odors. As night draws near, the forest, which had been dumb, all at once grows wholly vocal, every bush and tree sending forth the shout and whistle of some feathered songster in an ecstasy of riotous glee. The birds of Brazil have not only beauty of plumage to recommend them, but a gift of music as sweet as any heard in Northern meadows. But soon the sun falls below the wall of the mighty woods, the bird voices hush, while a chill stealing into the air warns the stranger to have caution and retreat to the shelter of the steamer's cabin.

Such is the portal. The following dawn has wrought a change. The vessel is steaming up the broad, muddy Amazon, and the forests have become less luxuriant. But still there is grandeur in them, and the orchids have increased in number, sometimes taking almost complete possession of a lofty tree. Native huts thatched with palm-leaves are more frequent. These clearings are locally termed *fazendas*, a name equivalent to "plantation," but they are in fact nothing more than small, ill-kept tropical gardens, yielding a few bananas, some yucas, and a little mandioca, the root from which farina and tapioca are prepared. There are *fazendas* along the river worthy of the name, but the little Indian hut and clearing is far more common. On the river are many little canoes, each partly covered by a low arched canopy, or roof, of palm leaves. This is the sole means of communication, for there are no roads in the valley of the Amazon; consequently no horses, no mules, no oxen; nothing but canoes. When the canoe carries a sail, it becomes an *igarité*, and is a mark of luxury. The sails are also frequently painted red and blue, producing very artistic effects on the glassy river. They, and all canoes, are usually bent upon some mission connected with rubber, either seeking it or conveying it to market. Occasionally, as we ride close to the shore, a native may be seen "smoking" his rubber, or *borracha*, as he calls it.

The process of rubber gathering is interesting. The Indian makes three or four incisions an inch wide with a narrow hatchet, cutting barely through the bark of the tree. Under each incision he causes a little tin cup to adhere by a bit of moistened clay. Into these cups the borracha milk exudes from the wounds. He goes from tree to tree doing the same, until he has tapped as many as he can conveniently attend to in a day. He then returns to the first tree and goes the round again, collecting the milk into a bucket. Each gash will yield from two to three tablespoonfuls of the sap. This will soon coagulate if not "smoked," which process consists in pouring the milk over a paddle, or round stick, and passing it through the smoke from a fire of palm nuts, which causes it to thicken. More milk is poured upon the paddle, and treated similarly, until the successive coats have made a large ball, often eighteen inches in diameter, called a *pelle*. The nuts of the palm Inajá yield the best smoke for this purpose; but as they are not so plentiful, the nuts of the Urucury are more commonly employed. When neither can be obtained, recourse is had to the more abundant Uauassú. The peculiar virtue of this smoke has not, to my knowledge, been investigated, but the answer of an Indian that it is "o pungimento," the pungency, is significant. The smoke of wood will not serve. Great care is needed in the operation lest part of the rubber should coagulate. When this happens, the product is termed "entra fina," which is the middle grade between "borracha fina," the best, and "sernamby," which is the inferior, wholly coagulated material, as it is found oozing from the trees. Efforts have been made, and are now making, to discover some means to preserve the milk and ship it in its fluid state; but some device to insure perfect "smoking" would perhaps be an equally satisfactory solution of the problem, if the natives could be taught to use it.

The rubber is yielded by a tree very unlike the so-called rubber plant shown in Northern greenhouses. It is tall, with smooth white trunk, often somewhat crooked, and branching at the top into a thick cluster of small gnarled limbs, scantily covered with lustreless green foliage. In Brazil it is called the Seringa. Rubber gathering is the chief industry of the valley of the Amazon. Cocoa plantations and cattle ranches have been abandoned for this business, which, while it is the present sole support, is also, under the existing system, the great obstacle to the development of the resources of the country, by drawing the people away from better occupations. It constitutes the basis of all the commerce of the vast province of Amazonas.

Manáos, a city of 14,000 inhabitants, the capital of Amazonas, is apparently destined to enjoy a prosperous future. There is a growing business in rubber, the exact quantities exported being, in 1887, 1,762 tons; in 1888, 2,167 tons; in 1889, 3,252 tons, including the latest shipments—a gain of 85 per cent. in three years. There are two lines of ocean-going ships which ascend these thousand miles of Amazon River for the trade of this port. One of these lines sails direct from New York, and the number of ships will be increased during the ensuing year. Manáos is situated about nine miles from the Amazon on the east bank of the Rio Negro. In the harbor fronting the city is a depth of fifteen fathoms at low water, and during several months of the year the river rises from twenty to thirty feet higher. The town, which is built on hills of considerable height, has protected its water-front by a handsome brown-stone wall. The houses are generally low, all tile-roofed, and many cornices are ornamented with statuettes. There are three large churches, that of Matriz da Conceição being the most pretentious. It is often called the Cathedral, which, however, is a misnomer, as the two great provinces of the Amazon, Grão Pará and Amazonas, constitute a single diocese under the bishop whose seat is in the city of Pará. This building is of the usual square type with two belfries, common to the country. The church of Nossa Senhora dos Remedios is more modern in style, having a square brown-stone corniced tower, which looks very pretty among its palms, with flocks of pigeons flying in and out of the belfry windows. There are several schools, mostly parochial, and one college under Government patronage, occupying a white marble building called the Lyceum. Within this structure is also a museum, containing an excellent herbarium and a collection of curiosities.

An iron market building of American construction, the pride of Manáos, stands above the wall fronting the river. There are busy scenes here in the early morning, when the population turns out to procure supplies—men in suits of immaculate white, others in white blouse and blue trousers, negro women with baskets on their heads, and a Babel of unintelligible dialects. A list of the provisions exposed for sale here may serve to show the limitations of the cuisine in Manáos. Beef of excellent quality is always obtainable. Many varieties of fish, large and small—preipitingo, very sweet and almost boneless; tambague, and pirarucú, coarse but good; acaré, resembling the sturgeon; surubí, a beautiful fish with leopard-like markings; with more besides. Cabbages, scrawny in appearance, but mild and pleasant in flavor, are abundant. Pumpkins, squashes, beans, yams, tomatoes, cucumbers, okra, lettuce, chicory, machaxeira, the Brazilian substitute for potatoes; jurumo, like a pumpkin; maxixi, like a cucumber; carurú, a green leaf used with agreeable effect in soups; peppers of many kinds, onions, and garlic, constitute a goodly array of vegetables. Fruits are present in the usual tropical abundance. Chickens and eggs, farina and tapioca, are also prominent. It is evident that one need not fare badly in Manáos, and a little more energy in gardening could easily enlarge the list of vegetables.

Manáos is at present lighted by gasoline lamps, but a gas company has been organized and will soon put in a plant. A system of water-works is already supplying the city with pure spring water impounded in the hills near by, and an English firm, having successfully instituted a cotton mill at Ceará on the coast, will probably soon have a similar factory in operation, utilizing a *cachoeira* or waterfall, now the great picnic-ground of the Manaenses, to furnish power. One of the great disadvantages under which this city labors is the absence of banking-houses. Drafts can be purchased from several business firms having dealings with merchants in Pará, but often no money can be obtained, and rubber lies awaiting shipment until the owners can secure enough from Pará to pay the export duties. A bank in Manáos would, however, encounter severe difficulties in the prevalence of lax methods of conducting business. It is not considered a disgrace for a merchant to suffer his paper to go to protest. He simply tells you to be patient and wait a little, and in order to get your money you must exercise forbearance. Business is *never* done on a cash basis, and a man's commercial consequence is often estimated, not on the amount he owns, but on the amount he owes! His ability to obtain credit is the measure of his affluence. Moreover, a merchant of any prominence will be "matriculated," which is another stumbling-block in the way of legitimate dealing. Such a one is registered with the Board of Trade, having paid therefor a fee, and he is then entitled to many privileges, one of which is that his property cannot be attached ("embargoed") for debt, and he can be forced into bankruptcy only when three creditors proceed against him.

A better spirit is springing up here, however, and even native merchants express a desire to see the abrogation of many of the commercial

laws and regulations of the port, which now embarrass the progress of the city, and they are hoping for such reforms under the new Republican régime. Manáos already imports from the United States all the flour, soap, kerosene, candles, axes, and cutlery she uses, and there are possibilities for a large extension of our trade with this important port.

Correspondence.

THE NICKEL PARADOX.

To the Editor of The Nation:

Sir: The anti-protection scoffers—jubilant, no doubt, under the influence of British gold—have got a story here to the effect that the millionaire proprietor of our great and only nickel mine, who has preached and written *ad nauseam* to prove the blessings of a tariff on that article high enough to compel all Americans to buy only of him and at his price, has undergone a change of heart. It is said his Pennsylvania monopoly has "petered out," and he is now obliged to get his supply from Canada, and begins to think the time has come when the prohibitory duty may be advantageously removed.

Whether this delightful story be true or not, it may at least serve to remind us of the big mistake made by Providence in giving us a natural deposit of the useful article in question—that is, supposing he intended it for our benefit. As long as we possessed no nickel in our country, we were allowed to buy it wherever we could find it best and cheapest. But no sooner was that accursed Pennsylvania mine discovered and successfully grabbed than the Congressional "fat-fryers" interposed and forbade us, under penalty of heavy duties, to buy even so much as a coffin-plate, except from that particular philanthropist and at his own price.

Let us thank Heaven that a beneficent Deity has seen fit to take back the gift which has been so expensive and disastrous, and let us have prayers said in all the churches that he may deign to take back all similar natural gifts, so that we may peradventure regain the liberty enjoyed even by African savages of buying what we want wherever we wish, and at half the Congressional prices. W.

Philadelphia, March 17, 1890.

"A SIDE LIGHT ON GREEK ART."

To the Editor of The Nation:

Sir: I perfectly agree, in the main, with Mr. Stillman, the more so as I was the first to point out in the *Nation* (October 1, 1885) the fraudulent character of the terracotta groups. Since the publication of my two papers in the *Classical Review* (1888, pp. 119-123, 153-155), where I summed up the whole controversy and stated the complete literature of the question, I have come to the conviction that the single terracotta figures sold as Asiatic, Tanagræan, Corinthian, and the like are in very many cases the work of *the same forgers* who make up the now rather discredited large groups. Sitting and reclining females, Victories, and ἀστραγαλίζουσαι are particularly to be suspected. I have quoted some conspicuous forgeries of these types in a late number of the *Revue Archéologique* (July, 1889, p. 128).

Where I *do not* agree with Mr. Stillman is when he says that the large groups are imported from Smyrna. Indeed, I sternly deny this, having published in the *Revue Archéologique* (1886, vol. ii., p. 92) the official record of the seizure to which Mr. Stillman alludes. These groups had been shipped at the Peiræus on board a French steamer going to Marseilles; the cases which contained them were examined and found to originate from the shop of a celebrated Athenian dealer, now deceased. A curious proof of this was that one of the groups was wrapped up in a sheet from a periodical to which the learned dealer in question was the only subscriber in Athens. It has never been possible to retrace the *provenance* of any group further east than Athens, and I am absolutely sure, from private information, that no group of any artistic value has ever been fabricated at Smyrna. Both Hamdi Bey and Baltazzi Bey have repeatedly investigated the matter on the spot and come to the same conclusion as myself.

I have lately received some hints as to the names and nationality of the clever artists who produce that highly interesting series of forgeries. The question may arise: Why does the Greek Government not prosecute them? But the answer to this question is an easy one: The forgers are the best auxiliaries to the stringent but little observed laws which prohibit the exportation of Greek antiquities. It is a real good fortune for the Greeks that, when the law is infringed in the matter of terracottas, nine times out of ten it is but apparently infringed, the smuggled object being no antiquity at all. Every forgery sold to an enthusiastic but ignorant amateur tourist keeps a genuine antique inside the country. I have even been told that forged groups have already been offered at the Hellenic court as diplomatic presents! Be that as it may, some of these groups are so prettily made up that they will certainly maintain a serious value in the market, even when the fraud shall be—as is not yet the case—generally acknowledged.

Yours truly, Salomon Reinach.

Château de St. Germain-en-Laye (Seine-et-Oise), March 8, 1890.

GERMAN UNIVERSITY METHODS AGAIN.

To the Editor of The Nation:

Sir: Mr. George Hempl misinterprets my letter to the *Nation* of February 13 if he believes me moved by a desire to revolutionize the position of instructors in American colleges. My sole aim was to point out the peculiar advantages for special work open to young university teachers in Germany, and the comparative lack of such opportunities for the same class of teachers in this country. Mr. Hempl's objection to my taking Berlin and Munich as specimens of the German system seems to me all the more untenable as I contrasted these two largest German universities with two of the largest American universities. Nor can I admit that the *Lector* rather than the *Privatdocent* corresponds to the American instructor. The functions of the *Lector* are limited to the teaching of practice in modern languages; and of his social position one may form an idea from the fact that in the Catalogue of the University at Kiel he is classified with the fencing and the riding-master. With regard to the omission of seminary work in my comparison of the work done by professors and *Privatdocenten*, having stated that seminaries were conducted by both classes of teachers, I hardly thought that my figures could give rise to misunderstanding on that point.

Kuno Francke.

Harvard University, March 21, 1890.

"MORALE."

To the Editor of The Nation:

Sir: The correct French use of (*la*) *morale* being "moral philosophy" or "moral lesson," and of (*le*) *moral* what Shakspere would have called "mind" and we should call "heart" (*e. g.*, *lui remonter le moral*, "to put heart into him"), can any of your readers point out an explanation of our misuse of the word *morale* for "moral tone"? Or is it another blunder that must go the way of *nom de plume*, *Encore!* and *double entendre?* Yours, etc.,

I. H. B. Spiers.

Wm. Penn Charter School, Philadelphia, March 17, 1890.

Notes.

The eighth volume of Horace Howard Furness's 'Variorum Shakspere,' "As You Like It," will be published in the course of another month by J. B. Lippincott Co., Philadelphia.

Charles Scribner's Sons announce 'The Proposed Revision of the Westminster Standards,' by Dr. Shedd; 'The Negro Question,' being Mr. George W. Cable's reply to the late H. W. Grady, in an address before the Massachusetts Club on Washington's Birthday; 'The Wife of the First Consul,' from the French of M. Imbert de Saint-Amand, by T. S. Perry; 'English Lands, Letters, and Kings,' a second volume by Donald G. Mitchell; and the following fiction: 'Little Saint Elizabeth, and Other Stories,' by Mrs. Frances Hodgson Burnett; 'The Lawton Girl,' by Harold Frederic; and 'Expiation,' by Octave Thanet.

A translation of Henryk Sienkiewicz's Polish novel, 'Fire and Sword,' by Jeremiah Curtin, is in the press of Little, Brown & Co.

The Albany Book Company will publish 'The Princess of Montserrat,' a tale of modern adventure in the Caribbean Sea, by William Drysdale, who has a wide acquaintance with the West India Islands.

'The Diaries and Letters of Sir Moses and Lady Montefiore,' in two octavo volumes, are to be issued on this side of the water by Belford-Clarke Co.

Mr. Bryce's chapter on "The Absence of a Capital" in the United States of course notices Washington's deficiency as a literary centre. Naturally, that city's literary productiveness, such as it is, is more or less closely related to the Government departments lodged there, and for this the Public Printer suffices. When Mr. Henry Adams, however, for example, was ready to admit the general reader to his 'History of the United States,' of which the third and fourth volumes have just appeared, Washington, though the fittest imprint in the whole country for such a work, had no publishing-house of national fame and standing. We have always regarded it as a serious drawback to the merited popularity of Mr. James Schouler's 'History of the United States'—a much more compendious work than the foregoing—that it was published at our so-called capital. By a recent change Mr. Schouler has removed the publication to this city, and we have from Dodd, Mead & Co. the four volumes thus far issued, from 1783 to 1847. The plates have, of course, been reëmployed, but the page has a more liberal margin allowed it, and the new binding is a great improvement upon the old. We trust that the work, which awaits a fifth volume for its completion, will now enter the channels of trade with more directness and prestige.

Two years ago we spoke at some length and in praise of the agreeable little work on 'Colo-

nial Times on Buzzard's Bay,' by William Root Bliss (Boston: Houghton, Mifflin & Co.). The popular favor it met with directly has led the author to prepare a new and somewhat enlarged edition, to which we still wish he had seen fit to add an index. As the New Jersey 'Story of an Old Farm,' which we lately noticed, was constructed around the fortunes of the Mellick family (the author's), so Mr. Bliss finds his central core in the archives of the Fearing family (his wife's). The narrative thus gains both in personal interest and in authenticity. The book is very prettily made up.

Dodd, Mead & Co. accompany a reprint of Mr. Frank Stockton's 'The Great War Syndicate' with the same writer's laughable 'Stories of the Three Burglars,' which has already seen the light in the Boston *Transcript*, if our memory serves us. Both illustrate the peculiar quality of Mr. Stockton's humor, and more need not be said.

The latest issues of the "Carisbrooke Library" (Geo. Routledge & Sons) include 'The English Prose Writings of John Milton,' exclusive of his replies to opponents, and 'Early Prose Romances.' The editor, Mr. Henry Morley, contributes to the former an introduction which is in the main a biography, with special reference to the public occasions of these writings. He observes that one reason for the neglect of Milton's prose is that the subjects discussed in them have largely ceased to be questions, since the reforms suggested have been carried out; but this does not make the papers useless, since they deal with great principles in a broad way, independent of their noble eloquence, and it is therefore not without hope of interesting the public that he has included them in this Library in a cheap, well-printed, and convenient form. Such an edition has long been a desideratum. The second volume, 'Early Prose Romances,' comprises in the contents Reynard the Fox, Friar Bacon, Robert the Devil, Guy of Warwick, Virgilius, History of Hamlet, Friar Rush, and a few of the Hundred Merry Tales. The text is from early English editions, and is accompanied by a bibliographical introduction. The English is not modernized, but is not difficult even for the general reader. The collection represents very well the story-telling of the age, and there is a directness in the narrative which is lost in the modern renderings, together with the charm of simplicity.

Mr. Angelo Lewis, who still uses the pen name of "Prof. Hoffmann," has now published yet another work on modern magic—this time on 'Tricks with Cards' (F. Warne & Co.). Mr. Lewis is distinctly the foremost authority on conjuring in our time, and he knows how to impart his information to the ignorant. The "Charlier Chaplet," for example (the workings of which are explained on page 60), enable an adroit performer with imagination and the dramatic faculty to outdo the strangest feats of the spiritualists. This Charlier chaplet is what is most novel in 'Tricks with Cards,' which necessarily contains much that is familiar to all who have studied the art; but it is only fair to say that "Prof. Hoffmann" has given us quite the best book on the subject: clear, comprehensive, and almost complete.

In the last number of Mr. J. H. Hickcox's Monthly Catalogue of United States Government Publications (Washington), we read that the Commissioner of Labor has had printed the results of his investigations on the subject of marriage and divorce in this country, making a volume of more than 1,000 pages. Pending authority from Congress to print an edition for general distribution, the Commissioner can respond only to special requests for this report.

We have received the preliminary announcement of the American Academy of Political and Social Science, whose headquarters are in Philadelphia, and whose president is Prof. E J. James of the University of Pennsylvania, with a general advisory committee, weightily composed, from all sections of the country. This organization dates from December 14, 1889, and the objects intimated in its title will be pursued in such aspects, chiefly, as other societies do not entertain, or else neglect, as sociology, constitutional and administrative law, philosophy of the State, and some portions of the field of politics. Publication is contemplated, regular meetings will be held, a library established, etc. Endowments are called for to supplement annual and life-membership fees. The Corresponding Secretary is R. P. Falkner, Germantown, Pa.; the Treasurer Stuart Wood, No. 400 Chestnut Street, Philadelphia.

Funk & Wagnalls have started a weekly eclectic paper called the *Literary Digest*, a sort of American *Review of Reviews*, but with more of condensation and abridgment than of abstracting. Thus the *North American* controversy between Gladstone and Blaine is cut down to two pages and a quarter of the *Digest*. This may be edifying to people who want the kernel, but it of course destroys all intellectual pleasure and profit, to say nothing of the chance of misrepresentation. Other departments are mere imitations of *Public Opinion*, or, as in the case of the "Book Digests," simple reviews conspicuous in the first number for the absence of excerpts. There is a useful index to periodical literature, a record of current publications, and a diary of current events.

The *Portfolio* (Macmillan), having completed in 1889 a course of twenty years, opened with the January number a new series, preserving the same form, but enlarged in the number of pages, with bolder type and a columnless page. Mr. Hamerton gracefully reviews the history of this best of English art journals, bringing to view the editorial collaboration which he, who "never lived in England more than three months at a time," has had from Mr. Richmond Seeley, and renewing the purpose of the *Portfolio* to avoid militant criticism, and to do something "to bring artists and the public nearer together." The January number is remarkable further for the beginning of a series of illustrated articles on the British Seas, of which the text is furnished by that novelist of the main, W. Clark Russell, and for the first of two articles on Walter Crane, by F. G. Stephens, likewise fully illustrated. In the February number Mr. Hamerton's review of Mr. Pennell's sumptuous work on 'Pen Drawing' is an excellent example of his temper and discrimination, and will be gratefully welcomed by the wood-engraving fraternity, who, for the rest, find scant employment in the *Portfolio's* illustrations. Incidentally Mr. Hamerton throws light on the helio-processes of etching — photo-etching they might well be called; and he has also a word for English catholicity in art as opposed to French ignorance of and indifference to art beyond their own frontiers. The etched plates of these three numbers confirm the promise to maintain the *Portfolio's* standard in this particular. We are glad to learn that an index of the twenty volumes is in preparation, and that the American circulation of the *Portfolio* is a significant part of the whole. In the March issue Mr. Hamerton reviews M. E. Müntz's 'Histoire de l'Art pendant la Renaissance.'

L'Art (Macmillan) entered with 1890 upon its sixteenth year, with no change of character or dress, and nothing startling in its prospectus, which promises particular attention to the artistic progress of "the great secular republic of the United States." To the issue for February 15 M. Adolphe Jullien contributes a very agreeable article, illustrated with his peculiar aptness, on Eugène Renduel, the memorable publisher of the Romantic school of French writers, who ended his days as a country gentleman amid his trees and his garden. We have portraits of himself and wife, a view of his château at Beuvron, and vignettes from his publications. "C'était presque une promesse, un brevet de célébrité que d'être édité par lui," says M. Jullien. Would that all publishers had the ambition to win a like epitaph.

Artistic Japan, of which the American edition is published at No. 220 Fifth Avenue, New York, is issued in its tardy monthly fashion, attaining its latest and seventeenth number just now, though it bears date October, 1889. The full-page plates are numerous in this and the preceding numbers, and cover a large part of the field of decorative art in Japan—stuff patterns, flowers, birds, landscape, statuary. In the September number there is a very interesting group of ivory carvings, masterly in execution and humorous without exception. The text is interspersed with designs generally having some pertinency, as in the case of the articles on Hiroshigé (August and September), or Philippe Burty's on Japanese pottery (October). They seem to us, however, rather distracting to the reader.

Vom Fels zum Meer (F. W. Christern) has a department likely to be self-sustaining for some time. It is styled "Physiognomical Correspondence"; and a beginning is made by some good-looking young woman, or her admirers, sending in a photograph to Prof. Isenbeck, who then writes down her character for the benefit of the magazine readers, who, of course, have the portrait for comparison. This disciple of Lavater is unduly susceptible for his office. He even calls for ice-water to check his ardor of expression.

A map of North Britain, one of Eastern Europe—say the scene of the next explosion of the Eastern Question—and another of the Western Balkan peninsula make up part ix. of the new "Stieler's Hand-Atlas" (New York: Westermann). On the second sheet is interpolated a map of the Southern Ural region.

Mr. G. L. Feuardent comes to the rescue of the discredited Tanagra figurines, in the *Studio* of March 15, in opposition both to Mr. Stillman and to Mr. Reinach, whose letter we print in another column.

—The April *Atlantic* opens with the first of two papers upon "Some Popular Objections to Civil-Service Reform," by Oliver T. Morton. It is written with great vigor, and gains in clearness by the division of the subject-matter into well-defined chapters, each of which deals briefly with some special phase of the opposition to the reform. In this way Mr. Morton successfully examines the weight of truth and argument contained in such statements as that the reform is a step backward to the discarded methods of the founders of the Government, that it is undemocratic, that it is an English importation and better harmonizes with English theories of administration, that examination is not a perfect means of selecting the most capable servants, and so forth. The remarks he makes are trenchant and uncompromising, and serve to make more widely known the results of reform thinking upon these branches of the subject; indeed, his article is an excellent summary of that thinking, and shows an advanced stage of the general argument in the public

mind. Prof. Thayer contributes a remarkably forcible example of the way in which prepossessions affect the mind's judgment, even in the region of applied law and under the restrictions of legal procedure; he tells the history of two great cases of trial for witchcraft, viewing them wholly from a legal point of view, and discusses in general the application of the machinery of justice to things supernatural when the verdict is to be given by a jury. The paper is an admirable illustration of what may be called social psychology. A third very striking article is upon the constitution and governmental methods of the Belgians, in which the extraordinary success of that nation, though Catholic, in securing liberty, is well brought out, and the impending crisis by which liberalism, in fulfilling itself by grant of universal suffrage, threatens its own destruction, is foreshadowed. The discussion of the education and ballot laws is especially timely. The remainder of the number is of the usual calibre.

—We mentioned last week Mr. Henry Sargent Codman's zealous and careful essay towards a bibliography of landscape gardening in *Garden and Forest* for March 12. A closer examination of it enables us to point out some curious omissions. The work was "prepared in the library of the British Museum, in the Bibliothèque Nationale, and in other private and public libraries." Yet, singularly enough, it does not include a number of works that are in the Boston Athenæum, only three or four miles from the compiler's dwelling. They are: 1763, Chambers, W., 'Plans of the Gardens at Kew'; 1785, 'Elements of modern Gardening'; [182– ?], Taylor, I., 'Decorations for Parks and Gardens'; 1826, Fosbrooke, T. D., 'The Tourists' Grammar; or, Rules relating to Scenery, including an Epitome of Gilpin's Principles of the Picturesque'; 1842, R. Brown, "Instruction on the Art of Laying Out and Ornamenting Grounds" [in his 'Domestic Architecture']; 1866, Copeland, R. M., 'Supplement to the Fifth Edition of Country Life'; 1869, Lefèvre, A., 'Les Parcs et les Jardins'; 1886, Parey, P., 'Verlagskatalog,' a booksellers' catalogue, *i. e.*, so far as it goes, a bibliography. Probably nearly every one of these is in the British Museum, but as those libraries, like most European libraries, have no subject-catalogue, they were hidden from Mr. Codman. The existence of a subject-catalogue at the Boston Athenæum, however, made it possible to add them to his list in a few minutes. Some twenty years ago, a European professor complained in our columns of the cost of the great subject-catalogue of Harvard College Library, and urged the use of bibliographies in their place. We showed at the time the insufficiency of the substitute for the needs of American libraries, pointing out that there are no bibliographies of a majority of subjects; that those which exist are getting more and more out of date every year, and can only be made to include the latest publications by the very inconvenient device of supplements; that a bibliography at the best is a very clumsy tool, since one must first find out what books there are on a subject, and then enter upon another investigation to ascertain if they are in the library; and now we may add that a bibliography even executed with care is sure to have some gaps. Suppose any one had been dependent upon Mr. Sargent's list to get at the landscape-gardening books in the Boston Athenæum; he would have missed half of them. We have one other criticism to make. Mr. Sargent endeavored to include all articles and reviews except such as appeared in horticultural and agricultural journals. The exception is reasonable and indeed necessary; but it seems to us that a complete bibliography ought at least to give a list of these journals. As it is now, the inquirer has in this bibliography no clue whatever to the existence and whereabouts of the articles and reviews in question.

—The meeting of the Society of Authors was held in Willis's Rooms, London, on February 27. No business of special interest was transacted. The annual report was read, but, though the power as well as the work of the Society seems to be increasing, there was nothing of great note to record. Authors have received advice, MSS. have been read, warnings against dishonest publishers given, and thus the first object of the Society—the maintenance, definition, and defence of literary property—has been in a measure accomplished. But towards the promotion of international copyright, another of its objects, and one in which Americans are much more interested, little has been done. The matter has been left in the hands of a competent committee, composed of eminent lawyers, and a "Bill to amend and to consolidate Domestic Copyright, or to place International Copyright upon a more satisfactory basis, has been for some time in the hands of the Board of Trade." It is worth while calling the attention of American publishers to the fact that the Society has been in communication with the Secretary of State for the Colonies on the open sale of American pirated editions which is said to prevail in many of them. An assurance has been obtained that in one, the Straits Settlement, the law shall be rigorously enforced, and an inquiry is being made as to the state of affairs in all the others so that the necessary action may be taken. The Society has published two of the books it promised last year. One, on 'The Cost of Production,' for private circulation only, contains much useful information about the charges for printing, paper, binding, etc., but it is far from being complete. No particulars are furnished as to the cost of illustrations, though nowadays one-third of the books published are illustrated, and nothing whatever is said about fine editions. The other book is a 'Note on the Société des Gens de Lettres,' giving a sketch of the origin and growth of the French organization, and its rules and regulations.

—Mr. Worthington C. Ford's edition of the Writings of Washington (Putnams) has reached its fifth volume. The fourth deals wholly with the year 1776, and leads from the evacuation of Boston to the loss of New York after the battle of Long Island—and after the Declaration of Independence. In the fifth volume the surprise of Trenton and the subsequent brilliant operations of the commander-in-chief are the surpassing features of Revolutionary progress. Both volumes end gloomily—the one, with the patriot army on the eve of dissolution in consequence of the expiration of enlistments; the other, with the distraction caused by the British expedition against Philadelphia and the approach of Burgoyne from the North. In vol. iv. we remark Washington's incidental testimony to the powerful effect of Paine's 'Common Sense' (April 1, 1776), his familiar allusion to "Old Put," and his desire to call in the aid of the Eastern Indians of Massachusetts (*i. e.*, Maine), as an offset to the acts of the British in making use of foreign mercenaries and in exciting slaves and savages to arm against the Revolutionists. In vol. v. we have a fresh defence of the character of the Eastern troops against "illiberal reflections" prevalent in Virginia. "No people fly to arms readier than they do, or come better equipped, or with more regularity into the field than they." Nor do "any of the States produce better men, or persons capable of making better soldiers." But "they are (generally speaking) most wretchedly officered," since the policy of the States has been to obliterate the distinction between officers and soldiers, and "to level men as much as possible to one standard." Washington also declares the Hessians more merciful than the British, who are rumored to be about to reinforce themselves with Russians, and Washington thinks them quite capable of employing "Russians, or any other barbarians." In another letter, desiring a bodyguard, he prefers "natives" (of New Jersey) to "foreigners" (natives of other States). To Washington we owe, on the advice of Knox, the selection of Springfield, Mass., as the seat of the Government "laboratory and cannon-foundery." By what we must consider an error of judgment, of which the editor himself confesses misgivings, Mr. Ford has incorporated with the genuine letters of Washington the forged letters of 1776. They are, to be sure, printed in smaller type, but they are placed in the body of the work, and inserted chronologically with the genuine letters, as if the dates had an historic value. Mr. Ford has since done what would have been sufficient for these lying productions: he has made them into a monograph which is issued by the Historical Printing Club, 97 Clark Street, Brooklyn.

—"The reason," writes a correspondent from Washington, "why negroes do not read fiction, poetry, and works of humor, is not far to seek. Every one acquainted with their character testifies that they are bent upon improvement. Having learned, amid many difficulties, to read at all, they do not select books for the purpose of passing away the time. As they take a very serious view of life, and consider ecclesiastical or political prominence the most desirable of all things, they naturally seek information on law, on government, on theology. It will be found that everywhere negroes readily buy the 'Library of Universal Knowledge'—a book which, for the money, contains, as they think, more useful information than any other. Those of a little higher type select the writings of the ancients, Plato, Aristotle, and Cicero, because they wish to excite admiration for their elocutional accomplishments and for their sound views on sociological and political matters. The librarian of one of our largest departments in Washington has for many years studied the literary tastes of the colored people who are allowed to use the miscellaneous collection of books under her charge. Her testimony is that their first choice usually is a book relating to the duties of the citizen, the methods of the public speaker, or the problems of ethics. Their next choice is a biographical or historical volume. They never select for their own reading any light or polite literature. In fact, every book drawn by them is meant to equip them as parliamentarians, politicians, or divines. The humor of it is to hear demands made by most ignorant negroes for the ponderous tomes of erudite scholars. One of this class, who rejected with indignation the offer of 'something in the way of biography,' because he was 'tired of all this chography anyhow,' gladly jumped at the 'Life of Wesley.' Another recently demanded the 'Life of Sourcrout.' He was promptly supplied with 'Socrates.' Fiction is under the ban of their churches, for nearly all negroes are either Baptists or Methodists. But this does not account for their apathy towards merely exciting,

amusing, or agreeable literature. The real reason is to be found in the negro's mental disposition and late entrance into the intellectual life. By knowledge he hopes to rise; he therefore wishes his share of it to be solid and extensive. But, above all, he craves that sort which will enable him to dazzle, to persuade, and to control bodies of men. The church rules are really needed only for the women. A few of them, it is said, read novels."

THE FIRST AMERICAN TRANSLATION OF 'WAR AND PEACE.'

War and Peace. By Count Lyof N. Tolstoy. From the Russian by Nathan Haskell Dole. Four vols. Thomas Y. Crowell & Co.

In noticing these volumes it is not necessary to say anything about the work of Count Tolstoi. That is a subject which has been discussed, as a whole, overmuch, in superfluous prefaces and otherwise, when one takes into consideration that the critics have lacked the fundamental requisites for forming an adequate judgment, namely, acquaintance with Russian life or language, or both.

Up to the present time the English-reading public has been obliged to found its opinion of 'War and Peace' on the mangled and otherwise seriously defective version through the French which was published several years ago, just as they are still obliged to derive their ideas as to the author's other great work, 'Anna Karenin,' from a similar version. The present translation—if such a piebald mixture can fairly be called a translation—is from the Russian, and is distinguished by the same vicious practices for which the translator's work is well known, and which becomes more marked with every fresh attempt of his to render a foreign language into English. In 'Anna Karenin' *nu*, *da*, *akh*, and *okh*, all of which words possess perfect English equivalents, were there sprinkled liberally over the pages, as if for the purpose of proving that the version had been made from the original, whereas the only result was the irritation of readers. In 'War and Peace' this system is exaggerated to the extent of introducing nearly one hundred Russian words, which are never translated at all, or are translated once, after which the unhappy reader is left to flounder on in the dark, if his memory fails him, or if he has not sufficient experience of the translator's methods and sufficient presence of mind to note down a glossary for himself. No one ever presumes to offer such work to the public, under the name of "translation," from the French or German. It would not be tolerated for a moment, although it would be much more excusable (though utterly inexcusable), in view of the larger proportion of persons who have at least a smattering of those tongues wherewith to eke out the translator's ignorance. One infers ignorance in the present instance rather than a desire to add "local color" because of the significant fact that, in every case where "local color," *i. e.*, delicate and characteristic national touches, occurs in the original, the translator has ruined it. In some cases a faithful rendering of the printed words was alone required to bring out the true sense; and the printed words are deliberately ignored, or reversed to conform to what the translator thinks Tolstoi ought to have said. In other cases the ignorance is involuntary, not wilful; but it equally annihilates the meaning.

Another point which deserves severe criticism is the manner in which the French phrases are handled. "For the amusement or gratification of the cultured reader," says the curious preface, "some of the polyglot conversation so characteristic of the story, as it was characteristic of educated Russians *two generations ago* [the italics are ours], has been relegated to footnotes." If this were so, we should have but little to say, except that footnotes are an abomination in anything but a scientific work, or when strictly national localities, viands, and so on, which have no English equivalent, require a word of explanation. Or if every French word except, possibly, *mon cher*, *ma chère*, *au revoir*, and *adieu* had been translated and printed in the text, in italics, the problem of illustrating "characteristic conversation" would have been thoroughly solved. As it is, no settled plan has been pursued, and the average reader will emerge from his struggle with the book with aching head and temper. Sometimes the phrase is repeated in the text in both French and English; sometimes the French is added in a footnote, as per preface, sometimes the English; sometimes one-half of the phrase is translated while the other half is not. To quote only one instance: Julie Karaguin's letter to the Princess Marya, which is pure French in the original, is reproduced in a fantastic and arbitrary mosaic of French and English, of the translator's own devising. The most effective comment on this process is furnished by Count Tolstoi's own action in changing everything into Russian in the latest editions, with the exception of perhaps one French or German word to one hundred thousand Russian.

Before proceeding to illustrate the literary offences above alluded to, and others, by a few examples, another word must be devoted to the footnotes. As we have said, footnotes are a dizzy abomination, only to be pardoned by imperative necessity and vindicated by their accuracy of information, whereas, in these volumes, they are absurd. Why should the wretched reader have his paragraph ruined and his head made to swim by being forced to see in the footnote that "a short jacket" is thus and so in Russian? Who cares which of the half-dozen Russian equivalents has been used by Tolstoi for "my dear fellow," or what the Russian is for "good-bye"? And why is not "my God" as suitable for the text as for a footnote? If the words are properly translated from the French or Russian, a footnote is a superfluous bane. This affectation of scrupulous exactness is ludicrously out of keeping with the more or less glaring errors which adorn the pages in countless number and variety, and the explanatory notes merely render blackness blacker. Nothing, for instance, could be further from the truth than that *kumatch* is "a sort of fustian"; that a *kalatch* is "a sort of pretzel or light loaf"; or that a *klobuk* is a "cowl"; while the comment upon the form of the names *Bezukhoi*, *Bezukhoff*, employed, frankly professes ignorance of a very simple matter. An *ekteniya* is by no means "a liturgical prayer for the Imperial family"; a *likhatch* is not "a good driver of horses"—and so on. The examples which follow may be classified as obscurities, absurdities, mistranslations, omissions, additions ("substituting the curved line of beauty for the straight line of duty," which the translator reprehends in others while arrogating his own right to it—see the preface); American slang, bad grammar, ignorance of words, customs, and idioms; wilful or ignorant spoiling of local color; and mixed cases which belong under more than one of these heads. The reader will be able to fit the few assorted specimens which space permits us to give into one or more of these categories for himself, when not indicated.

Passing lightly over the "diamond-buckled shoes" of chapter i., in the place of "low shoes" or "pumps"—the "buckled" having been derived from the French version, and the "diamond" from the translator's own imagination—let us proceed to "rattled off in a stream of talk" for "began to talk"; "they had disagreed about remedies, one preferring one thing, one another," for "they had tried one thing after another"; "he could not find enough to say in praise of" for "he praised"; "still with a smile on his handsome lips" for "with a smile"; "he was fond of running down pedestrians on the street-crossings"—the added "street-crossings" being an absurdity in winter in Moscow; "realized the new delight which was awaiting him" for "found pleasure in it." A fondness for adjectives, particularly of the boarding-school-girl type, results in such phrases as "how *elegantly* he dances," "an *unnaturally* low tone," "*nice* new uniform," "*silken* dresses," where there are no adjectives in the original, and in "a *lovely* relative," for a *fine* relative, a "*lovely*-looking priest" for *good-looking*, and so on. Among the words left in Russian, presumably through ignorance, are, *flügel-adjutant*, *sarafan*, *kasha*, *vozok*, *shubka*, *denshchik*, *kulebyaka*, *leib-hussar*, *shchi*, *afishki*, *kabak*, and so forth. Among those thrown in for company are: *akh*, *okh*, *papenka*, *mamenka*, *politzeimeister*, *general-marsch*, *kompanyonka*, *guvernantka*, *intrigantka*, *dusha moya* (always wrongly accented), *Avstriak*, *Polyak*, *Prusak* (Mr. Dole seems to have been in doubt whether it meant a Prussian or a cockroach), and many others. By a sacrifice of sense to rhyme, "No love is lost 'Twixt Russia and frost," is furnished as the translation, while the real translation, "Russia and summer have no alliance," is supplied in the note as a "variant"! Making havoc with the most characteristic details, the translator represents sheepskin coats as "buttoned," which they never are, and as "lined" (with nankeen cloth and so on), while Tolstoi correctly describes them as "covered." He treats Prince Vasily's fur-lined coat as trimmed with fur; dresses hussars in "wide, sagging pantaloons," makes *sukhari* "biscuit" and "hardtack," both being equally wide of the mark; makes the "glazed vestibule" "mirror-lined"; makes gentle Princess Marya say "beastly," instead of "inhuman," and makes Pierre throw the bear and policeman into the Moscow River instead of the Moïka Canal—a trifling error of 611 versts! He makes Natasha "gentle," which she never was, instead of "slender," makes her "snicker out loud," instead of "jump up," endows her with an impossible "bang" and "pug," and Sonya with a "switch" (clearly false hair) instead of a "braid." He trims Hélène's dress with smilax instead of ivy; calls her "Ellen," a form unknown in Russian society of the time, and which, if the name be so transliterated from the original, demands that *Pierre* should be rendered as *Piyer*. He persistently employs the Russian feminine of surnames, Rostova, Bolkonskaya, and so on, which no Russian ever uses in English or French. He renders "he had just been entered in the Line and immediately transferred to the Guards" as "he had lived some years waiting to be transferred from the Line." "That look of escape from the ills of life with which wretched people regard their labors" is beautified into "he had been working for dear life, just as wretched people, in their efforts to save themselves from the wretchedness of their lives, take up any occupation that comes to hand."

When Pierre is a prisoner, he is described as having shoes of "goatskin," which the reader will probably regard as too commonplace to

deserve mention, and rightly. What Tolstoi says is, that he had shoes made from the raw bullock's hide from a bale of overland tea. The sledge-driver is said to "wind his whip round a peasant's neck" (instead of striking the peasant), a feat quite impossible of accomplishment. The Virgin's face is represented as "tarnished," which is never the case, instead of "black," which is true of old images, and he has her borne on "carved staves," a pure invention, instead of "with towels," as plainly printed. The hour of the day is mistranslated in every case; the ninth hour, for example, being not "nine," but eight o'clock. *Zal* is neither a ball-room, drawing-room, music-room, nor parlor, as it is rendered in turn, at random. Tolstoi describes the ball-gowns of Natasha and Sonya as being "of a cloudy white material (tulle) over pink silk slips." The translator gives them "pink silk overskirts" and "crêpe" in an impossible combination, and makes Natasha always "chassée" across a ball-room—a most extraordinary performance, for which Count Tolstoi is not responsible. Ignorance of idiom leads to a literal rendering of "to carry these robbers through clean water" and "if a cat were to run between us"; to "Beauty does not make sweetness, but sweetness makes beauty," in place of "You are beautiful because you are dear, not dear because you are beautiful"; and to "Where are the Anferoffs?" instead of "The Anferoffs indeed!"

Natasha is represented as going to another cottage to see Prince Andrei. Even if one be ignorant of the construction of a peasant house, the context shows that this is false. The French are said to have stolen a holy image, whereas they never took anything but the silver or gold settings. The priest is described as officiating "with honeyed unction"—a thing which a Russian priest never does—instead of "the gentle solemnity" which is peculiar to him; while the purple-velvet *skufya* is rendered, "lilac velvet calotte," a very different matter. The deacon is said to have "pressed his cross to his heart," and "crossed himself on the front of his stole," two absurdities only to be surpassed by the rendering of "May the net come upon them without their knowing it, and take them unawares," as " . . . and may the draught of fish which they meant to take surround them on all sides." One feels inclined to inquire what was the outcome of this peculiar position between the surrounding fish and the Lord's "slaves," as "servants" is carelessly given. Another attempt at translating Slavic results in, "Let thy bounty and thy mercy guard us as from everlasting to everlasting," instead of, "Remember thy bounty and thy mercy, which are from everlasting," and so forth.

The two merchants are represented as "setting out on a pilgrimage to the shrine of St. Makarii," instead of to the fair, which is now held at Nizhni-Novgorod, and which is still known as "Makariya," because it was formerly held at a place of that name. One wonders why the *Granovitaya palata* was not rendered "the county jail." It would have been quite as near the truth as "Court of the Exchequer." "You might have had some pity on your children" appears as "you've had a great longing for your children," while *ryabtchik* is stated to be woodcock. Tikhon is said to have "his legs high wrapped in *lapti*" (*lapti* being bast slippers), and as being able, "with absolute certainty, to split a brain with his hatchet at any distance (!), and, taking it by the but [*sic*], cut out dainty ornaments or carved spoons," whereas he really could merely "split a beam with a full swing of his ax, cut pegs," and so on. Pierre is made to say of his wife that "she had never been loved in her whole life for anything but her body," instead of "she had loved nothing but her own body all her life"; and "a batiste shirt evidently but just donned" is "evidently only intended for summer," while "a deep, antiphonal bass" by no means represents the "voice like a protodiakon," and the "black *lepeshki* with buttermilk" of Tolstoi are as different a thing from the "wheat-flour cakes" of the translator as the way in which a Cossack's hair is really cut from the "close-cropped, leaving a tuft," of the improvised English.

Of the various omissions we may allude to divers characteristic epithets referring to Princess Liza, and to a long paragraph in vol. ii., p. 374, which evidently proved too much for the translator. American slang is represented by "That's a great note!" (instead of "Very fine indeed!"); "He took no stock in Zdrzhinsky's story," instead of "He was not pleased with Z's story"; "Training with the cub," instead of "making a turmoil with," and so on. In the question of grammar, we should like to have, among others, the sentences "If it is admitted, as the historians do," and "It makes you dizzy even on a staircase" (vol. i., p. 38), either construed or retranslated.

It will be seen that "local color" would have existed in abundance had more knowledge of language, customs, chronology, more care and more discretion, been used, without resorting to any such devices as the employment of *barin*, *shef-zhendarmof*, *nachalniks*, and so on in the text, and *golubtchik*, the Russian for "a fancy-dress ball," etcetera, in the footnotes. If we do not translate some of the words incorrectly rendered, and quoted above, it is because we do not regard it as our duty to teach the translator Russian any more than we consider it to be his office to force Russian words on the public. In short, owing to these defects and to the false methods for which the translator has already been widely criticised in less offensive cases, these volumes cannot be said to be designed for the *English-reading* public at all, but merely for a few persons who are fairly well acquainted with French and Russian. The position of the person not thus qualified who undertakes the task may be justly compared to that of an unskilled rider who goes to the riding-school for a lesson in equitation in an easy and pleasant ring, and who finds himself suddenly and treacherously launched into a steeplechase course, and left to flounder on helpless and alone. The verdict of the unhappy wight will be apt to assume the form of expression which the present translator applies to the people whom he accuses (and justly) of his own faults: "Here the old law of an eye for an eye and a tooth for a tooth, repudiated by Count Tolstoi, ought to have a new application!" But the victim will infallibly make the old Scriptural application.

Manual of Ancient Sculpture. By Pierre Paris, late member of the École Française at Athens. Edited and augmented by Jane E. Harrison. With 187 illustrations. 12mo, pp. xvi and 369. London: Grevel; Philadelphia: J. B. Lippincott Co. 1890.

M. PARIS'S 'La Sculpture Antique' adds one more treasure to the invaluable "Bibliothèque de l'Enseignement des Beaux Arts." Like its predecessors, it is intended as an introduction, of the most popular kind, to those who know nothing about its subject, and who wish for no more than a general knowledge. The best gift of a teacher of this class is an ability to squeeze the juice out of an enormous mass of material, and administer it in doses that shall be at the same time palatable and nourishing. This gift M. Paris seems to possess to an eminent degree. To compress into the limits of a small duodecimo volume all the salient points in the development of Egyptian, Oriental, Greek, and Roman sculpture, in such a way as to give those entirely unfamiliar with the subject an adequate and unconfused impression, is no small undertaking, yet this M. Paris has accomplished—we will not say completely, as that would be to perform the impossible, but certainly satisfactorily.

It was a fault of Collignon's 'Archéologie Grecque' that it attempted too much. The reader's mind became bewildered among the many new facts and names that it encountered on almost every page, and he was left at the end with a feeling that the subject was too large for the book. This fault M. Paris skilfully avoids. With a style as clear and entertaining as Collignon's, he confines himself to fewer facts, and more generalization from these facts. From each of the epochs he selects only a few of the monuments that best illustrate its characteristics, and, using these as a sort of text, points out the features of the epoch, school, or master to which they belong so clearly that it seems as though his object must be accomplished, even with the most casual reader; while those who read the book carefully will find themselves well equipped for an intelligent visit to any gallery of ancient sculpture. His summary of the characteristics of Egyptian art especially, in the various phases of its development, or rather of its decline, seems to us a masterpiece in its way. The book treats of Egyptian, Oriental, and Greek sculpture, with a final chapter upon sculpture in Etruria and Rome; and though for his materials he has been largely dependent upon the books of Maspero, Babelon, Perrot and Chipiez, and others, he has been admirably successful in getting out of the works mentioned just so much as was needed for his purpose. We know of no short manual of ancient sculpture that can be so confidently recommended to beginners.

Miss Harrison's translation, or "edition," as she calls it, is on the whole well done, and may be used profitably by those unable to read the original, though there are occasional slips in the translation which result in erroneous statements, as, for example, on p. 182, where she speaks of an Apollo of Kalamis "found at the Ceramicus in Athens." No statue of Kalamis has ever been found, and no Apollo has been found in the Ceramicus at Athens. Paris's expression is "qui se trouvait au Céramique," which of course means that the statue formerly stood there.

Much more serious than this, however, are the liberties which Miss Harrison has taken with the original text, and, however trifling these may be in themselves, it would be manifestly unjust to the author to pass them over unnoticed, especially as Miss Harrison herself has done so. An editor or translator has certainly no right to substitute his own opinions for those of his author without giving due and specific notice of the fact, yet this Miss Harrison has done in too many instances to be quoted here, though we may give one or two by way of illustration. Speaking of the *columnæ cœlatæ* at Ephesus, M. Paris says (p. 264):

"Celle que M. Wood a rapportée au Musée Britannique, par l'ingénieux groupement des figures, le modelé délicat des nudités viriles, la richesse et la grâce des draperies féminines, n'est pas indigne du maître, sans qu'on ose affirmer que l'œuvre soit justement la sienne."

This, in the English edition, appears as follows (p. 266):

"The best preserved, which Mr. Wood has taken to the British Museum, is, however, quite unworthy of the master, and, happily, cannot be proved to be his."

Again, speaking of the head of the Hermes of Praxiteles, M. Paris says (p. 281):

"Vue de face, vue de profil, elle ne rappelle en rien ce type de convention qu'on nomme le type grec, fin, distingué, pur de ligne et certainement admirable, mais qui se répète trop, comme un cliché impersonnel et froid."

Miss Harrison, not being quite of this opinion, makes the author say (p. 284):

"Seen from front view or profile, everything in it recalls and yet transcends the conventional type—the so-called Greek profile, delicate, distinguished," etc.

An amusing instance of this perversion of the author's statements occurs in the discussion concerning the so-called Choiseul-Gouffier Apollo, in which M. Paris alludes to the theory advanced by "M. Waldstein," while in Miss Harrison's version "M. Waldstein" becomes multiplied into an impersonal "group of archæologists." In only one instance has she separated her own opinion from that of the author. What he says about the Venus of Melos she has left to himself, though in a footnote she has "felt bound to record" her view, which is that the statue is "not an Aphrodite at all, but a Victory—not to be dated before the second century B. C."

Whether or not Miss Harrison knows more about her subject than M. Paris, or, granting that her opinions may be more valuable than his, it must be none the less exasperating to an author to see his own statements thus rebuked and modified after they have gone beyond his reach; and, as we said above, it is more from a desire to do justice to him than from any feeling that these changes destroy the value of the book that we have called attention to them. To leave the latter impression upon the minds of our readers would be unfair to Miss Harrison. She has violated the rules of literary courtesy, but she has translated, or "edited," a useful book in a way that will make it useful to those who do not care whose opinions they are reading, provided they be of good authority. The bibliography at the beginnings of the chapters gives an added value to the English edition; and the illustrations, to judge from the two copies before us, are much better in this than in the original, notably the archaic head in the Acropolis Museum (figure 59).

Conversations in a Studio. By William Wetmore Story, D.C.L. 2 vols. Boston: Houghton, Mifflin & Co. 1890.

Mr. Story's 'Conversations' are just what the title indicates—informal and rambling discourses upon subjects that would naturally interest an artist and a poet who has the field of modern culture within his range. A considerable portion of his material has been collected from writings of earlier years and thrown into the form of conversation; but much of it is fresh and has only recently seen the light. He begins with some remarks upon the large prices paid for great works of art in our generation, and reminds us that even at present rates less is paid for painting and sculpture, and even for pottery, than was lavished by the ancient buyers of Athens and other Greek cities and of Rome upon the works of the masters of the antique. His catalogue of sales is a long and curious one, and sustains his position, while on the other hand he is able to contrast the happy fortune of these first artists with the small fees received by the great masters of the Renaissance. This, which is one of the more interesting chapters, is an excellent example of the subjects he treats of in a half-learned or half-gossiping manner, and of which the number is legion, ranging from Paris costumes to the proper pronunciation of Latin.

Art naturally holds the first place in the mind of the writer, and is discussed both in its historical embodiment in the works of the great, and in its theory, with its relation to the ideal and real, to beauty, nature, and truth. The author is an idealist, and his judgments follow the canon of idealism, but his presentation of his views is remarkably clear in statement, and as well reasoned as it is excellently illustrated. The second leading topic is poetry, of which Mr. Story writes with something of an old-fashioned familiarity with old-fashioned poets, but always with good taste and discrimination. Shakspere naturally comes in for words not a few and praise not small, but room is found for others less illustrious, and in the discussion of melodies and of melodic poems the author has much to say that it is desirable for us to be reminded of in days that forget Byron and Moore; he revives also the reputation of a few American geniuses, and particularly of Robert Treat Paine, though not to do them honor.

The conversations, however, are not all of this literary and artistic sort. The question of magic, the always living subject of centenarians and their distinctions, the equally immortal one of extraordinary powers of memory, are examples of these excursions into the region of mere information which relieve the reader's attention. The examination of the ancient theory of proportion in the human figure and the argument for an Italianated pronunciation of the Latin language are the most serious topics, and in these portions of the volumes the author evidently aims at more than entertainment. In general, however, the talk is not exacting, and flows on pleasantly, without ruffling the mind with vexing questions, or requiring it to lay off a leisure mood and gird itself to any serious matter. Mr. Story's talk is out of the fulness of his cultivation and holds us by its interest, and if he rides his hobbies at times, that is an ancient privilege of the talker and not to be taken with bad grace by the listener. Indeed, the volumes are excellent within the limit set by their familiar and unsystematic character; many things are spoken of with intelligence, sufficient anecdote enlivens the pages, and the subjects introduced are those which belong to the common stock of cultivated minds.

Rules for a Dictionary Catalogue. By Charles A. Cutter. [United States Bureau of Education, Special Report on Public Libraries, Part ii.] Second edition. Washington. 1889 [1890].

This long-expected revision of the "cataloguer's Bible" fills 133 pages, some fifty more than the authorized version of 1876. The largest single addition is an appendix containing, among other things, the American Library Association's reports on book sizes and on transliteration—the latter owing much of its value to the late Michael Heilprin—a long list of abbreviations, and a comparison between the American Association's cataloguing rules, as codified in 1883, and the rules of the Library Association of the United Kingdom, 1881, of the Bodleian Library, 1882, and of Columbia College, 1888. Throughout the text of the book, also, Mr. Cutter has amplified his former discussions and introduced new rules to meet difficulties not previously anticipated. These additions, however, are matters of minor importance; the original rules were at once so complete and so lucid as to leave little opportunity for supplement or explanation. It is by examining the changes, rather than the additions, that we shall discover the merit of this new edition.

Mr. Cutter, to be sure, did not invent the dictionary catalogue, but he systematized what was previously without form and void. Under the circumstances it was not unnatural that a reformer's zeal should make him somewhat rigidly systematic. Nor was his zeal misdirected: to insist on the intrinsic value of method was to teach a lesson much needed at the time. To-day, however, when method is too frequently preferred before sense, a different lesson is needed, and no one is abler or more willing to teach it than is Mr. Cutter. Accordingly he has modified his rules in various significant respects, moving always towards vital usefulness, and frequently away from dead uniformity. Thus he now prefers the entry of British noblemen by their titles instead of their names—an eminently sensible change, supported by this convincing syllogism: "Authors should be put under their names; a name is 'that by which a person or thing is known.' British noblemen are known by their titles, not by their family names." How many Americans, for instance, know the family name of the Marquis of Hartington, or even of the Marquis of Salisbury? A similar change, defensible by the same reasoning, provides for the entry of some authors, *e. g.*, "Gavarni" or "E. Marlitt," under the pseudonyms by which they are known, with references from the real names by which they are not known. A third noticeable change recommends that separately published parts of the Holy Scriptures be scattered throughout the alphabet under their common English names, instead of being grouped, as is the current custom, under the word Bible. Few American libraries, indeed, will ever accumulate, as has the British Museum, 160,000 titles, filling twenty-one folio volumes, under that single rubric. Nevertheless, the entry "Bible" is very complicated even in smaller catalogues, and Mr. Cutter's suggestion for simplifying it ought to meet with hearty approval. Besides these three, there are a number of minor changes of similar intent, and all praiseworthy.

There is, however, one important feature of this new edition which cannot be commended, viz., the elaborate list of abbreviations. No cataloguer can remember 600 abbreviations, the majority of them arbitrary contractions of forenames; certainly no reader can understand them. Abbreviations which do not suggest the word they replace are a nuisance. At least one library catalogue in this city is rendered well-nigh unintelligible by the extent to which the librarian has employed arbitrary abbreviations, using aggravating combinations of initials with colons and double periods and semicolons inverted and semicolons on their backs, in place of the names which authors received from their sponsors in baptism. Fortunately, it is very easy not to use Mr. Cutter's abbreviations. The remainder of his book is as easy to use as any set of cataloguing rules can be, and a good catalogue should result from the intelligent use of it.

Arctic Alaska and Siberia; or, Eight Months with the Arctic Whalemen. By Herbert L. Aldrich. Chicago: Rand, McNally & Co. 1889. 234 pp. 8vo. Illustrations and map.

The sub-title of this book more accurately denotes its scope, since Arctic Alaska and Siberia are treated of only as they could be observed from the whale ships. The author states that he

"found the subject of Arctic or Bowhead whaling untouched by any author except in a most general and meagre manner, though it offers richer material than other kinds of whaling. It is carried on in a region beset with inconceivable dangers and risks, and in a region practically unknown, for no writer has ever visited it, though whalemen had been there every year for forty years. The moment seemed to me ripe to preserve this valuable material, for modern science is fast removing the picturesque excitement of whaling. Therefore I have made the cruise and pictured the subject as comprehensively yet briefly as I could with my pen and camera."

When one remembers the octavos and quartos, the New York *Herald* correspondents, the *Jeannette*, the *Corwin*, the Rodgers, and the grand old Admiral for whom she was named, with his stout sloop the *Vincennes;* the Point Barrow expedition under Ray, to say nothing of Lieut. Stoney and the Revenue Marine on the one hand and Kotzebue, Beechey, Hooper, and Richardson on the other, it is a little difficult to understand what is meant by "practically unknown" and unvisited by "any writer." Besides purely nautical works, there is a fair-sized library of books relating to the region, by dipping into some of which Mr. Aldrich might have learned much that would have enabled him to make his own voyage more fruitful.

But, this little indiscretion of the author apart, his intentions were good, his plan laudable and not badly carried out. Not counting South Sea sperm-whaling, there is not, as far as we know, any book treating of life on a whaler in the North Pacific, and especially the Arctic Ocean north of Bering Strait. Gustave Lambert published something on the subject, which we believe never was Englished, and bore rather on the opportunity for polar discovery than on the daily life he led. Consequently our author had a clear if rather limited field ripe for his harvest. On the whole, taken for what it really is, the description by an untrained observer of the average life on board the whaling fleet during a successful and prosperous season, the book is a good one. Mr. Aldrich sailed from San Francisco in March, 1877, and later transferred himself from one vessel to another, returning the following autumn at the end of the season, after having made the rounds of half-a-dozen of the fleet. We can corroborate the faithfulness and accuracy of his observations as a whole; and if there is no evidence, in point of literary finish, that "any writer" has yet reached those waters, yet his account is straightforward, clear, and with no nonsense about it, which is saying a great deal. We believe that most readers will find it full of interest, while the brief, unvarnished tales of wreck and other "typical experiences" from the annals of the Arctic fleet, appended to the narrative, draw the veil from scenes which might claim Pierre Loti as an appropriate chronicler. How men, cheap, coarse-fibred, ordinary sailor-men, under good leadership, will face death heroically is good to know. It shows that the pith of the race grows from the roots. Even the pitiable weaknesses noted by the impartial record on occasion have their grimly humorous, only too human, side.

In his account of the natives of the two coasts, the author falls into some inaccuracies, due to inexperience, but they are of little moment. His impressions are those which would be gathered by any one under similar conditions. The illustrations due to the camera, though sometimes very good, are on the whole less satisfactory than process-drawings would have been. There is too much detail in almost any "ship-scape" to leave the interesting items clear to the unprofessional eye. There is a tolerable map, but no index. The press-work is unusually poor for an American book, if we may judge by the copy examined.

The Union Theological Seminary of the City of New York: Historical and Biographical Sketches of its First Fifty Years. By George Lewis Prentiss. Anson D. F. Randolph & Co. 1889.

THIS is a tardy publication. The historical address of 87 pp. was prepared for the fiftieth anniversary of the opening of the Seminary, December 7, 1886, and, too long for compiete delivery, was read on that day in an abridged form. That three years have intervened between this publication and that event is accounted for by the sickness of the editor and the difficulty in obtaining the material requisite for the biographical sketches of founders, directors, benefactors, and professors, which occupy nearly twice as many pages as the historical address and in much smaller type. It is remarkable that while Dr. Prentiss gives the heads of his discourse in the table of contents, he has not given the pages of the numerous sketches. There is simply one page reference for the "Founders, Directors, and Benefactors," and another for the "Professors." Since the fiftieth anniversary, President Hitchcock and two of the oldest directors have died, and sketches of their lives are included. Through some excess of modesty the present constitution of the Faculty is left to be worked out from the schedules of study together with the division of work—a tedious business. It would even have been allowable to give some brief account of each member of the present Faculty. The antecedents of Dr. Charles A. Briggs have lately become a matter of wide public interest, and it is possible that the blameless fronts of his coadjutors may conceal like possibilities of seismic theological phenomena.

Dr. Prentiss's story is one of steady growth, of generous benefactions, of wise administration, and faithful personal service. The frontispiece illustration of the present domicile of the Seminary is in pleasant contrast with the picture of its original tenement in University Place. Students matriculated from the beginning number 2,230. Of these more than 91 per cent. were college-bred, and 1,774, as nearly as can be ascertained, are still alive. It is a defect of Dr. Prentiss's address for the general reader that it assumes a knowledge in him of Presbyterian theological development which he does not possess. Thus, at the beginning, where the coincidence of the founding of the Seminary with the trials for heresy of Albert Barnes and Lyman Beecher is spoken of, there is no indication of the quality of their offence. We are told that the Seminary, established two years before the disruption of Old School and New School in 1838, was emphatically on the New School side, "for the simple reason that its Presbyterianism was mainly of the type that had been shaped by Puritan and New England influences"; but these are not distinguished from the Scotch-Irish influences for the benefit of the uninformed. The writer congratulates himself and others on the freedom from theological disturbance which the history of the Seminary had shown during its first half century. But, since his writing, the *entente cordiale* has been considerably disturbed by Dr. Briggs's interrogation, "Whither?" and the debates on creed-revision make it appear very doubtful if the pledge required of the professors, p. 43, will not prove a stone of stumbling and a rock of offence to others before long.

The Seminary has been fortunate in several of its instructors and in many of its benefactors and directors. Drs. Edward Robinson, Henry B. Smith, and Roswell Dwight Hitchcock were men of whose character and attainments the friends of the Seminary may well be proud. The sketches of these and of Albert Barnes and Samuel Hanson Cox are valuable and interesting, but might have been much more so if to bring out and not to smooth away their individuality had been the end in view. There is a hint that Dr. Cox's judgment was not perfect, but how little of his proper self could be inferred from this account by those not otherwise acquainted with his explosive energy! This sentence stands out significantly in the sketch of Albert Barnes: "In his day and generation he ranked, like his illustrious contemporary, Dr. Channing, among the moral instructors of the American people." That is in vivid contrast with Dr. Cox's advice to his Brooklyn people not to have any social relations or business dealings with Unitarians. Dr. Cox's exordium in Exeter Hall, p. 159, hardly merits Dr. Prentiss's degree of admiration. It was as morally dull as it was intellectually bright.

Letters of Philip Dormer, Fourth Earl of Chesterfield, to his Godson and Successor. Now first edited from the originals, with a memoir of Lord Chesterfield. By the Earl of Carnarvon. With portraits and illustrations. Oxford: Clarendon Press; New York: Macmillan. 1890.

THESE new letters of Lord Chesterfield were written in his age to his godson, Philip Stanhope, whose education they were meant to form in what constituted a cultivated man of the world. The child was between five and six when the correspondence began, and it was continued for nearly ten years. The relation of the two was one to make this record of it interesting, but, on the whole, the letters do not justify the expectation that might be formed of them. Philip Stanhope was too young to contribute much, and the old Earl had already had his say in writing the series to his son which has become classical in English literature. He repeats in these later letters the same practical advice, and holds up the ideal of the great world as he understood it in much the same way. He writes also of the state of Europe, and the character of princes, and passes criticism on the poets. The substance exhibits the strength of his mind, his wide and intelligent interest in foreign affairs, and the standards of literary taste which belonged to his age; but attention is naturally directed to the social ideal, to the pattern man of the world, with which his literary fame has become associated. What that was, the world knows perfectly well. Lord Carnarvon, in his excellent memoir, says the best possible for the character and defects of Chesterfield, and presents him under the most favorable light; but he acknowledges, practically, that the change of society has had a most damaging effect on the reputation of his client because of his deficiency in the sense of the proprieties of relation between father and son, and also in moral tone. On the other hand, Lord Carnarvon endeavors to see in this new series of letters a more praiseworthy spirit, and makes the most of a few phrases of commonplace religion and morals, which, indeed, may have had a grave and serious meaning to the aged statesman, but are hardly sufficient as counter-evidence to the example and precept of his mature life.

In the new letters passages are frequently to be met with which would at any time have been

widely condemned in an elderly man writing to a child under twelve; and, apart from these, the insistence upon the worldly ideal of how to make a figure in fashionable life is hardly to be regarded as the best instruction for an opening mind. Possibly no harm was done, for when the child came to be a man, he was far from being the man Chesterfield had painted. It is to be said, indeed, that Chesterfield's advice was distinguished by its deterring his godson from many of the gross and foolish vices of youth of the day—from swearing, for example; and there was enough of seriousness in the political and historical information and in the constant strengthening of the taste for industry and the sense of personal honor. Yet with all this there are radical defects in the whole, there is a lowness of tone in the ideal itself, there is what must now be regarded as a false point of view, such that the correspondence cannot give pleasure or receive praise, and must remain a literary curiosity. The one trait which destroys it in modern eyes is its unmanliness, and in an English ideal that is the one thing which cannot be forgiven.

The volume has been published in a beautiful form, with typography and execution of the best character, and makes a handsome appearance; it is illustrated with several admirable portraits and one or two quaint views, and is furnished with an index. Nothing has been spared to make it a triumph of the printer's art. A less expensive and more popular edition has also been issued.

Life of Honoré de Balzac. By Frederick Wedmore. [Great Writers.] London: Walter Scott. 1890.

George Eliot has somewhere said that "of all forms of mistake the most gratuitous is prophecy." Mr. Wedmore might well have borne this aphorism in mind before beginning his sketch of Balzac's life with this sweeping statement: "Among the writers whose successes in pure literature this century allows, five alone must be accounted for ever influential—Goethe, Wordsworth, Balzac, Dickens, Browning." Surely, this list of "immortal shapes of bright aerial spirits" is too exclusive and absolute. Why restrict the number to five? And, further, one feels inclined to ask whether the biographer has heard of a recent French critic whose verdict on Balzac was, "assommant"! Well, if this jaunty decision is what Matthew Arnold used to call a freak or a violence, Mr. Wedmore's first words are open to the same charge in a less degree; and it is not too much to ask that what purports to be a popular critical biography, an ultimatum (up to date), should begin with neither freak nor violence. The dominant note in the whole book is the echo of this sentence; lack of balance shows itself in the failure to estimate correctly the weak side of Balzac's character and work, so that, to get a more vivid picture of the man and a sounder notion of his merit as a moralist (he thought himself one) and a writer, the reader may fairly be advised to turn again to Gautier's 'Portraits Contemporains' and to Mr. Leslie Stephen's admirable essay in the first set of 'Hours in a Library,' rather than to the last issue of the "Great Writers" Series.

The compression of Balzac's life into 140 octavo pages might still have left room for somewhat longer notice of his many fads and whims—his abuse of coffee, his strange hours of work, and other forms of mild vice; his singular domestic arrangements to secure quiet; and, above all, the substratum of humbug which so often deceived himself. Like many literary Frenchmen, he had a strong dash of *blague*, ready to take itself in earnest if any one ventured to question its sincerity. It was this which inspired his code of rules for the literary worker, some of the more stringent of which filled the hot-blooded Gautier with dismay, and which, of course, the author himself never observed. Mr. Wedmore notices fully the humorous phase of this weakness by pointing out that Balzac's fictitious characters finally became real to his imagination; indeed, so much a slave was he to his hallucination that for years he amused his friends with mysterious allusions to loss of untold fortune in speculation, described as *le déficit Kessner*. But to the practical mind these delusions seemed to reach their height when the novelist comes to look on his work as beyond a mere art—as a sacerdocy. Of this mania Balzac, who has since been followed by the brothers Goncourt, Zola, Paul Bourget, and many smaller fry, was, with Victor Hugo, one of the first sufferers. English critics are prone to call it charlatanism, but its large admixture of naïve good faith ought to save it from such severe blame.

Mr. Wedmore accurately estimates the moral worth of Balzac's teaching. It has already been frequently said that his young men are anything but estimable; in fact, few of them are really gentlemen, at least in the English and American sense of the word. Raphael, who hides in Fœdora's bedroom; De Rastignac, and even the courtly De Vaudenesse, give way to impulses of which most well-bred men certainly do not boast, if they can be brought to confess them. And the virtuous women, as Mr. Leslie Stephen remarks, are terribly shaky; so unstable is their virtue that one feels that a little more pressing—a mere trifle—would have brought them to surrender. Consequently, the lesson of "La Comédie Humaine" is on the whole disheartening, for it deals in the main with moral degradation or with mistaken and disappointed virtue; unlike Thackeray, in that it has no Dobbin, no Col. Newcome, and only pale images of the Little Sister, it leaves a bad taste in one's mouth. "La Comédie Humaine" is truly delightful to no one but the consistent pessimist. This is possibly the reason why Mr. Wedmore lays so little stress on "Le Lys dans la Vallée" and "Les Contes Drolatiques," which go some way towards redeeming the too generally sombre pictures of the total work—the one with its inimitable and truly *gaulois* humor, and the other with its exquisite sentiment. For, in truth, the countless figures that play their puppet-parts in the comedy, whose wires are pulled by the most skilful of all hands, seem to us like a huge family of *névrosés;* in almost every one of them there lies somewhere a moral warp, and that generally a mean one. Theirs are not the infirmities of noble minds, but the vices and failings that attend the "struggle-for-life" in old and crowded communities.

French writers are usually treated with much scornful acerbity by their English critics for their frequent mistakes in spelling and their ignorance of English titles; we may therefore expect of the Englishman some scrupulousness in the writing of French names—a precaution omitted by the present biographer, as it was before him by Mr. F. T. Marzials in the 'Victor Hugo' of the same series. Why both these writers write Nôtre Dame passes guessing. Why not Dâme also? It is quite as much a contraction of a Latin word. Then, again, we find the Duchesse d'Abrantès; no regard being paid to the fact that the name has long since been Gallicised into D'Abrantes. Once more, Balzac's sister would naturally have objected to seeing herself described as Madame Surville, without *de*—a magical particle as dear to the French heart as *van* to any true Knickerbocker. We say, of course, Balzac, Lamartine, Musset; but with people not world-famous the *de* should be preserved.

Unquestionably the best part of Mr. Wedmore's book is the biographical. It is accurate in matters of detail, and on the whole judiciously discriminative. Much sound information is given also as to the proportion existing between the material furnished from Balzac's own experience of life in all its forms and what his marvellous power as an analyst of character, a *voyant*, in short, enabled him to infer from mere indications of temperament and conduct in people whom he saw but for a moment. The last chapter, which is a summing up, contains too much controversial questioning of other critics' judgments, and has on the whole too little decisiveness of its own, to be in any sense a pronouncement on Balzac; but, notwithstanding these shortcomings, this 'Life' is written with sufficient ease, grace, and spirit to deserve more than one reading.

Commentaries on the Constitution of the Empire of Japan. By Count Hirobumi Ito. Translated by Miyoji Ito. Tokio. 1889.

Count Ito is one of the ablest living statesmen of Japan. From the position of an humble feudal retainer he has raised himself, by the sheer force of native ability, to the most influential station in the Empire. For seventeen years he has been a member of the Cabinet; once he held the honorable position of the Minister President of State; and, until the recent division in the Cabinet, when he retired from the Government, he occupied the chair of the President of the Privy Council, with a seat in the Cabinet. He was one of the Vice-Ambassadors of the Iwakura Embassy. He once performed an important mission to China, and, what is more to our present purpose, he was commissioned by the Emperor to study the political institutions of Europe, in order to give him material help in the framing of the new Constitution. For this purpose Count Ito stayed two years in Europe. He has had no small share in the framing of the present Constitution. A statesman, an astute diplomatist, and an interesting speaker, he has now proved himself to be a legislator, and an expounder of the new Constitution.

To those who have cast only a hasty glance at the Japanese Constitution it seems like a copy of the German Constitution, or at best a constitutional patchwork. They exclaim: "How surprising is the apish power of the Japanese! How can such a 'subtle organism' as a constitution of a country be thus manufactured in a day?" To such critics the book before us will show that the new Constitution of Japan has an historic basis. The accidental resemblance to the German Constitution results not from mere imitation, but from the common nature of monarchy and feudal institutions in the two countries. Centralized monarchy, with ministers of state at the head of departments of Government, is an ancient polity. The custom of presenting petitions to the Emperor as a means of making known public opinion and of redressing grievances when there was no Parliament, is as old as the reign of the Emperor Kōtoku (645-654 A. D.), in which "a bell and a box were hung out through which the people might make their representations and complaints."

Our author is no admirer of the American system of checks and balances in government. He is, indeed, a strong admirer of German Imperialism. He tells why the complete isolation

of the legislative, executive, and judicial powers from each other is injurious to the state. In such a polity as that of Japan, these powers should be united in and exercised by the sovereign person, with constitutional limitations. He says that the Imperial Diet has, first, the right to receive petitions; second, the right to address the Emperor and to make representations to him; third, the right to put questions to the Government and demand explanations; and fourth, the right to control the management of the finances. He argues that the establishment of the House of Peers is needed not only to make it "a bulwark for the imperial house" and to preserve the conservative elements of the nation, but to maintain the organic existence of the state. As to the duties of the Ministers, the author has to say:

"First, that the Ministers of State are charged with the duty of giving advice to the Emperor, which is their proper function, and that they are not held responsible on his behalf; secondly, that Ministers are directly responsible to the Emperor, and indirectly to the people; thirdly, that it is the sovereign, and not the people, that can decide as to the responsibility of Ministers, because the sovereign possesses the rights of sovereignty of the State; fourthly, that the responsibility of Ministers is a political one, and has no relation to criminal or civil responsibility, nor can it conflict therewith, neither can the one affect the other."

Whether the Cabinet should be responsible to the Emperor or to the Diet is now hotly debated in Japan; but debate is idle until representative government shall have been put into practice. Time and experience alone will solve the question.

Count Ito generally follows the historical method of comment. He rarely enters into the discussion of abstract principles or mere theories of state. But he carries the historical method too far when he says that the theory of the rights and duties of subjects, as mentioned in the second chapter of the Constitution, is to be traced to "ancient documents" and "the customs of the land." It is a simple fact of history that the right of private property, of personal and religious liberty, freedom of speech and of the press, are new things in Nippon, and are now for the first time guaranteed to the Japanese.

While our author is anxious to trace every article of the Constitution to "the ancient documents," and "the customs of the land," while he devotes six pages to the historical evolution of the Government method of granting lands and promulgating ordinances, he has nothing to say concerning the origin and growth of representation in Japan. This is a grave omission. A political biologist might find the germ of representation in Japan in the most original form in the Hiyakushôdai, who represented farmers "in case of their having any petition to present, or any affairs to settle with their superiors." But a more definite prototype of the coming House of Peers is to be found in the Great Council of Kugés and Daimios, which the sudden advent of foreigners, in 1854, called to spasmodic life between that year and 1868, and which was to be transformed first into the Genro-in (Senate), then into the House of Peers. The House of Representatives is foreshadowed in the Kogijo (sometimes called Gi-ji-in) or 'Parliament,' as Sir Harry Parkes translates it, in his despatch to the Earl of Clarendon. The Kogijo was convened in the second year of Meiji (1869). It was composed chiefly of the retainers of Daimios, and has left behind it in the Kogijo Nishi, or Journal of the 'Parliament,' a record of its abortive undertakings.

From the dissolution of the Kigijo to the opening of the House of Representatives this very year, 1890, there intervenes a period of two decades, singularly rich in events which led the way towards the establishment of the constitutional Parliament. Famous among the steps towards the realization of this object are the establishment of the Genro-in, in 1875, and of the local assemblies in 1878. It is a matter of regret that our author, in describing the Imperial Diet, makes no mention of these important historic landmarks.

Count Ito represents the connecting link between the old Chinese school of statesmanship and that of modern Anglo-Japanese statesmanship. He exhibits in his book the conservatism of the old statesman and the liberalism of the new. His translator has appended the Imperial House Law, the Imperial Oath and Speech, and the Laws and Ordinance that were issued at the time of the promulgation of the Constitution. Copies of the book can be had by addressing T. Kenzo, Igirisu-Horitsu Gakko, Tokio, Japan.

A Thousand Miles on an Elephant in the Shan States. By Holt S. Hallet. London: William Blackwood & Sons. 8vo, pp. 484.

SHUT out from the markets of Europe and North America by prohibitory tariffs, and depressed by overproduction, the British manufacturer is ever searching for and developing new markets for his machine-made goods. As the seaboard and navigable rivers of the world give access to only limited areas for commerce, the railway must be built to open the great populous and land-locked interiors of continents. Cheap means of communication must be provided for those areas now shut off by the prohibitive cost of carriage, if commerce is to advance and civilization overspread the earth.

With characteristic British pluck and persistence, Messrs. A. R. Colquhoun and Holt S. Hallet have since 1881 devoted themselves to practising what their British fellow-countrymen so continually preach, and have sought out railway routes between India and China. The *Nation* has already reviewed Mr. Colquhoun's books, 'Across Chrysé' (that is, from Canton, China, to Mandalay in Upper Burmah) and 'Amongst the Shans.' Mr. Holt S. Hallet, like his fellow-traveller, surveyor, and patriotic knight of trade, has long been impressed with the fact that Chrysé, Chersonese, Suvarna-Bumi, or whatever else Sanskrit, Greek, Latin, British, or other authors may call the peninsula between China and India, it is certainly what Mr. Colquhoun names it, "the veritable gold-field of Asia." No wonder that Lady Dufferin, in her book, 'Our Viceregal Life in India,' just fresh from the press, writes that at Mandalay she was tired of gold: "I never conceived such masses of it before, and cannot understand it all at once." To unite the people of India and China, a total population of 700,000,000 souls—one-half of the population of the earth—that is this British engineer's dream. The problem is to bring the British machine-made goods to their doors at a price below that of their hand-made manufactures. "We are a nation of shopkeepers, and it is by trade that we live," is the legend on Mr. Hallet's flag. To get the Maulmain route of iron rails extended into central China, at Chung-King in Sz-chuen province, and into southeastern China at Pak-hoi, and thus to see the railway from the Persian Gulf to the Sea of Japan completed through Chinese, Siamese, and British territory before the French get a chance in the peninsula, is the aim of our author's life. Hence, his work is less a fascinating book of travels and adventure than another campaign document in favor of a stalwart policy of trade with "all the Chinas." Nevertheless, apart from its interest as a bulletin of advancing civilization and a journal full of the element of personal adventure, it comes into notable touch with an American interest. Mr. Hallet's dedication is worth transcribing, especially since his guides, interpreters, and fellow-travellers were American missionaries: "To the American missionaries in Burmah, Siam, and the Shan States, I dedicate this book, as a mark of the high esteem in which I hold the noble work the American Baptist mission and the American Presbyterian mission are accomplishing in civilizing and Christianizing the people of Indo-China."

Having by long practice mastered the difficult art of surveying from an elephant's back, Mr. Hallet started on his journey of a thousand miles or more, on the 23d of January (1885, if we conjecture aright, for year dates are notably scarce), and finished it on June 28 at Bangkok. His trip was from Maulmain to Maingloongee, to Maung Haut, to Kiang Hsen, to Lakon, to Zimme, to Raheng, to Bangkok (we give only the main points), and was full of interesting incident. A voracious seeker for information, a good questioner, having the eye of an engineer, statistician, merchant, and trained traveller, withal of splendid physical powers, and full of kindly sympathy and humor, his book, in its contents, reminds us of a successful hunter's game-bag. It is gorged to repletion with facts, figures, observations, legend, story, incident, and anecdote. One learns the full gamut of an elephant's tricks, though the ways of the supple heathen are somewhat more mysterious. Evidently the author kept the missionary guides busy in answering questions, and putting them for the questioner to the natives. The customs, manners, habits, morals, resources of the people are described in detail. The ruins of old cities, the deserted localities devastated by war, the local mythology and legend, are duly noted, and the history and traditions of each place digested for us. Of the work of the missionaries the author is an appreciative critic. He shows that the Karens and spirit-worshipping tribes are easily converted to Christianity by persevering teaching, but that the Buddhists are intractable. The manufactures and industrial habits of the people were especially studied. They are good metal-workers, and the Shan States may be called the land of gold-leaf, so lavishly is this article laid upon idols, pagodas, and works of art.

In short, the book is an encyclopædia of information about the Shans, with comparative remarks about the Burmese and Siamese. In outward form it is a handsome octavo of nearly five hundred pages, with all the appurtenances of good book-making to recommend it. In the preface we have an historical summary, the table of contents is full, there are seven clearly printed maps detailing the author's route of travel, and one map showing the projected and completed railways between India and China; there are ninety-three illustrations, and there is a good index—all helping to make a most satisfactory book for the student of commercially aggressive civilization.

The Theory of Credit. By Henry Dunning Macleod, M.A. 2 vols. Vol. I. Longmans, Green & Co. 1889.

THE critical examination of Mr. Macleod's theory of credit may properly be deferred until his second volume shall have appeared, but the present occasion seems to call for some observations upon his method. It is unnecessary to say to those familiar with his writings that he is not distinguished for self-effacement. He

does not hesitate to repudiate established doctrines, or to speak disrespectfully of established authorities. He bristles with sharp points, and abounds in apt quotations from writers of all ages and tongues; but the points are not so sharp as they look, and the quotations are sometimes a little warped. His scholarship is certainly extensive, but we do not find it in all respects trustworthy. Upon this matter, however, we prefer to postpone our comments.

Above all things Mr. Macleod's method is distinguished by systematic and apparently scientific definition. A glance at his pages impresses the reader with the idea that everything is demonstrated with mathematical rigor, and yet, to say the truth, the demonstrations are so clever and so brilliantly illustrated as to be really captivating reading. We have found it necessary, however, to be on our guard against this glamour, and a few specimen fallacies will be sufficient to prove that none of his conclusions can be safely accepted without scrutiny.

Thus, in the summary of definitions at page 145, we read that wealth is *anything* which can be exchanged; that wealth, economic, or exchangeable quantities, are of three forms—material things, personal qualities, and abstract rights; that property is not a *thing*, but a *right;* that wealth, exchangeable or economic quantities, consist exclusively of exchangeable *rights;* and that economic quantities are of three species, all of which are property. A little study shows that conclusions of the most contradictory nature may be drawn from these premises. All wealth is property; property is not a thing but a right; wealth is anything that can be exchanged—and so forth.

Perhaps the most vital point in the author's theory is his doctrine of value, and here is the "lemma" with which he refutes those who maintain the doctrine that labor is the sole cause of value: "*If Labor is the sole Cause of Value, then whatsoever thing Labor has been bestowed upon must have Value.*" Casting this into the form of a syllogism, we have:

Whatever is valuable is the product of labor;
This thing is the product of labor;
Therefore, this thing is valuable—

which is as gross a case of the fallacy of "undistributed middle" as we have ever encountered, and which, occurring where it does, is sufficient to throw discredit over the whole of the author's theory.

Das Reichsgesetz über die Erwerbung und den Verlust der Reichs- und Staatsangehörigkeit vom 1 Juni, 1870. Von Dr. Wilhelm Cahn. Berlin: J. Guttentag. 1889.

This edition of the German law regulating the acquiring and loss of citizenship enables the American reader to form a clear idea of the mode in which the relation between Federal citizenship and State citizenship is adjusted in Germany. The fundamental principle of the law as it existed before the statute of 1870 was, that Federal citizenship was not, as in the United States, a primary, independent legal status. It was based on the citizenship in one of the States forming the Federation. The matter was left entirely to the regulation of the various States. In Prussia alone there were eight different statutory regulations of the subject for different parts of the kingdom. The States had full power to impose the same conditions which were demanded of foreigners on citizens of a sister State; and, as a matter of fact, there was generally no distinction made between the two classes.

It became absolutely necessary to change this state of affairs. The law under consideration (which was subsequently adopted for the German Empire) adheres in theory, however, to the existing relation between the States and the Federal Government. It announces in section 1 that "Federal citizenship is acquired by becoming a citizen of one of the Federal States and is lost by the loss of such State citizenship"; but in the subsequent sections it prescribes the exact mode in which the State citizenship shall be acquired and lost, and decides who, for all intents and purposes, shall be considered citizens of the States. The only right left to the States is to impose additional conditions for the naturalization of foreigners. The requirements laid down in the law under review are only a minimum. The States cannot, however, admit any one to citizenship unless all the conditions laid down in the Federal law are satisfied. One of these essential conditions is the ability of the applicant to support himself and his family.

The right to impose additional conditions exists only as against non-Germans. Citizens of one Federal State must, on changing their domicile, be admitted as citizens of the State into which they have removed. This principle was reiterated emphatically in the German Constitution of 1871. Nominally, therefore, Federal citizenship is a mere appendix to State citizenship; but practically the Federal power claims and exercises the right to interfere in the internal affairs of the States in a much greater degree than in the United States. The States appear in the light of provinces, to whom a certain latitude is left, not on the ground of any inherent rights possessed by them, but simply on grounds of convenience.

The book is edited with typical German care and scholarship. Copious extracts are given from the *Motiven—i. e.*, the document explaining the bill which was submitted to the Chambers by the Government—and also so much of the debates as throws any light on the sections of the act. After each section the statutory provisions of foreign countries on the subject are carefully collated and discussed.

Alexander: A History of the Origin and Growth of the Art of War, etc. By Theodore Ayrault Dodge, Bt. Lt.-Col. U. S. A., Retired. [Great Captains.] Boston: Houghton, Mifflin & Co. 8vo, pp. xxv, 693.

In this handsome volume Col. Dodge has accomplished, in regard to Alexander the Great, the purpose indicated in his short sketches of Great Captains which were noticed in these columns some time ago. The outline then given has been filled up to a full narrative of the campaigns of Alexander, and the best ancient and modern authorities have been laid under judicious contribution to make up as complete and intelligible a history of the wars of the great Macedonian as is now possible.

The author has spared no pains in elucidating and illustrating the equipment and the tactics of the ancient Persians and Greeks, copying from the best authorities the defensive and offensive armor in use, the numerous woodcuts being well drawn and well chosen. As to the charts and topographical sketches, Col. Dodge does not claim for them minute authenticity, for the geography of Alexander's wars is by no means settled; much less can it be said that the scenes of all his engagements have been definitively fixed or the fields surveyed. The maps are frankly declared to be constructed from the topographical descriptions contained in the text of ancient writers, rather than from actual surveys; but they serve a good purpose, when this is borne in mind, as diagrams by the aid of which the reader can more easily follow the text.

Original research in the fullest sense of the word is not claimed by the author, who modestly confines his estimate of his own work to that of industrious compiling, editing, and turning into English the facts and theories which his judgment finds to be the most authentic and reliable of all that have come down to our time. The American reader is thus furnished with a convenient and interesting narrative of the earliest campaigns which we know enough about to criticise them intelligently, and which have always impressed the great modern leaders in war as demonstrating the warlike genius of Alexander, and proving that the principles on which he conducted his military enterprises were identical with those of the modern Frederick and Napoleon.

Epitome of the Synthetic Philosophy. By F. Howard Collins. With a preface by Herbert Spencer. D. Appleton & Co. 1889.

A more admirably executed second-hand synopsis of a system of philosophy never was. Considered simply as an index to Spencer's systematic works, this 'Epitome' is invaluable; and to persons who read and reread those thick volumes, not because they believe in them, but only because they want to know what it is that so many others believe, and to whom the writings of the dreariest scholastic doctor are less heartbreakingly tedious, this one volume of 500 pages in place of a library of 5,000 pages is like balm of Gilead. Would it only embraced an introduction boiling the whole thing down to 50 pages! It is printed uniformly with Spencer's works, upon agreeable paper with clear type, and published by the same eminent firm which, by the dissemination of those writings, has contributed so much to the culture and thought of our people.

In Tennyson-Land. Being a brief account of the home and early surroundings of the Poet-Laureate, and an attempt to identify the scenes and trace the influence of Lincolnshire in his works. By John Cuming Walters. With twelve plates. Scribner & Welford. 1890.

This very agreeable narrative of a ramble about Somersby and its neighborhood, with illustrations of Tennyson's poetical landscape as it comes out in his works, is a study, partly in poetry and partly in nature, which any one familiar with the poet's imaginative scenes will enjoy. A slight personal element enters into it, but little more is told us of the family or early life of Tennyson than was already known; the charm consists in seeing these few facts of his boyhood and youth set in relief upon their real background. We learn, however, that his school-days at Louth lasted only from the age of seven and a half years to eleven years, and that he has taken the very least interest in the school since he left it. He entered hardly at all into the general school-life, but kept closely with his brother, with whom, indeed, he seems to have grown up with exclusive intimacy. It appears, also, that the price paid the two brothers for their poems was £20 instead of £10; and the suggestion of the publication is said to have come from a coachman who advised the youths to provide themselves with pocket-money in this way.

The usefulness of the book, however, does not lie in such details, but in the sympathetic rendering of the Lincolnshire landscape as forming the ground, and often the exact nature effects, which Tennyson afterwards made the world of his poetry. Most attention is paid to

the moors and low-lying stretches of country, with their cloud and shadow and damp, to the brook, with its bridge, which has become famous, to Holywell Glen, with its Druidical quality, to the cathedral of the city in the distance, and to the sea as it is at Mablethorpe, where the poet first made its acquaintance and lived beside it in summer months. There is a predominant tone of melancholy and an atmosphere of waste places in the scenes described, except for the rustic life of the small hamlet where Tennyson was bred. The attempt to locate Locksley Hall is unsuccessful, but the "moated grange" seems to be determined. In the last chapter something is said of Jean Ingelow's treatment of the same country. Altogether the volume is one to delight the lovers of the poet, and is unmarred by any lack of taste.

The Makers of Modern Italy. By J. A. R. Marriott, M.A. Macmillan & Co. 1889. Pp. 84.

This little book contains three lectures delivered by the author at Oxford, in which he gives a brief but interesting account of the unification of Italy, by treating the career of Mazzini, Cavour, and Garibaldi. His opinions on these three leaders are, in the main, just. He discriminates, for instance, between Mazzini, the apostle of moral regeneration, and Mazzini, the instigator of futile risings and republican demonstrations. In his former character Mazzini helped immeasurably the Italian cause; in the latter, he harmed it, and the harm might have been irreparable, but for the prudence and vigilance of Cavour. Mr. Marriott likewise separates the beneficial from the mischievous in Garibaldi's exploits, but we think that he hardly states with sufficient emphasis how great an incubus Garibaldi was to the Italian Government from the death of Cavour, in 1861, to the entry of the Italians into Rome in 1870. Indeed, the chief defect of this monograph is that it does not bring out with sufficient force the magnitude of the obstacles which confronted the would-be unifiers of Italy. Difficulties seem smaller in the retrospect, but the business of the historian is to reproduce, as vividly as possible, the menacing and almost disheartening effect which difficulties produced upon contemporaries at a given time. So Mr. Marriott's account of the Revolution of 1848-9 is scarcely adequate; and yet, even with the brevity to which he restricted himself, it would be possible to make more distinct not only the hopeless dissensions among the patriots themselves, but also the cropping out of ancestral jealousies between province and province, the machinations of Mazzini and the sects in Milan and Rome, the backsliding of the Pope, the lukewarmness of the Grand Duke, and the treachery of the King of Naples.

In general, as we have said, the outlines are correct, but in many cases the shading should be altered in order to make a lifelike history. Thus, Mr. Marriott speaks as if the cession of Savoy to France had been determined on only after the campaign of 1859; in fact, however, that was one of the points stipulated by Napoleon in his interview with Cavour in 1858. Again, no mention is made of the measures secretly taken by Cavour to direct the rebellion in the Emilia and Tuscany, or of the fact that Cavour supplied arms to Garibaldi's Thousand. It is not quite true to say that Victor Emanuel regarded Cavour as his "dearest friend." The King admired the statesman and recognized his astonishing sagacity, but he would not have been the true scion of Savoy that he was had he not sometimes chafed at the inflexible minister who imposed his policy on the sovereign as on the Parliament. It is to the King's credit that he usually followed the counsel of his great adviser.

We notice a few errors in Mr. Marriott's text: Léri for Leri (p. 37); Cavour died June 6, not 5, 1861 (p. 52, 83); Forte should be Forlì (p. 54); Uzo for Ugo Bassi (p. 62); Monte Rotundo for Rotondo (p. 73). Mr. Marriott adds a list of books to be recommended to students of this period. Most of the works are excellent, but we miss the titles of many recent Italian publications: of Cavour's letters, edited by Chiala, Bianchi, and Berti; of two important works on Cavour by Bert; of Castelli's Memoirs, of Minghetti's Memoirs, of the histories by Mariani, Poggi, and Bersezio; of the letters of Ricasoli. To these we must go for the best information; but Mr. Marriott recommends, for the most part, only those works which are accessible to one who reads English. He is right in praising Garibaldi's Autobiography, but he ought to have added that Garibaldi's statements are often untrustworthy, for he, like Goethe, mingled fiction very freely with the truth concerning his life.

BOOKS OF THE WEEK.

Besant, W. Captain Cook. Macmillan & Co. 60 cents.
Blake, E. V. The Dalzells of Daisydown. Boston: D. Lothrop Co. $1.50.
Bliss, W. R. Colonial Times on Buzzard's Bay. 2d ed. Boston: Houghton, Mifflin & Co.
Carlisle, J. H. Memoirs of Roger Ascham and Thomas Arnold. Syracuse: C. W. Bardeen. $1.

Fine Arts.

THE BOSTON MUSEUM'S ENLARGEMENT.—I.

From the line of the Boston and Albany Road, as the Springfield train runs into Boston, one sees, at a little distance, a long and low wall, terminating at each end in a sharp-pointed ear. This is the southwest side of the Boston Museum of Fine Arts, as it now stands, occupying exactly half of the land reserved for it, the wall that we see being a temporary wall, which will come down whenever the remainder of the structure shall be brought into existence. The trivial architecture of the northeast front faces on Copley Square. The recent additions to the buildings are not in this same very ornate, modern Gothic style; they are of an extremely reserved and undecorated character, as is proper to an institution with but little money to spare. These additions carry the building around one of its two ultimate courts, and on three sides of this court the building is practically double—that is, it has two rooms in its width, one of them lighted from the court and the other from the street. On the fourth side, namely, that towards the temporary wall spoken of above, the building is only a broad corridor on each floor, with staircases, and here the light is taken from the court only.

The great simplicity of the outside of the new buildings is not to be very much regretted; but it is perhaps a pity that there is no attempt at decorative treatment within. Certainly, we should never urge the expenditure of the funds of a museum on ornamentation. The tessellated pavement and the marble-lined wall are poor ways of spending funds that are needed for works of art of historical and educational value; but there is a way of treating an interior in an architectural fashion which is apt to cost a little money, to be sure, but not much in proportion to the comparative agreeableness of such an interior, considered even with regard to its true requirements. The works of art themselves, the collections for which the museum exists, would be more striking, and would impress forcibly more minds, if beauty of proportion and what may be called an artistical treatment of the simple parts of the interior were followed. It is true that American artists have scarcely considered the interiors of their edifices, and that, even of those who are the best known as artistically minded men, but few have thought of a corridor, a stairway, or a gallery with anything like the interest which they take in the exterior. But the Boston Museum is perhaps exceptional in its rudeness, and certainly there is no place about the building where anything agreeable is added by the management of the building itself.

The chance has been taken, now that the space allowed the classical department is much increased, to rearrange this department completely. The old idea that Dartmouth Street would be the principal street, that the main entrance of the Museum would be on this street, has disappeared; and it is evident that the entrance will always be towards Copley Square. Such, at least, is the talk of the Boston papers. Whether for this reason or for other and more valid ones, the curator of the classical department has reversed the order of its galleries, and now, as you enter the building by the main entrance, you find, in the first room on your right, the Egyptian and Assyrian antiquities; in the second room the earliest Greek antiquities—that is to say, those which may be

roughly taken as before the year 500 B. C.; in the third room, which occupies the north corner of the building, the Greek sculpture which may be roughly classed as from 500 to 450 B. C.; in the fourth room, the Greek sculpture of the epoch immediately succeeding the last named, namely, the epoch of Polycleitus; in the fifth room, the casts of small bronzes, both Greek and Roman, in cases in the middle of the room; and, around the walls, Greek and Græco-Roman busts on shelves. In this room, therefore, the chronological order is broken, and the works of many epochs are placed side by side. It is, perhaps, to be regretted that this is so. The old dread lest works of art very different in scale should injure one another seriously has been allowed, as it seems to us, too much weight. The comparison of the large and the small, the minute and the grandiose, may be even claimed as a desirable thing; and, certainly, the overwhelming importance of maintaining the chronological sequence and, even more, the grouping together of objects of the same time, even if they do not succeed one another in the order of their time, would seem to forbid the putting together of works of art in any other arrangement than this, at least until this arrangement also has been made. No one, indeed, could regret the opportunity of comparing the busts with one another and the typical statuettes with one another, as provided in this room; but, first, the most important comparisons are generally of pieces of the same epoch; and, second, the pieces to be compared are, as in the instances before us, so small and so inexpensive that it would not be hard to retain the present arrangement for comparative study in some part of the gallery, and still to provide a strict chronological arrangement. The room that follows this, the Parthenon room, stretches across the whole width of the building from street to court, with windows at each end, and is the only one that is so planned. This form of room and this form of lighting allow of an extraordinarily perfect display of the Parthenon frieze, which can be better studied here than in almost any museum on earth; and in the same room are grouped properly and skilfully a large proportion of the other and larger sculptures of the Parthenon. In view of this, one longs to go back to the room just quitted, and take out of it the Roman busts, which have drawn the mind away from the severity of Greek art. We could wish to approach the Parthenon through the grouped sculptures of Olympia and Ægina, and not to have seen on our way a mass of busts of the first century after Christ.

A large room of Egyptian antiquities has been passed, as we have followed the Greek rooms in their order. It stands on the court, adjoining all the rooms that we have mentioned; that is to say, it is L-shaped, turning one corner of the court, and enveloped in its turn by the rooms that we have described. But to continue the examination of the Greek sculpture, we enter, as we leave the Parthenon room, the great corridor adjoining the blind wall spoken of above, and this corridor, the whole length of the building, is devoted to Greek and Græco-Roman sculpture. Here we lose track of the chronological sequence and the orderly arrangement of styles almost altogether; and, moreover, this corridor leads to a hall, on the opposite side of the building, in which is to be found at one end the gallery of six caryatids from the Erechtheum, and, at the other, more of the sculptures from Pergamon. The hall generally is given up to the Hellenistic sculptures, and the invasion of this subdivision by the pure Greek sculpture and architecture of the caryatid porch was indeed inevitable, as this is the only room high enough in the ceiling to allow of its being put in place; but that very fact makes it more desirable that the other pieces should be kept in their chronological order. If everything else in the Museum were where it belongs, according to the strictest comparison of date and style, it would be easy for a placard, or many placards, to call attention to the banishment of the porch in question to a room where the student would have to seek it; but it is impossible for any system of placards to point out the sequence in which these present arrangements are to be found. The catalogue, of course, when it is ready, will enable the patient and willing student to follow the order, the date, and the differences in schools of art; but all students are not patient and willing, and the catalogue is not ready.

If we insist on this point so strongly, and in despite of the great authority of the scholar and critic who has arranged the casts, it is because we feel the immense importance of facilitating study to our hurried American young people, much too inclined to believe that what cannot be known by the light of nature is not worth knowing. It is not many years since an English journal, capable of better things, sneered at the American disposition to make indexes and books of reference as at an unworthy disposition to facilitate the picking up of scraps of information. Scraps of information are better than no information at all, and it is certain that the teacher of American students has to provide to a large extent for persons who have but little time to give to study. But one object of our competent teachers should be recognized as the facilitating of study by all such means, for nothing grows faster by indulgence than a love of getting knowledge. In the case in point, familiarity with a certain order of the casts in these galleries may do more, either to help or to hinder knowledge of ancient art, than perhaps has been supposed. We dread the false impression which will be given to the student by the recollection of pieces of sculpture of very different styles and of far distant times cheek by jowl in the same gallery. We long for a uniformly logical arrangement in this respect, that the mind may be aided in its effort to realize what the Greek sculpture of any time really was like; and it is worth while to insist upon ideal perfection of order in such a collection as this, which has been made with the most minute and learned consideration of the whole field, and with a thoroughly critical comprehension of what is needed most in a collection of a given size. Nor has the limit of size been too severe; this collection, as indeed the annual report, recently issued, makes clear, is one of the important ones now in existence, ranking, according to the latest trustworthy reports, with the largest in Europe, except the overwhelming one at Berlin. That one, indeed, outnumbers all others in the proportion of five to two; but Boston ranks with the old-established and well-known collections of Bonn and Dresden, and just after that of Strasbourg, which has been newly made at great cost, and far in advance of the much-trumpeted collections at Cambridge and South Kensington. The casts, too, are of unusual excellence. The greatest pains have been taken to provide for getting the best possible first-hand reproduction in every case, and old casts have been laid aside or sold and new ones ordered, with a beautiful sense of the necessity of perfectness in such a matter, whenever the old casts were suspected of any shortcomings. Moreover, one of the great objections to a collection of casts seems to have been overcome; and we are told that the newly invented process and machine which we know by the name of the inventor, Fondechin, have been secured by the Boston Museum to keep its casts white hereafter, or at least of the color which it is desired they should have. They will no longer become grimy with the dust that settles upon them, but retain their color, as marble does, subject only to such very slight alterations as atmospheric influence alone may cause.

Inexpensive Etchings and Water Colors.

J. E. Runtz-Rees,
13 East 16th Street, New York.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

THE OPEN COURT—A WEEKLY Magazine of Philosophy, Science, and Ethical Religion.—The all-important want of our time is the foundation of a purely ethical religion. This religion must rest upon a scientific basis. Its principles must be derived from the scientific investigation of the facts of human soul-life (PSYCHOLOGY), and the relations of the world (PHILOSOPHY) and the circumstances of society (SOCIOLOGY) that determine human conduct.

These three topics are discussed in *The Open Court* by the most eminent investigators of Germany, France, the United States, and Great Britain. Correspondence from Continental critics. SPECIMEN COPIES FREE. Subscription one year $2.00. THE OPEN COURT PUBLISHING CO., 1734 La Salle St., Chicago, Ill.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.
NO. 5 WALL STREET, NEW YORK.

THE AUSTERFIELD, 502 BEACON Street, Boston, Mass.—Elegant apartment-house in the immediate vicinity of Harvard College, and commanding a splendid view on the bank of the Charles River. Especially desirable for parents having sons in college. Address the PROPRIETOR.

E. W. NASH, 80 NASSAU ST., NEW York, has just issued Catalogue 25, relating to America, Local History, Genealogy, etc. Sent to any address on application.

Macmillan & Co.'s
NEW BOOKS.

Sir Charles W. Dilke's new book uniform with James Bryce's 'American Commonwealth.'

PROBLEMS OF GREATER BRITAIN.

By the Right Hon. Sir CHARLES W. DILKE, Bart. With Maps, large 12mo, $4.00.

"Will be received with wide interest as the latest record of great countries and the work of a careful traveller and student. Like Mr. Bryce, the author has studied men and their customs rather than the physical nature of their countries. His insight into governments is clear, his characterization of peoples is amiable, and his general conclusions optimistic and hopeful. There is an air of verity in the descriptions and a calm serenity in the statement of political facts that make the volume most interesting reading."—*Boston Journal.*

"The book should be not read merely, but carefully studied by the intelligent people of this country whose destinies are inextricably intermingled with those of the entire English-speaking race."—*Boston Beacon.*

THE DEVELOPMENT AND CHARACTER OF GOTHIC ARCHITECTURE.

By CHARLES HERBERT MOORE. With 200 Illustrations. 8vo, $4.50.

Chesterfield's Letters.

LETTERS OF PHILIP DORMER,

FOURTH EARL OF CHESTERFIELD, TO HIS GODSON AND SUCCESSOR. Now first edited from the originals, with a Memoir of Lord Chesterfield. By the EARL OF CARNARVON. With Portrait and Illustrations. Royal 8vo. $4.50.

"These letters, which have never before been published, were written by Lord Chesterfield in his old age, are very similar in style, . . . to the celebrated letters he wrote to his son some some twenty years before. The volume is an exceptionally handsome one, . . . is never dull or lacking in interest."—*Boston Saturday Evening Gazette.*

THE ANCIENT CLASSICAL DRAMA:

A STUDY IN LITERARY EVOLUTION. Intended for Readers in English and in the Original. By RICHARD G. MOULTON, M.A., late Scholar of Christ's College, Cambridge; Lecturer in Literature, author of 'Shakespeare as a Dramatic Artist.' 12mo, $2.25.

Volume V. now ready of the new and enlarged edition of the works of

DE QUINCEY.

Edited by DAVID MASSON, M.A., LL.D., Professor of Rhetoric in the University of Edinburgh.

Vol. V. BIOGRAPHIES and BIOGRAPHIC SKETCHES: Dr. Parr, Wellesley, Coleridge, Lamb, Charlemagne, Joan of Arc, etc. 12mo, $1.25.

*** This edition will be completed in 14 volumes, published monthly, price, $1.25 each.

A cheap edition of Charles Kingsley's Novels.

TWO YEARS AGO.

By CHARLES KINGSLEY. 8vo, price 25 cents. Already published:

WESTWARD HO!	YEAST,
HYPATIA.	ALTON LOCKE.

Now Ready. New Volume.

ENGLISH MEN OF ACTION SERIES.

CAPTAIN COOK.

By WALTER BESANT. 12mo, limp cloth, 60 cents; uncut edges, 75 cents. Already published:

DAVID LIVINGSTONE,	DAMPIER,
HENRY THE FIFTH,	MONK,
GENERAL GORDON,	STRAFFORD,
LORD LAWRENCE,	WARREN HASTINGS,
WELLINGTON,	PETERBOROUGH.

"An admirable set of brief biographies. . . . The volumes are small, attractive, and inexpensive."—*Dial.*

"The 'English Men of Action' promises to be a notable series of short biographies. The subjects are well chosen, and the authors almost as well."—*Epoch.*

MACMILLAN & CO.,
112 Fourth Avenue, New York.

"A STORY OF REAL LIFE."

Pactolus Prime.

A Novel. By ALBION W. TOURGÉE, author of 'A Fool's Errand,' 'Figs and Thistles,' 'Bricks Without Straw,' etc., etc. 1 vol., 12mo, new and unique binding, $1.00.

This is perhaps in all respects the most unique, fascinating, irresistible, and yet scathing and profound, of all Judge Tourgée's works. It cuts across American civilization in a new place, with a new knife, and will make some people smart who never thought of being called to answer such accusation. Hardly anything this author has written is destined to have so wide an audience.

"Infinite Riches in a Little Room."

Cassell's Pocket Guide to Europe.

EDITION FOR 1890.

Planned by E. C. STEDMAN of New York, compiled by EDWARD KING of Paris, revised by M. F. SWEETZER of Boston. 1 vol., leather binding, price $1.50.

"It is accurate, its maps are clear and legible, and its information full and exact."—*Boston Transcript.*

"Its handy form, large type, frequent maps (not folding), and flexible binding are among its meritorious points."—*Nation, N. Y.*

"The best of the kind published."—*Bulletin, Phila.*

Tin Types.

TAKEN IN THE STREETS OF NEW YORK.

A Series of Stories and Sketches portraying many singular phases of Metropolitan Life. By LEMUEL ELY QUIGG. With fifty-three Illustrations by Harry Beard. 1 vol., 12mo, cloth, gilt top, etc., $1.50.

"They are of the soil, racy, and they possess all that fascination that goes with stories of life in a great city."

The Pope and the New Era.

Being Letters from the Vatican in 1889. By WILLIAM T. STEAD, author of 'The Truth about Russia,' late editor of the *Pall Mall Gazette* and editor and founder of the *Review of Reviews.* 1 vol., 12mo, $1.50.

Mr. Stead says in his Introduction: "There is much in these letters, I fear, which will give pain and offence to those within and those without the Catholic Church. That, however, was inevitable from the standpoint which I occupy."

New Edition, in Paper. 50 Cents.

The People I've Smiled With.

RECOLLECTIONS OF A MERRY LITTLE LIFE.

By MARSHALL P. WILDER. With Portrait. Paper covers, 50 cents; fine edition, with portraits, cloth, gilt top, etc., $1.50.

This book has been one of the great successes of the past year. At the reduced price of 50 cents it is bound to have an enormous audience, to whom the author's name is synonymous with amiability and fun.

David Todd.

The Romance of His Life and Loving. By DAVID MCCLURE. 1 vol., 12mo. Paper, 50 cents; cloth, 75 cents.

"A simple story well told. The plot is strong and the characters are well drawn."

For Sale by all Booksellers.

Cassell Publishing Co.,
104 and 106 Fourth Ave., New York.

E. P. Dutton & Co.'s
NEW BOOKS.

An Easter Sermon.

By the Rev. PHILLIPS BROOKS, D.D. Paper, 25 cents.

Glad Eastertide.

Large 4to. A set of beautiful Spring water-color landscapes from originals, by FRED. HINES. Most artistically printed. Fourteen pages and verses. $1.00.

Immortality.

Large 4to. Appropriate Easter verses, with very fine Scriptural drawings printed in colors. 75 cents.

"The Children's Easter."

(Egg shaped.) A souvenir for the little ones. Size, 5½x7½. An original poem, illustrated with full-page colored drawings. 50 cents.

Sunrise.

An oblong booklet. Twelve pages, color, monotint, and type. 50 cents.

The Little Maid.

An original poem. By Mrs. EMILY HUNTINGTON MILLER. Small 4to. Twelve pages, illustrated in colors. 50 cents.

Easter Dawn.

Quarto. Twenty pages, color, and monotint and type. 50 cents.

A Nest of Easter Eggs.

A set of four little booklets in shape of egg, in neat box. Each with eight pages of verses or texts, and appropriate illustrations in gold, silver, or monotint. 60 cents.

"*They are souvenirs that everybody will find genuine delight in giving or receiving.*"

Dr. Greer's New Book.

The Historical Christ, the Moral Power of History.

By the Rev. DAVID H. GREER, D.D., Rector of St. Bartholomew's Church, New York. 16mo, cloth, $1.00.

"Is a convenient adaptation of Christian evidence, in its most irrefragable substance, to the needs of the present day, and should be of use to put into the hands of any one who is skeptically inclined."—*Standard of the Cross.*

Five Sermons.

By BISHOP WHIPPLE. 12mo, cloth, 132 pages, $1.00.

To Europe on a Stretcher.

By Mrs. CLARKSON POTTER. 16mo, cloth, 100 pages, $1.00.

"Refreshing, cheerful reading that will give hope and comfort to many bedridden invalids."—*Epoch.*

"Opens a new vista to invalids who have been debarred foreign sight-seeing by physical inability to endure the strain of ordinary travel. . . . One gets from it, in fact, something of the unspeakable pleasure and refreshment which the author derived from her skilfully planned and admirably managed journey."—*Boston Beacon.*

Robert Brett.

His Life and Work. By T. W. BELCHER, D.D. Crown 8vo, cloth, $2.00.

"A valuable record of the good that may be done by a generous, energetic, and spiritually-minded layman, although actively engaged in business pursuits."—*London Times.*

"The story of his life throws a good deal of light on the progress of the Tractarian movement as a whole."—*John Bull.*

NEW AND RECENT BOOKS.

A Naturalist's Voyage Around the World.

JOURNAL OF RESEARCHES INTO THE NATURAL HISTORY AND GEOLOGY OF THE COUNTRIES VISITED DURING THE VOYAGE ROUND THE WORLD OF H. M. S. 'BEAGLE.' By Charles Darwin. New illustrated edition. With maps and 100 views of the places visited and described, chiefly from sketches taken on the spot by Robert Taylor Pritchett. One vol., 8vo, price, $5.00.

The object of this edition is to aid the author's descriptions by actual representations of the most interesting places and objects of natural history referred to in them. This has been effected by securing the services of an artist who has visited the countries which Darwin describes.

Around and About South America.

TWENTY MONTHS OF QUEST AND QUERY. By Frank Vincent, author of 'The Land of the White Elephant,' etc. With maps, plans, and fifty-four full-page illustrations. 8vo, cloth, $5.00.

Mr. Vincent made the entire circuit of South America. He visited every capital, chief city, and important seaport, made several expeditions into the interior of Brazil and the Argentine Republic, and ascended the Parana, Paraguay, Amazon, Orinoco, and Magdalena Rivers; he inspected the coffee districts of Brazil, descended the gold mines—in brief, left no place of importance unvisited.

An Epitome of Herbert Spencer's Synthetic Philosophy.

By F. Howard Collins. With a Preface by Herbert Spencer. 1 vol., 12mo. Cloth, $2.50.

"The object of this volume is to give in a condensed form the general principles of Mr. Herbert Spencer's Philosophy as far as possible in his original words. Each section has been systematically reduced."

The Physiology of Bodily Exercise.

By Fernand Lagrange, M.D. International Scientific Series. 12mo. Cloth, $1.75.

"In the number and variety of striking illustrations, in the cogency of its suggestions, Dr. Lagrange's essay has, as yet, no equal among books on this subject."—*Philadelphia Ledger.*

The Religion of the Semites.

THE FUNDAMENTAL INSTITUTIONS. By Prof. W. Robertson Smith, author of 'The Old Testament in the Jewish Church,' 'The Prophets of Israel,' etc. 8vo. 488 pp. Cloth, $4.00.

Evolution of Man and Christianity.

By the Rev. Howard MacQueary. 12mo. Cloth, $1.75.

"There can be little doubt," says Prof. Le Conte, "that we are now on the eve of the greatest change in traditional views that has taken place since the birth of Christianity. This change means not a readjustment of details only, but a *reconstruction of Christian theology.*" It behooves us, then, as religious teachers, to recognize this fact, and adjust our theology accordingly.—*From the Preface.*

James G. Birney and His Times.

THE GENESIS OF THE REPUBLICAN PARTY. WITH SOME ACCOUNT OF ABOLITION MOVEMENTS IN THE SOUTH BEFORE 1828. By William Birney. 12mo. Cloth, with Portrait, $2.00.

"The abolition of slavery in the United States was neither an accident nor a miracle; it was a result of evolution. Upon the issues made the author invokes the impartial judgment of the men who write American history."

Falling in Love:

WITH OTHER ESSAYS ON MORE EXACT BRANCHES OF SCIENCE. By Grant Allen. 12mo. Cloth, $1.25.

"Mr. Grant Allen's treatment is dexterous, his style light and pleasant. The result is a bright and readable book."—*London Saturday Review.*

Five Thousand Miles in a Sledge:

A MIDWINTER JOURNEY ACROSS SIBERIA. By Lionel F. Gowing. With map and 30 illustrations in text. 12mo, cloth. Price, $1.50.

"It gives one rather an arctic sensation to travel with Mr. Gowing on his midwinter trip across Siberia (*Five Thousand Miles in a Sledge*, by L. F. Gowing), whereas the sensation in reading it in the dog-days would have been delicious. The author belongs to that class of eccentric and indefatigable Englishmen who from time immemorial—before the Vikings—have undertaken impossible journeys, chosen by preference routes hedged in with difficulties of all kinds, plunged into jungles, and climbed Andes and crossed Himalayas, rather than lie abed at ease in London."—*The Critic.*

History of Egypt,

FROM THE EARLIEST TIMES TO THE CONQUEST BY ALEXANDER THE GREAT. By F. C. H. Wendel, A.M., Ph.D. With maps. New volume in History Primers. 18mo, cloth, flexible. Price, 45 cents.

Practical Hints for Teachers of Public Schools.

By George Howland, Superintendent of the Chicago Schools. International Education Series. Edited by William T. Harris, LL.D. 12mo. Cloth, $1.00.

The Town Dweller.

HIS NEEDS AND HIS WANTS. By the late J. Milner Fothergill, M.D. With an introduction by B. W. Richardson, M. D. 12mo. Cloth, $1.00.

Hygiene for Childhood.

SUGGESTIONS FOR THE CARE OF CHILDREN AFTER THE PERIOD OF INFANCY TO COMPLETION OF PUBERTY. By Francis H. Rankin, M.D., President of the Newport Medical Society. 12mo. Cloth, 75 cents.

"It is hoped that the suggestions contained in this little manual will afford practical aid in the care of children, and enable mothers to avoid numerous hygienic sins of omission and commission."—*From the Preface.*

Bishop Butler.

A RELIGIOUS PHILOSOPHER FOR ALL TIME. A sketch of his Life, with an Examination of the "Analogy." By Thomas Ruggles Pynchon, D.D. With Portrait from painting in Trinity College, Hartford. Sq. crown 8vo. Cloth, $1.25.

Introduction to the Study of Philosophy.

By William T. Harris, LL.D. Comprising Passages from his Writings, selected and arranged with Commentary and Illustration, by Marietta Kies. 12mo. Cloth, $1.50.

Exercises in Wood-Working.

A TEXT-BOOK FOR MANUAL TRAINING CLASSES IN SCHOOLS AND COLLEGES. By Ivin Sickels, M.S., M.D. 12mo. Cloth, $1.25.

Robert Browning's Principal Shorter Poems.

Appletons' Town and Country Library. 12mo. Paper, 50 cents (also in half cloth, 75 cents; cloth, gilt top, $1.00).

Browning was so voluminous a writer that his complete works are practically inaccessible to many readers. The present collection includes everything by which he is best known, except the dramas and long poems.

Recent Economic Changes,

AND THEIR EFFECT ON THE PRODUCTION AND DISTRIBUTION OF WEALTH AND THE WELL-BEING OF SOCIETY. By David A. Wells. 12mo, cloth. Third edition. Price, $2.00.

"The book is the best contribution Mr. Wells has ever made to economical and statistical and social science, and one of the best that is to be found in any country or language."—*New York Evening Post.*

Great Leaders:

HISTORIC PORTRAITS FROM THE GREAT HISTORIANS. Selected, with Notes and Brief Biographical Sketches. By G. T. Ferris. With sixteen engraved Portraits. 12mo. 438 pages. Cloth, $1.75.

The Historic Portraits of this work are eighty in number, drawn from the writings of Plutarch, Grote, Gibbon, Curtius, Mommsen, Froude, Hume, Macaulay, Lecky, Green, Thiers, Taine, Prescott, Motley, and other historians. The subjects extend from Themistocles to Wellington.

The Ice Age in North America,

AND ITS BEARINGS UPON THE ANTIQUITY OF MAN. By G. Frederick Wright, D.D., LL.D., F.G.S.A., Professor in Oberlin Theological Seminary; Assistant on the United States Geological Survey. With an Appendix on THE PROBABLE CAUSE OF GLACIATION, by Warren Upham, F.G.S.A., Assistant on the Geological Surveys of New Hampshire, Minnesota, and the United States. With 147 Maps and Illustrations. One vol., 8vo. Cloth, $5.00.

The numerous maps accompanying the text have been compiled from the latest data. The illustrations are more ample than have ever before been applied to the subject, being mostly reproductions of photographs taken by various members of the United States Geological Survey in the course of the past ten years, many of them by the author himself.

European Schools;

OR, WHAT I SAW IN THE SCHOOLS OF GERMANY, FRANCE, AUSTRIA, AND SWITZERLAND. By L. R. Klemm, Ph.D., Principal of the Technical School, Cincinnati, Ohio. Volume XII. of the International Education Series, edited by William T. Harris, LL.D. Copiously illustrated. 12mo. Cloth, $2.00.

Christianity and Agnosticism

A CONTROVERSY. Consisting of Papers by Henry Wace, D.D., Prof. Thomas H. Huxley, The Bishop of Peterborough, W. H. Mallock, and Mrs. Humphry Ward. 12mo. Cloth, $1.00; paper cover, 50 cents.

The Garden's Story;

Or, Pleasures and Trials of an Amateur Gardener. By George H. Ellwanger. With Head and Tail Pieces by Rhead. 16mo. Cloth, extra, $1.50.

"A fusion of many good qualities—sentiment, literary taste, reflectiveness, love of nature, animate and inanimate, and knowledge both practical and theoretical."—*Boston Advertiser.*

The History of Ancient Civilization.

A HAND-BOOK BASED UPON M. GUSTAVE DUCOUDRAY'S 'HISTOIRE SOMMAIRE DE LA CIVILISATION.' Edited, with additions, by the Rev. J. Verschoyle, M.A. With numerous Illustrations. Large 12mo. Cloth, $1.75.

"A great many volumes have been produced treating of a past civilization, but we have seen none which in the same space gives such varied information."—*New York Times.*

1, 3, and 5 Bond Street, New York.

A. C. Armstrong & Son's New Books.

History of Art in Sardinia, Judæa, Syria, and Asia Minor.

By GEORGES PERROT and CHARLES CHIPIEZ.

Edited by W. ARMSTRONG, B.A., Oxon., with about 500 Illustrations. Two vols., imperial 8vo, uniform with 'History of Art in Ancient Egypt,' 'History of Art in Chaldea and Assyria,' 'History of Art in Phœnicia,' etc. Handsomely bound in cloth, $15.50; half levant morocco, $22 50.

This New Work is the fourth in the series by these distinguished writers on the "History of Ancient Art," the three previous works having achieved remarkable success, and being accepted by the highest authorities as the Standard Works on the Subjects.

This great history is, in many respects, the most important contribution of modern times to the literature of art and archæology. As it progresses its value becomes more and more apparent. The illustrations are admirable as illustrative art, and abundant to bring the descriptive text within the comprehension of the ordinary reader as well as the student. The value of these works to every reader of history, whether of mankind or of what man has produced, consists in the fact that we have here from a scholar of the first rank (and none holds higher rank than Perrot) the results, in digested form, of the extensive contributions of knowledge made by *Layard, Rawlinson, Loftus, George Smith, Lenormant, Maspero, Oppert, and a host of other distinguished laborers in the field.*

STUDIES IN LITERATURE AND STYLE.

By Prof. T. W. HUNT of Princeton College. 12mo, cloth, $1.25.

It is the aim of these studies to state and illustrate the fundamental types of style, with primary reference to the needs of English literary students. The discussion is both philosophical and practical, developed in scholarly and yet popular form, and always in obedience to the high demands of literary art and taste.

New Edition—from New Plates.
REVISED BY A. L. MAHEW, OXFORD.

SUPLÉE'S TRENCH ON THE STUDY OF WORDS.

From the latest English Edition. With an exhaustive Analysis, Additional Words for Illustration, and Questions for Examination. By Prof. SUPLÉE. 1 vol., net, $1. (Sent for examination, 75 cts.)

These questions were prepared not only to call forth the facts stated by the author, but also to follow up lines of thought suggested by him. To *each* lecture a list of words has been added, illustrating its various topics, and intended to encourage original research on the part of the pupil. *The new arrangement of the text, analysis, and questions, cannot fail to be of great assistance.*

THE BEGINNINGS OF ETHICS.

By Rev. Carroll Cutler, D.D., ex-President Western Reserve College. 12mo, $1.25 net. (*Sent for examination at* $1.)

The subject is handled throughout in its concrete and real nature. Facts and theories are stated in a straightforward and practical way. The style is plain and clear, and the subject-matter is everywhere fresh and interesting.

INTRODUCTION TO THE STUDY OF PHILOSOPHY.

By J. H. W. Stuckenberg, D.D., Member of the Philosophical Society of Berlin. Crown 8vo, cloth, $2. (For examination, $1.35.)

This work must command the respect of all schools of thought. It is not a philosophy nor a psychology, nor a book to defend a particular system of metaphysics. It is simply what it purports to be, an introduction to the subject.

Unabridged Students' Hallam.

FOR USE IN COLLEGES AND SCHOOLS.

THE MIDDLE AGES. A View of the State of Europe during the Middle Ages. Revised and corrected edition. 2 vols., crown 8vo. Price, $2.50.

CONSTITUTIONAL HISTORY OF ENGLAND, from the Accession of Henry VIII. to the Death of George II. Including Mr. Hallam's Supplemental Volume of Revision up to 1848. (Indispensable to students.) Complete in 2 vols., cr. 8vo, $2.50.

INTRODUCTION TO THE LITERATURE OF EUROPE in the 15th, 16th, and 17th Centuries. Revised and corrected edition. Complete, 2 vols., cr. 8vo, $2.50.

MAY'S CONSTITUTIONAL HISTORY OF ENGLAND, since the Accession of George III., 1760 to 1871. By T. Erskine May. 2 vols., cr. 8vo, price $2.50.

This is substantially a continuation of Hallam's great work, tracing the progress and development of the British Constitution during an entire century.
Special prices offered for use as Text-Book.

THE UNKNOWN GOD,

Or, Inspiration Among Pre-Christian Races. By C. L. Brace. Octavo, cloth, $2.50.

"This new work from the author of 'Gesta Christi,' which is already in its fifth thousand, is very welcome. The author, who has something like an ecumenical reputation as a scholar and as an apostolic example of practical Christianity, plants himself in this new work on the broadest ground of Catholic thinking and scholarship. We do not know where to turn for another presentation to be compared as to fulness and scholarly adequacy with this."—*N. Y. Independent.*

THE EXPOSITORS' BIBLE.

Third Series. 6 vols., crown 8vo, $1.50 per vol.

JUDGES AND RUTH. By Rev. R. A. Watson.

JEREMIAH. By Rev. C. J. Ball.

ST. MATTHEW. By Rev. Dr. J. Munro Gibson.

EXODUS. By Rev. Dean Chadwick.

ISAIAH. Vol. II. By Rev. G. A. Smith.

THE ACTS. By Rev. C. T. Stokes, D.D.

Another New Vol., Being the 4th, of

THE SERMON BIBLE.

(ISAIAH TO MALACHI). Completing the Old Testament. With 500 sermon outlines and several thousand references, and 24 pages in each volume for notes. Crown 8vo, cloth, $1.50.

Rev. James Stalker's New Work.

IMAGO CHRISTI.

THE EXAMPLE OF JESUS CHRIST. With Introduction. By Rev. Wm. M. Taylor, D.D. 12mo, cloth, $1.50.

Presbyterian Review, January, 1890: "Mr. Stalker has brought fresh treasures out of a field that has often been explored, but not in his method. The volume is interesting, as well as instructive. The author thinks clearly and writes lucidly. The book is a worthy companion to the impassioned devotion of Thomas à Kempis."

A new edition, with a complete analysis in Twenty pages, of

THE STRUCTURE OF ENGLISH PROSE.

A Manual of Composition and Rhetoric. By Prof. J. R. McELROY of Univ. of Pennsylvania. With full index. 12mo, cloth, $1.20 net. *Sent, postpaid, for examination, for 90 cts.*

"*Though theory is by no means lost sight of, the aim of the author is eminently practical, thus adapting his work for use in both college and advanced classes in High Schools and Academies.*"

A New and Cheaper Edition of (Uniform with 'May's Constitutional History')

DEMOCRACY IN EUROPE.

A HISTORY. By SIR THOMAS ERSKINE MAY. Two vols., crown 8vo, cloth. *Price reduced to* $2.50.

N. Y. Evening Post.—"Those of our readers who will recall Mr. Erskine May's 'Constitutional History of England since the Accession of George the Third' need not be told that he has executed his 'History of Democracy in Europe' with great skill, painstaking accuracy, and erudition, and yet he is earnest and vigorous, and his book, once taken up, will not be laid down again until the greater part of its contents is mastered."

HARPER'S READERS

Commended by the Highest Educational Authorities in this Country.

Hon. J. ESTABROOK, *State Supt. Public Instruction, Michigan*, says: "Harper's Readers are *in all respects excellent.*"
Hon. GEO. W. WINANS, *State Supt. Public Instruction, Kansas*, says: "I fail to see wherein they could be improved."
Hon. J. B. THAYER, *State Supt. Public Instruction, Wisconsin*, says: "In quality, quantity, and arrangement of reading matter, I think them unsurpassed."
Hon. D. L. KIEHLE, *State Supt. Pub. Inst., Minnesota*, says: "Your fresh and instructive Readers will do good wherever fairly used."
Presd't T. B. NOSS, *State Nor. Schl., California, Pa.*, says: "I am greatly pleased with Harper's Readers."
Presd't W. H. PAYNE, *University of Nashville, Tenn.*, says: "I regard them as representing the highest ideal yet reached."
Presd't A. R. TAYLOR, *Kansas State Nor. School, Emporia*, says: "They are most happily adapted to the wants of our schools."
Presd't W. M. BLACKBURN, *Pierre University, Pierre, S. D.*, says: "They combine the best methods of teaching reading."
Prof. MOSES COIT TYLER, *author of "History of American Literature,"* says: "I can benevolently envy those happy young mortals whose birth has been postponed until the epoch of such reading-books."
Prof. RICHARD G. BOONE, *author of "History of Education in America,"* says: "I am daily persuaded of their superiority."
Pres'd't G. L. FARNHAM, *State Nor. Sch'l, Peru, Neb.*, says: "No other Readers approach so nearly the true and rational standard."
Pres'd't DEL KEMPER, *Adger College, S. C.*, says: "There is nothing further to be desired in their line."
Sup't J. M. GREENWOOD, *Kansas City, Mo.*, says of Harper's Fifth Reader: "It is living literature, rather than an echo from the tomb."
Sup't THOMAS TASH, *Portland, Me.*, says: "Harper's Readers seem to me just suited to the best instruction."
Sup't ALBERT L. BARTLETT, *Haverhill, Mass.*, says: "They are the delight of both pupils and teachers."
Sup't B. B. SNOW, *Auburn, N. Y.*, says: "I know of no Readers I should more willingly recommend."
Prin. O. P. LEE, *Edgefield Academy, S. C.*, says: "Harper's Readers are far superior to anything of the kind I have seen."
Prin. H. B. PARKER, *Hampton Academy, Ga.*, says: "We are perfectly delighted with the series."
Bishop SAMUEL FALLOWS says: "I am delighted with the high moral tone and intellectual excellence of Harper's Readers."
Bishop CHARLES EDWARD CHENEY says: "Harper's Readers have my unqualified commendation."
Rev. J. MINOT SAVAGE, *Church of the Unity, Boston*, says: "I should not know where to look for a better than Harper's Fifth Reader."
Rev. Dr. ROBERT MCINTYRE, *Grace M. E. Church, Chicago*, says: "It is small praise to call these books *the first of their kind.* I know of none comparable to them."
THE JOURNAL OF PEDAGOGY says: "We are strongly inclined to believe that the earlier numbers of this series are the best we have yet seen."
THE SCHOOL JOURNAL, *New York*, says: "We predict the lasting popularity of this series because it is built upon sound educational principles."
COMMON SCHOOL EDUCATION, *Boston*, says: "They are calculated to cultivate a taste for the best literature."
THE BEACON, *Boston*, says: "We do not think that Harper's Readers are equalled by any others."
THE CHRISTIAN AT WORK, *New York*, says: "They are a vast improvement on anything that has gone before."
THE CONGREGATIONALIST, *Boston*, says: "We have seen good books of the sort before, but we remember none which are quite equal to those of this series."
THE BROOKLYN STANDARD-UNION says: "Taking all things into consideration, these Readers are undoubtedly the best and cheapest ever published."
THE EPISCOPAL RECORDER, *Philadelphia*, says: "Altogether, we know of none better suited to aid the young."
THE SUNDAY DEMOCRAT, *New York*, says: "They are admirably graded, and the mechanical get-up is worthy of the beautiful selections from the best modern authors."
THE WESTERN CATHOLIC, *Detroit*, says: "No Catholic child or parent could say that they contain anything which a Catholic should not read."
THE PRESBYTERIAN BANNER, *Philadelphia*, says: "They are so attractive that one almost regrets one's inability to begin all over again."
THE ADVANCE, *Chicago*, says: "The books are based upon sound educational principles."
THE METHODIST PROTESTANT, *Baltimore*, says: "We fully commend these books."
THE STANDARD, *Chicago*, says: "The best series of Readers yet furnished by any publishers."

The above are samples of MANY THOUSANDS OF TESTIMONIALS to the superior merits of Harper's Readers. No other series of school Readers has received commendations so numerous and hearty, or has met with success so general and substantial.

"This series seems to be an absolutely ideal one."—*New Haven (Conn.) Palladium.*

The Nation.

NEW YORK, THURSDAY, APRIL 3, 1890.

The Week.

ALTHOUGH the Senate passed the Dependent Pension Bill on Monday by a vote of more than three to one, a halt was called on the mad rush for reckless grants from the Treasury which is full of encouragement. The passage of the bill under consideration was inevitable, as the Republican majority were thoroughly committed to it, and many of the Democrats had consented to the passage of a similar measure during the Cleveland Administration. Consequently there has never been a shadow of hope that the nation could escape having this additional charge saddled upon it since it became assured that the Republicans would control both Congress and the Presidency. The important feature of Monday's proceedings was the refusal of the Republican majority to go a step further on the road, and the earnest and successful opposition of two leading representatives of the party, Messrs. Frye and Hawley, to the vastly larger and more dangerous schemes which have stalked behind the Dependent Pension Bill. One of these was brought forward by Mr. Plumb of Kansas, in the shape of an amendment removing the limitation as to arrears of pensions, so as to make pensions on account of wounds, or injuries, or disease commence from the death or discharge of the soldier; and was, of course, heartily supported by Mr. Blair of New Hampshire. A Democratic Senator asking whether any estimate had been made of the cost of removing this limitation, Mr. Plumb calmly replied that the Commissioner of Pensions had stated some weeks ago that the cost would be about $478,000,000, and that the Chairman of the House Committee on Pensions had estimated it at $500,000,000; "it would be somewhere about these figures." Another Democratic Senator declared his conviction that the cost would not be a dollar less than $600,000,000, one-half of which would have to be turned over at the first quarterly payment, and he pointed out that, if the amendment were adopted, there would have to be some means provided for paying that immense amount. But Mr. Blair was not appalled by any such figures as $600,000,000, and cheerfully admitted that he "thought it very likely that the cost of arrears of pensions would reach $600,000,000, and it might reach a billion." However, he said, it was only the payment of a debt, and "it was time to call a halt on such low, selfish, and devilish considerations as were raised against the payment of that debt."

The new tariff bill of the Ways and Means Committee has already caused a schism in the Republican ranks, and this promises to grow wider as the combat goes on. The reimposition of a duty on hides has exasperated the Massachusetts members much more than the first action of the Committee did. The Massachusetts men had been given to understand that this tax had been taken out of the bill, and, in fact, it had been. When this resolution was reconsidered, and the tax put back, it came with redoubled terrors to the New England men, because, in addition to the tax itself, which was quite sufficient to unsettle things politically in several Congressional districts, it showed a state of "wobbling" among the leaders which must prove very demoralizing to the rank and file. The Boston Home-Market Club had passed a resolution stigmatizing the duty on hides as "superlatively unwise," and the Boston *Journal of Commerce* of Saturday said that "if hides should be placed in the tariff among dutiable articles, it would go a long way in throwing the politics of New England into the hands of the Democrats." This was said when it was supposed that hides had been restored to the free list. If it was true then, it is true now, and perhaps truer, since there is now the added conviction among the leathermen that they have been deceived and played with. Why the Committee of Ways and Means reconsidered their action, and put hides again in the dutiable list, is easy enough to see. The West is in an unsettled state on the tariff question generally, and would throw the whole thing over without much compunction. The West has made the duty on hides a sort of test question. There may be some spirit of wantonness in it, but the danger in that quarter is considered greater than the danger in New England. Hence the duty on hides has been put back in the bill. It serves the interests of tariff reform about equally well either way.

Works of art are placed on the free list, and the President has sent a special message to Congress recommending such action. The message is accompanied by a report from Secretary Blaine, who says that the duty on paintings and statuary has been made the subject of repeated representations on the part of foreign Governments. There have been rumors from time to time that negotiations were in progress with the French Government looking to the swapping of pork for pictures; *i. e.*, that we would admit pictures free if France would do the same for our hog products—a fine thing to go down in history: pork for pictures, bacon for water colors, the works of Meissonier for those of "Phil" Armour; two of the leading nations of the world, at the close of the nineteenth century, higgling with each other, one saying, If you will stop taxing our cut meats, we will stop taxing your works of art, and vice versa. But we should be quite ready to accept the end and forego criticism on the means. It happens, however, that simultaneously with this happy negotiation comes the brutal McKinley Administrative Bill, which has so angered the French people that it is doubtful whether any kind of tariff we might adopt on works of art would have any mollifying influence. That pestilent measure, in its consignment clause, virtually says to foreign countries, "You shall not sell to us; whatever we want of you we will go to your shop and buy." It is useless to expect to carry on any negotiations about little things while this big thing stands in the way. If Minister Reid and Secretary Blaine want to promote the killing of pigs for the French market, let them first kill that old hog, the McKinley bill.

The decision of the Supreme Court of the United States, reversing two decisions of the Supreme Court of Minnesota in railway cases, distinctly declares that neither a State Railroad Commission nor a State law can arbitrarily fix rates. On the contrary, such rates must be determined, when any question is raised as to their reasonableness, by a judicial proceeding, not by a mere hearing before executive officers. Anything less than this is depriving persons of their property without due process of law, and is therefore in conflict with the Constitution of the United States. This decision removes the most serious menace to railway property that has ever existed in this country, or in any country, and must be welcomed by all persons who hold such property, or indeed who hold any property of any kind.

Every few years there comes to the surface of things agricultural an organization of one kind or another that proposes to amend the world in the interest of the farmer. Offices are opened, secretaries are hired, stationery is bought, and perhaps some mischievous legislation is adopted which puts the farmer in a worse position than he was before by enabling smart people to rob him to better advantage. When, after the lapse of time, the farmers find out that they have been "fooled again," the organization falls in pieces, and the agricultural classes go on with their farm work, taking their chances with the nation at large until they have forgotten the lesson and start in again under new leaders to fresh disasters. A few years ago it was the Grange, now it is the Alliance. The latter organization is making the most stir in Kansas. At Topeka, after a two days' session, resolutions have been passed setting forth the principles of the Alliance in that quarter. They demand, among other things, that the Legislature should "apportion" the shrinkage of farm values between the mortgageor and the mortgagee—that is, scale down the debts of the former according to some basis that the Legislature in its wisdom shall find just and equitable; in other words, pass a law impairing the obligation of contracts. They demand, also, that Congress shall investigate the original bill for the issue of national bonds to see whether the word "for" was erased and the word "after" substituted, whereby the pay-

ment of the 4 per cents was postponed to the year 1907. Also, that State Railroad Commissioners be elected by the people, and that they be vested with plenary power to fix rates—that is, that all railroad property be vested in "the people." Also, that homesteads be exempted from taxation in whole or in part, and that cumulative taxes be imposed on lands held by speculators, non-residents, and aliens, etc., etc.

The only resolution in the series that has a grain of common sense is the one which opposes the reëlection of Ingalls to the United States Senate; but this is deprived of any force by being mixed up with a "demand" that Senators be elected by a direct vote of the people, in the teeth of a clause of the Constitution of the United States directing that they be elected by the Legislatures of the several States. They might as well "demand" that the President shall be elected by the Supreme Court. If they meant that the Constitution ought to be amended in this sense, any convention not strictly bedlamite in its composition would have said so.

The true meaning of Mr. Blaine's proposal of unlimited reciprocity to the Argentines is, we have excellent reasons for believing, that it was only a move in the game he is playing for what he regards as a far higher stake than any mere matter of commerce. He has set his heart on getting from the Pan-American Congress a grand scheme for obligatory and universal arbitration to be put into force over this entire hemisphere. That he has encountered opposition is clear from the long delay in the Committee's report on that subject; it was promised for March 1, but is not yet forthcoming. It is an open secret that the Argentines have all along refused to acquiesce in some of the anti-European features involved in the plan as drawn up by Mr. Blaine. To secure their adhesion, what more tempting offer could be made than a great free market for their wool? Yet it is evident, from the inspired abuse of them which appears in the *Tribune*, that the offer was not accepted. They simply could not accept it. Under instructions, as they are, to withstand any utterance which might give offence to friendly European Powers, they could not consider even the most positive offer of commercial advantages; and they are altogether too shrewd not to know that Mr. Blaine has no power to give them reciprocity. They know very well the great difference between a proposed treaty and a confirmed treaty in this country. To say, as the *Tribune* does, that they are basely acting in the interest of England, does not help matters very much. They are acting under instructions from their home Government, and it is rather hard to reconcile a delicate regard for England on the part of the Argentine Republic with that hatred of all things European, and willingness to buy American wares at double the foreign price, which, the *Tribune* has assured us, characterize all South Americans.

The glib assertion of our Department of State, in its publications designed for the Pan-American Congress, that we can successfully compete with European manufacturers in the South American market, is left dangling by a long article in the Vienna *Handels-Museum* of January 9. The writer, Oskar A. Droege, first shows by an examination of the statistics of our South American trade that, as Mr. David A. Wells has recently pointed out, our exports have scarcely held their own of late years. Then he submits our exports to a searching analysis, remarking that they are mostly made up of raw materials, and that the machinery we have sold has been of special kinds the demand for which is sure to be less in the future. In the great staples of manufactured goods Europe has the whole market. Our whole yearly export to any of these countries, he says, "of toys, fine leather goods, harness, carpets, metal goods, toilet soap, porcelain, copper wares, etc., would scarcely supply a single warehouse such as those that fill the Rua do Ouvridor in Rio Janeiro, the Plateros in Mexico, and the Portales in Santiago, house after house, all stocked with European goods." He speaks of our pride of isolation, of our sublime contempt for an export trade, and says that it is almost a settled thing in the minds of foreigners that "the North Americans do not manufacture for export, but desire to have foreign buyers regulate their taste by the stray American goods they see in their own lands." His natural conclusion is, that, "without some new tendencies of emigration or some other unforeseen change in existing relations," European exporters have no reason whatever to fear our competition in the markets of Central and South America.

Another phase of the same question is dealt with in an interesting manner in the same paper of February 20, in a long letter from Buenos Ayres. The correspondent refers to the alleged European nervousness lest the Pan-American Congress should result in the establishment of an American Zollverein to the injury of European commercial relations, and says that, "so far as the Argentine Republic is concerned, this fear has not the slightest foundation." He follows this with a recapitulation of the financial and commercial situation of the country in question, and sums it all up by saying: "The Argentine Republic has no sufficient motive for cutting herself off from Europe and entering into an American customs union, and the United States, besides, are not in a position to supplant Europe here in either commercial or financial matters." It remains to be seen how Mr. Blaine proposes to dispose of these difficulties. His note or memorandum on the subject will be extremely interesting.

Gov. Hill's third veto of ballot-reform legislation is the most perfunctory and dispirited document of the series. He is obviously depressed by the knowledge that the number of people who are deceived by his specious excuses is much smaller to-day than ever before. He lays much stress upon his own assumption that the Legislature, in declining to accept his proposal for a joint reference of the question of the bill's constitutionality to the Court of Appeals for an informal opinion, incurred the chief responsibility for the present veto; but the pretence is so transparent that he is unable to give it an aspect of seriousness. If he really wished for the Court's informal opinion, he could have asked for it alone with full as much reasonableness and with full as much hope of success as he could have asked for it in company with the Legislature. His constitutional objections, with a single unimportant addition, are substantially the same as they were in his previous messages, being aimed almost entirely at the exclusive official-ballot provision of the bill. As that is the vital principle of the reform, his continued objection to it, in face of the facts that ten States have adopted laws containing it, and that in two of those States the laws have been put into operation with such complete success as to stifle all opposition within their limits, simply means that he is unalterably opposed to the reform itself, and that his constitutional objections are mere pretexts.

Gov. Hill's selection of Gen. Sickles for Sheriff is a commendable one. The General is and has been for many years a Tammany Democrat, but he showed by the manner in which he administered the office of President of the State Board of Civil-Service Commissioners that his conception of public office was not that which prevails in Tammany Hall. He is a man of much force of character, of large wealth, and of no inclination to use public office for the personal benefit of himself or of "politics." He says of the Sheriff's office:

> "It will be my ambition to run the office to the satisfaction of the bench, the bar, and the people. Whether it can be run on the legal fees or not, I do not know. Only the legal fees will be charged. If they are not large enough, I will call the matter to the attention of the Legislature for the benefit of my successor. I do not have to live on the fees of the office. I am well enough off to be independent of the official recompense. Whatever the legal fee may be, that and that only will be charged. Nothing additional will be accepted. I do not know whether or not I will make any changes in the office; any man guilty of impropriety or overcharging will not be retained. I intend that the office shall be conducted in a manner beyond criticism. If the fees are not sufficient to conduct the office, I will make up the deficiency and call the matter to the attention of the Legislature. No additional charges not authorized by law will be permitted."

If he carries out these pledges, he will accomplish one of the most salutary reforms ever bestowed upon this city. He has only eight months in which to hold the position, but that will be ample time for a man of his ability and energy to sweep out the whole gang of bummers, loafers, petty thieves, and ignorant public plunderers who have held sway there, according to the Grand Jury, for the past twenty years, and to put the office on a permanent basis of

honest and intelligent administration. That will be a reform worthy any man's ambition.

How is it that no attempt has as yet been made to indict Mayor Grant as well as the deputy sheriffs? He is the principal offender. It was he who conducted the Sheriff's office on the corrupt basis which the Grand Jury has exposed. It was he who employed these men. He shared their booty himself and directed or authorized the manner in which it was to be divided with others. Surely there must be evidence which will support an indictment against him also. The Grand Jury, which has spoken out so boldly, is hardly likely to be affected by the account of himself which imposed on so many people when he was made Mayor, and by which he even got into what is called "Society." There has been nothing more curious in the history of imposture and credulity than the manner in which this Tammany Boy, without a solitary advantage except the possession of a small inherited fortune, largely made, we believe, in the liquor business and invested in liquor-stores, has made his way during the past two years in this unfortunate city. He obtained, while wallowing in corruption and fraud in the Sheriff's office, a certificate from 121 members of the bar that he was conducting the office with a purity and efficiency such as is rarely seen in any public office anywhere. On this he was elected Mayor. He then obtained the insertion in a journal of the highest standing, famed for its hostility to Tammany and all its works and ways, of an extravagant eulogy of himself and his chosen friends and counsellors, under the common Tammany title of "the Big Four," accompanied by their portraits. On this he issued a call for a Columbus Fair, and speedily got himself surrounded by all our leading citizens, who listened to him and took suggestions from him with respect not unmixed with admiration. His praise was soon heard at all the dinner-tables. As soon as he became the figure-head of the Fair, "Society" took him up. Mr. W. W. Astor gave a great dinner in his honor, and he even "opened" a Patriarchs' ball as a dancer. We can recall nothing quite like this, except the success of the English butcher boy in persuading considerable numbers of intelligent people that he was a long-lost baronet of ancient lineage. The reign of common sense is, however, now restored, and it is time that justice were done.

Mr. Charles Dudley Warner has been writing an excellent article in the *Forum* on "Newspapers and the Public," but we fear it will get him into much trouble, for he criticises the American press severely. This is something the press will never submit to tamely, and yet nothing is more necessary. A large part of the faults and follies of the newspapers are due to the fact that they expend no criticism on each other. They fight a good deal about comparative circulation, and about the comparative amount of "news" they contain, and about the comparative rascality of their respective editors, but good, sensible criticism on the way in which they discharge their self-imposed duties to the public, from anybody who can make them mind, they rarely hear. A minister or college president occasionally ventures on it, but, instead of receiving it meekly and profiting by it, they proceed to make his life uncomfortable by some sort of irrelevant ridicule or abuse. What they need is criticism from esteemed contemporaries who can answer back, who are not afraid of them, and can follow up offenders *l'épée dans les reins*. It is a good sign to see a kindly person like Mr. Warner doing a little of this most necessary work. Nobody needs criticism as much as the man who passes his life criticising everybody else and everything sacred or profane he can set eyes on or hear of. Mr. Warner has some excellent remarks on the responsibility of the public for the great circulation of "the most vulgar, most sensational, and most chaotically conducted" newspapers. Also, on the notorious fact that the men who most denounce the newspaper press are the most diligent readers of the more scurrilous, silly, and indecent journals. Most of his observations are thrown into the safe interrogative form, and many of the most searching are put into the mouth of the "intelligent foreigner." But Mr. Warner cannot secure impunity in this way. He will catch it, but we advise him to stand to his guns, and, as he has a newspaper of his own, give as good as he gets.

Some of the friends of the common schools in Massachusetts engaged in defending them against Papal aggression are, we fear, about to make themselves and their cause a little ridiculous by proposing the disfranchisement of all Roman Catholics, on the ground that they give their highest allegiance to the Pope, and consequently cannot, any more than the Mormons, be good sectarians and good citizens of the United States. The "Committee of One Hundred," who take this ground, and have issued a pamphlet in support of it, with numerous quotations from Papal documents, do not seem to be aware that they are threshing out once more the oldest, fustiest, and best-beaten straw of religious controversy. All this story was gone over in England immediately after the Vatican Council had issued the decree of infallibility, Cardinal Newman taking a leading part in it. There is nothing new to be said about it. Time makes every word of it every year more and more futile. After you have quoted a hundred Papal bulls, rescripts, encyclicals, and pastoral addresses in support of the contention that every man who goes to mass and calls himself a Catholic considers the Pope his sovereign on earth, and will obey nobody else, sensible men will continue to ask, But is it true in the light of actual experience? Do Catholics, as a matter of fact, obey the Pope in their political action and in their relations to their fellow-citizens of other denominations? Everybody knows they do not—that on most of them the political declamation of their clergy has no effect whatever. And then is there no more practical work to do in this age of the world than advocating the disfranchisement, on religious grounds, of a million voters who belong to the oldest and largest Christian denomination?

The French protectionists are running protection into the ground very much like our own. They have furnished the Lyons silk-manufacturers with a grievance very like that of our own woollen-manufacturers. The Lyons manufacturers consume annually 4,000,000 kilos of raw silk. Of this France herself only furnishes 800,000 kilos, and even if she could furnish the whole 4,000,000 of any kind of raw silk, could not possibly furnish all the varieties needed by the French manufacturer, whose position in this also resembles closely that of our woollen-man who needs coarse wools which cannot be produced here. But the French silk-growers here step in and ask heavy duties on the raw silk, which has roused the Lyons manufacturers to fury, and they have in convention not only protested against the proposed duty on raw silk, but demanded that all raw material which enters in any way into the silk manufacture, whether silk, wool, or cotton, shall be put on the free list. This question of "raw materials" is bothering the high-tariff men a great deal all over the world, and will bother them more and more every year.

The Spanish dissident Liberals are following the example of their political analogues in England and playing into the hands of the Conservatives. Gen. Martinez Campos recently had himself interviewed by a Cadiz newspaper, and prophesied a speedy return of Cánovas to power. He thought that a general election would have to be held in July or thereabouts, and that the Conservatives would be successful. He should cast his influence in their favor, he said, and he intimated pretty broadly that he might be a member of the new Conservative Cabinet. The other disaffected Liberals have not gone as far as this, at least not openly, but keep on giving a great deal of aid and comfort to their ancient enemies. It all results in giving a tone of unaccustomed personality and bitterness to the debates in the Cortes, and forecasts a most hotly contested campaign when once dissolution comes. Sagasta's failure to reconcile the revolting members of his own party has naturally given a more radical slant to his policy. He is evidently going to rely upon the votes of the men to be enfranchised by his suffrage bill, and to accentuate in general the democratic features of his programme. The form in which the economic issue is to figure in the election is not yet clearly apparent, but it seems certain that Sagasta will be driven by the logic of the contest, if not by his own choice, into a pretty pronounced advocacy of free trade. The extensive labor troubles now existing in the manufacturing region of Cataluña will probably help to bring up sharply the question of the national fiscal policy, and it will be strange if so shifty a politician as Sagasta does not find his account in them somehow.

THE TWILIGHT OF THE TARIFF.

SINCE our present high "war" tariff was adopted as a national policy, almost thirty years, or, practically, a generation of time, has passed away. During that long period many special causes have combined both to obscure the high-tariff evil and to postpone the results to which its economic heresies were bound sooner or later to lead. The size of our country with free trade within its borders, the expansion of our railroad systems, and currency questions, have been some of the most forceful of these obscuring and delaying facts—to say nothing of the civil war itself and certain exciting questions not connected with the currency which grew out of it. One by one, however, these national causes, checking the advance of high protection towards its end, have either passed quite away or their influence has been greatly slackened. As a consequence we now see the iniquitous system moving with quickened pace to its downfall. It has in all probability now reached that secondary stage which goes before its final disaster. The present juncture is therefore a very favorable time for reviewing both the general symptoms of the high-tariff disease in afflicted nations, and those secondary and final ones which our own American patient is now manifesting.

Historically, and as an economic development, we shall find a high protective tariff almost always springing from some morbid condition of national life. England had it at its worst during her Continental wars and the outgrowing fiscal problems. Her movement to abolish it, culminating in the repeal of the Corn Laws, came not many years after the return of prosperity and peace. In France we see it as the outcome of the tremendous burdens imposed by the war of 1870. In Germany, under Bismarck, it has been the sequel of his efforts to disguise taxes so as to sustain an abnormal military armament. In Canada, where protection has never run to extremes, its most potent subcause was retaliation against the United States. Thus, as a rule, almost without exception, we shall find protective tariffs born from national emergency or distress, not from the sober national quietudes. In this respect, as in many others, protection is singularly like an inflation of the currency by irredeemable paper money. Both are the product of national troubles; both favor a class, not the mass of the people; both disguise their evils for a time; and both must finally be remedied by the pressure of industrial pain. In fact, to pursue the analogy, we have very likely reached in our country just now with our tariff question one of those "long drags" leading to a final cure which marked the beginning of our currency and financial troubles in 1873. Certainly we have come to the time when, with the "war issues" removed or greatly lessened, economic truths assert themselves with double strength.

The scientific prognosis of the high-tariff disease, with its baleful paradox of creating national wealth by taxation, is always substantially the same in nations, and varies only in its minor symptoms. When adopted as a policy, its first effect is to give a certain semblance of prosperity. Capital pours into new industries under the stimulus of the governmental tax-bounty. To the shallow and thoughtless, these "new industries" thus artificially reared by subtraction of wealth from more healthful ones always seem solid growth and industrial progress. But as time goes on, the error demonstrates itself, soon or late. The prices of manufactured products rise. This checks the exportation of them, and forces the factory to rely on the home market. Exportation goes on only or mostly in the natural products of the country which are "unprotected," and even here the producer of them—like the American farmer—must incur the disadvantage of paying enhanced protective prices for his machinery of production. Meanwhile, in the restricted home market, manufacturing rushes upward. Its first large profits from the national tax-bounty impel into it an undue amount of capital. But, sooner or later, the point is reached where manufacturing begins to be congested and to compete actively with itself. This is the symptom of the breakdown of the system. It is the period when one protected industry begins its outcry against another, seeks a large market, and demands free raw material; when abatement or delay of competition is sought by Trusts or kindred combinations; when the appeal goes out to "hold together" and resist the "entering wedge" which is to rend the protected group; when every attempt to "revise" protection cuts with a two-edged sword; and finally, when the great mass of unprotected consumers of protected products awake to the realities of the topheavy industrial policy and demand a change.

The date of the rivalry of protection with itself, feeding on its own vitals, is the beginning of the end, the twilight of a high tariff. It notes clearly that ultimate stage of high-tariff history which we are witnessing in this country at the present time. After protection, owing to the wiles of demagogues, to tricks of legislation, and to diverting national events, has had everything its own way for almost thirty years, it stands at last brought to bay by the often slow but ever certain working out of economic law. The cries of woe from New England manufacturers, the awakening of the farmers to the causes of their own poverty, the writhings and contortions among the Republican tariff "revisionists" at Washington, have meanings not to be mistaken. It only remains to be seen whether the country is to emerge gradually and by stages from the high-tariff blight, or whether Republican party fatuity is to force reform by whirlwind at the last.

THE MONTANA SENATORIAL CONTEST.

THE decision of the Republican majority of the Senate Committee on Privileges and Elections in favor of seating the two Republican Senators from Montana is a case of "going behind the returns" worthy of an old-time Southern Returning Board. In order to make clear what they have done, it will be necessary to review the facts in the case from the outset, that is, to go back to the first State election of Montana held in March, 1889.

The whole question before the Senate Committee turned on the validity of the official returns from Precinct 34, in Silver Bow County. Previous to the holding of the election, a tunnel was being cut in this county through the mountains at a spot remote from any organized community. One of the contractors, being a Republican and a candidate for the State Legislature, wished to have a voting precinct established near the tunnel, so as to allow the men engaged there to vote at the election. At his request the County Commissioners, who were Republicans, established a precinct, and the Republican County Committee paid the expenses of carrying the men who were working in the tunnel over to the city of Butte to register, and the Republican contractor agreed that the men should be allowed their regular pay for that day's work. Three judges of election were appointed, two Republicans and one Democrat. Pay-day at the tunnel came before election-day, and the men found that the promise of the contractor was not kept, as they did not receive their pay for the day they had been away to be registered. On election day the men took their revenge for this treatment by voting almost unanimously, 171 out of 174, for the Democratic candidates for the Legislature, and for the Democratic ticket generally. The judges of election made up the poll-list in the ordinary form, and forwarded it to the County Canvassing Board. Under the law the County Canvassers were directed to make an abstract of the returns from all election boards, and they prepared such an abstract, putting thereon the returns from the tunnel precinct.

Within twenty-four hours, however, it was known that the vote of the county turned upon the result in this precinct, and that the result in the Legislature, upon which the election of two United States Senators depended, turned upon the result in Silver Bow County. Telegrams began to pour in from the leading politicians of the Territory, and on Sunday following the election "visiting statesmen" arrived from Helena, and on Monday morning it was found that the abstract which the County Canvassing Board had already prepared was altered by a red line drawn through the returns from the tunnel precinct. This being known, the Democrats at once obtained a writ of mandamus from the Territorial Judge, commanding them to include Precinct No. 34 in the count and abstract, and thereupon the County Canvassing Board prepared a new abstract containing returns from the tunnel precinct, and this was the only document forwarded by the County Canvassing Board to the State Canvassing Board under the requirements of the law. The State Canvassing Board, however, on receipt of this return, made up its State returns; and although its authority under the wording of the statute was simply to canvass the returns received from the County Canvassing Boards and declare the result, it disregarded the tunnel precinct, and

assumed the authority to issue certificates of election to five of the Republican candidates for the Legislature from Silver Bow County. That county was entitled to ten members of the Legislature; four of the Democratic candidates were elected beyond question; and the other five Democratic candidates would be elected if the tunnel precinct was counted, and one Republican also. The State Canvassing Board sent certificates of election to the five Republicans, but did not send certificates to the four Democrats who were elected beyond question.

The Constitution of the State adopted by the people at this election provides expressly that all laws of the Territory in force at the time of the election, and not expressly or by necessary implication repealed by the Constitution or the ordinances adopted by the Constitutional Convention, were to remain in full force and effect. The laws of the Territory in force before this election prescribed that the election returns should be canvassed by a board consisting of the Chairman of the Board of County Commissioners, the Probate Judge, and another official, or any two of them, and the Clerk of the County Commissioners was to issue certificates to the members of the Territorial Legislature, which certificates were to be prima-facie evidence of the right to join in the organization of the Legislature. Now the ordinance known as No 2 took from the County Canvassing Board the right to make the final canvass, and directed them, in place of making such canvass, to make an abstract of the returns of the judges of election, which abstract was to be sent to the Secretary of State, and he, together with the Governor of the State and the Chief Justice, was to canvass the votes and declare the results.

In another paragraph of the ordinance the same trio are instructed to canvass the votes cast for the Constitution, and the Governor is then authorized and directed to certify to the President the result. But in the case of the votes cast for officers the expression used is that they are to canvass the votes and declare the result. The Territorial laws had very particularly expressed the duties of the officer whose business it was to issue certificates of election to members of the Legislature-elect, and had expressly made these certificates prima-facie evidence of the right to take part in the organization of the Legislature; and it is to be noted that, under the Territorial law, the persons whose duty it was to issue the certificates formed no part of the Canvassing Board.

The Governor by proclamation appointed a day for the meeting of the Legislature, and by a second proclamation designated the Court-house, the place where the Territorial Legislature had met in times past, as the place of meeting. The Democrats of the House met according to the two proclamations, and the five Silver Bow Democrats presented their certificates from the County Clerk; they were duly recognized by the Committee on Credentials, they took part in the organization of the House, and they remained from that time on with the Legislature, or what is known as the "Court-house Legislature." The Republican members met at Iron Hall, the five Republicans from Silver Bow being present with certificates from the State Canvassing Board, and organized a rival house. Neither house had a quorum without the members in dispute. The State Senate was also evenly divided—eight Republicans and eight Democrats. The Lieutenant-Governor, who by law presided and had the casting vote, was a Republican. All the formalities usual in the election of United States Senators were observed. The Governor of the State recognized the Democratic joint convention, and issued certificates of election to the Democratic Senators, but the Secretary of State, who was a Republican, refused to attest the Governor's signature or to affix the seal of the State thereto. He, on the contrary, issued certificates to the Senators elected by the Republican joint convention, signing the certificates himself.

The questions presented to the Senate Committee were, first, the question of fact as to which of the rival Legislatures was the legal one, the answer to this question depending upon their decision as to which certificate was the legal one, and this question could not be considered doubtful. The law requires that the County Clerk shall issue the certificate, and that such certificates are the prima-facie evidence of right to organize the Legislature. If, however, the Committee decided to go behind this and go back to the question of which men were duly elected members of the Legislature, they must decide that the Democrats were duly elected, whether they decided to go back of the returns of the Election Board at the tunnel precinct or not, unless they decided that the State Canvassing Board had the authority to throw out the returns of a precinct without having any evidence before them whatever to justify such action, and when the only legal evidence that could come before them was the abstract made by the County Canvassing Board, which contained returns from this precinct. They took the latter course.

To reach their decision the Republican majority of the Committee were forced to disregard the fact that the question of the regularity of the election at Precinct 34 had been passed upon by a court of competent jurisdiction in Montana, aided by a jury from the locality, which decided that the election was free from fraud and conducted in substantial compliance with the terms of the law. They were forced to disregard also the direct evidence of the affidavits of the judges of the election, two Republican and one Democratic, that the election was free, fair, and legally conducted, and the votes returned as cast. Their decision, under such conditions, makes election by the people a farce, and election by Canvassing Boards the only one recognized as valid by the Republicans of the United States Senate. This is restoring at Washington, under Harrison, in 1890, the condition of affairs which existed in the Southern States under the carpet-baggers of 1876-'7. It remains to be seen if the Republican majority in the Senate are capable of such extreme partisanship as the majority of the Committee have shown; but there is small reason for hoping anything better of them. When a Republican President confers office and honors and patronage upon the most discredited members of the old carpet-bag gang of the South, why should not the Republican Senate revive for the party's use the Returning-Board methods of the same gang?

A FIELD DAY IN THE SENATE.

THE debate in the Senate on Wednesday, March 26, was really one of the sort of things that ought not to be allowed to pass into oblivion. Some of the smartest and most experienced Senators of the period took an active part in the exercises. The bill under consideration was Senator Sherman's Anti-Trust Bill, and the amendment of Senator Ingalls of Kansas was the particular subject of attention. This amendment proposed that dealers in "futures," when bargaining for grain, cotton, or provisions, shall pay a license tax of $1,000, and a further tax of so much per pound on the articles bought or sold. In order to make the bill effective it was necessary, of course, to define futures. This was neatly done by the Kansas Senator. Futures were defined to be "any contract or agreement whereby a party agrees to sell and deliver at a future time to another any of the articles mentioned, when at the time of making such contract or agreement the party so agreeing to make such a delivery, or the party for whom he acts as agent, broker, or employee in making such contract or agreement, is not, at the time of making the same, the owner or the lawful agent of such owner of the article so contracted and agreed to be delivered."

There was such happy unanimity among Senators as to the desirableness of this amendment that when the vote was taken on it, the day previous to the field day we are now considering, there was no division. Mr. Sherman did object that it was not germane to the subject of Trusts. One or two Senators said that, since it was a bill imposing taxes, it would be unconstitutional if it were to originate in the Senate. Mr. Ingalls disposed of this objection by showing that although it was a tax bill, still it was not the *intention* to "raise revenue" by it, and therefore it was not obnoxious to clause 1, section 7, article i. of the Constitution. How a court, being asked to pass upon the bill (as the courts surely would be asked), would ascertain the *intention* of all the Senators, besides Ingalls, and all the Representatives in voting for it, and of the President of the United States in signing it, was not made clear by the Hon. Senator from Kansas; but neither the constitutional question nor the parliamentary question (as to its being germane or not) was deemed of sufficient consequence to justify a call for the yeas and nays. The amendment was adopted on Tuesday *nem con.* Entire harmony, so far as appeared on the surface, existed as to the merits of the measure, even such good business men as Senators Allison and Sherman giving it their approval in principle, although objecting somewhat as to time, place, and form.

When the Senate met on Wednesday, after

some desultory talk about legal construction, Senator Eustis of Louisiana remarked that the Ingalls amendment would prevent a man from selling any cotton for future delivery unless he happened to own it at the time. Senator Pugh denied that it could have any such effect. Senator Butler said that he understood it the same way that Senator Eustis did. Then Senator Pugh appealed to Senator Ingalls to know whether he (Pugh) had interpreted the bill rightly. Ingalls thereupon stated that Pugh understood the clause rightly, adding that it was not the intention to prevent anybody from selling anything "of which the parties may be possessed, or of which they may be the producers, or which they intend actually to deliver, *provided they are the owners of it*"—that being precisely the contrary of what Pugh did understand. Then Ingalls made a fine speech against speculators and in favor of the Farmers' Alliance, winding up with a few appropriate remarks about the war and the rebel brigadiers.

The latter observation called up Senator Vest, and served to switch the debate off upon another line for a while. But Senator Blair drew it back to the right place by saying that, as he read it, the bill would prevent a New Hampshire cotton-spinner from buying cotton for future delivery, unless he could find a seller who actually owned it at the time; and since usually the sellers did not own it at the time, but expected to get it after the crop was gathered, the bill would, if executed, close most of the mills in New England. Then Senator Mitchell of Oregon discovered that the Ingalls amendment would prevent a farmer from selling his own wheat crop before it was matured, since he could not be said actually to own wheat while it was still in the nature of green grass. Senator Allison kindly came to Mr. Mitchell's assistance by suggesting as an amendment that the word "producer" be added after the word "owner," so that producers might sell for future delivery although not actual owners. This amendment was accepted by Ingalls. Then Senator Sherman made the fatherly suggestion that he supposed the intention of the Kansas Senator was to prohibit contracts when the parties had *no intention* of delivering the property, but only to pay differences. Senator Hoar, who had hitherto taken no part in the debate, here suggested a form of words to meet the Sherman idea, adding that of course the onus of proving the intent would be on the Government, just as in other criminal proceedings; to which Senator Allison replied that the intent would necessarily be the intent at the time of making the contract, and not at the time of executing it. A man's intentions might be ever so good to deliver a thousand bales of cotton, yet when the time came he might not be able to do so. Mr. Allison went on to tell why "our people" want the Ingalls amendment to pass. They want it because they think that dealing in futures "has a tendency to greatly depress the price of agricultural produce." Mr. Allison prudently abstained from saying whether he agreed with "our people" in that opinion. Probably he does not. Probably he sees that just as much wheat has to be bought as is sold, whether in futures or otherwise, and that since the two balance each other the effect is, upon the whole, *nil*.

The end of this field day was that Ingalls himself offered an amendment to his own amendment, providing that the bill should "not apply to bona-fide contracts for the actual delivery of the property contracted for." This was adopted, as the other had been, without a division. Therefore anybody who deals in futures bona-fide, as all good people do, can continue to deal in them without paying any license fee or tax whatever.

THE BAR AND THE SHERIFF.

THE statement of the Grand Jury, in its late presentment, that the Sheriff's office had been given up to corruption and disorder during the last twenty years, suggests inevitably to the most intelligent men the question why the bar has never called attention to the matter or initiated any process of purification. In all the treatises on the office of advocate, in most commencement addresses to graduating lawyers, and in responses to after-dinner toasts on behalf of the legal profession, the bar is treated as the special guardian of the machinery of justice. The courts are supposed to know nothing of its working except what the lawyers bring to their notice. The judges rely on the advocates and attorneys, as officers of the court (which they are in the eye of the law), to let them know when any minister of justice has failed in his duty, has been guilty of any act of fraud or oppression, has abused the process of the court or failed to execute it, or has in any manner deprived any litigant of his just legal rights. In fact, the bar may fairly be called the inspector of the judicial procedure. This inspectorship is as much a part of their duty as is the proper presentation of cases in court. Lawyers undertake it, when admitted to practice, as part of the consideration which they pay for the legal monopoly which they enjoy. They are the eyes and ears of Justice. Justice simply sits aloft, waiting for people to come and complain; but the lawyers run about and make themselves acquainted with everything that is going on out of doors.

This being the case—and we do not think any one will dispute it—how comes it that Grant and Flack and their predecessors have been able to turn the Sheriff's office for twenty long years into a den of thieves, without, so far as we know, one word of public remonstrance or exposure or denunciation from any members of our bar? It appears from the evidence taken both by the Fassett Committee and by the Grand Jury, not only that there has been no professional interference with the Sheriff's methods, but that the bar have all this time been paying him the enormous sums in blackmail which made the office "a plum," and which naturally came ultimately out of their clients' pockets. Of course this has constituted a heavy tax on the administration of justice, and a tax which was not paid into the public treasury either, but turned over to bands of ruffians to be spent, probably, largely in vulgar debauchery. Most of those who "go to law" do so most reluctantly. In almost every case one or other of the parties is poor, or in very moderate circumstances, and finds any law-costs a burden hard to bear. But in this city, whether he won or lost, he has had, for a long while back, in addition to his ordinary legal expenses, to contribute more or less heavily to keep the unclean gang of ruffians whom Grant and Flack gathered around them supplied with money, drink, and jewelry, and make a small fortune for the Sheriff himself. We do not need to explain this in detail. The particulars have been set out before with great minuteness in the evidence before the Fassett Committee.

Of course, we know very well what the lawyer's excuse is. If he did not submit to the Sheriff's extortions in one case, his clients in other subsequent cases would be exposed to some sort of wrong in the execution of the process of the Court. The execution would be delayed or postponed until it became worthless, or until some other got in ahead of it; so no scruple is felt in charging the client for greater certainty and expedition in the satisfaction of his legal claims. But the answer to this plea is, that it would excuse the purchase of justice from corrupt judges, and really was used to excuse the purchase of justice in Barnard's day. If a lawyer once admits the necessity of buying his client's rights from any officer of the law who is willing to be bribed, there is no reason why he should not begin with the judge on the bench. It would be more scandalous to pay a judge of the Supreme Court for giving a judgment in your favor, or for giving an early judgment, than to pay extra compensation to the Sheriff for doing his simple duty, but it would not differ from it in principle. Both acts are connivance at a species of fraud on the community, and are a contribution to that rising tide of corruption which is threatening to overwhelm nearly every institution in the State. A client is just as much entitled to protection from the Sheriff at his lawyer's hands as from every other wrong-doer. It is not an advocate's business to buy immunity from malefactors for people who give him briefs. It may be in Sicily or Macedonia, but not in the United States.

We believe the leading legal firms suffered much less from the Sheriff's extortions than the smaller and younger ones, and that this accounts in some degree for the equanimity with which the former have looked on while Grant and Flack fleeced the latter. But surely the bar is, as we are often told, a professional corporation, each member of which is charged with the interests and dignity of the whole, and concerned equally with every other in the proper and efficient administration of justice. If a judge is corrupt, or the Sheriff is a rogue, every lawyer, and not only the lawyers who have actually suffered from it, is bound to take the matter to heart. In truth, in no calling is responsibility to the public so much increased by prominence as the bar. In that, above all places, is the man whose words are weightiest most called on for speech, and

the man whose character stands highest most bound to make it felt in putting a stop to fraud and oppression. There is no class in the community on whose courage and independence American institutions are so dependent to-day for safety and preservation as the lawyers. But if the watchmen will not watch, who will save the city?

SOME CURIOSITIES OF BRITISH STATISTICS.

DUBLIN, March 4, 1890.

THE dying out of superstition and the spread of enlightenment are shown by hardly anything more than the alteration in the character of the almanacs circulating among the masses in these countries. It is not much more than one hundred years since the Stationers' Company had returned on their hands an issue of almost the only almanac then published, because they had tried the experiment of omitting the columns of "the moon's influence on the parts of the human body." In 1833 Charles Knight could only hope that before long the "quantity and tone of such objectionable parts will disappear entirely." In 'Old Moore's' and such other literary corners they still linger—more, doubtless, from habit, and as ministering to that hankering after the occult that remains almost a part of our nature, than because of any real belief in their predictions and astrological jargon. Almanacs are more plentiful than ever. But while they have thrown off their original absurdities, they have widely diverged from the definition given by Webster: "A book or table, containing a calendar of days, weeks, or months, to which astronomical data and various statistics are often added, such as the times of the rising and setting of the sun and moon, changes of the moon, eclipses," etc. If Johnson were living, we can imagine his now defining an almanac as "a menstruum put forward annually by persons and associations to advance their own interests or opinions." One of Webster's derivations is peculiarly apposite to the number of almanacs now given away about Christmas, "Arabic, *manaha*, to give as a present."

For many years I have taken the *Financial Reform Almanack*. The almanac proper figures on only one of its 200 pages. It is about the best shilling's worth I know of to persons seeking information as to the financial condition of the United Kingdom and the aims of British reformers. The Financial Reform Association was established in 1848, to advocate direct taxation, with economy in the public service, and the completion of the free-trade principles of Cobden, and to "insist upon a revision of the land laws and a readjustment of the land tax." It numbers among its Vice-Presidents Mr. Labouchere, Mr. Morley, Mr. Story, Prof. Thorold Rogers, and other well-known Liberals. The Association appears to be locally represented in 117 principal towns and cities in the United Kingdom; in Ireland only in Belfast, a striking indication of how little intelligent interest is, in the present condition of affairs, felt here in the concerns of the United Kingdom. Its offices are in Liverpool. It publishes a monthly journal and this almanac, which, although apparently consisting of dry tables, is full of the most pithy reading. The matter varies somewhat from year to year; a complete file would be a veritable *vade-mecum* for any politician having concerns beyond and above those of party. I cannot do more than note some of the topics exhaustively set forth and discussed in the present number.

The advantages of free trade are expounded in an analysis of the Trade Returns of the Kingdom. The increase of British shipping is striking—from 3,096,000 tons in 1849 to 7,352,000 tons in 1888. The men employed have in the same interval increased from 153,000 only to 224,000, showing with how much greater economy of hands per ton vessels are now navigated. Of vessels entered and cleared in the United Kingdom in 1860, 56.3 per cent. of the tonnage was British; in 1887, 73.6 per cent. You, under your navigation laws, do not appear to have fared so well; according to this almanac, the proportion of your own tonnage in your own ports in 1860 was 70.8 per cent.; in 1877, 21.0 per cent. These estimates do not, I presume, include the tonnage employed in the coasting trade. The wrecks and casualties to British shipping have fallen from a tonnage of 297,000 in 1881 to 198,000 in 1887; the losses of life in the same years from 3,165 to 1,888.

The perusal of an exhaustive article on "Sugar Bounties" leaves the conviction that we have upon the whole gained by the mistaken policy of our neighbors in this respect. The consumption and use of sugar in manufacture per head of our population has increased from 15 20 pounds in 1840 to 73 20 in 1887. An enormous impetus has been given to the manufacture of sweets and confectionery, not only for home consumption, but also for export. "In London alone an annual consumption of 34,000 tons of sugar by certain leading firms engaged in confectionery and jams is accounted for, and the hands employed by these firms number 6,000." The number of sugar-refiners in the United Kingdom has, through changes in the mode of manufacture, diminished; their output has increased from 424,000 tons in 1864 to 739,000 in 1888. With regard to the supposed ruin of our colonies through free trade, we are told that "at no period has there been anything but an increase in the growth of British cane sugar."

The late discussions regarding royal grants have naturally turned attention expressly to the cost of royalty, and we have full tables on this subject. Since the accession of her Majesty in 1837, her relatives living at that date have received £9,050,000. In addition, the Cambridge family have received £910,000, besides special packets, rent-free residences, and exemption from rates and taxes. Prince Albert during his lifetime, and the Queen's descendants up till the present, have received £4,961,000, besides special packets, etc. It would be impossible to estimate the Queen's realized property, which is believed to be very great. She receives £385,000 per annum for her ordinary expenses. Out of certain departments for which this is allocated she is acknowledged to have saved £824,025; but an account of the moneys on other heads is denied the public. Besides this amount the royal yachts (which cost £273,000 to build) demand an outlay of £23,000 per annum, military escort and aides-de-camp £61,000 per annum; royal parks, palaces, and pleasure grounds, excluding such as are virtually set apart for public enjoyment, £36,000. With four yachts kept up at such expense, it shows a want of spirit to saddle the country with some £700 per annum for special packets for members of the royal family. Regarding these accounts generally, we are told they are made out "as if purposely designed to blindfold criticism and delude all inquiries. . . . We contend, therefore for a real and not a piecemeal Civil List."

If we sometimes sigh for the republican economy which leads the United States to pay its President only £10,000 a year, France £24,000, and Switzerland £600, we can at least console ourselves that we are in this respect better off than Austria, whose Emperor receives £775,000, Italy, whose King is allowed £614,000, or Turkey, whose Sultan draws from £1,000,000 to £2,000,000 per annum.

The House of Lords upon the whole manages to feather its nest pretty well at the public expense. Besides a rental from land of £12,838,000 per annum, its members draw as pay in the public service and otherwise £750,000 per annum; 334 out of 474 peers are in one way or other in the receipt of public emoluments, and besides these 6,821 of their relatives, including 12 wives and daughters, 30 mothers and sisters, 109 great-uncles, 32 aunts and great-aunts, 3 grandmothers, 841 cousins, 676 half and second-cousins, and 10 third-cousins. The influence which this golden harvest gives royalty and the nobility is one great impediment to reform, and to a fairer division of such offices as it would be for the benefit of the public to maintain.

The land tax, upon which the burden of the State originally rested, has been all but extinguished. Many fiscal arrangements are twisted to the benefit of the upper ten thousand. This is especially remarkable in the valuation of houses and the incidence of house taxation. The castles, halls, and courts of the land are valued not in proportion to their cost of erection, but to their supposed letting value, and, in assessing letting value, is taken into account the fewness of persons likely to require such expensive accommodation. There are many single offices, shops, and warehouses in Liverpool, Manchester, and London, where the assessment to poor's rate is higher than that on four of the principal noblemen's residences put together. The same applies to demesnes, which are often assessed at only two-thirds or half of the rate per acre of what adjacent farms have to pay.

There are interesting tables regarding the composition of the House of Lords and the composition and occupations of the House of Commons. Of the 474 peerages, 128 were existent before the time of George III., 173 were created from his accession till that of Victoria; 173 during the present reign. The Conservative influence of the House of Lords is shown by 35 Liberal peers having within recent years become Tories, while only 4 Tories became Liberal. The possessions, occupations, and relations of the House of Commons are singularly illustrative of the parties into which it is divided, from the well-endowed 306 Conservatives, through the less aristocratic 75 dissentient Liberals, the 199 more generally middle-class Liberals, and the somewhat Bohemian 84 Irish Nationalists.

The Queen is empowered to grant annually £1,200 additional pensions on a list instituted to reward special services which could not be otherwise recognized, or to assist struggling merit. We are given a list of those at present in receipt of this bounty, amounting to £25,121 per annum. The *Almanack* complains of the extent to which, for many years, in violation of the spirit of the grant, large sums have been apportioned out of this fund "to the relatives of those who had for many years filled well-paid posts in the military or civil services, and who had thus had ample means of providing for their families." A glance over the list of some 300 recipients calls up many associations. Military service appears best recognized. Absolutely fair apportionment would perhaps be almost impossible. Dr. Chalmers's three surviving daughters receive £25 each annually, the daughter of Nelson's adopted daughter, £300; the daughter of poor Fourdrinier, inventor of the paper-making

machine, £100; four daughters of Dr. Kitto, £25 each; Mary Ann DeFoe and Jane Amelia De Foe, lineal descendants of the author of 'Robinson Crusoe,' £75 each; three sisters of Frank Power, in consideration of his services at the siege of Khartum, £50 each; Prince Lucien Louis Bonaparte, for "services to literature and learning," £250; and so on. Upon the whole, Irish merit, where it has not run into distinctly "National" channels, seems fairly recognized.

Ample tables are given regarding the national debt, which has been reduced from £808,000,000 in 1856 to £694,000,000 at present. If no expensive wars intervene, some persons now living may see its extinction.

The licensing statistics are sadly illustrative of the extent to which drinking customs are more prevalent in Ireland than in Great Britain. Here 44 per cent. of the licensed houses are under £10 annual value, while in Great Britain the same class of houses is but 3.3 per cent. of the whole. Nor are our poor-law statistics encouraging; while we continue less pauperized than England and Scotland, we are retrograding and they are advancing. The percentage ratio of paupers to population in 1860–4 was: England, 4.7; Scotland, 4.2; Ireland, 0.9. 1880–4: England, 3.0; Scotland, 2.7; Ireland, 2.1.

The 9 pages of tables devoted to the results of the Crofters' Commission are interesting. Upon a rental of £11,882 their rents have been reduced £3,502, or 29.4 per cent., while 68.3 per cent. of arrears have been cancelled. The total result of the Irish Land Acts up till the present has been, on a rental of £4,582,000, to make a reduction of £932,000, or 20.3 per cent. Inability to wipe off arrears here has been a fertile cause of continued agitation.

I think I have written enough to show that the *Financial Reform Almanack* contains much that is worthy the consideration of politicians on both sides of the Atlantic. D. B.

ZENOBIA, PALMYRA, AND THE ARABS.

NIFFER, January 13, 1890.

IN a former letter to the *Nation* I described the ruins of Halebiyeh, on the right bank of the Euphrates, a day and a half above Deir, with a view to ascertaining whether the site had been identified, since Sachau, in his 'Reise in Syrien und Mesopotamien,' spoke of it as a place unknown. I remarked outside the walls of the city tombs of the Palmyrene type. The walls were excellently preserved, but inside there were almost no remains of buildings, but a blank space. On the northern slope of the acropolis, partly within and partly without the wall, were the ruins of a palace, serai, or Government building, with dome constructions of a Byzantine character.

In Constantinople I found a Procopius, and almost the first passage which met my eye (vol. ii., 8) was an account of Zenobia, built by the famous Queen of Palmyra, and rebuilt or repaired by Justinian as a bulwark against the Persians. The description of the city, in a narrow gorge where the Euphrates breaks through a transverse mountain chain, left no doubt as to the identity of Halebiyeh and Zenobia, and the Palmyrene tombs and Byzantine dome were accounted for by Zenobia and Justinian respectively. But, having been at much pains to identify the site, I now find that it was already identified. Chesney, in his 'Expedition to the Euphrates and Tigris,' mentions "Halebi" as the ancient Zenobia, and says:

"In the town are the remains of a temple, and an extensive palace containing many ornamented apartments; also numerous well-constructed private dwellings, supported by arches; and in general the buildings are so well preserved that the mind can scarcely be brought to feel that all have so long been unoccupied."

He also describes the necropolis as occupying a prominent situation in the valley and along the declivity westward, and as remarkable for a number of square towers like those at Palmyra. In one of these Capt. Lynch found a female mummy, with the face covered by a thin mask of the finest gold, while in another Mr. Ainsworth found a Greek inscription. It seems almost incredible that ruins, such as Chesney describes, of a palace and well-preserved private dwellings supported by arches, should have disappeared within fifty-five years, leaving absolutely no trace behind them, at the same time that the walls remain untouched.

My course from the seacoast to Baghdad this year lay through the capital of the Palmyrene Queen itself. The road from Damascus to Palmyra was declared to be unsafe on account of robber tribes in the mountains, and the local authorities at first refused us permission to go. At last we obtained an unwilling consent to go at our own risk, without escort. On the road we learned that, a short time before, a party which had attempted to pass had been stopped by the police and sent back to Damascus. We saw no robbers and no signs of their existence, which is not a proof that none exist. Our course was slightly erratic, our first station being Domeir. On Kiepert's large map this is located some distance out in the desert, and the non-existent town of Obair is put in its place. There are here the remains of a Græco-Roman building, apparently a temple. The natives have built against this temple, which they call a citadel, and the better part of a Greek inscription has thus been covered over. The stone is the same as that used at Palmyra, and the architecture seemed to me similar. At a later date the temple became an Arab fortress. The great eastern and western gates were walled up, and on one of the stones in the latter is visible a badly effaced Arabic inscription.

Turning northward from Domeir, we soon entered a narrow plain, which continued, almost like a very broad road, to the gates of Palmyra itself, a five days' journey for our camel caravan. Most of the time we were obliged to carry water, for wells are few and far between. Kiepert's map proved incorrect, for it must be remembered that very little of the Turkish Empire has ever been surveyed. So, for instance, his map gives a small range of hills to the north of Kurietain, whereas in fact there is no elevation whatever. From Damascus to Palmyra, and from Palmyra to Deir or Meyadin on the Euphrates, there is a natural carriage road.

About eight hours from Kurietain is the ruin of Kasr el-Haïr. This was a road station on the caravan route from Damascus to Palmyra in the time of the glory of the latter city. Baedeker's guide-book mentions the massive tower, which still forms a landmark for a whole day's journey, but omits to mention the richly carved gateway of a large building, perhaps a khan, the reservoir, and the aqueduct to bring the water from the springs of 'Ain el-Berdi in the mountains, two or three hours away. He mentions the supposed finding of a Maltese cross on the tower, which would assign the ruins to the crusaders. There is no such ornament to be found at present, but there is, on one of the stones on the northeast corner, a conspicuous ornament resembling a sun disk. The place was unmistakably an outpost of the magnificent Palmyra of Zenobia's time.

Palmyra has already been so well and often described and pictured that it seemed to me almost like a place that I had seen and known before. The Turks strictly forbid the removal of antiquities, but illicit digging continues, and almost every traveller buys and removes a few busts or mortuary inscriptions, and the natives themselves use the latter for their own graves. There are ruins of the times of Zenobia, Diocletian, Justinian, and the Caliphate. There is also on a high hill, to the west of the city, a castle in an excellent state of preservation, which Baedeker, the only authority I had with me, ascribes to the Arabic, or possibly even to the Turkish period. The Arabs fortified the old temple of Baal, using again the fallen stones and columns of the ancient building. The Holy Place, the closed building in the centre of the temple courts, became and still remains a Moslem mosque, around which, in the temple enclosure, is contained the greater portion of the miserable modern town of Tadmor.

The castle on the hill is quite unlike any other Arabic or Turkish construction at Palmyra or elsewhere in that region. Both in its situation and architecture it strikingly resembles the castles of mediæval Europe. It is surrounded by a deep dry moat, cut in the rock, and the whole of the island thus formed is occupied by the massive keeps and dungeons of the still towering fortress. The drawbridge is broken, and access to the interior can be obtained with difficulty only by scrambling up the precipitous sides of the moat to a hole in the south-eastern corner of the castle wall. The outer walls are of stone, but the interior work is chiefly in brick. The method of construction is condensed, much space being obtained within a small exterior circuit. Battlement rises above battlement, three tiers of defences in all, while vaults and dungeons have been cut down into the solid rock. I believe there is some tradition that it was built by a powerful Druse chief, but there are no inscriptions or marks to determine either date or origin. If the Crusaders had ever reached this point, the architecture of the castle could readily be explained; but it is difficult to connect it with anything else that I have seen in the country. I suppose it is scarcely probable that the Crusaders ever built a fortress here, and yet their great stronghold at Tripoli is not far distant, and the road from the mountains is easy.

The snow-capped mountain of Tripoli, Fem el-Mizab, is visible almost from the gates of Palmyra, and at the season of our visit a bitterly cold west wind reminds one unpleasantly of its proximity. Among other coins found at Palmyra or in the vicinity, I saw two silver coins, discovered at Erek or Rakka, about eighteen miles further desertward, the one a coin of Charles VIII. of France, and the other of Maurice of Saxony. It seemed a strange place to find European coins of such a date.

At Damascus, by the way, I had been told vaguely that there were in the Hauran, and also out in the desert, men who had been Christians since the time of the Crusades. It turned out that the desert Christians referred to were the Sleib or Sallabi Arabs. I have not yet had the good fortune to meet any of these strange people, but everywhere I have diligently questioned the Arabs among whom they live, and native merchants who have travelled with or among them, eliciting the following information, which I give for what it is worth. Their name means *cross;* they are not Moslems, and seem to have no religion; when questioned as to their race, they say that they are descended from Europeans, and that the Franks are their "uncles." In appearance they are said to be fairer than ordinary Arabs, with fuller beards,

and, occasionally, blue eyes. They are few in number, but scattered from Mosul to the Nejd. They are despised by other Arabs, but it is regarded as a shame to injure them, and they may wander at will among warring tribes. No Arabs every intermarry with them. Among themselves they are said to recognize ownership in the land, but, of course, this ownership is not recognized by others. Unlike the ordinary Arab, who is anything but a sportsman, they are famous hunters, especially of the gazelle. They are reputed to be the best guides in the desert, and it is they who clean out and keep in some sort of repair the few miserable wells that exist.

Between Kurietain and Palmyra I had noticed a few uninscribed milestones. Three hours, or about nine miles, beyond Palmyra I found a similar stone, but inscribed. Part of the inscription read:

STRATA
DIOCLETIANA
PALMYRA
ARRAKKA
VIII.

Near this lay another large mile-stone of a different sort, also inscribed, but I was unable to read the inscription. It was badly defaced, and I was alone, a mile behind my caravan, with a wild horse. Both of these stones were noticed, I believe, by the Wolfe expedition five years ago. Rakka, or Erek, the modern representative of the ancient Arrakka, is a miserable mud hamlet, a Turkish station on the caravan route from Damascus to Deir. Between this and Sukhne, the next station, I found another inscribed mile-stone, not of Diocletian, which proved to be illegible. There are also the remains of two or three forts, built to guard the road against the Bedouin, I should judge, in the Roman and Arabic periods respectively. At Sukhne, where there are warm springs, foundations of buildings of considerable extent are still visible. The last point to which I was able to trace the ancient road was Kabakik, sixteen hours beyond Sukhne and eleven hours from Deir. Here I found the remains of an aqueduct and reservoir.

Whether the road originally reached the Euphrates at Deir or Meyadin, or even at Salahiyeh, I could not determine; all three routes would have been practicable, and the two former are still used by caravans. Deir is near the upper end of a large plain dotted with ruins. The older part of the town is built on an accumulation of débris, twenty to thirty feet in height, testifying to long occupancy. The name Deir, 'monastery,' very common through the whole Turkish Empire, shows that it was the seat of a monastic foundation in the Christian ages. It is at present the most important Government station on the Euphrates north of Hillah. Meyadin is situated in the same plain, one day's journey southward, not far below the mouth of the Khabour and the Roman frontier fortress of Circesium. The direct road from Kabakik to Meyadin would save one day, and near the point at which the caravan road now descends from the plateau to the plain stand the imposing ruins of a strong Arabic castle, called Rehaba. One day's journey below Meyadin are the ruins of a large and very strongly fortified Roman city, now called Salahiyeh. (In a former letter I gave to this place the Turkish name of Kan Kalessi, Bloody Castle. This was an heirloom from the Wolfe Expedition, and rested on the information of a Turkish *zaptiyeh*. On careful inquiry I find that the only name known among the Arabs of the neighborhood is Salahiyeh.) This evidently once guarded something of importance, but what, it is difficult to determine, unless the Euphrates has slightly shifted its bed, as it often does, and this were once the southern limit of the large ruin-studded plain on which Deir and Meyadin now stand; or, unless it were the point at which a caravan road reached the Euphrates. The desert journey from Kabakik to this point would be, it is true, longer than those to Deir or Meyadin, some twenty hours against eleven and thirteen respectively, but it would shorten the road, and the maps represent a well as existing on this route.

The country between Palmyra and Deir is very inaccurately given on Kiepert's map. A narrow valley or wadi is there represented as almost connecting those places, thus forming a natural caravan road. For about five hours from Palmyra the road runs parallel with a low range of hills, as represented on that map. Then it passes through hilly or heavily undulating ground, as far as Sukhne, or a little beyond. To the left runs a range of hills, but there is no corresponding range to the south. On the slopes of those hills, a couple of hours beyond Rakka, one sees a few *Butum*-nut trees —remains, I presume, of the forests which the Assyrian annals describe as once existing in this region. To the north of Sukhne, not to the south, as Kiepert has it, is a glaring white marlhill, called Jebel Abyad, or White Mountain. Beyond this to the Euphrates the country, as far as the eye can reach, is almost as level as it can be made. Kiepert's errors seem to be chiefly copied from Chesney's map of this region, which rested neither on survey nor actual travel, but on such information as could be gathered from Arabs.

At the time of my journey the country was in a dangerous condition. Drought had driven the wild Arabs towards the Euphrates, in our very route. Such water as we found had been polluted by their filthy uses, and tasted so strongly of sheep, Arabs, and camels that we only drank out of dire necessity. Even tea could not conceal the taste. At Sukhne we found ourselves encamped among Anazeh Arabs just returned from the successful and bloodless repulse of a Shammar *ghazu*. The Azeli sheikh with whom I was travelling made me dress in an *abbah* and *kefiyeh*, and tried to pass me off as a Turkish official. But the Arabs observed that we had no escort, and demanded blackmail. This I declined to pay unless I had to, and tried to obtain an escort from the Turkish guard of four *zaptiyehs* stationed at Suhkne. It was refused, and we spent rather an uneasy night. The following morning I made a peremptory demand for an escort, and, by a combination of bullying and something else (the latter done by a faithful servant behind my back), I obtained one horseman, and we proceeded on our way, having in tow two other small caravans, a few stray travellers, and a couple of Shammar, the débris of the unsuccessful raid, all trusting for protection to us and our own *zaptiyeh*. Suddenly ten Arabs appeared, as it were out of the ground, and came riding down on us, brandishing their long spears gracefully as they came, while a much larger force merely showed itself on the opposite side. Had we been entirely disinterested spectators, the sight would have been charmingly picturesque and romantic. Finding that we were officially under police protection, after some parley they professed that they had only come out Shammar hunting, and allowed us to pass unmolested. I am afraid that if we had not obtained that *zaptiyeh*, they would have mistaken us for Shammar, and I must confess that we were all surprised at their ready recognition of Turkish authority.

I had intended to make an exploring tour, either northward from Sukhne, by what appears to have been a former caravan route through Resafa to the Euphrates above Halebiyeh, or eastward from Kabakik to Meyadin or Salahiyeh, but, as the Anazeh were on both routes in large numbers, and my escort could only accompany me to Deir, I was compelled to renounce my good intentions and proceed by the common road to Deir.

JOHN P. PETERS.

Correspondence.

THE TARIFF IN THE WEST.

TO THE EDITOR OF THE NATION:

SIR: The Western farmer is sorely distressed financially. The cause is not ascribable to poor soil, or bad climate, or his mismanagement, but it is due to the fact that it costs him nowadays the market price of grain to produce it; and cattle, hogs, and sheep are worth no more after a winter's feeding than the fall before. The farming industry of the West has been steadily drifting into bankruptcy during the past ten or fifteen years, and certainly better times cannot be expected unless a different economic policy is adopted. The prohibition panacea has not prevented the "hard times" of the Western agriculturist from becoming chronic, and the hope of good prices that a general European war would bring is too long deferred. Anti-railroad legislation has not proved an adequate remedy; for, after the severe overhauling of transportation rates and the sweeping away of traffic discriminations against rural towns and communities, the situation of the farmer is more critical than ever.

The question is, What will he do next? The political issue before the country in 1892 will be the tariff—not monopolies and trusts. Will this crisis of the Western farmers force them to abandon their war traditions and their affiliations with the Republican party, and make them vote for such an effective reduction and readjustment of the tariff as will bring them needed relief? It would be an insult to their intelligence to imagine their reasoning far different from this: We have always supported the tariff faithfully because we believed it would build up American manufactories, keep up the price of labor, and provide a reliable, ample, and, above all, friendly home market for us. Whatever else it may be accomplishing, it is not affording us a good market—in fact, prices have been gradually going down for years until there is now no sale for farm produce. We have had ample anti-railroad legislation. We are coining plenty of silver every month and we have had liberal pensions. Everything has been done that we have wished, and we are, nevertheless, in a most sorry plight. To what else, then, can this be due but to protection? How does the tariff help the farmer when it permits him to become ruined? We have always been told that if the tariff were materially lowered or abolished, the country would be deluged with cheap foreign goods. It is certain that the tariff makes us pay more for what we buy than we otherwise would, and yet furnishes no market for what we have to sell. "Free trade" cannot possibly make the present market worse, and will obviously make what we buy cheaper.

But the zealous Republican leader says: The Western farmer will never vote against Republican principles. He fought through the

war, and his hatred for Democrats and Democratic principles is too deep-seated. He may complain and find fault, but when the campaign year comes, the waving of the flag, the drum-corps processions, the war songs, and rousing Republican speeches will keep him in the party ranks.

With a view to ascertaining whether or not this will probably be true, the writer recently asked the editors of the twenty-six agricultural papers in Illinois, Iowa, Minnesota, Nebraska, Kansas, and Colorado, these questions:

"(1.) Do you think the present tariff imposes an undue burden on the Western farmer?

"(2.) If so, how would you amend it in his interest?"

It will be borne in mind that these six agricultural States are the backbone of the Republican party, and the farmers there have supported protection with almost fanatical zeal and enthusiasm. Thirteen replies have been received. Of these, eight state in strong terms that the present tariff is an unjust burden on the farmer. Of the eleven replies as to question 2, three urge a radical reduction of the tariff, three insist on "free trade," two desire that all things which the farmer must purchase and which cannot be grown in this country be placed on the free list; one thinks the present necessity demands free refined sugar; one would increase the tariff on agricultural and animal products; and one recommends no change at all.

These replies cannot but be regarded as remarkably significant. It is only fair to suppose that most, if not all, of these editors are Republicans—at least they are writing for the stanchest Republican communities in the land. That they represent without question the sentiments of their readers, the present constant and determined efforts of the Western farmers to form extensive leagues, combinations, and alliances for self-protection—organizations designed to be offensive as well as defensive—are abundant proof. When eight out of thirteen of the agricultural editors of the six great Western Republican farm States assert that protection has placed an unfair burden—a load indeed—on the farmer, the day is at hand when he will insist on and obtain cheaper goods and a larger market. H. O.

THE DAKOTA TIN DEPOSITS.

To the Editor of The Nation:

Sir: At this time, when one hears so much, in Congress and out, of the existence of vast deposits of tin in the Black Hills of South Dakota and of the advisability of developing the tin-mines there by levying contributions upon the rest of us who are not interested therein, it may be a part of one's duty to caution the public as to the *facts* in the case, let alone the policy of the measure. One would think "protection" hardly necessary if the ore exists in such vast and luxurious profusion as has been claimed, and at that distance from the seaboard. But thus far, strangely enough, it does not seem to have occurred to any one to question the statements of the tin-mine men as to this existence of their ore. At the December meeting, however, of the Minnesota Academy of Sciences, in this city, Prof. C. W. Hall, Professor of Geology in the University of Minnesota, and a careful as well as an eminently fair-minded observer, read a paper embodying the results of his own and those of a fellow-geologist's examinations in the Black Hills region, whither they went, so far as tin-mines are concerned, under the pay of no one and with no possible bias one way or the other. I cannot do better than quote Prof. Hall's own conclusion

"that the tin-ore of the granitic area [*i. e.*, that portion of the Black Hills containing tin at all] would never be found to occur in paying quantities save in occasional 'placers' into which the ore of removed areas of granite has been collected, or in occasional lumps of granite having a larger quantity of ore than the average of the granitic mass; this fact [of non-existence in paying quantities] being due to the igneous origin of these rocks and the non-segregated condition of the ore in vast masses of the carrying rock."

Would it not be well, before proceeding further, for Congress to ascertain more of the facts touching the possibilities of this industry, and from other sources as well as from the owners and manipulators of the mines themselves? Edward C. Gale.

Minneapolis, March 27, 1890.

VACATION STUDY.

To the Editor of The Nation:

Sir: In an admirable little circular sent to parents of pupils in a prominent Northern school, a request is made that those children who do not do regular work during the summer holidays may be allowed to read books indicated by their teachers. The suggestion is so sensible and practical that one would like to see it adopted by schools all over the country.

Every one interested in school work, either as teacher or director, knows the increasing difficulty of making the school course, with its natural and necessary limitations of time, cover the ground it is expected to. People in general, no less than educators themselves, are insisting more and more strongly on a single standard for schools, that of the entrance requirements of colleges of high standing, while colleges on their side are raising the standard of proficiency in subjects presented for examination. The schools must keep pace with the colleges, and must besides include in their curricula several subjects not formerly taught, such as the elements of natural science and drawing. Physical culture must also receive a due share of attention.

If courses of systematic reading were marked out, and pursued in the long vacation—always tending to grow longer by reason of the greater length of time which families are spending in the country—much could be done towards relieving the pressure of the school year. History could be read to great advantage by following the scheme pursued by the teacher. Younger children might be directed to read such fascinating books as Kingsley's 'Greek Heroes,' Hawthorne's 'Wonder Book,' or Church's 'Stories from Homer,' and in the following term the teacher might satisfy herself or himself that the reading had been thorough by taking the themes for composition from the book selected. Older pupils could be required to study the two or three short classics and plays of Shakspere set by the colleges as subjects for examination in English. In this way pupils might gain, under judicious direction, an amount of general culture which it is difficult to combine with the severer mental drill of algebra and geometry, Xenophon and Cæsar. Or it might be that a teacher would prefer to have pupils backward in certain subjects bring themselves up to the level of their class by their summer studies.

From two to three hours daily would not be a large amount of time to take from open-air sports. The change from a studious occupation ought properly to give an added zest to active amusements, while the habits of study formed during the winter would be kept up, and the next year's work much more easily accomplished in consequence. G. A.

CLERICAL JESTING.

To the Editor of The Nation:

Sir: Your editorial on "Clerical Jesting" in No. 1290 seems to me to be correct in a great measure, yet I fear the statement that "nothing is commoner in a church nowadays than the subdued and decorous ripple of laughter" needs some qualification. If you meant to draw the distinction which some of my co-religionists would draw between "*a* church" and "*the* church," I have nothing to say; but certainly in the Episcopal Church, and in liturgical churches generally, a ripple of laughter is the rarest of rare things. Where a church service approximates to a lecture, and where the sermon is regarded as most important, both in the time given to it and the value placed upon it, in contrast to the other parts of the service by a congregation, there the tendency towards the entertainment of the listeners and the "decorous ripple" is undoubtedly greater. There are seasons for all things, and I cannot see why a clergyman may not be a right good fellow in social intercourse, and at the same time leave jesting behind him in his pulpit ministration. W. A. M.

Miami University.

HALF QUOTED AND MISQUOTED.

To the Editor of The Nation:

Sir: In the article "English and Americans," recently published in the *Fortnightly Review*, occurs an error in a quotation—an error which is frequently made, and which, to my mind, gives a different force to the passage quoted. The writer holds forth as follows:

"But the Prayer-book offers a most convenient code to fall back upon as a means for the wholesale instruction of children and the lower classes. In England, surely, it is decidedly in the interests of the upper classes and the public weal to be able authoritatively to enjoin upon servants the ordering of themselves 'lowly and reverently' to all their betters, and the necessity of their 'doing their duty in that state of life into which it has pleased God to call them.'"

One would think that a writer for the *Fortnightly* would either know his catechism better or at least have one on hand. The exact words are: "To do my duty in that state of life *unto which it shall please God to call me.*" The writer did not seem to remember the sentence immediately preceding this, which might quite as fairly or unfairly be used as follows:

"But the Prayer-book offers a most convenient code to fall back upon as a means for the wholesale instruction of children and the upper classes. In England surely it is decidedly in the interests of the lower classes and the public weal to be able authoritatively to enjoin upon the upper classes that they should 'learn and labor truly to get their own living.'"

Respectfully yours, J. H. Dillard.

St. Louis, March 20, 1890.

AN INCIDENT OF THE NEW SOUTH.

To the Editor of The Nation:

Sir: During a late visit to Richmond, an incident was brought to my attention which may interest your readers as it did me. The field of Seven Pines is seven miles east of the city. The surroundings being somewhat picturesque, and the distance convenient, a railroad station has been established there, and an effort is made to make it a popular resort for pleasure parties. The most interesting object in the vicinity is a National Cemetery containing the remains of 1,350 "Wearers of

the Blue." The place is a model of neatness, and the keeper, Mr. Barrett, is a true gentleman. After showing our party about the grounds, he told this anecdote:

During the summer the inmates of the Confederate Home at Richmond visited the place, and, as a part of their day of pleasure, wished to have their pictures taken in the cemetery. Mr. Barrett consented if they would sit in front of the flag. This they cheerfully did, and when everything was ready they called for him, saying they wanted one Yankee in the group. The picture, with the scarred and crippled Confederates in the foreground, the Yankee in the back, and the Stars and Stripes over all, is in the office at the cemetery, and was to me a prophecy of the good time when there shall be no North and no South in these "reunited" States. D. P. NICHOLSON.

JOHNS HOPKINS UNIVERSITY, March 22, 1890.

THE ARRANGEMENT OF THE BOSTON MUSEUM OF FINE ARTS.

TO THE EDITOR OF THE NATION:

SIR: In reply to the rather severe censure of your critic, published in this week's *Nation*, will you allow me to quote the following from my last annual report, issued the week before he visited us?

"With regard to the arrangement of the classical department, I wish to anticipate one criticism which may be made when the public is admitted to the Museum. The basis of this arrangement is that which is now universally admitted to be the correct one—the chronological. It will be found, however, that this plan has not been carried out to the letter. For example, objection may be made to the fact that the Porch of the Maidens from the Erechtheion and the selection from the reliefs of the Great Altar at Pergamon are brought into the same room, and this the last room in the classical series, or that the selections from the Monument of Lysikrates are surrounded by works of the Roman period. A number of such chronological errors have been committed, but in no case without especial reason, and in no case, I trust, so as to deceive or confuse the intelligent visitor.

"As regards the first instance quoted above, the reason is simple, and will be readily understood by those who see the building, though the combination may look strangely in the catalogue. This is the only room in the classical department high enough to admit the Erechtheion porch. Being the last room in the section, it should theoretically be devoted to Roman art, but this would have necessitated placing the spirited works of the Hellenistic epoch in the darkest and narrowest portion of the long corridor that connects the two wings, and the inferior works of the Roman period in one of the finest and best-lighted rooms in the building. In these circumstances, and inasmuch as the larger part of the Roman works are Hellenistic in type and feeling, a reversal of the natural order has been considered justifiable, and has therefore been adopted. If it is asked why the building was not constructed so as to make the correct arrangement possible, the reply is, that in the division of space there are other departments requiring consideration as well as the classical, and the satisfaction of all required mutual concessions. This is especially true as regards the situation of the Bust room. In an ideal scheme the room illustrating the art of Pheidias would have followed directly upon those filled with works of the period of transition; but the construction and arrangement of the building as a whole required the introduction of a small room at this point, and as the sculptures of the Parthenon could not be compressed into the space thus afforded, the historical sequence has been interrupted abruptly by the adoption of this as the room of the casts from busts of all epochs of Greek and Roman art, and also from small bronzes. The visitor will thus see at a glance that this has nothing to do with the chronological order of the rooms, and can take up the thread again in passing from it into the Parthenon room."

If it is true that in passing from the Parthenon room to the corridor "we lose track of the chronological sequence and the orderly arrangement almost together," the fault is due to ignorance on my part, not to carelessness; for, in all but the end referred to above, I used the same care in grouping styles and subjects that met Mr. Sturgis's approval in the first rooms. Very respectfully yours,

EDWARD ROBINSON.

BOSTON, March 28, 1890.

Notes.

A VERSATILE writer, Mr. Theodore Child, has prepared a work for the palate, 'Delicate Feasting,' which will be published by Harper & Bros.

A third volume by Jerome K. Jerome, the English humorous writer, 'Stage-Land: Curious Habits and Customs of its Inhabitants,' is announced by Henry Holt & Co.

The Messrs. Longman will issue the only authorized edition of Mr. William O'Brien's new Irish novel, 'When We Were Boys,' together with 'The Seat of Authority in Religion,' by Dr. James Martineau, and 'Old Friends,' by Andrew Lang.

Houghton, Mifflin & Co. will shortly publish 'The Master of the Magicians,' by Elizabeth Stuart Phelps and the Rev. Herbert D. Ward; 'A Waif of the Plains,' by Bret Harte; 'The Mistress of Beech Knoll,' by Mrs. Clara Louise Burnham; and 'Robert Browning: Personalia,' by Edmund Gosse.

'Notes on American Schools and Training Colleges,' by Dr. J. G. Fitch, and 'The Growth of Intellectual Faculty,' lectures to the Teachers' Training Syndicate in Cambridge, England, by Dr. Francis Warner, are in the press of Macmillan & Co.

Thomas Whittaker announces Prebendary Ross's 'Christian Theism,' a popular survey of the evidences and objections.

From Ginn & Co. we are to have Sidney's 'Defence of Poesy,' edited by Prof. Albert S. Cook of Yale; 'A History of the Veto Power in the United States,' by Edward Campbell Mason, and 'An Introduction to the Study of Federal Governments,' by Prof. A. B. Hart, being the first two of the projected series of Harvard Historical Monographs.

'A Short History of Mexico,' by the Rev. Arthur H. Noll; 'A Winter Holiday in Summer Lands,' namely, Cuba and Mexico, by a lady; and Lamartine's 'Raphael; or, Pages of the Book of Life at Twenty,' are among the latest announcements of A. C. McClurg & Co., Chicago.

Robert Clarke & Co., Cincinnati, ask subscriptions to a limited edition of the 'Life and Times of Ephraim Cutler,' prepared from his journals and correspondence by Julia P. Cutler, his daughter, and the granddaughter, therefore, of the Rev. Manasseh Cutler. Ephraim Cutler took a leading part in the Ohio Constitutional Convention of 1802, and was otherwise an eminent citizen.

B. Westermann & Co., New York, will publish for the United States, in connection with Weidmann, Berlin, 'T. Macci Plauti Fabularum Reliquiæ Ambrosianæ,' edited by Studemund, long favorably known as a Plautus scholar. A Latin prospectus is to be issued shortly reviewing the editor's work, which cannot fail to be welcome to the many Plautus students and college libraries in this country. The price will exceed $20, including the interest our paternal Government takes in the Old Roman, and will be about $17.50 for public and college libraries.

The third volume of Sybel's 'Begründung des Deutschen Reiches durch Wilhelm I.,' which has just appeared (Westermann), is devoted entirely to the history of the Schleswig-Holstein question. The author begins with an account of the old Constitution of Schleswig-Holstein and the dynastic complications originating in the election of the King of Denmark as "Lord of the Duchies" in 1460. Repeated attempts were made by energetic and ambitious monarchs to convert this purely personal union into a territorial union, and to reduce the duchies to Danish provinces. This aggression was resented and resisted by Germany, which defended the independence of Holstein as "deutsches Reichsland," and thus incidentally extended its protection also over Schleswig. Out of these relations grew the German-Danish war, or rather succession of wars, which led to the separation of the duchies from Denmark and their final incorporation into the German Empire. In the minds of most foreigners Schleswig-Holstein does not excite a very lively interest; nevertheless it has played an exceedingly important part in the political evolution and consolidation of Germany. Its history is a snarled skein not easy to untangle, and no reader can help admiring the skill with which Sybel has unravelled and spooled it.

Still another portrait of De Quincey accompanies the fifth volume of Prof. Masson's new edition of his Collected Writings (Macmillan). The contents are very miscellaneous—on Dr. Parr, Coleridge and Opium-Eating, Charles Lamb, Wellesley, and Charlemagne; and as entertaining.

The Progressive Publishing Co., London, sends us a 'Biographical Dictionary of Freethinkers, of All Ages and Nations,' by J. M. Wheeler. It is an odd collection, in which one hardly knows whether to be more surprised at meeting Gautama or Asa Gray, Lincoln or Chaucer. Theodore Parker is included, but Bishop Colenso ignored. The title suffices for Col. Ingersoll and Shakspere, for Darwin and Rousseau, for Fanny Wright and George Eliot and Harriet Martineau. The compiler contemplates a 'History of Free Thought in England.'

Tourists and readers of foreign languages will find a generally trusty convenience in the four little volumes of Ignatius Em. Wessely's 'Practical Pocket Dictionary' (G. P. Putnam's Sons). Each vocabulary in turn gives equivalents in English, French, German, and Italian. The condensation is remarkable, and has been effected without obscurity. The print is all that could be expected as regards size or clearness of impression, and the typographical accuracy is also noticeable. Sometimes the English is a little old-fashioned or unidiomatic, but it is seldom one meets with even so much of a slip as (under *lasciare* in the Italian volume), "It is all *what* one could wish"; or a freak like inserting the adverb (*abjectly*) and omitting the adjective. The set is neatly bound in red cloth, the English volume being somewhat the bulkiest.

Parallel with this last, by the way, is vol. i. of 'Baedeker's Conversation Dictionary in Four Languages, English, French, German, Italian' (New York: B. Westermann), of which the form is larger, with a gain in flatness, but the print is neither larger nor better. The pronunciation is rather less well attended to by Baedeker than by Wessely, who in copiousness is again decidedly superior. For instance, the former not only omits *abase*, which is perhaps seldom likely to be used by the tourist, but *abatement*, whereas Wessely gives "no abatement made! *prix fixes*," etc.—the very thing for shopping. Under *ability*, Baedeker

gives no phrases, but Wessely, "to the best of one's ability," etc. Baedeker simply has the four synonyms for *railway*, but Wessely gives railway guard and speed. Now one, now the other of these dictionaries may seem to choose the best equivalents. It is fair to say that Baedeker is put forth tentatively and with apology for shortcomings.

We hesitate to rank Mr. David Salmon's 'School Composition' (Longmans) as high in its class as the same author's 'English Grammar.' It deserves, however, the attention of teachers, especially such as are already using the latter work, and its direct, sensible method is to be praised almost without reserve. The notes for teachers at the end of the book are excellent in conception and as practical instructions. In the higher or second part, Mr. Salmon's "personal equation" is too visible, and will confirm pedagogic narrowness in the handling of the English language. He refers to prejudice and to etymology for his authority much oftener than to the best usage, and does not teach the child that usage should rule, and where it must be sought. Nor is his attitude towards neologisms what it ought to be, for it practically denounces growth and enlargement of the vocabulary—a futile proceeding. The section on *shall* and *will* is too summary for our American aberration. Something might be said, too, as to the quality of the selections; and several carelessnesses or liberties with the text may be noticed, as in Cowper's "Pity for Poor Africans" and Wordsworth's "Fidelity." The punctuation of extracts, when metrical, has not been properly looked after.

The Rev. Mr. Fausset of Fettes College, Edinburgh, whose recent edition of Cicero's 'Pro Cluentio' will lead classical students to watch his work with interest, has conceived the idea of presenting, as a nucleus about which the young learner may group his gains of knowledge of Roman literary and political life, a biographical picture of that life at the most interesting period of Roman history. His choice, by its conditions, was fixed upon Cicero; and he found material ready to his hand in Dr. Munk's treatment of that author in his 'Geschichte der römischen Literatur,' which, translated into true and fluent English, with free omissions and a few additions in the form of notes, Mr. Fausset has published under the title of 'A Student's Biography' (London: Swan Sonnenschein & Co.). The view taken of Cicero's character is that to which it seems probable that the world will easily return when it has had time to recover from the spell of Mommsen's genius. The book may be confidently commended, but to one detail serious exception must be taken: the frontispiece, an exquisite reproduction of a photograph of the so-called Cicero bust in the Uffizi, probably represents Corbulo (see Bernouilli, 'Römische Ikonographie,' i., 275), and at any rate does not represent Cicero.

The revision of Boise's 'First Lessons in Greek' (Chicago: S. C. Griggs & Co.) gives us substantially the old work. Little is changed in the presentation of the subject, and less, of importance, in other ways. The character of the old edition, indeed, precluded much change by the new editor. The whole seventy-one lessons do not give a single instance of connected discourse to be translated from Greek into English or vice versa. There is a certain mechanical method about the book that some teachers think a necessity. The new editor still keeps such words as λεώς, ἤπειρος, and γάλα in the early lessons, although the student will seldom use them, and not at all for some time after his first year's work. The use of marks of quantity is carried to an unnecessary extent, and has caused indistinct accent marks over them to appear in many cases.

Prof. W. G. Frost's 'Greek Primer' (Boston: Allyn & Bacon) marks a decided advance towards a rational treatment of Greek for beginners. The author has dared to compose some easy Greek in connected discourse in the ninth lesson, has inserted an epitaph in the seventeenth, and an ode of Anacreon in the twenty-seventh; and un-Attic words are sometimes employed. This will never do—for the "machine." The method is inductive, but not to illustrate the conceivable possibilities of induction. Engravings of interesting objects are used. In general, the book indicates some respect for a pupil's reason, and some recognition of the fact that first steps in Greek may safely be made similar to those in use for modern languages. A plunge into Attic Greek, merely because it is Attic and Greek, has no pedagogical sense in it, any more than the insane practice Comenius overthrew by writing notes to classic texts in German. It may be questioned whether the presentation of the verb could not be more effectively made by a more gradual development of it, and whether metres could not safely be omitted from a primer. Both this and Boise's 'Lessons' are beautifully got up.

One of the evils of allowing the "libraries" of fiction to be entered as periodicals, and hence to take advantage of the cent-a-pound rate for second-class matter, is that not only adults are cheaply supplied with trash, but our youth with the most deleterious literature, sufficiently indicated by such titles as 'The Mysterious Marauder, or the Boy Burglar's Long Trail,' 'Gold-Trigger the Sport, or the Girl Avenger,' etc. An effort is making to reduce these pseudo-periodicals—the very regularity of whose appearance is the most alarming feature of them, and finds a premium in the present law—from second-class to third-class (eight cents a pound), where honest books are found. A bill is now pending in the House of Representatives (No. 7558), and it is desired that letters should be freely sent to members of the Senate and House Post-office Committees urging the passage of the measure. The chairmen are (Senate) Philetus Sawyer of Wisconsin, (House) H. H. Bingham of Pennsylvania. To write to the district's Representative is also an efficient mode.

The report of the Commissioners of Emigration of New York State, for the year 1889, is largely taken up with the details of the controversy with the representatives of the general Government over the return of immigrants. We fear that this controversy is really between two groups of politicians, and that the interests of the public and of the immigrants are not the controlling considerations. The result is likely to be the disuse of Castle Garden as a receiving station, and the establishment, at much expense to the United States, of another post. This should eventually relieve the State of New York of a considerable burden. There seem to be good reasons why the matter should be controlled by the general Government. The number of alien passengers arriving at this port during 1889 was about 350,000, a decrease of about 70,000 from the previous year.

The wills of William Penn and his kinsmen, beginning with that of William Penne of Myntie, in the County of Gloucester, Yeoman, proved April 21, 1592, are the leading feature of Mr. H. F. Waters's "Genealogical Gleanings in England" in the April number of the *New England Historical and Genealogical Register*. These are succeeded by addenda to what has been already published concerning the Washington pedigree. The fifth volume of the Memorial Biographies of deceased members of the Historic Genealogical Society is reported to be in preparation.

Nature for February 27 presents a uniform system of transliteration from the Russian, which has been accepted and will be employed by many of the foremost English and American scientists and librarians, including the publications of the Royal Society, the Zoölogical and Geological Records, the Annals of Botany, etc.

The most important of the four papers on African explorations in the March Proceedings of the Royal Geographical Society is Mr. D. J. Rankin's on the Zambesi Delta. After showing the unsuitableness of Quillimane as the port for the river commerce, two transshipments and a land carriage being required, he proceeds to describe in detail the various mouths of the river, having especial reference to the Chinde. This, the northernmost mouth, is apparently the natural way of communication with the interior, both on account of the greater depth of water and the superior healthfulness of the surrounding country. He gives a graphic description of a storm and a night canoe-ride on the Zambesi, an exploit attended with great danger on account of the hippopotami. Mr. F. C. Selous contributes a map of his recent journey in Mashona Land, accompanied by geographical notes of present interest as bearing upon the claims of Portugal to this country. Mr. A. Sharpe describes the country between the Shiré and a branch of the Zambesi, and Mr. J. R. W. Pigott gives an account of an exploration of the upper Tana River, made for the British East Africa Company, which is chiefly noteworthy as testifying to the rapid depopulation of this part of Africa through the constant inter-tribal wars. The German expedition of Dr. Peters appears to have followed pretty closely the route taken by Mr. Pigott. An interesting account, with diagram and pictures, of the new volcanic Falcon Island in the Tonga Group, is given by Mr. J. J. Lister of H. M. S. *Egeria*, as well as a translation of the last letters from the Russian expedition to Central Asia.

Within a few months has been discovered the Spanish original of the 'Epistola Christophori Colom cui etas nostra multum debet.' It is a two-leaved small folio, and is clearly the edition from which was copied the quarto reprint now in the Ambrosian Library in Milan. This is inferred from certain orthographic changes (*magestat* to *magestad*, *venit* to *venid*, *qualls* to *quales*, *temporals* to *temporales*) made in the Ambrosian edition, as well as from the un-Spanish typography of the latter. The newfound letter is now in Mr. Quaritch's possession, and he supposes it to have been struck off at Barcelona in April, 1493, during Columbus's visit to the court.

Sun and Shade is issued by the Photo-Gravure Co. from their new quarters at No. 137 West Twenty-third Street, New York. The February number has two conspicuously fine plates from nature, a leafless woody scene by a brookside, and a winter effect of snow-covered elms.

News has been received of the death of the Danish artist Carl Bloch. Born May 23, 1834, Bloch passed almost the whole of his life in Copenhagen, being at the time of his death professor at the Art Academy of that city. For many years his works were the centre of interest at the local exhibitions, and this popularity is to be attributed not merely to their great excellence, but also to the distinctive nationality of the artist. Bloch excelled in historical and religious subjects, the most con-

spicuous examples of the former being "Christian II. in Prison" (1871) and "Prince Christian at the Death-bed of Chancellor Kaas" (1880); of the latter, the series of pictures illustrating the life of Christ, executed between 1866 and 1880. Bloch was also very happy in genre painting, the subjects being taken from Danish and Italian life.

Our readers will have noticed last week a confusion of names in the note on Mr. H. S. Codman's bibliography of landscape-gardening.

— The April *Harper's* is an excellent stock-number. The principal paper, entitled "A Suit of Clothes," being the ninth of the Great American Industries series, is full and exhaustive, and, like the others that have preceded it, is a marvel of compact detailed statement of a large mass of facts. Similar to it is the paper upon the New York Maritime Exchange, which need not be further described. A third article, even more encyclopædic in character, is upon American Literary Comedians, in which some hundreds of writers, since the dawn of letters upon this continent, are mentioned and properly classified to the bewilderment of the mind. The richness of American humor in the multitude of its servants could receive no better illustration, nor the briefness of their literary fame be more forcibly brought home, than in these catalogues of the purveyors of laughter, which read like voting lists. Dr. Thomas Young, whose scientific labors deserved more popular fame than has ever been his portion, is the subject of a thorough monograph, in which his personal character is not forgotten and the list of his talents and of their increase in his stewardship is long drawn out, but not unduly. The inventor of the undulatory theory of light and the deciphering of hieroglyphics found many provinces of learning and knowledge between those two extremes, and it is a pleasure to notice that foreign nations have been more appreciative of him than his own people. Gen. Merritt writes a spirited and educating article upon recent Indian wars, taking pains to bring out the peculiar conditions and the terrible incidents of such fighting in the uninhabited country, while he does justice to the remarkable qualities of the Indians as evinced in their retreats. The leading paper is Mr. Lang's comment upon the "Merchant of Venice," which deals more instructively with Mr. Abbey's accompanying drawings than with Shakspere, and in respect to them we can cordially subscribe to the prognostication that tastes are likely to differ; not so far as they are drawings, be it remarked, but so far as they imagine *Shylock*, *Portia*, *Antonio*, and the rest.

—The April *Scribner's* has its usual variety of travel, fiction, and solid serial papers. The Electric Railway is fully described, and the extraordinary rapidity and variety of invention in developing it are brought out with so little remark as to furnish a striking example of the marvellous progress of our time in its special direction. The series upon the Rights of the Citizen is opened by Mr. F. W. Whitridge with an orderly account of the rights of the householder, with particular attention to the rights of the citizen of this city. The limitations upon his liberty in the construction of his house are enumerated, and the obligation of the various departments to secure proper conditions about the house and in the street is defined. At the end the paper becomes practically a criticism of the working of municipal government in regard to the safety of life and property and the sanitary welfare of the community. The author takes a sanguine view of the future, and points out that the conveniences which are now least certainly obtained under city rule are those which not long ago were everywhere regarded as refinements of civilization. The gossipy paper upon Charles Lamb, devoted to his personal characteristics and biography as read in his charming letters, is concluded, and it is aided by some interesting illustrations of places associated with the gentle humorist of many failings. Miss Jewett's story is, as usual, the most notable contribution to fiction. The discussions in the "Point of View" continue to be remarkably weak in critical value: the opening passage upon Mr. Pater, in particular, is eccentric and individual in matter, and exhibits a narrowness of view unusual in our better anonymous criticism. Such criticism, however sincere, is to be regretted.

—A remainder from last year upon our shelves is the latest volume of the Archives of Maryland as printed by the State under the admirable editorship of Mr. Wm. Hand Browne. It embodies the proceedings and acts of the General Assembly from October, 1678, to November, 1683. The original records for this period are a good deal mutilated in parts, and frequent gaps occur. The general tenor of colonial affairs was peaceful, but the Indians were still a source of concern, and bounties had to be offered for the killing of wolves and loose stallions. Capt. John Goode of the Lower House was very obnoxious to the Upper, of which he expressed his contempt in coarse and vulgar idiom; but they in vain urged his unseating pending trial. Dr. Edward Husbands, on the other hand, the Assembly would fain, in 1678, have put an end to on suspicion of his having attempted to poison the entire body, with the Governor thrown in, but took away his practice "as a Phisitian or Chirurgeon," and, "for the Crime of Threatning menaceing & Curseing this Assembly," ordered him twenty lashes on the bare back at the hands of the common hangman. This case served as a "good President" in 1683, when Jacob Young was impeached for (among other things) taking an unpopular view of the peaceable disposition of the "Susquehanoughs." The evidence was insufficient to convict, but it was made convenient for him to leave the colony. The sheriff's fees greatly exceeded his estate, amounting to 13,640 pounds of tobacco. The use of this article, by the way, as currency is well illustrated by the phrase in which the Upper House complains of "haveing Spent soe much time and Tobacco." There are numerous naturalization petitions, and a recurring petition for the relief of Jacob Leslier or Leister, merchant of New York, who, we think, must be the patriot Leisler—but this identification is missed in the index. Several acts assessing the public charges contain long lists of inhabitants. There is an act for keeping holy the Lord's day, which, contrary to Puritan usage, "is hereby Judged and deemed to be and begin according to primitive and Christian vsage from twelve of the Clock on Saturday night to twelve of the Clock att night ensueing." "The bodily Exercise or occupacõn of fishing" on Sunday was especially aimed at in this act of 1678. An act to regulate the militia provided for "pressemasters" to make forced levies on goods and commodities to meet the cost of war, and also for prizes in Indian wars, with this remarkable engagement, "That the free Booty Prize Pillage and Plunder *or any Indian* seized or Taken Prisoner shall by the Comander be *equally distributed & divided* amongst the Soldiers," etc. The economic acts are fairly numerous. Some were to encourage the woollen and flax industries; some to prevent the fraudulent packing of tobacco by the putting of "Rotten frostbitten, Ground Leaves, or Seconds or worse Trash in the Middle or any part of the hogshead"; some to forbid the exportation of wool, old iron, leather, and raw hides—these last "for the encouragement of Tanners and shoemakers." As is known to the experience of the present day in the practical working of protection, "the Advantage and abuse made thereof by the Insolency of the Tanners of this Province," raised an outcry against the act.

— Slavery makes but little show in this volume. Negroes and slaves are exempted, along with "preists deligates Majestrates & Constables," from military training and service. Another act confirms the slavery of existing or imported bondmen, and seeks to prevent intermarriage by a fine of 10,000 pounds of tobacco, by master or mistress permitting, or minister performing, the ceremony. Yet a premium on a white woman's uniting herself with a black slave was contained in that part of the owner's penalty which manumitted her and her offspring. In an act forbidding the sale of negroes or other slaves by administrators for the payment of debts, we have the baldest expression of the condition of chattels personal:

"That all Negroes & other Slaues after the Transmitting of the estate to the County Court as aforesaid shall bee appraised to the Gaurdians or Trustees & bee preserved by them & bee Imployed to the said Gaurdians or Trustees vse & benefitt, & the Like number of Slaues & of Like ability of body Retourned to the said orphans out of theire Increase, (if any bee) att theire full age by this Law Limited, & if any of the said Slaues bee growne aged or otherwise Impotent or bee Lamed, & that the Increase will not make the originall Stocke good as to number & ability of body that then they shall againe bee Appraised," etc.

— The Superintendent of the Eleventh Census issues a preliminary report, descriptive principally of the manner in which he proposes to execute his duties. It is big with promise, but as the reputation of this officer rests upon his success in manufacturing statistics for political purposes and in editing a rabidly protectionist campaign newspaper, we cannot feel assured that this promise will be satisfactorily realized. It was not very encouraging that he should begin his labors with an appeal to the farmers of the country to keep books showing the products of their farms, for the purpose of facilitating his operations. Doubtless it would be a good thing if farmers kept systematic accounts; but to suppose that some ten or twelve millions of most conservative people would revolutionize their business habits in response to a request from this quarter, is almost a sign of a lack of common sense. Certainly no competent statistician would seriously make such a request as this, and we venture to suggest that a table showing the number of farmers that have complied with it would not be the least interesting of those that are to be published. The Superintendent insists with great force that if the publication of the returns of the census is not to be most injuriously delayed, it must be taken out of the hands of the Government Printing-office. This would result in a vast saving not only of time but of money; and when we consider that a single new requirement of the census law will involve the publication of eight quarto volumes of a thousand pages each, it seems indispensable. It is gratifying to learn that the services of Dr. John S. Billings and of Mr. Frederick H. Wines have been secured in their respective departments. In a number of respects improvement upon the methods and results of the Tenth Census is promised, and such improvement is eminently desirable.

—M. Jules Simon announces, in the *Temps* of March 2, that he has quitted the *Matin*, and that henceforth he will print from day to day a "Little Journal" of his own. The separation is not due, he says, to any unkind feeling on either side, but to an intense desire on his part for absolute independence. One who knows none of the secrets of the *Matin* office might well think that its writers have very wide liberty as it is. It is a journal which professes no political creed, and takes no side in politics. From day to day it publishes leading articles, each duly announced the day before, by writers who sound the whole gamut of political opinion from Divine Right to radicalism. Among these writers the chief have been MM. John Lemoinne, J. Cornély, J. Simon, Emmanuel Arène, Jules Delafosse, and Ranc. From this happy family M. Jules Simon has withdrawn, and he sets up his independent journal, not as a separate venture, but in the columns of the *Temps*. He occupies daily a certain space, more or less, in which he gives free expression to his opinions on many subjects under the heading "Mon Petit Journal." The *Temps*, he says, gives to him as an old journalistic hand a place without responsibility incurred on either side, just as workmen might give free bench-room in a shop to a veteran who liked to be among them and busy. M. Jules Simon's articles so far have touched a number of very diverse subjects—political, biographical, and social—and it may be that this width of range has been one of the attractions that have drawn him away from the *Matin*, where his work was for the most part political. He treats his present subjects with varying degrees of minuteness and care, but always in an interesting way.

A METHODIST EDUCATOR.

Wilbur Fisk. By George Prentice, D.D., Professor in Wesleyan University. Boston: Houghton, Mifflin & Co. 1890.

THERE is a sharp contrast between this book and its forerunner, 'Jonathan Edwards,' the first volume of a series of "American Religious Leaders." It suggests the query whether it would not have been better to find for each subject a sympathetic biographer of some other sect. Dr. Allen's 'Edwards' kept his sectarian opinions so completely in abeyance that they did not ruffle the surface of the book, while Dr. Prentice's stir up the sand from the bottom at almost every page. He never tires of celebrating the growth of Methodism and the expansion of its educational system. Within certain limits, such a course was perfectly legitimate, especially with reference to the educational expansion; but it is very greatly overdone. The tone is that of an anniversary glorification. In general the book is not well written. The syntax is often faulty, so that something else is said than what is meant. The style smacks of the local editorial more than of scholar's work. It is needlessly polemical. In the third chapter there is a violent and protracted assault upon Matthew Arnold for certain ill-advised observations on American Methodism. It is lugged in, and the chapter reads like a belated article for the *Methodist Quarterly Review*, stuck here to give the volume more pretentious bulk. It is evident that Dr. Prentice did not find his subject a prolific one. He would have been much happier writing a life of Dr. Whedon, to whose theological statements he continually recurs with an enthusiasm to which his praise of Dr. Fisk does not attain. If he had set out to write down the latter, the effect could not have been much more damaging. An impression of intellectual and personal thinness is not to be escaped. The deathbed scenery of the concluding chapter is long drawn out, as if Dr. Prentice had aimed to write a narrative which might some time make an edifying tract.

Chapter iii. concludes with such a generous endorsement of Dr. A. V. G. Allen's 'Continuity of Christian Thought' as "incomparably the best exposition of that theology of the early Eastern Church" in which Dr. Prentice seeks the goal of Wesley and Whedon, that we are haunted by a grave suspicion that the object of the series is to exalt that theology at the expense of the Western type. In his 'Idea of God,' Mr. John Fiske, who is to have a volume in the series, was greatly taken with Dr. Allen's book. He would probably not find it difficult to hitch the pantheistic theology of Parker to that of Origen and Clement. That all the subjects of the series can be construed in this way is hardly possible. Perhaps before it is concluded we may have a theologian, as subject or biographer, who finds the Eastern theology which is germinal in the Fourth Gospel as little satisfactory as the Western theology which is germinal in the Pauline Epistles, and the doctrine of the synoptic Gospels the simplest and the best of all.

It may be that the brevity of Dr. Fisk's life accounts partly for the lack of weight and substance which it would seem that every one must feel in Dr. Prentice's biography. He was born in 1792 and died in 1839. He had but three years' schooling before he was sixteen. His striking out for a college education at a time when such education was generally considered among Methodists injurious to Christian character, and especially to the preacher's fitness for his work, implied no early break with the tradition, for his first idea was to study law. His college course began at the University of Vermont, where it was interrupted by the war of 1812, and continued at Brown University, and was not in any way remarkable. Signs of consumption were already evident and increased at Baltimore, where he went as private tutor. Returning to his friends in Vermont, he found a revival in full swing, and "before he had any chance to confess his back-slidings he recovered the favor of God," and resolved to enter the ministry; whether as Congregationalist Episcopalian, or Methodist, he was at first undecided. He finally joined the Methodist Conference in 1818.

His ministry was of but three years' duration, one in Vermont and two in Charlestown, Mass., where his health again broke down under the weight of his constitutional tendency, aggravated by ascetic foolishness and overwork. Whether the raptures of his piety were related to his physical condition as cause or effect is an interesting question. At the Wellfleet camp-meeting his attainment of "a clean heart," or "perfection," was accompanied by great physical prostration; but such "bodily exercises" were common to the weak and strong. His marriage was unhappy; entirely, we are assured, through the wife's fault. Dr. Prentice makes much of the kindness of her husband's friends and the Wesleyan University Faculty to her after his death. His own treatment of her is a sad exception to the rule. He pursues her with relentless pertinacity, and, by leaving everything vague, is more damaging to her reputation than if he had been more explicit; for it does not appear that anything worse could be charged upon her than a lachrymose and fretful disposition. As compared with Wesley's termagant, she must have been a model wife.

"When Wilbur Fisk was invited to become principal of the Wesleyan Academy at Wilbraham, Mass. [in 1826], his pious mother urged him, for the sake of his own soul, not to accept the new work." She appealed to his own experience in such matters. Had he not declined in his interest in religious truth and spirituality of life while he was a student in Peacham Academy, and continued in a back-slidden condition during all his successive connections with the University of Vermont and Brown University? This was a characteristic note, and Dr. Prentice brings together a good many facts to show how little religious were the colleges in the fore-part of the century. To argue from the Unitarianism of Harvard "how powerful were the influences of unbelief" may seem a little strange to some who know the spiritual quality of Channing, and equally the assertion—Dr. Fisk's—that the Unitarian theory of religion was that it consists "chiefly in external performances." Not only the irreligion of the colleges scared the Methodists, but also their Calvinism. It was the distinction and glory of Wilbur Fisk's short life to stem the tide of this feeling against education and turn it quite the other way.

Wilbraham Academy was the first Methodist academy in New England. There are now seven of like character, with 1,715 students, and property valued at $1,000,000. "But one school has a debt of $12,500," says Dr. Prentice; the halting grammar meaning that only one has any debt, and that one a debt of $12,500. Wilbur Fisk was only two years at Wilbraham. It was the day of small things, but not on that account to be despised. Probably it took much more force and genius to make a beginning in the teeth of various opposition, and with financial resources that seem ridiculously small, than it does to carry on the booming enterprises of the present time. Mr. Fisk's salary was that of an itinerant preacher, the student's board was $1.25 a week, and the principal never intrusted the office of corporal punishment to another's hands. He was never false to his idea that education and religion can be joined together. At Wilbraham, and later at Middletown, Conn., he was not more interested in the intellectual than in the spiritual welfare of the youth under his charge; and a revival of religion was his measure of the success attending his endeavors. When the first Methodist college in the country was established, it was largely in response to his appeals, and it was only natural that he should be made its president. His wisdom was never better shown than in his refusal to subject the instructors of the college to a sectarian test. It may be said he made a virtue of necessity, for, otherwise, he must have taken them all from three Methodist academies. His connection with the Wesleyan University began in 1828 and continued for ten years, ending only with his life.

Dr. Fisk had great influence in the Methodist Conference. He used it for the establishment of an Indian mission. He also used it to allay the fierceness of the anti-Masonic rage. So we are told, but with infinite vagueness as to the character of his mediation. In temperance matters, also, he took a vigorous and leading part. "In the main," says Dr. Prentice, "the causes which enlisted Dr. Fisk's interest, in Church and State, are causes which have made signal advances in the world since his death." The grand exception was the anti-slavery cause. Wilbur Fisk's opposition to this has been for fifty years the best assurance of his fame. Dr. Prentice devotes a chapter to his relation to the anti-slavery movement. It is a damaging apology. What it amounts to is, that Dr. Fisk was not a pro-slavery opponent

of the abolitionists, but a colonizationist, who preferred the indefinite continuance of slavery to any disturbance of the peace and unity of the Methodist Church, and who contended for the good and regular standing of slaveholders in that Church on Scriptural and moral grounds. It must be confessed that Dr. Prentice does not disguise the force of the "Appeal" made by the Rev. George Storrs and others to the New England Methodists. Nor does he disguise the feeble casuistry of the "Counter Appeal," which, though signed by many, was unmistakably the work of Dr. Fisk. In general the strength of Garrison's Scriptural argument was in its appeal to what was highest in Old Testament and New. It was often wasted upon those to whom every part of the Bible was of equal weight—an incident of the history as authoritative as the voice of Jesus or the prophets. But it was Dr. Fisk's contention that the continuance of slavery was justified and anti-slavery agitation was condemned by the Golden Rule, "All things whatsoever ye would that men should do unto you, do ye even so to them." We agree with Dr. Prentice that "One may fairly doubt the feasibility of the plan of action in reference to slavery proposed by Dr. Fisk and his associates," seeing that it was to destroy slavery through the softening influence of Christian love in the slaveholders' hearts while they were being steadily assured that slaveholding was not denied to Christian men. It baffles the imagination to conceive of the remoteness of the end attained by means so contradictory as these. Dr. Fisk's anti-slavery position was of a kind that the slaveholders would have had indefinitely extended. The more of it the better for their trade.

Dr. Prentice devotes two chapters of his book to theological matters. It is evident from these that Dr. Fisk was a theological disputant of no mean abilities. His defence of the Arminian doctrine against Calvinism was marked by rigorous common sense. It is made more probable that he was, at least relatively, sound in his opinions by the tendency of Congregationalism in America, and Presbyterianism, first in Scotland and now in America, to abandon the positions he assailed. But his educational work is his best title to the admiration of his sect and the community at large.

A WRETCHED REFERENCE-BOOK.

Fact, Fancy, and Fable: A New Handbook for ready reference on subjects commonly omitted from cyclopædias. Compiled by Henry Frederic Reddall. Chicago: A. C. McClurg & Co. 1889.

Mr. Reddall's book, while it includes some matter not found in other compilations, as a rule follows them, even in their errors, and displays an inexplicable want of enterprise in the compiler in trying collateral sources of information. It contains only half as much matter as Brewer's 'Reader's Handbook,' while, owing to the inclusion of several hundred abbreviations which may be found in the appendix to any "unabridged" dictionary, and of an equal number of real and alleged pseudonyms—mostly of obscure writers in still more obscure journals—as well as by the omission of the names of buildings, streets, works of art, etc., the treatment of which distinguishes Wheeler's 'Familiar Allusions,' the average interest of its pages is inferior to that of either of the works named.

We think pseudonyms, stage-names, etc., should be excluded from a work of this kind, both because those who need to know about them are provided with works which treat them more fully and carefully than is here possible, and because they occupy valuable space. But even if this is not the correct view, Mr. Reddall's treatment of this class of entries is little short of ridiculous. Not only does he swell his list by giving, as a pseudonym, the maiden name of all married women known in literature, but he gives many a name of no value to any one but the owner, if, indeed, to him. The most pedantic cataloguer can hardly care to know that "Broadaxe" was the pseudonym of Martin Knapp in the Rockland County *Press*. Besides these superfluities, Mr. Reddall is guilty of many inconsistencies and errors. On page 92 he gives "Brooke (pseud.), Miss E. Nesbit in *Good Words*," and on page 188, "E. Nesbit. The pen-name of Mrs. Edith Bland." Under "Langel" we read: "Pseud. The Comte de Paris, who furnished a series of papers on the United States to the *Revue des Deux Mondes*, Paris, 1865." The work of Mr. Auguste Laugel is too familiar to readers of the *Nation* for an explanation of this to be necessary. "Competition Waller" (Wallah) is here said to be a pseudonym of G. O. Trevelyan, "b. 1831." For 1831 read 1838. "Iron Tooth" Mr. Reddall identifies with "Frederick II., elector of Brandenburg, 1657–1713." Frederick II. was called "The Iron," but died in 1471, the dates given belonging to King Frederick I. of Prussia. Malakoff is given as a pseudonym of Dr. Johnson—an odd anachronism even for Mr. Reddall.

What may be termed general errors are found on every page, except where the compiler wastes two or three pages at once ("Junius" absorbs eight) on topics so threadbare as Caspar Hauser, Junius, and the Iron Mask. "December 6, 1745," we are told, was "the day on which the news arrived in England that the Pretender had landed." He landed in July, 1745, and at the date given was in the heart of England. The overthrow of the Directory in France by Bonaparte, Mr. Reddall thinks, was a "popular uprising." "During the Irish rebellion," he says, "a man was run over by a passenger *train*." We are in doubt as to whether the compiler supposed that the Irish "car" implied a train, or whether he thought railways existed in that country in 1798. Corn, it seems, "in England means wheat," so that the repeal of the Corn Laws benefited the consumers of only one kind of grain!

The compiler has not only not taken the trouble to revise his extracts, but not even to compare them. On p. 264 we read: "Hotel Disease—A disease which broke out among the guests of the National Hotel, in Washington, in 1856"; but on p. 370: "National Hotel Poisoning—A mysterious disease which affected the guests of the National Hotel, Washington, in January and March, 1857"—the true date, as is shown by the commentary. *Feuilleton* (p. 206) is "a small leaf; a *supplement* to a newspaper, a pamphlet," but on page 305 it is more correctly (though still incompletely) defined as "that part of the paper . . . devoted to current literature and musical and dramatic criticism." On page 447 we are told that the Baltic provinces are called the Russian Ireland "because they were for many years the scene of agrarian agitation and disaffection," a gross misstatement, as appears from a paragraph on p. 55, where, under "Baltic Question," we read: "A controversy of long standing between the Baltic Provinces and the Russian Government concerning the rights and privileges confirmed to their inhabitants by Alexander II., February, 1856," the chief grievance being the enforced "russification" in respect to religion and language.

James II. (page 483) did not abdicate, in 1688 or afterwards. Cicero (page 201) was not named Father of his Country *by* the Senate, nor was "Veni, vidi, vici" (page 512), Cæsar's "despatch to the Senate, announcing his conquest of Britain," but his message to a friend, to announce his victory over Pharnaces. Bismarck did not become Chancellor in 1862 (page 299); the office was not created till after the establishment of the Empire. "La Vendée" was not the name of a party (page 315), but of a province. Mr. Reddall has not heard of the death of the Count of Chambord, and so styles him (page 319) "the present representative of the Legitimists." But of all Mr. Reddall's aberrations in European history, perhaps the oddest is his supposition that the phrase "Man on Horseback," which goes back to 1789, was coined in honor of Boulanger, "so called from the fact that he is seldom seen in public except mounted on his favorite black charger."

There is one particular in which Mr. Reddall's book, in so far as it carries out the promise of the preface, has a decided advantage over its predecessors, viz., in the inclusion of American catch-words, political and other—a department which generally receives but small attention. Unfortunately, the compiler's ignorance is here even more obvious than elsewhere. Few indeed are the American topics on which he does not make a more or less serious blunder. He begins with Albany Regency, which, he says, was "a term given to the cliques *both Whig* and Democratic," etc. The American party "swept the country like a tornado, carrying nearly every State." It never elected officers in more than eight States. The Liberty party is said to have "contained such men as W. L. Garrison, Wendell Phillips, Lewis Tappan," etc. Of "Machine" we are told: "A coterie of politicians, or *an entire party*, receives this name when the wishes of individual members succumb to the crack of the party whip." This is worse than inadequate, it is false. "Upon the axiom, 'To the victors belong the spoils,'" says Mr. Reddall, "the Government of the United States had *always* been conducted until the appearance of the 'Civil-Service Reform' agitation." But the list of errors is endless, and we have not touched upon the omissions.

It may seem that we have given more space to this book than it deserves, but it is to be remembered that such works, though sometimes not inaptly termed repositories of useless knowledge, are widely used, and that, unless the contrary is clearly and even sharply shown, the one latest in date is, naturally enough, taken to be better than its predecessors as regards accuracy, completeness, and the discretion with which the topics treated are chosen.

Studies in Literature and Style. By Theodore W. Hunt, Ph.D. A. C. Armstrong & Son. 1890.

We have had occasion previously to remark upon Prof. Hunt's excellent writings in the department of school Rhetoric, in which he deals with advanced subjects with unusual breadth of view and freedom from the stiff pedagogy which generally monopolizes the manuals of instruction in style. The present volume is a continuation of his former studies, and is characterized by similar system in statement and absence of technicality. He classifies style as intellectual, literary, impassioned, poetical, etc., analyzes each division, and gives illustrations usually from standard authors. He winds up with a criticism of Arnold's and Emerson's style which, while without brilliancy or novelty, is both clear and just. The fact that he has the courage to name the defects in

both is significant, and in so doing he affords an example of that independence which he advocates at the end.

We observe with surprise some strange statements, as, for example, that Shelley wrote no prose—the fact being that Shelley is as good an instance as could be selected of the noble style which belongs to the poet. Shelley's "Defence of Poetry," to say nothing of other minor papers and the translations, reaches the dignity of a classic. The author also fails in discrimination occasionally, especially in speaking of American critics. James T. Fields, for example, is not to be regarded as a writer of literary rank, nor Whipple to be coupled with Lowell. This lack of perspective is the principal defect of an otherwise excellent treatise.

Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773-1783. Vol. III. London: B. F. Stevens.

THE third volume of Stevens's Facsimiles comes with praiseworthy promptness. The documents now given belong to the same series with those which made up the greater part of the first and second volumes, being the correspondence of the spies employed by the English Government in Paris, and some intercepted letters for the year 1777. We see still more plainly than before under what disadvantages Franklin and Deane did their work in Paris. Dr. Bancroft, their trusted secretary, was a spy, in constant correspondence with the half-trusted Paul Wentworth. Arthur Lee, as has long been known, was so conceited and suspicious as never to work heartily with his colleagues. He had arranged in his own mind, and communicated to his brother in the American Congress, a plan for the reorganization of the diplomatic service. Dr. Franklin was to be sent to Vienna, as the first place and the most respectable and quiet. Indeed, Franklin's quietness, which was not the least of his eminent diplomatic gifts, was a great annoyance to the hot-headed Lee, as it was at a later period to the equally hot-headed but far more sensible John Adams. Silas Deane was to go to Holland and Alderman Lee to Prussia, as the commercial appointments. Edmund Jennings was assigned to Madrid. "France remains," says the self-sufficient Arthur Lee, "the centre of political activity, where, therefore, I should choose to be employed"—a modest request in the Commissioner who was certainly the least acceptable of the three at the Court which it was the especial wish of Congress to conciliate (269).

The atmosphere of treachery in which all these people moved is disgusting. Yet it is curious to observe how men may delude themselves about their moral position. Wentworth, while stealing seals and visiting-cards from the tables of his acquaintance in order to facilitate the violation of their correspondence in the mails, speaks of himself to his employer as "a man who aims at honor and reputation" (321). Even Captain Jo. Hynson, who turns despatches intrusted to him over to the enemy, heartily despises the character of a spy (316).

Mr. Stevens promises ten volumes a year. We look forward to them with interest. No attempt on this scale has ever before been made to give historical scholars the material they need, in the most trustworthy form. We hope that this undertaking will be but the first of a line. There are several collections of correspondence in the world to which this method might well be applied. Perhaps the continual questions as to what Washington actually did write can be satisfactorily settled only by publishing his correspondence in facsimile. A process which excludes all possibility of tampering or editing (except by notes) is indeed a boon to the scholar.

In Thought-Land and in Dream-Land. By Elsa D'Esterre-Keeling. London: T. Fisher Unwin. 1890.

THIS interesting collection of very short sketches by an Irishwoman has unusual individuality, and although most of the stories will best serve for children, older readers will enjoy the bright fancy, the sharp landscape drawing, the touch of pathos, and here and there a remarkable mere prettiness hard to describe. The sketches are so brief, rapid, and full as to remind us rather of the best French models in this sort of writing than of anything English; and, trifles though they seem, they often bear a world of meaning in their suggestiveness or the implied moral. Many are plainly from the life, and in these a certain tenderness is discernible. The author's sympathies are most excited by the life of children, or else by the poor, narrow lives of servants and street-characters. The range is through England, Scotland, and Germany, and also Ireland, of course, where the author seems at home. A little essay on the differences in the use of small words and phrases in England and Ireland shows how thoroughly the English misunderstand their neighbors, as a more ambitious article might fail to do. There are bits of poetry here and there, one of which is so fresh that we copy it. The title is "Love-making in Paddy-Land":

I. UNDER KITTY'S WINDOW.

"Ah, then; who is that there talkin'?"
"Sure, it's only me, ye know.
I was thinkin' we'd go walkin' ——"
"Wor ye raly *thinkin'* so?"
"Och, ye need'n' be so cruel,
An' me thrudged this siven mile——"
"Is it cruel, Michael, jewel,
Sure I'm dressin' all the while!"

II. BEFORE MICHAEL'S COTTAGE.

"There, now, that's me cottage, Kitty."
"Is it, Mike?"
"Yis; an' isn't it pretty?"
"Hm!—lonesome like."
"Lonesome!" (Now's y'r minute! Michael, strike!)
"Sure, if *you* wor in it——"
"Arrah, Mike!"

611 Hints and Points to Sportsmen. Compiled by Seneca. *Forest and Stream* Publishing Co.

THIS is a most excellent series of short apothegms on questions of moment to sportsmen, and indeed to most others who are much in the open air and observant of the different aspects and products of Nature. As the title indicates, there are 611 of these, but their subdivisions and amplifications make up a book of 250 pages, useful alike to those who shoot, angle, camp, trap, go yachting or naturalizing. Half-a-dozen pages are devoted to "Health Hints and Remedies," and, in fact, there is scarcely anything connected with life in the woods or on the waters on which useful information is not conveyed. A few of the subdivisions of the book are "Guns and Shooting," "The Rifle," "Game Hunting and Trapping"—the advice on wing shooting being most excellent—"Fish and Fishing," "Camping and Outing," etc. No such good handbook on field sports has lately appeared; the compiler having made his selections with capital judgment and a knowledge of just what was needed.

Selected Poems of Matthew Prior. With an Introduction and Notes by Austin Dobson. [The Parchment Library.] Scribner & Welford.

MR. AUSTIN DOBSON, besides as usual giving pleasure by what he writes, has done a great service in making the really delightful poems of Prior accessible to all classes of readers; for the complete editions of Prior's works contain, as is the case with all the Restoration poets, so much that was written for the coarser readers of that time that few to-day have the patience to sift out for themselves the pint of wheat from the bushel of chaff. This is what Mr. Dobson has done. He has selected all that is gracefullest and wittiest from the writings of one of the most cultivated of all court poets, and omitted from them not only all that is bad (which is a great deal), but all that is dull (which is a volume in itself), and he has taken the pardonable liberty of occasionally substituting a proper for an improper line, where he would otherwise have had to sacrifice the whole poem. When we add that he has given us probably the best short biography and critical sketch of Prior yet written, and very laborious and careful notes, it can be seen what a new debt lovers of English verse owe him. The book contains a fine etching of Prior's strong face, and, like all others of the series, is handsomely printed.

In a Club Corner: The Monologue of a Man who might have been Sociable. Overheard by A. P. Russell. Boston: Houghton, Mifflin & Co. 1890.

THIS volume is an abundant collection of anecdotes about literary and other famous men, strung together with considerable skill upon commonplace titles, such as Reading Aloud, The Philosopher's Stone, Youth and Age, Content, Heroism, etc. The author has gleaned in many fields, and he gives a kind of appositeness to each story or quotation which relieves the book of the wearisome piecemeal character usually so depressing in collections of the sort. There is no reason why he should not have continued through another volume, and he intimates as much by closing with a long list of subjects for similar essays, with hints of how to develop them in his own manner. In general the collection is somewhat fresher than might be expected and shows a wide and excellent range of reading. Occasionally the series is broken by a short anecdotical essay, as, for instance, upon Sheridan and Garrick. Altogether the task set has been cleverly done.

Fine Arts.

THE BOSTON MUSEUM'S ENLARGEMENT.—II.

THE Parthenon room is well worthy of another mention. The arrangement of the frieze is good, and there are one or two unexpected and delightful additions to the Parthenon collections, such as that metope of the centaur and warrior to which Dr. Waldstein's acuteness has added the hero's head—or say restored, as the head belongs to one museum and the slab to another; but the union is entirely practicable in the cast. Also, Boston has what no other museum except Berlin has, a cast of that important metope which still remains in place at the southwest angle of the Acropolis. The statues of the pediments are placed on a large stylobate in the middle of the room, and the more important are made to rotate upon this, so that they may be seen from different points of view at pleasure. The few metopes are high on the wall, as, in fact, they ought to be.

In the Olympia room important additions have been made, not so much of new pieces as of additions to the pieces which have been previously in place. The casts of the sculptures from the Temple of Zeus at Olympia were purchased at a time not very long after the discovery of those sculptures, and no purchases have been made since that time; but during these years much has been found and learned. Pieces of the sculpture have been brought together in Berlin and at Olympia and found to correspond perfectly, and many a statue has been proved to be far more nearly capable of completion than had been supposed. Thus, the standing figure of Zeus is almost a complete statue now, instead of a torso with head, only; the seated bearded man and the very perfect group of the centaur seizing a maiden have received important additions; and all these changes are preserved in these casts. Mr. Robinson has shown excellent judgment in backing the shattered metopes with a sort of secondary background of plaster.

The casts of the Italian Renaissance are numerous now, and the large room is beginning to be well filled with works of art of this important epoch. Both the Michael Angelo tombs from the new sacristy of San Lorenzo are now in place, raised at a height above the floor about (perhaps exactly) equal to that of the originals, and they look well. It is to be desired that certain altar-tombs should be made to look like what they really are; an effigy, life-size and in high relief, as of a statue lying upon a flat surface, looks badly, if this surface seems to be a mere slab. It is not, to be sure, necessary that the whole of the monument of Ilaria del Carretto be given, for the sarcophagus itself is of minor importance; but in some way it is desirable that this appearance of a mere thin slab, with a figure upon it, should be avoided, and no doubt this will be seen to in due time.

In the room devoted to French and German Renaissance there are few pieces as yet, but among them is a real treasure—the statue of King Arthur from the Innsbruck tomb—a figure which it seems has never been cast before, and of which four copies only have been made—one for Boston, one for Chicago, one for the old Corcoran Gallery at Washington, and none, alas! for New York. It would be well if this and all other casts of bronze statues could be colored like bronze, and, if any one doubts this, let him look at the cast of the so-called "Praying Boy of Berlin," which although not of the same color as the original, yet gives an idea of the bronze statue, and is in giving it far better than if it were white.

The collection of Gothic and Moorish casts is hardly worth mention at present. It is a pity, too, that there should be any attempt to class them together, even by putting them in the same room. There is too much willingness, perhaps, to consider these styles as in some way correlative, and the vastly too great importance allowed nowadays to Moorish art is made possible by such a distribution.

The L-shaped room on this side, corresponding to the Egyptian room on the other side, is filled with Greek, Roman, and Etruscan antiquities, some of which are really of importance, as, for instance, the pieces brought from Assos, and a collection of Etruscan pieces of the well-known black ware which for beauty and completeness can hardly be surpassed, although the number of pieces is not very great. With this we complete the examination of the ground floor, looking back upon it only to feel how admirable a nucleus for a museum of sculpture is here, and how admirable already is the provision made for real instruction for persons desiring to study art or history in art.

On the grand staircase is the "Victory" from Samothrace, set high on its pedestal, from the front of which, as it projects over the well of the staircase, sticks out a beak, to represent the prow of the ship upon which the Victory is supposed to have alighted. It is not the original beak, or a reproduction of it, but a suggestion that in this part of the work was the marble original. The staircase leads through a hall in which are a few pieces of modern sculpture in the original marble or bronze, not important, but having among them the hideous "Diana" of Falguière, an artist whose well-deserved reputation as a sculptor is curiously at odds with this unqualifiable production.

To the west open out some rooms which have not been much changed in their disposition. Thus the gallery of textiles is very familiar, and the adjoining rooms, with wood-carving, weapons, wrought-iron, and Italian cassoni, while they contain some new and valuable works of art, are the old rooms still. The splendid display of original dresses in the large cases in the textile gallery shows changes only for the better. One of these cases is devoted wholly to Chinese costumes, both of men and women, belonging to several different owners, of whom it appears that Miss Scidmore is one of the most favored by fortune, for it must be a real delight to own such magnificent pieces of textile work and embroidery. The second case, and the wall cases for nearly one-half of their extent, are filled with splendid Japanese costumes, belonging altogether, we believe, to Mr. Bigelow. Some of the new ones here are as splendid as those that have been here in former years, and although it seems that one or two of the old friends are gone, it is probable that they are to be found in another room where a minute examination would detect them. The third standing case is occupied, as it has long been, and worthily, with the European and American costumes of the last century, loaned chiefly by the Misses Ware of Milton. To the student of American history, no case could be more interesting than this. In one of the smaller rooms it is gratifying to see the collection of casts from armor, sword-hilts, and the like; probably the only instance, except that of the Slater Museum in Norwich, where these wonderful productions of Kreitmeyer of Munich have been brought to this country in any number. It should have been said above that it is to Kreitmeyer that we owe also the King Arthur. It struck Mr. Robinson that the man who was accustomed to make casts of weapons and ivory carvings and metal reliefs would be the right person to charge with the taking of such a cast as the King Arthur, with its varied detail of surface, its under-cutting and elaboration; and the result proves the wisdom of his choice of a workman.

The great corner room is devoted wholly to pottery, porcelain, and glass, for the cases of lacquers have been taken away. It is now most worthily filled with collections of Oriental and European wares of great beauty, and, if there is no serious attempt to cover the whole field and to lead the student of ceramics or of glassware from one epoch to another, this is not to be expected. Only the expenditure of very large sums of money and an effort continued very many years could in any way suffice to represent this important but too much neglected subject. There is one exception to the uniform filling of this room with the industrial arts which give it its name, and this is in the display of Oriental enamels; although, indeed, it might be urged that cloisonné enamels are in a sense glassware. The case devoted to these enamels is really a splendid display, and is worthy of the long journey to Boston to study. Three or four of the beautiful pieces which once belonged to Mr. Cunningham, and are now the property of Mr. Ames, remain with the loans of other gentlemen in the collection.

Opening out of the pottery room is a small square room which is put down on the plan as a "Metal Room," and which has glass cases along one wall with interesting specimens of bronze and other metal, not as yet in a final arrangement. But in the middle of this room is a case containing the challenge cups won by Gen. Paine with his three famous yachts. It is an extraordinary sight, this collection! In the first place, when it is remembered that no one of these prizes represents a victory in the famous races for the *America's* cup, it becomes evident how remarkable has been the achievement of the three great sloops identified with Mr. Paine. There is one large tray presented to him in general recognition of the services done to the country by winning the races which saved the *America's* cup; but all the rest are for outside and less widely known contests. And in the second place, it is extraordinary that so many and such costly pieces of silverware could be brought together and give no pleasure to the spectator. Obviously the best talent of the country, as employed in the production of decorative plate, has been given to the making of these pieces, and yet there is not one which a man of taste would consent to have as a part of the furniture of his rooms. How this can be, it would take a long time to explain. That so it is must, we think, be evident to the spectator who knows what artistic silverware really is.

The coin room, adjoining this, contains as yet only a few cases—of reproductions—but it is to be said at once, and insisted on strongly, that numismatic reproductions are altogether desirable, and that they have this great advantage over originals: that (1) the most important, the rarest, and the most perfect specimens can be brought together as no collections of originals could hope to bring them together, and (2) that they can be arranged with the obverse and reverse side by side. Nor must it be forgotten that reproductions of this kind can be made indistinguishable from the originals. Even experts may be deceived, and often are. The only way in which the museums that furnish these duplicates can avoid causing infinite confusion and error is by putting a mark in some unobtrusive but perfectly well-known

place. It follows that when the walls of this room and cases in the middle of it are filled with reproductions of coins, as carefully chosen for their artistical value as are the collections on the floor below, there will be all that a general museum can be expected to give in the way of numismatology.

The Japanese room is above the Parthenon room, which we have described as going through from court to street with windows at each end. This room, arranged in the same way, connects immediately with the long corridor of this upper story, and the two are devoted to the most extraordinary collection of Japanese art which is to be found in any public museum in the world. It is mainly a loan collection, but the objects are left for an indefinite period; and, indeed, no private owner could find room in his dwelling for any large proportion of the immense display made here by any one of several contributors. In the Japanese room, so called, are the glass cases of splendid lacquers, beautiful swords, long and short, ivory carvings, sword-guards, and other pieces of artistical metal work and larger pieces of bronze and of carved wood. In the corridor are, first, the whole of the Morse collection of Japanese pottery, so well known to collectors and students of Japanese art, at least by fame, but so little seen hitherto, being now for the first time brought to a place more accessible and more commonly visited than the little town of Salem. Here it is in a series of immense cases, admirably lighted, and arranged, to all appearance, according to the refined and scholarly taste of the proprietor, and it challenges examination. Upon the cases and overhead are large carved panels of wood, of which the immense collection belonging to Mr. Bigelow decorates this corridor and the room we have just left. Along the walls of the corridor, behind the glass, but not injured by the glass, is a small part of the prodigious collection of Kakemonos belonging to Dr. Charles G. Weld, a large part of which at least was bought from Mr. Fenelosa, who had made the collection in Japan. It is not known that another so large or so representative a collection exists. Similar paintings, mounted on screens, are set above the glass cases which hold the Kakemonos, and in some cases are as important as the latter. The whole makes a gallery of Japanese paintings such as probably does not exist in Japan, where it has never been the custom to show an overpowering mass of works of art—where the possessions even of a great collector are shown only one at a time. As for what collections of Japanese paintings may be in private hands, perhaps the number now visible in the Boston Museum may be surpassed; but the whole collection is enormous, and will allow of frequent changes.

And so we are brought to the picture galleries, and of these we can speak but briefly. They are increased in number, so that there are now five rooms devoted to paintings, one to water-colors, and three to prints. The galleries of paintings make a worthy show of good art of many schools, and there are some pictures in the collection of very high rank indeed. The water-color room is bare as yet, with most of its wall space unoccupied. And one is left wondering why the reopening was made the occasion of a special display of Mr. Platt's etchings, to the exclusion of a selected exhibition of many living artists.

THE OPEN COURT—A WEEKLY Magazine of Philosophy, Science, and Ethical Religion.—The all-important want of our time is the foundation of a purely ethical religion. This religion must rest upon a scientific basis. Its principles must be derived from the scientific investigation of the facts of human soul-life (PSYCHOLOGY), and the re ations of the world (PHILOSOPHY) and the circumstances of society (SOCIOLOGY) that determine human conduct.

These three topics are discussed in *The Open Court* by the most eminent investigators of Germany, France, the United States, and Great Britain. Correspondence from Continental critics. SPECIMEN COPIES FREE. Subscription one year $2.00. THE OPEN COURT PUBLISHING CO., 175½ La Salle St., Chicago, Ill.

COAST OF MAINE.

To Let, completely furnished for housekeeping—Four summer cottages, with stable accommodations with two. In a charming location, adjoining old Fort Edgecomb and Wiscassett. Near Boothbay and Squirrel Island. Yachting, fishing, and bathing; pleasant drives and beautiful scenery; seaside and country combined. Houses situated but a few rods from water. Rents from $150 to $250 to right parties. Address for further information, H. WALDRON, Back Bay Post-office,

FOREIGN PHOTOGRAPHS.

Various sizes, mounted and unmounted. Works of the Old Masters in the Galleries and Churches of Europe. Italian Views. Modern Paintings. From the originals by Alinari, Naya, Brockmann, Hollyer, Berlin Co., Hanfstaengl, Mansel, etc. Braun's Carbon Photographs. Imported direct by
C. H. DUNTON & CO., 50 Boylston St., Boston.
New 1889 Catalogue of 100 pp. mailed for 10 cts. in stamps.

MACMILLAN & CO.'S EDUCATIONAL PUBLICATIONS.

"A List of equal excellence and authority it would be hard to find in the English language."—N. Y. Nation.

STANDARD ENGLISH TEXT-BOOKS.

CHAUCER. The Prologue, The Knightes Tale, The NONNE PREESTES TALE, from the Canterbury Tales. Edited by the Rev. RICHARD MORRIS, LL.D. A new edition with Collations and additional Notes by the Rev. WALTER W. SKEAT, Litt.D. 16mo. 60 cents.

Prof. E. E. Hale, jr., of Cornell, writes: "It is a great improvement over the original edition, which was in many ways the best book for a class beginning the study of Chaucer. The revised text is, of course, of the greatest value, and the corrections and additions by Prof. Skeat are, wherever I have compared the two editions, very much to the point."

CHAUCER'S CANTERBURY TALES. Annotated AND ACCENTED. With Illustrations of English Life in Chaucer's Time. By JOHN SAUNDERS. With Illustrations from the Ellesmere MS. 12mo. $1.60.

"Whoever would taste his (Chaucer's) delicious flavor must master his dialect. One of the most promising of recent attempts to induce readers to take this trouble is Mr. Saunders's 'Canterbury Tales.' The modernization of the language has been managed with skill and delicacy; beyond the introduction of a uniform standard of spelling and the use of marks of accentuation, there appear to be no alterations of the text. The quaint illustrations of the Ellesmere MS. add materially to the attractiveness of the book."—*The Dial.*

HALE'S LONGER ENGLISH POEMS. With Notes Philological and Explanatory, and an Introduction on the Teaching of English. Edited by J. W. HALES, M.A. 16mo. $1.10.

"The Notes are very full and good, and the book, edited by one of our most cultivated English scholars, is probably the best volume of selections ever made for the use of schools."—Prof. MORLEY.

EARLE. THE PHILOLOGY OF THE ENGLISH TONGUE. By JOHN M. EARLE, M.A., Professor of Anglo-Saxon in the University of Oxford. Fourth Edition, revised throughout and rewritten in part. *Clarendon Press Series.* 16mo. $1.75.

"Every page attests Mr. Earle's thorough knowledge of English in all its stages, and of the living Teutonic languages."—*Academy.*

SWEET. AN ANGLO-SAXON PRIMER. With Grammar, Notes, and Glossary. By HENRY SWEET, M.A. Fourth Edition. *Clarendon Press Series.* 16mo. 60 cents.

"The whole of the Grammar is admirably and very carefully compiled. . . . The Glossary contains a large number of words, and supplies a sufficient Vocabulary for all that the beginner can want. . . . The book as it stands is marvelously compressed, and has been purposely brought within such a compass as allows it to be sold at a very moderate price."—*Prof. Skeat in the Academy.*

SWEET. AN ANGLO-SAXON READER. In Prose and Verse, with Grammatical Introduction, Notes, and Glossary. By HENRY SWEET, M.A. Sixth Edition, revised and enlarged. *Clarendon Press Series.* 16mo. $2.10.

"The Grammatical introduction will help students to master the difficulties even of Beowulf; and a course through the Reader, with the help of the Glossary, will set students far on the way of being Anglo-Saxons."—*Notes and Queries.*

TRENCH ON THE STUDY OF WORDS. By RICHARD CHENEVIX TRENCH, D.D., Archbishop. Twentieth Edition. Revised by the Rev. A. L. MAYHEW. 16mo. $1.00.

WARD'S ENGLISH POETS. Selections with criti- CAL Introductions by various writers and a general Introduction by MATTHEW ARNOLD. Edited by THOMAS HUMPHREY WARD, M.A. In four volumes, 12mo: *Cabinet Edition*, four volumes in box, $5.00. *Student's Edition*, each volume sold separately, $1.00.

Vol. I. CHAUCER TO DONNE.
Vol. II. BEN JONSON TO DRYDEN.
Vol. III. ADDISON TO BLAKE.
Vol. IV. WORDSWORTH TO ROSSETTI.

"Altogether it would be difficult to select four volumes of any kind better worth owning and studying than these."—*Nation.*

"These four volumes ought to be placed in every library, and, if possible, in the hands of every student of English."—*Churchman.*

"The best collection ever made. . . . A nobler library of poetry and criticism is not to be found in the whole range of English literature."—*N. Y. Evening Mail.*

"For the young, no work they will meet with can give them so good a view of the large and rich inheritance that lies open to them in the poetry of their country."—J. C. SHAIRP, in Academy.

Macmillan's English Classics.

With Introductions and Notes.
16mo.

"The beauty, convenience, and cheapness of the editions fit them for use anywhere, in schools or private libraries."—*Sunday School Times.*

COLLEGE TEXT-BOOKS.

OLMSTED'S COLLEGE PHILOSOPHY.

THIRD REVISION. BY KIMBALL.

An Introduction to Natural Philosophy. Designed as a Text-Book for Students in College. By DENISON OLMSTED, LL.D., Professor of Natural Philosophy and Astronomy in Yale College, and E. S. SNELL, LL.D., Professor of Mathematics and Natural Philosophy in Amherst College. Third Revised Edition. By RODNEY G. KIMBALL, A. M., Professor of Applied Mathematics in Brooklyn Polytechnic Institute. 8vo, pp. xiii., 510. Extra cloth. Price, $3.12.

This revision of OLMSTED'S NATURAL PHILOSOPHY has been made in accordance with the plan of the former editions, the object being to produce a text-book in Physics adapted to the requirements of a college course; it is believed that as now presented it includes all that is necessary in this department of a liberal education. Copies for examination mailed to Professors upon receipt of Two Dollars.

OLMSTED'S COLLEGE ASTRONOMY.

THIRD STEREOTYPE EDITION, REVISED, WITH ADDITIONS BY COFFIN.

An Introduction to Astronomy. Designed as a Text-Book for the Use of Students in College. By DENISON OLMSTED, LL.D., Professor of Natural Philosophy and Astronomy in Yale College, and E. S. SNELL, LL.D., Professor of Mathematics and Natural Philosophy in Amherst College. Third Edition, revised, with additions by Prof. SELDEN J. COFFIN, Lafayette College.

The special advantages recognized in this text-book are: First, Absence of all superfluous matter and its moderate size, rendering its contents capable of being compassed within the limited time generally allotted to the subject. Second, Its distinct and accurate mathematical demonstrations, showing the strictly scientific basis and methods of Astronomical work, and rendering the book valuable, both as a means of mental discipline and as an introduction to the practical application of its principles. 8vo, cloth, with numerous illustrations and diagrams. Price, $2.00. Copies for examination mailed to Teachers and Professors upon receipt of One Dollar.

COFFIN'S CONIC SECTIONS.

Elements of Conic Sections and Analytical Geometry. By James H. Coffin, LL.D., late Professor of Mathematics and Physics in Lafayette College, and author of treatises on Solar and Lunar Eclipses, Astronomical Tables, The Winds of the Globe, etc. Sixth edition, revised and improved by Selden J. Coffin, Ph.D., Hollenback Professor of Mathematics in Lafayette College.

In this edition are included a number of original Numerical Exercises, adapted to illustrate the meaning of Propositions, and to show the utility of the truths taught.

The student of Conic Sections will welcome the explanation of geometrical points by the introduction of numerous references to the treatises of Professors Loomis and Wentworth, which are given in addition to those to Legendre and Euclid in the earlier editions.

One volume 8vo, cloth, pp. 167; price, $1.35. Copies for examination mailed to Professors and Teachers upon receipt of One Dollar.

EXTRACTS FROM NOTICES:

From *Prof. E. S. Breidenbaugh.*

Pennsylvania College, Gettysburgh, Pa., Aug. 27, 1889.

I regard the book (*Philosophy*) as an excellent work, well suited for use in American colleges, have recommended it for reference among my students, and next year shall use it in classes.

From *Prof. J. P. Uhler.*

Gustavus Adolphus College, St. Peter, Minn., July 10, 1889.

Your latest edition of Olmsted's *Astronomy* I have not seen. I should like the privilege of examining Coffin's additions. You are aware that I use the *Philosophy* and *Coffin's Conic Sections.*

From *Prof. A. W. Kelley.*

Battle Creek College, Battle Creek, Mich., December 31 1889.

After some delay our Board adopted your *Philosophy*, and we have now a class well under way; we like the book.

From *Prof. A. M. Beal.*

Western College, Toledo, Iowa, December 30, 1889.

I have used the *Philosophy* and *Astronomy* for nine years in my classes and expect to continue their use.

From *Prof. Howard Lyon.*

State Normal School, Mansfield, Pa., April 23, 1888.

We use the *Astronomy* as the text-book in Mathematical Astronomy. We also use the *Philosophy* in our scientific course.

From *Prof. C. S. Richardson.*

Olivet College, Olivet, Mich., Sept. 16, 1889.

I have adopted the *Philosophy* and am using it in my classes. I find it admirably adapted for their needs. I am pleased with the *Astronomy* and shall probably adopt it as my class book.

From *Prof. John W. Caldwell.*

Tulane University, New Orleans, August 1, 1889.

I have carefully examined it (the *Astronomy*) and have concluded to adopt it.

From *Prof. E. S. Loomis.*

Baldwin University, Berea, O., January 31, 1889.

We use the *Astronomy*. It gives good satisfaction.

From *Dr. Charles Forbes.*

Macalester College, Macalester, Minn., Sept. 14, 1889.

We have decided to introduce the *Philosophy*.

From *President Ellis.*

Plattsburg College, Plattsburg, Mo., March 8, 1889.

I am much pleased with the *Philosophy*, and have adopted it.

From *Prof. A. J. Bigney.*

Moore's Hill College, Moore's Hill, Ind., June 22, 1889.

I have decided to adopt your *Philosophy* as a text-book in physics.

From *Prof. G. A. Gregory.*

Gales College, Neligh, Neb., Dec. 20, 1889.

The *Philosophy* examined: we have decided to take it for future use.

From *Prof. W. S. Ryland.*

Bethel College, Russellville, Ky., June 26, 1889.

I have decided to use the *Philosophy* next year for a ten months' course in physics.

Books on Teaching.

C. W. Bardeen follows a unique line of publications. He publishes more books directly for the help of teachers than any firm we know of. —*Intelligence, Chicago, July 1, 1885.*

C. W. Bardeen of Syracuse, N. Y., is the most enterprising and progressive publisher of teachers' books in this country, and the recent Paris Exposition has given him the Gold Medal.—*Educational Courant, Ky., October, 1889.*

Mr. Bardeen is perhaps the most of a genius to be found among men devoting themselves to supplying teachers with literature, timely or classic. He has the confidence of the teaching profession.—*New England Journal of Education, Jan. 9, 1890.*

REORGANIZATION
OF
The Denver Land & Security Company.

This company, originally organized in December, 1887, with a capital of $250,000, for the principal purpose of buying, improving, and selling the Denver real estate known as "Berkeley," has paid 13 per cent. in cash dividends and has capitalized $500,000 of its surplus. The stockholders have voted to issue $250,000 additional stock, making a total of One Million Dollars. The surplus shown on the books February 1, 1890, was $330,287.59, which is likely to be greatly augmented during the year unless reduced by increased dividends. The new stock participates with the old in this surplus, and is, therefore, worth at least $130 per share. Inasmuch as the Board of Directors have authorized its offer at par ($100 per share) for a quick sale, it is deemed only just to the old stockholders that they should have the first opportunity to subscribe for the new issue, and the books will be open for subscriptions by stockholders only until March 1, 1890, and after that date to all who may desire to subscribe.

It is proposed to further amend the Articles of Association so as to change the name of the corporation to

The Continental *Land & Security Company.*

Stockholders may send their subscriptions on the blanks furnished them to Jno. C. Avery, President, 115 Broadway, New York, or to S. B. Carter, New England Manager, 209 Washington Street, Boston, Mass. On and after March 1st, 1890, subscriptions will be received at the offices of the Company, 115 Broadway, New York, 209 Washington Street, Boston, and 1700 Curtis Street, Denver, Col., or at the offices of any of its agents, from whom also further information may be obtained.

Reference is also made, by permission, to the following Banks:

The National Bank of the Republic, New York.

The National Bank of Kansas City, Kansas City, Mo.

The Denver National Bank, Denver, Col.

The Merchants' National Bank, Fort Worth, Tex.

"To judge from the volume before us, this great work will be characterized throughout, and in every respect, by a lavish expenditure of labor and capital, of rare ability and technical skill, all turned to the best advantage by careful and capable attention to the uniform realization of a thoroughly judicious plan."
—London "Athenæum," March 1, 1890.

"The dictionary of the century" is how the Rev. C. H. Spurgeon has paraphrased the title of the new dictionary of the English language now being issued by The Century Co. Prof. Wm. Dwight Whitney of Yale, aided by a large corps of eminent American scholars, has been engaged for the past eight years upon this great work, which, when completed, in 1891, will contain not only the fullest vocabulary of words in common use, but will be also by far the most complete and accurate dictionary of technical terms ever published. The Century Dictionary will include about 250,000 different words and phrases, supplemented by an equal number of quotations and more than 6000 illustrations. The definitions are of an encyclopedic nature, giving much valuable information about the *objects* denoted by the words. In a review published in *The Nation* of May 30, 1889, it was said of this work: "It is the handsomest dictionary that ever was made, . . . and when completed it will be the most comprehensive and satisfactory work of general reference yet produced—a book which every one will want, and which ought to have a place in every public library."

The Century Dictionary is sold only by subscription. A large pamphlet, containing full-size sample pages with complete list of editorial contributors and a full description of the work itself, will be sent to any address upon receipt of five two-cent stamps. Descriptive circulars sent free upon request. For terms, etc., address

THE CENTURY CO. 33 East 17th St. New York.

Current and Vital TOPICS.

J. B. LIPPINCOTT COMPANY

HAVE JUST PUBLISHED:

As You Like It.

Volume VIII. of the *Variorum Edition* of Shakespeare. Edited by HORACE HOWARD FURNESS. Royal 8vo. Extra cloth. Gilt top. $4.00.

The publication of a new volume of the *Variorum Edition* of Shakespeare, which is now recognized among scholars as a veritable mine of information, will be a welcome event to those who have studied the former plays. Each volume is a Shakespearian library in itself, and contains the best criticisms that have ever been written. Those already issued are "Romeo and Juliet," "Hamlet" (two vols.), "Macbeth," "King Lear," "Othello," and "The Merchant of Venice."

"To enjoy Shakespeare thoroughly, there is but one edition that will suffice, and that is Dr. Furness's own. It is the result of a lifetime of study by the most eminent Shakespearian scholar in America."—*Philadelphia Public Ledger.*

"One of the most notable contributions to Shakespeare literature in the present century."—*Manchester (Eng.) Guardian.*

WORKS OF WILLIAM H. PRESCOTT.

The Reign of Charles V. (2 vols.).

New Library Edition. Edited by J. FOSTER KIRK. Illustrated with Portraits and Maps. Complete in twelve volumes. Octavo. Neatly bound in cloth. Gilt top. $2.50 per volume.

NOW READY:

Conquest of Mexico, 2 vols. Conquest of Peru, 2 vols. Ferdinand and Isabella, 2 vols.

"Mr. Prescott has long been honorably known as the author of the most valuable historical works produced in the present age."—*The Edinburgh Review.*

PREVIOUSLY ISSUED:

Stanley's Emin Pasha Expedition.

By A. J. WAUTERS, Chief Editor of the Mouvement Géographique, Brussels. With Maps. 33 Portraits and Illustrations. 12mo. Cloth. $2.00.

"A better work than those which have preceded it; one too which is authoritative. We have here many of the most essential facts, including not only the successful termination of the search and the triumphal march back to the coast, but also an outline of the important geographical discoveries made by Stanley."—*Philadelphia Eve. Telegraph.*

With Gauge & Swallow, Attorneys.

By ALBION W. TOURGEE, author of 'A Fool's Errand,' etc. 12mo. Cloth. $1.00.

"The trenchant power of the author's imagination is equalled by the wisdom with which he has chosen his subjects, and with the effect of a well-drawn complaint, and a powerfully compact argument, he forces his scenes and characters into the reader's mind."—*The Independent, New York.*

Starlight Ranch,

And Other Stories of Army Life on the Frontier. By Captain CHARLES KING, U. S. A., author of the 'Colonel's Daughter,' 'Marion's Faith,' 'The Deserter,' etc. 12mo. Cloth. $1.00.

"Captain King has caught the true spirit of the American novel, for he has endowed his work fully and freely with the dash, vigor, breeziness, bravery, tenderness, and truth which are recognized throughout the world as our national characteristics. Captain King's narrative work is singularly fascinating."—*St. Louis Republic.*

A Last Love.

By GEORGES OHNET, Author of 'Dr. Rameau,' 'Antoinette,' etc. 16mo. Paper. 50 cents. Cloth. 75 cents.

"Ohnet's characters are always strong, his portrayal of scenes vivid, and each work increases his fame."—*Toledo Blade.*

"It is a story told with remarkable skill, the elaboration of character and motive being worked out with striking minuteness."—*Chicago Times.*

A Study in Scarlet.

By A. CONAN DOYLE, author of 'The Sign of the Four,' etc. 16mo. Paper. 50 cents. Cloth. 75 cents.

Mr. Doyle's previous stories created such a sensation in both England and America that he now ranks among the best English novelists. His new novel shows the marvellous imagination which enables him to invent a seemingly insoluble mystery and then to clearly unravel it, and is intensely interesting.

Miss Breckenridge.

A Daughter of Dixie. By a Nashville pen. Square 12mo. Paper, 50 cents.

"This new book is creating a distinct sensation, and it bids fair to take an immediate and brilliant prominence in the world of literature, for it has a breezy freshness and originality of style that is delightful. A novel feature is its remarkable description of the first great Futurity—Proctor Knott's famous triumph—which, for accuracy of detail, vivid picturing, and intense interest, can be very creditably compared to Ben Hur's famous race."—*New York World.*

If not obtainable at your Booksellers', send direct to the Publishers, who will forward the books, free of postage, promptly on receipt of the price.

J. B. LIPPINCOTT COMPANY, Publishers,

715 and 717 Market St., Philadelphia.

THE FORUM.

Contents for April:

THE DEGRADATION OF POLITICS. F. A. P. BARNARD, the late President of Columbia College. How the substitution of personal reward for public duty, as the prime motive for political activity, has changed the character of our Government, and changed also the popular conception of governmental functions.

EDUCATION IN BOYHOOD. President TIMOTHY DWIGHT of Yale. The best course of study for a boy up to his eighteenth year.

WOMAN'S POLITICAL STATUS. FRANCIS MINOR. An argument to show that women have a constitutional right to vote.

HYPNOTISM AND CRIME. Dr. J. M. CHARCOT. How crimes may be committed upon and by hypnotized persons.

SECULAR CHANGES IN HUMAN NATURE. FRANCES POWER COBBE. Wherein we are worse and wherein we are better than the ancients.

NO THEOLOGY AND NEW THEOLOGY. Rev. Dr. LYMAN ABBOTT. A statement of the liberal orthodox interpretation of religious doctrines.

NEWSPAPERS AND THE PUBLIC. CHARLES DUDLEY WARNER. Ought the blame for sensationalism to rest on editors or on the public?

THE RIGHTS OF PUBLIC PROPERTY. Rev. Dr. WILLIAM BARRY.

TRUTH AND FRAUD IN SPIRITUALISM. RICHARD HODGSON, Secretary of the Society for Psychical Research.

WHY THE FARMER IS NOT PROSPEROUS. C. WOOD DAVIS. An argument to show that over-production of farm products is the chief cause of agricultural depression.

THE COMMERCIAL FORUM (Advertising Department) contains: "Western Investments," "Recent Advances in Heating Buildings," "The Mineral Springs of Wisconsin," "Sanitary Improvements," "Geographical Progress," "Maps and Map Making," "A New Invention in Sewing Machines," "Useful Hints to Travellers," "Letters of Credit to Travellers," "Comfortable Travelling," "The Wagner Palace-Car Service."

The Forum Publishing Co.,
253 FIFTH AVE.

50 cents a copy; $5.00 a year.

THE FORUM EXTRA this month contains: Great American Fortunes, by Thomas G. Shearman and Rev. Howard Crosby. Price, 5 cts. a copy; 50 cts. a year.

OF INTEREST TO ALL.

What is Said of the AMERICAN ARCHITECT.

EDMUND CLARENCE STEDMAN *says:*

"*It is a liberal education* to have your wonderful INTERNATIONAL EDITION reach me weekly with its rich variety of illustration, gathered from the round world's latest achievements in the art which most of all represents man's *needs*, and which, out of his necessity, has created so much beauty. If your noble magazine appeals so strongly to a layman like me, I am sure it must be indispensable to every architect and every builder."

MISS MARY EVANS, Principal of the Lake Erie Seminary, *says:*

"In renewing my subscription I cannot refrain from expressing my appreciation of the value of the *American Architect* to the principal of a seminary for young women. . . . For the nearly ten years since I have been a subscriber I have studied plates, reading matter, and pages of advertisements to prepare myself for the time when new buildings would be added to the Seminary . . . And we have now the foundations laid of the most important of a group of buildings for which the *Architect* has furnished both information and inspiration."

N. CLIFFORD RICKER, Professor of Illinois Industrial College, *says:*

"I have been a subscriber to the best edition of the *American Architect* from the beginning, and have always found it worth to me much more than the subscription price."

ALBERT F. D'OENCH, late Inspector of Buildings, New York, *says:*

"Your publication has been of such a high standard, has given so much pleasure and been of such service to architects that its further development must be hailed with satisfaction by the entire profession."

JOHN M. VAN OSDEL, Architect, Chicago, *says:*

"I am pleased with your INTERNATIONAL edition and prize it highly. You have struck a long-felt want in giving us the best work of the world as well as of our own country."

SILAS McBEE, Principal of Fairmount College, *says:*

"I consider it invaluable."

Published weekly in three editions. Send stamp for Specimen Copy and Prospectus for 1890, to

TICKNOR & COMPANY, Publishers,
211 Tremont Street, Boston.

A LITERARY MARVEL.—$2.50 PER VOLUME.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City

The April CENTURY
issued April 1st, contains a rich variety of articles; 160 pages illustrated by more than 75 engravings,—price, 35 cents.

The contents include "Suggestions for the World's Fair," by the Director of the Paris Exhibition; "The Slave-Trade in the Congo Basin," by one of Stanley's pioneer officers; "How I came to play Rip Van Winkle," by Joseph Jefferson; Kennan's comments on "The Latest Siberian Tragedy"; Cole's engravings; "An Artist's Letters from Japan," by John La Farge; papers on "The Serpent Mound of Ohio"; "The Fur Seal Islands," etc. In addition there are the usual Departments, practical essays, a serial, three short stories, and poems by James Whitcomb Riley and others.

THE CENTURY CO., N. Y.

ATTRACTIVE NEW BOOKS.

STORIES OF NEW FRANCE. By Miss A. M. MACHAR and THOMAS G. MARQUIS. Illustrated, 12mo, cloth, $1.50.

No period of American history is more replete with thrilling and romantic interest than that which may be called the "heroic age" of Canada.

"Never, probably, in the history of the world have the highest and the lowest qualities of men been more strikingly displayed than in the earliest story of Canadian exploration and colonization. . . . The authors have told this marvelous story with succinctness, but without divesting it of its romantic charm."—*Christian Union.*

THE CATHOLIC MAN. By Mrs. LAWRENCE TURNBULL. 12mo, cloth, $1.25.

A notable new novel of home and society life in New York city.

"Its great charm lies in its power and beauty as a study of some of the best types of character, which are developed with keen psychological insight and a delicate and discriminating touch."—*Home Journal.*

"The novel gives a new direction to realism by making it the ideal."—*Christian Leader*

A CHRONICLE OF CONQUEST. By FRANCES C. SPARHAWK, Author of "Little Polly Blatchley." 12mo, cloth, $1.25.

The reader cannot fail to catch the contagion of the writer's enthusiasm, as he follows the story to Western Plains, to Florida, and wherever the practical interest in the "nation's wards" is developing into unlooked-for encouraging results. The book may fitly stand beside 'Ramona.'

"The story must be a text book for all those who are working for Indian rights."—HAMILTON MABIE, *Editor of the Christian Union.*

EGGS: FACTS AND FANCIES ABOUT THEM. Compiled by Anna Barrows. 16mo, $1; gilt edges, $1.25.

This unique and attractive little book has as many phases of interest as the egg itself has sides to rest on. Chemistry, commercial statistics, history, magic, mythology, choice bits of literature, and practical suggestions, all find a place between its dainty covers.

SOME NEW EDITIONS.

THUCYDIDES. Translated into English with marginal analysis and index, by B. JOWETT, M.A., Master of Balliol College, Professor of Greek in University of Oxford, etc. Edited with introduction to American edition, by A. P. Peabody, LL.D. 8vo, cloth, $2.00; half calf, $3. Professor Jowett's book is especially valuable, from its sympathetic quality, to the student and the man of letters.

THE ODYSSEY OF HOMER. Done into English prose by S. H. BUTCHER, M.A., of University College, Oxford, and A. M. LANG, M.A., of Merton College. 12mo. $1.50. Greek scholars in England and America pronounce it the standard prose version.

"No verse translation can carry one through the poem with so much interest."—*N. Y. Nation.*

COMMON SENSE SCIENCE. By GRANT ALLEN. 12mo, $1.25.

"Mr. Allen combines German scholarship with British sense and French grace. His book will do equally for the professional naturalist, the reader who seeks a pleasant entertainment, and the happy young men and women who want an introduction to the study of nature."—*Boston Beacon.*

LAST EVENING WITH ALLSTON, AND OTHER PAPERS. By ELIZABETH P. PEABODY. 12mo. $1.25.

"It brings us back to persons and things which in this rush-ahead age we are apt to forget."—*The Epoch, N. Y.*

LIFE AMONG THE GERMANS. By Emma Louise Parry. 12mo, $1.50.

"The author seems to have gained a clear insight into German character and German modes of thought, and she has brought out well the points of contrast between that nation and our own."—*Brooklyn Times.*

FINANCE; or, Money in Politics. By Hon. J. H. UPTON. 12mo, $1.25.

"It gives, in my judgment, the best record of U. S. legislation yet presented in regard to coinage, legal tender, and other matters of our financial history."—EDWARD ATKINSON.

Send for Descriptive List of 2,000 choice books, sent free.

D. LOTHROP COMPANY, BOSTON.

HAND-BOOK OF LOGIC.

A Concise Body of Logical Doctrines, Including Modern Additions with Numerous Practical Exercises.

By JNO. J. TIGERT, M.A., Instructor in Moral Philosophy in Vanderbilt University. 12mo, cloth. 320 pp. Price $1.

Used in leading institutions in Massachusetts, Texas, Indiana, Kentucky, California, Tennessee, and others.

"Written with a great deal of ability and precision."—*Dr. H. M. Harman, Dickinson College.*

"An excellent work—*one of the best in our language*—whose influence will be to greatly encourage the study of the science in our colleges."—*Prof. Noah K. Davis, University of Virginia.*

"The many carefully selected illustrative examples in which the book abounds are a valuable feature."—*Prof. Joseph Carhart, De Pauw University.*

"As a text-book for schools, it seems to me to possess every desirable quality."—*Dr. W. P. Harrison, Book Editor, M. E. Church, South.*

BOOKS WANTED — EXECUTORS and others having small or large lots of books for sale, will find cash purchaser at full auction prices. Address F. P. HARPER,
17 East 16th St., N. Y.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

Brown Brothers & Co., Bankers.
NO. 5 WALL STREET, NEW YORK.

Solid Silver Ware.

Table Forks, which are of Italian invention, are about three centuries old, the ancients knowing nothing of them. Queen Elizabeth was the first royal personage in England to have used them; all classes, high and low, using their fingers.

We here illustrate some approved designs of Forks and Spoons, fairly representing the very attractive collection in this department, and offer them in Storage Chests, Cabinets, Cases of six or twelve, or singly as Presentation spoons, which may also be sent by mail, at price per dozen:

	Dozen.
No. 7, Table Spoon	$46 00
No. 6, Dessert "	24 00
No. 5, Tea "	12 00
No. 1, Fork	40 00
No. 2, "	26 00
No. 4, Coffee Spoon	8 00
No. 3, Bon-Bon or Caddy Spoon, 1.75; gilt bowl, $2.25.	

☞ *Weights guaranteed and prices per ounce attractively low.*

An interesting collection of more than fifty patterns of Solid Silver Spoons, reproductions of Mediæval French, English, and Dutch Models.

Descriptive Catalogue supplied of other Silver, with some indications of Rich Table Porcelain, Clocks, Bronzes, etc.

Ovington Brothers,

330 FIFTH AVE., New York. *Brooklyn House, Fulton and Clark Sts.*

The Debenture Bonds issued by the International Loan and Trust Company of Kansas City, Mo., are the direct obligations against its entire capital—$1,000,000.00—and assets, and are FURTHER SECURED by an equal amount of REAL ESTATE FIRST MORTGAGE LOANS deposited with the Boston Safe Deposit and Trust Company, Boston, Massachusetts, as Trustee, each Series of Bonds issued having an INDEPENDENT FIRST LIEN SECURITY on real estate worth more than double the face of the mortgages deposited, making these Debenture Bonds a DESIRABLE HIGH-GRADE SECURITY, free from any speculative element, and consequent fluctuation in value, and at the same time yielding the Investor a Net ANNUAL INCOME OF 6 per cent., payable semi-annually, Mar. 1st and Sept. 1st.

Can be procured in amounts to suit upon application to

Dodd, Mead & Co.

HAVE JUST PUBLISHED

A New Work by Professor Dana.

Characteristics of Volcanoes.

With Contributions of Facts and Principles from the Hawaiian Islands. By JAMES D. DANA, Professor of Geology in Yale University. With many maps and illustrations. 8vo, cloth, $5.00.

A New Edition.

Corals and Coral Islands.

By JAMES D. DANA, Professor of Geology in Yale University. With many maps and beautiful illustrations. 8vo, cloth, $5.00.

This book was first issued eighteen years ago, and has passed through several editions. The present one has been thoroughly revised and brought down to date by the addition of upward of 150 pages of new matter. Four full-page plates, in color, have also been added.

The History of the United States

UNDER THE CONSTITUTION. By JAMES SCHOULER. 4 vols., 8vo, cloth, $9.00.

This standard work, which has heretofore been published by Mr. W. H. Morrison of Washington, has been added to our list, and a new edition is now offered in a style more worthy of its merits. The old edition will be furnished at the former price until exhausted. Of this work *The Nation* says:

"It is the most real history of the United States yet produced for the period it covers."

And Hon. GEORGE BANCROFT, the veteran historian, says:

"I recognize in all I have read faithful investigation and superiority to prejudice."

The Stories of the Three Burglars.

By FRANK R. STOCKTON. 12mo, cloth, $1.00; paper, 50 cents.

The Great War Syndicate.

By FRANK R. STOCKTON. 12mo, cloth, $1.00; paper, 50 cents.

Both of these stories are written in that same strain of cheerful humor which has made Mr. Stockton's reputation world-wide.

A Powerful Novel by a New Author.

Miss Mordeck's Father.

By FANI PUSEY GOOCH. 12mo, cloth, $1.00; paper, 50 cents.

Palestine.

By Major CONDER, R.E., Leader of the Palestine Exploration Expeditions. With maps and illustrations. 12mo, cloth, $1.25.

The second volume in the series of "Great Explorers and Explorations."

Already Published in this Series.

Life of John Davis.

ARCTIC EXPLORER AND EARLY INDIA NAVIGATOR, being the first volume of the series of "Great Explorers and Explorations." By CLEMENTS R. MARKHAM, C.B., F.R.S. With maps and illustrations. 12mo, cloth, $1.25.

New Books.

THE SEAT OF AUTHORITY IN RELIGION.

By James Martineau, LL.D., D.D., D.C.L. 8vo. pp. xii.–664. $4.50.

This work is the author's attempt to make clear to himself the ultimate ground of pure religion in the human mind, and the permanent essence of the religion of Christ in history. It is addressed to the requirements, not of specialists, philosophers, and scholars, but of educated persons interested in the results of modern knowledge.

A NATURALIST AMONG THE HEAD-HUNTERS.

By C. M. Woodford, F.R.G.S., etc. Being an account of Three Visits to the Solomon Islands in the Years 1886, 1887, and 1888. With 16 full-page illustrations and 3 maps. Crown, 8vo. $2.75. —[Immediately.

"A genuinely good book of its kind—full of solid information as well as of pleasant reading—the illustrations taken from what must be admirable photographs taken by himself. . . The maps also are well done, and the index makes the bright little book complete."—*Spectator*.

NATURAL RELIGION:

THE GIFFORD LECTURES DELIVERED AT GLASGOW, 1888. By F. Max Müller, M.A. Crown 8vo, pp. xix.–608. $3.00.

"The results of a lifetime of study and thought. We know scarcely any book better worth the careful study of the preacher and teacher who is able to do some thinking for himself."—*Christian Union.*

CARTHAGE AND THE CARTHAGINIANS.

By R. Bosworth Smith. Third and cheaper edition. With 2 Full-page Illustrations and 9 Full-page Maps and Plans. Crown 8vo, xxviii.–388 pages. $2 00.

HISTORY OF PHŒNICIA.

By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford, Canon of Canterbury, etc., etc. With 2 Maps, 10 Plates, 122 Woodcuts in the text, and full Index. 8vo. pp. xxii.–583, cloth, $6.00.

"Without making an oppressive array of learning, he knows how to weave the materials of the ancient and the modern sources into an easy and agreeable narrative."—*The Nation.*

WINCHESTER.

(Historic Towns Series.) By G. W. Kitchin, D.D., F.S.A., Dean of Winchester. With Maps and Plans. Crown, 8vo, $1.25.

"We confess to having received from this book a fresh impression of the glory, variety, and richness of English history. The style of the author is clear and brisk, and the matter of sterling value."—*Critic.*

PHYSICAL REALISM:

Being an Analytical Philosophy from the Physical Data of Sense. By Thomas Case, M.A., Fellow and Senior Tutor, Corpus Christi College, and Lecture at Christ Church, Oxford. 8vo. $5.00.

"An able and scholarly work, well worthy the attention of those familiar with the course of philosophical thought and fond of philosophical discussion."—*Popular Science Monthly.*

THE CAPTAIN OF THE POLESTAR;

AND OTHER TALES. By A. Conan Doyle, author of 'Micah Clarke.' Crown 8vo. $1.50.

New Educational Works.

THE ELEMENTS OF LABORATORY WORK.

A Course of Natural Science. By A. G. Earl, M.A., F.C.S., Science Master at Tunbridge School. With 57 Diagrams and Numerous Exercises and Questions. Pp. xii.–179. Crown 8vo. $1.40 (net).

[*Just ready.*

In this book an effort has been made to arrange a course which shall point out the main lines of investigation in Natural Science, in preference to an attempt at explaining any one branch in detail; it is hoped that the course may give something of a training in that habit of directly appealing to nature which is the root of all scientific progress. . . .

A HANDBOOK OF CRYPTOGAMIC BOTANY.

By Alfred W. Bennett, M.A., B.Sc., F.L.S., Lecturer on Botany at St. Thomas's Hospital, and George Murray, F.L.S., Senior Assistant, Department of Botany, British Museum, and Examiner in Botany, Glasgow University. With 378 Illustrations. 8vo. $5.00.

"The arrangement of the subject matter is admirable . . . Of the general execution of the work too much cannot be said in the way of praise."—*Science.*

A TEXT-BOOK OF ELEMENTARY BIOLOGY.

By R. J. Harvey Gibson, M. A., F.R.S.E., Demonstrator of Biology in University College, Liverpool. Illustrated with 192 Engravings. Crown 8vo, $1.75.

"We are glad to find this work treating of the complex and involved phenomena of biology in a way to make the path of the student plain and intelligible."—*Journal of Education.*

LONGMANS' SCHOOL COMPOSITION.

By David Salmon. Uniform with Longmans' School Grammar. 12mo 80 cents.

"Its direct, sensible method is to be praised almost without reserve. The notes for teachers at the end of the book are excellent in conception and as practical instruction."—*Nation.*

LONGMANS' JUNIOR SCHOOL COMPOSITION.

By David Salmon. A First Book on English Composition for Junior Classes. Crown 8vo, 110 pages. 30 cents.

This book forms Part I. of LONGMANS' SCHOOL COMPOSITION, which will be ready shortly. It contains: Synthesis of Simple Sentences—Practice in Simple Sentences—Sentences Combined—Punctuation—Easy Narratives (*a*) Stories to reproduce, (*b*) Skeletons of Stories to reproduce, (*c*) Stories in verse to be written in prose—Easy Essays—Letters—Grammar (Typical Errors)—Notes for Teachers, etc.

LONGMANS' SCHOOL GRAMMAR.

By David Salmon. Crown 8vo, 272 pages, 75 cents.

"This is a better book by far than any in common use in this country. It is thoroughly logical and scientific; one of the best working grammars we have ever seen, and this applies to all its parts. It is excellently arranged and perfectly graded. Part four, on 'History and Derivation,' is as beautiful and interesting as it is valuable—but this might be said of the whole book."—*Teacher, N. Y.*

LONGMANS' JUNIOR SCHOOL GRAMMAR.

By David Salmon. Crown 8vo, 128 pages, 30 cents.

The Junior School Grammar is an adaptation of the first half of the author's School Grammar, with some of the explanations simplified, and with a few of the difficulties omitted. It provides much to do, and not much to remember.

Messrs. Longmans, Green & Co. will be happy to send their General Catalogue, or their new Catalogue of Educational Works to any address on application.

LONGMANS, GREEN & CO., 15 East 16th Street, New York.

JAMES POTT & CO.,

PUBLISHERS.

A Southern Planter.

By Susan Dabney Smedes. 4th edition, 12mo, cloth. 341 pages. Price, $1.50.

The fourth thousand, now ready, contains a fac-simile of Hon. W. E. Gladstone's letter of enthusiastic praise to the author, dated October 12th, 1889.

"The most interesting book that has ever been written about the South."—*Joel Chandler Harris.*

"My interest in the work is not only lively but profound. . . . The exhibition of one of the very noblest of human characters."—*Gladstone, Hawarden Castle, October 12th, 1889.*

"*Sermons of Impassioned Eloquence.*"

"Padre Agostino Da Montefeltro." Sermons Preached in Florence.

Subjects: God, The Soul, The Spirituality of the Soul, The Purpose of Life, The Claim of God upon our Lives, Family Life, Pain, Hope, The Observance of Sunday, Liberty, The Working Classes. Third Thousand, 174 Pages.

Sermons Preached in Rome.

Subjects: The Necessity of Religion, the Objections Urged Against Religion, The Sources of Unbelief, The Christ of History, The Divinity of Christ, The Love of Christ, The Teachings of Christ, The Passion—for Good Friday, The Supernatural, Our Native Land. 166 pages.

"The Sermons of Padre Agostino da Montefeltro, called by his countrymen 'the modern Savonarola,' can hardly fail to have a deep interest for any one who cares to study the thoughts and influences of our time."—*Spectator.*

Paper boards, 50c. each, or complete in one volume, cloth, red edge, $1.00.

Records of the Past.

BEING ENGLISH TRANSLATIONS OF THE ASSYRIAN AND EGYPTIAN MONUMENTS. Under the Editorship of Prof. Sayce. Assisted in the work by M. Le Page Renouf, Prof. Maspero, Mr. Budge, Mr. Pinches, Prof. Oppert, and other distinguished Egyptian and Assyrian scholars.

The new series of Volumes differs from its predecessor in several respects, more especially in the larger amount of historical, religious, and geographical information contained in the introductions and notes, as well as in references to points of contact between the monumental records and the Old Testament. Translations of Egyptian and Assyrian Texts will be given in the same volume. Volumes I. and II. ready. Crown 8vo, 174 pp., cloth extra, $1.75 per vol.

The Greatest Thing in the World.

An Address on I. Corinthians, 13th chapter. By Henry Drummond. Leatherette, gilt top, 35 cents.

"Thoughtful and powerful, with a wealth of illustration."—*Churchman.*

Bagster's Comprehensive Teachers' Bible.

With New Helps, New Concordance, Indexed Atlas, and the Complete Bagster Bible. The only Teachers' Bible published since the Revised Version.

Rev. S. McGerald, Ed. of *Christian Advocate*, Methodist.—"We are glad to be able to add to this personal testimony that of some of our leading pastors who have received the book and given it a thorough examination. As was said in these columns nearly four years ago when reviewing Dr. Geikie's 'Hours with the Bible': 'It is in the interest of Bible study, and not of the publishers,' that we commend the 'New Bagster.'"—*Editorial in the Christian Advocate, Nov. 29, 1888, by the Rev. S. McGerald, D.D., Buffalo, N. Y.*

Numerous Editions. Various Bindings.

This Edition of the Bible is the one used by the Rev. D. L. Moody.

The above are supplied by leading booksellers or of the publishers and sole agents,

JAMES POTT & CO.,

14 and 16 Astor Place, New York.

CHARLES SCRIBNER'S SONS' *NEW BOOKS.*

A NEW BOOK BY FRANCES HODGSON BURNETT.

LITTLE SAINT ELIZABETH,

And Other Stories. By FRANCES HODGSON BURNETT. With 12 new full-page Drawings by Reginald B. Birch. Square 8vo, uniform with 'Little Lord Fauntleroy.' $1.50.

Susan Coolidge writes:

"The pretty tale from which the book borrows its name has for its heroine a little French girl brought up in an old château in Normandy by an aunt who is a recluse and *dévote*. A child of this type, transplanted suddenly while still in childhood to the realistic atmosphere of prosperous New York, must inevitably have much to suffer. She is puzzled; she is lonely; she has no one to direct her conscience. The quaint little figure, blindly trying to guess the riddle of duty under these unfamiliar conditions is pathetic, and Mrs. Burnett touches it in with delicate strokes. The second story is full of good old fairyland flavor, with the addition of a delicious spice of modern fun and humor. The third story, which is called 'The Proud Little Grain of Wheat,' is even more delightful in its way. 'Behind the White Brick,' also a story of dreamland or fairy character, closes the book, which is prettily illustrated by Birch."

"Elizabeth is as charming a girl creation as Mrs. Burnett's boy hero, Little Lord Fauntleroy."—*London Graphic.*

"Elizabeth is one of the most winning of Mrs. Burnett's child heroines."—*London Athenæum.*

UNIFORM WITH THE ABOVE, 'Little Lord Fauntleroy.' Illustrated by R. B. Birch. Square 8vo, $2.00.—'Sara Crewe.' Illustrated by R. B. Birch. Square 8vo, $1.50.

Expiation.

By OCTAVE THANET. Illustrated by A. B. FROST. 12mo, cloth, $1.00; paper, 50 cents.

The scene of this story is Arkansas in the last year of the Civil War, when the country was infested with plundering and murderous "gray-backs." The character portraiture and the pictures of the adventurous life of the time are given with strength and vividness. The movement of the story is rapid, and the reader's interest is maintained throughout.

The Lawton Girl.

By HAROLD FREDERIC. 12mo, cloth, $1.25; paper, 50 cents.

A powerful piece of romantic realism, characterizing vividly not only the personages of the novel, but the entire social life of the town in which the scene is laid. The story has a very strong human and pathetic side, and the trials, struggles, and accomplishments of 'The Lawton Girl' are depicted with much sympathy and delicacy of touch.

ENGLISH LANDS, LETTERS, AND KINGS.

VOLUME II.

From Elizabeth to Anne. By DONALD G. MITCHELL. 12mo, $1.50.

The second volume of Mr. Mitchell's talks about historical and literary England covers the period from James I. to Queen Anne, Shakespeare being the first and Swift the last personage of importance who passes under review of the sympathetic commentator and critic. The novelty of the author's point of view, the suggestiveness of his portraits and pictures, and the unique charm of his style, unite to make the book as noteworthy as its predecessor.

ENGLISH LANDS, LETTERS, AND KINGS. Vol. I.—From Celt to Tudor. 12mo, $1.50.

"A bright, pleasant, chatty record, true to history, and full of useful hints and suggestions."—*Boston Saturday Evening Gazette.*

"A most charming book for lovers of the purest and best literature."—*Hartford Post.*

The United States:

ITS HISTORY AND CONSTITUTION. By ALEXANDER JOHNSTON. 12mo, $1.00.

A lucid, scholarly, well-ordered narrative of the history of the United States from the earliest discoveries down to the present day.

"On account of its broad philosophical spirit, its insight into causes, and its lucid style, I regard it as one of the most valuable contributions yet made to American history."—*Prof. John Fiske.*

The Negro Question.

By GEORGE W. CABLE. 12mo, 75 cents.

The address which Mr. Cable delivered in reply to the memorable speech by the late Henry W. Grady is the leading feature of this volume, which also contains the "open letters" by Mr. Cable.

"Mr. Cable's famous papers make a stirring volume that will be read with interest."—*Brooklyn Eagle.*

EMIGRATION AND IMMIGRATION.

A Study in Social Science. By RICHMOND M. SMITH, Professor of Political Economy and Social Science in Columbia College. 12mo, $1.50.

CONTENTS.—Introduction—The History of Emigration—History of Immigration—Immigration and Population—Political Effects of Immigration—The Economic Gain by Immigration—Competition with American Labor—Social Effects of Immigration—Assisted Emigration and Immigration—Protecting the Emigrant—Chinese Immigration—Legislative Restriction of Immigration—The Question of Principle and of Method.

"One of the most thoughtful and useful books of the new year. The political and social effects of immigration are carefully studied."—*N. Y. Sun.*

"One of the most useful and significant studies in social science that have been published in recent years."—*Philadelphia Press.*

*** *For sale by all booksellers, or sent, postpaid, on receipt of price by the Publishers.*

NEW BOOKS.

Flowers from a Persian Garden, and other Papers.

By W. A. COULTON, author of 'Popular Tales and Fictions.' 12mo, cloth, $1.75.

Robert Browning—Essays and Thoughts.

By JOHN T. NETTLESHIP. New Edition, revised and enlarged, crown 8vo, cloth, $2.25.

This volume, under the title, 'Essays on Robert Browning's Poetry,' first published in 1868, was admittedly the means of bringing Mr. Browning's works into popular favor. Since its publication the Browning cult has become so widespread that the book is in great demand. On the rare occasions that it occurs for sale, it brings prices varying from one to two guineas. The new edition will be considerably enlarged by one-third at least.

Hazell's Annual, 1890.

A Cyclopædic Record of Men and Topics of the Day. Rewritten to date. Contains over 3,500 Original Articles by Eminent Specialists on every question now before the public. Edited by E. D. Price, F.G.S. 12mo, cloth, $1.50.

"An extraordinary amount of information at a low price. . . . We can imagine few volumes more useful to place on the table of the reading-room of a public library or of a mechanics' institute."—*Academy.*

The Uncollected Writings of Thomas De Quincey.

With a Preface and Annotations by JAMES HOGG. 2 vols., 12mo, $3.50.

CONTENTS: Greek Literature—Moral Effects of Revolutions—Malthusian Doctrine of Population—Ricardo's Political Economy—Abstract of Swedenborgianism—Storms in English History—The English in India—On Novels—The Lake Dialect—The English in China—Shakespeare's Text—Suetonius Unravelled—How to Write English—Casuistry of Duelling—The Love Charm—Last Will and Testament—Anglo-German Dictionaries, etc., etc.

*** These Writings are not included in any other Edition of this author.

The New Spirit.

Essays Biographical and Critical, by HAVELOCK ELLIS, Editor of "The Mermaid Series of English Dramatists." 8vo, cloth, $2.75.

*** Contents—Diderot, Heine, Whitman, Ibsen, Tolstoi, etc.

OF INTEREST TO ALL.

What is Said of the AMERICAN ARCHITECT.

EDMUND CLARENCE STEDMAN *says:*

"*It is a liberal education* to have your wonderful INTERNATIONAL EDITION reach me weekly with its rich variety of illustration, gathered from the round world's latest achievements in the art which most of all represents man's *needs*, and which, out of his necessity, has created so much beauty. If your noble magazine appeals so strongly to a layman like me, I am sure it must be indispensable to every architect and every builder."

MISS MARY EVANS, Principal of the Lake Erie Seminary, *says:*

"In renewing my subscription I cannot refrain from expressing my appreciation of the value of the *American Architect* to the principal of a seminary for young women. . . . For the nearly ten years since I have been a subscriber I have studied plates, reading matter, and pages of advertisements to prepare myself for the time when new buildings would be added to the Seminary. . . . And we have now the foundations laid of the most important of a group of buildings for which the *Architect* has furnished both information and inspiration."

N. CLIFFORD RICKER, Professor of Illinois Industrial College, *says:*

"I have been a subscriber to the best edition of the *American Architect* from the beginning, and have always found it worth to me much more than the subscription price."

ALBERT F. D'OENCH, late Inspector of Buildings, New York, *says:*

"Your publication has been of such a high standard, has given so much pleasure and been of such service to architects that its further development must be hailed with satisfaction by the entire profession."

JOHN M. VAN OSDEL, Architect, Chicago, *says:*

"I am pleased with your INTERNATIONAL edition and prize it highly. You have struck a long-felt want in giving us the best work of the world as well as of our own country."

SILAS McBEE, Principal of Fairmount College, *says:*

"I consider it invaluable."

Published weekly in three editions. Send stamp for Specimen Copy and Prospectus for 1890, to

THE
AMERICAN ACADEMY
OF
POLITICAL AND SOCIAL SCIENCE.

Organized at Philadelphia, December 14, 1889.

President.
EDMUND J. JAMES, Ph.D.

Corresponding Secretary, R. P. FALKNER, Ph.D., Station B, Philada.
Treasurer. STUART WOOD, Esq., 400 Chestnut St., Philada.

General Advisory Committee.

Pres. Adams, Cornell; Pres. Andrews, Brown; Pres. Angell, Michigan; Prof. Ashley, Toronto; Prof. Blackmar, Kansas; Dr. Bourinot, Ottawa; Prof. Burgess, Columbia; Prof. Ely, Baltimore; Prof. Follwell, Minn.; Prof. Goodnow, Columbia; Judge Jameson, Chicago; Prof. Jenks, Indiana; Pres. Johnston, Tulane; Prof. Moses, Cal.; Prof. Peabody, Harvard; Simon Sterne, New York; Hannis Taylor, Ala.; Prof. Thayer, Harvard; Prof. Thorpe, Phil.; Gen. F. A. Walker, Boston; Prof. Wilson, Wesleyan; Prof. Ward, Washington.

The Academy is a national association for the advancement of Political and Social Science. All persons interested in the promotion of Economics, Public Law, and Politics are eligible to membership, and should join the organization. It has already over 300 members. The annual fee is $5.00.

The Proceedings of the Society will be published in the form of a quarterly periodical, which, together with other publications, will be sent to all members of the Academy. It will be called the

Annals of the American Academy of Political and Social Science.

The first number will appear in June next.

All applications for membership, and all papers and communications which the writers wish to submit to the Academy for publication should be sent to

AMERICAN ACADEMY OF POLITICAL AND SOCIAL SCIENCE,
Station B, Philadelphia, Pa.

The Nation.

NEW YORK, THURSDAY, APRIL 10, 1890.

The Week.

THE most important business which Congress is transacting nowadays is the construction of new States. During the past month the House of Representatives has passed bills providing for the admission of Wyoming and Idaho, and it seems a foregone conclusion that the Senate will concur as soon as the question comes up in that body. Practically, therefore, it is already settled that the Union will soon have two new members, the House two more members, the Senate four additional members, and the electoral college six more votes. There is not the slightest excuse for the admission of either of these Territories at the present time. The total vote of Wyoming in 1888 was only about 18,000, as against about 7,500 in 1880, when the whole population was 20,789; and there is no good reason to suppose that the number of inhabitants to-day exceeds 60,000. Idaho had 32,610 people in 1880, and the growth of her vote between 1880 and 1888 does not indicate a population of more than 100,000 now. There are, of course, all sorts of wild estimates and claims as to a much larger population in each Territory, but there is nothing substantial upon which to base them, and at best nobody supposes that the number of inhabitants in either Wyoming or Idaho comes anywhere near 151,912, which is the number of people required to secure one Representative in the House by the last apportionment.

Experience has given more than one warning against haste in this matter. Nevada was hurried into the Union as a State just before the Presidential election of 1864, upon claims as to the size of its population which proved gross exaggerations when the next census was taken. Its vote has fallen off a full third since 1880, when the whole number of people, including more than 5,000 Chinamen and Indians, was but 62,226; and it is doubtful whether there are to-day over 35,000 white people in the State. Yet these 35,000 have one Representative in the House, two Senators in the upper branch, and three votes in the Electoral College of 401 members. A year ago North Dakota was admitted as a State. It had been for years filling up with a population which was supposed to be remarkable for general intelligence and political morality. Yet the Legislature of this new State at its very first session was restrained with the utmost difficulty from passing an act under which the Louisiana-lottery swindle would have been guaranteed a new lease of life, now that its existence in Louisiana is almost ended. Except for the fact that the Governor of the State chanced to be an opponent of the scheme, the job would in all probability have been carried through, and North Dakota would have rewarded the old States for admitting her to their circle by offering an asylum to swindlers whom they will no longer harbor. Finally, the Idaho and Wyoming bills are pushed as Republican party measures. But, even from this point of view, it may be doubted whether admission would be good policy. The former gave only 1,747 Republican majority in 1888, and Wyoming but 2,894. Either one of them is liable to become a Democratic State within a few years, as each has been a Democratic Territory within a few years.

It requires close study of such a measure as the Ways and Means Tariff Bill to understand all its absurdities. For instance, one of the articles which appear on the dutiable list under the heading "Farm Products," is sugar of milk. This article in the present tariff is on the free list. Almost its sole use is in the form of the pellets used in the dispensation of homœopathic medicines, and as an excipient in such medicines as lacto-peptine, pepsine, etc. For these purposes from 200 to 250 tons are used annually in the United States. Almost the whole of this comes from Europe, the whey from Swiss cows yielding nearly twice as much sugar as that from cows in this country. But a few years ago a New Jersey milkman learned from a Swiss the process of making milk sugar, and began it on a small scale. Being also something of a politician, he "knew the ropes," and, going to Washington, he secured a "hearing," and the result is a proposal to tax the whole people of this country who use homœopathic medicines 10 cents a pound on the sugar used in these medicines, all for the benefit of a New Jersey milkman. The quinine tax was howled down even by protectionists because of its apparent burden on the many to enrich the few, but when we consider the number of persons who will make the profit out of this tax on a "dairy product," the quinine tax seems quite as justifiable. We do not, however, say that it is inconsistent with the rest of the bill. McKinley says his aim is to apply the protection principle. Sugar of milk gives him a fair opportunity.

The "staff correspondent" of the Philadelphia *Press* at Washington confirms the statement made by the *Evening Post* some time since that Secretary Blaine would propose reciprocity treaties with all the countries of Central and South America which might choose to join. "The suggestion," says this writer, "is, in effect, that the President shall, by proclamation, declare the ports of the United States free to all the products of any independent country on the American hemisphere on which no export duties are levied, so long as such nations admit free of all taxes breadstuffs, provisions, preserved meats, fish, vegetables, fruits, and in fact all articles of food, lumber, refined petroleum, and such other products of the United States as may be agreed upon; provided, however, that this concession shall apply only to merchandise transported in vessels of the United States or of other American countries entering into the agreement. Such is, in very nearly its exact terms, the suggestion informally made to the Ways and Means Committee, and likely to be put into writing within a few days." It is stated, also, that the Argentine Republic and Chili have withheld their assent to the proposition because they are convinced that the Congress of the United States will not consent to admit wool free of duty, and that they will not vote for a plan of reciprocity which manifestly cannot be carried into effect. The staff correspondent, on the other hand, thinks that there is a fair prospect that free wool from South America may be incorporated into the Ways and Means Tariff Bill before it is reported. We think it would be safer to wait until David Harpster and Judge Lawrence are heard from.

If the proposed duty on hides is due, as alleged, to Mr. Blaine's wonderful shrewdness in getting together the materials for chaffering with the Argentines, its reception by the latter will be rather painful to him. They have publicly declared that the imposition of such a duty would make trade with their country so impossible that they shall at once advise their Government to withdraw from the agreement to subsidize a line of steamers between the United States and Buenos Ayres, on the basis of a pro-rata payment by the several nations interested. It would appear, then, that they do not altogether relish the idea of this elaborate manœuvring right under their noses, for the sake of getting up some obstacles to Argentine exports that may be graciously waived for an equivalent favor shown to this country. At any rate, it will be a solemn warning to the band of faithful protectionists and subsidizers that they must all stand or fall together; the moment such a baleful thing as a reciprocity treaty is schemed for, away go the subsidies. We should not be much surprised, in fact, if this and other aspects of the Pan-American Congress should deepen and embitter their traditional hatred for everything foreign, and lead them to abandon for ever such entangling trade alliances, with a virtuous resolve to do their own taxing and bounty-giving independent of all the rest of the world.

The *Iron World* of Pittsburgh takes exception to a recent article of ours, in which the statement was made that if there had never been any duty on pig-iron in this country, there would probably have been "such a rapid development of the product of iron in Great Britain as to have led, many years ago, to the exhaustion of the fine ores and the coking coals which is now creating such alarm on that side of the water." The *Iron World* thinks that if this should meet the eye of the iron and coal-producers of Great Britain, they would be vastly amused, be-

cause "the idea that the demand for iron in the past, or any demand that would have been possible under conditions that were at all probable, would have been sufficient to have exhausted the deposits of ores and coking coals in Great Britain, is too absurd for serious thought." The only thing that would amuse the iron and coal-producers of Great Britain more than our article would be an official report made by Joseph D. Weeks of Pittsburgh to the United States Geological Survey, on the Durham coal mines, the chief dependence of England for coke. This report was made in 1886. It pointed out the increasingly distressing conditions of coke production which must soon lead to an excessive cost of that indispensable article. Only four years have passed since Mr. Weeks made his report. And what do we find now? According to the *Iron World* of March 7, the present cost of the coke needed to make one ton of pig-iron in England is $9.31, against $3.24 in Pittsburgh. Whether Mr. Weeks was the editor of the *Iron World* in 1886 or not, we do not know, but we understand that he holds that chair at the present time. As to the rapid exhaustion of fine ores in Great Britain, the last report of the British Iron and Steel Institute contains ample evidence to sustain all that we said on the subject. The *Iron World* discovers that by a slip of the pen we spoke of the cost of pig-iron at the "mines" instead of at the furnaces, and it supplies the information that pig-iron is not dug out of the earth. That is valuable instruction, and we shall hope to profit by it.

Mr. Clarence A. Seward has prepared an opinion on the long-and-short-haul clause and the anti-pooling clause of the Inter-State Commerce Act, holding both to be unconstitutional. It will be remembered that it was by his advice that the Illinois Central refused to join the Inter-State Association a year ago, the ground being that a company could not legally delegate its rate-making powers to an association. Presumably upon request of the same railroad company, Mr. Seward has prepared the present opinion. In its broad features the principle advocated by Mr. Seward is the one laid down by the United States Supreme Court in the Minnesota cases, rendered after the opinion was written. It is that the question of the reasonableness of a railroad rate, or of a law affecting a rate, is a judicial one. A State legislature, and presumably Congress, cannot by arbitrary enactment take from a railroad its right to reasonable charges. Herein the Minnesota law was clearly wrong, in that it provided no machinery for determining such a question of reasonableness. The point urged against the Federal law is somewhat similar, but the analogy does not seem altogether applicable. Directly contrary to the Minnesota law, the Federal act says that the Commission shall investigate rate questions, shall hear both sides, and, after every precaution, shall render a decision. Such decision is not, however, conclusive, as the Minnesota Legislature tried to make the findings of its State Commission, but is *prima-facie* evidence before a court of law. This, it will be noticed, is almost exactly what the United States Supreme Court contends for, and at the same time is in line with the old Granger decisions. As far as this principle is consistently carried out in our present Federal law, apparently its constitutionality would stand a test. A railroad can, if it chooses, carry before a regular judicial tribunal any case decided against it by the Commission, but doubtless it would enter into such a contest with great odds against it.

The decision of the Supreme Court of the United States in the case of the people of the State of New York vs. the Home Insurance Company is of considerable importance in the way of settling one of the vexed questions of taxation. The question before the court was whether a tax on the capital stock of a corporation is a tax on the franchise or a tax on the property and assets. The Court of Appeals of this State has held that it is a tax on the franchise. The Supreme Court of Pennsylvania has held, in a parallel case arising under a similar law, that it is a tax on the property and assets. Now the Supreme Court of the United States holds, in a New York case, that it is a tax on the franchise. Would the same court hold, in a Pennsylvania case arising under a similar law, that it is not a tax on the franchise, but a tax on the property? It is a rule of the Federal Supreme Court, in the interpretation of the statutes of a State, to follow the latest settled decision of the highest tribunal of that State. There is some latitude in the use of the word "settled." The court did, in one case at least, overturn the decision of a State Supreme Court in the interpretation of a State statute, upon finding that the State Court had made two contrary decisions on the same subject-matter, whereupon it was held that the later decision could not be considered a settled decision. Aside from this merely technical phase of the Home Insurance Company's case, the decision is important in establishing the principle that corporations may be taxed in New York on their entire capital stock, without regard to the situation of the property (in this or in other States or foreign countries), and without regard to the kind of property (United States bonds, or whatever else it may be). State comity will suggest that the taxing power be limited to the amount of property actually employed within the State, as our laws do now limit it. But the decision establishes the legal power of this State to tax the Western Union Telegraph Co., for example, on the value of all its lines and plant in every part of the world.

The Indian Rights Association has issued a little pamphlet giving reasons against the proposed removal of the Southern Utes from their present reservation in Colorado. The whole subject simply presents the oft-repeated arguments of white men who now find the lands set apart for certain Indians the object of their own covetousness, and who, accordingly, are taking the usual means to dispossess the Indians of them. The reservation, they say, is too large; it is in the white men's way; the Indians make no progress, and are a burden to their white neighbors; the place to which it is proposed to remove them abounds in game, and is adapted to grazing, and the Indians are willing to move. The reply to all this is, that if the present lands of these Indians are allotted in severalty, they will no longer be an impassable boundary; that one reason why the Indians have not made more progress in civilization is because none of the latest treaty obligations with them have been carried out, leaving the Indians uncertain of their future; and that to place them in a wild region where they will have a temptation to live by the chase will be only still further to postpone their civilization, and subject them to a demand for another removal when the whites again catch up with them. With the little assistance these Indians have received from the Government, they have over 600 acres under cultivation, are learning the art of irrigation, have a school in operation, and give good promise of future advancement. But in the light of the past it is natural to expect that the Indians "must go," and the higher civilization of the boomer, in the shape of stolen claims, three-card monte, saloons, and revolvers, move in to dedicate the land to its new possessors. Such has been the story from the Atlantic westward.

All respectable authorities agree that the first trial of the new Ballot Law of Rhode Island in last week's election was a complete success. There was no trouble anywhere in the State save in the city of Pawtucket, where a slight delay and some uproar were caused by the illegal conduct of the local Democratic Boss, who happens also to be Mayor. He has been a bitter opponent of the law from the outset, and he naturally did his best to prevent its success in practice, but he was not able to accomplish much. He is one of the most unsavory politicians in the State, and rightly looks upon the law as a deadly enemy of his trade. Accounts from all parts of the State say that the election was the quietest and most orderly ever held there, that the usual gangs of "heelers" and "workers" about the polls were not to be seen, that the vote-buyers were thrown out of business, and that everybody was delighted with the new system. There was much delay in counting the vote, due mainly to unfamiliarity with the new form of ballot, and somewhat to the unusual size of the poll, desire to try the new system bringing out a very large vote. Reports from Missouri and Wisconsin, where the Australian system was tried for the first time in municipal elections on April 1, announce similarly successful results in all cases.

The recent municipal election in Milwaukee possessed a national interest because it turned, not upon any of the local issues which alone are appropriate to such a con-

test, but upon a question of general concern to the country—whether education in the English language shall be required in the schools of a State. The Wisconsin Legislature, at its last session, passed, as our readers are aware, what has come to be known as the Bennett law, the vital feature of which was this provision: "No school shall be regarded as a school under this act unless there shall be taught therein, as part of the elementary education of children, reading, writing, arithmetic, and United States history in the English language." The measure attracted no especial attention during the two months that it was pending, and passed each branch almost without opposition. The Germans, however, soon wakened to a perception of the fact that it involved interference with the parochial schools, to which both the Roman Catholics and the Lutherans largely send their children, and the authorities of both these churches sedulously cultivated the spirit of opposition which soon arose. The first skirmish in this fight took place on April 1 and resulted in a victory for the alliance of the Roman Catholic and the Lutheran Church influence with the Democratic machine, which elected its entire ticket by a large majority, although Milwaukee is usually a Republican city. The Democratic managers were already much disposed to make the Bennett law the chief issue in the State contest next fall, when a Governor and a Legislature which will choose a United States Senator are to be elected; and they will now feel confident of equal success in this wider field.

Last year there was a breeze in the political circles of the State of Kansas caused by the suspicion that Prof. Canfield of the State University was not sound on the doctrine of protection. This suspicion became an acknowledged fact after it was inquired into by the faithful regents, and an attempt was made to get rid of Prof. Canfield, or rather to prevent him from being elected Chancellor of the institution, a vacancy in that office having occurred. Three of the five regents were so much disturbed by the prospect that Mr. Canfield's remarkable talents would carry him into the Chancellorship despite his laxity on the tariff question, that they went in great haste to Minneapolis and offered the Chancellorship to the Rev. Mr. Thwing of that city; and in order to make sure of his acceptance of it they added $2,000 to the salary of the office. Mr. Thwing declined the offer, and it was afterwards found out that he also was unsound on the tariff question, being in perfect agreement with Prof. Canfield on that question. Then the laugh was turned on the pilgrim regents. The Chancellorship question is still unsettled, and is now pressing for solution. The Republican politicians, including the Governor of the State, are fighting hard against Canfield. The latter has nothing to commend him except his superior qualifications for the position; and since such men do not grow on every bush, the State is hard put to it to decide the question either way. The difficulties are enhanced by the fact that everybody who is fit for the place agrees with Canfield on the tariff question. If we must have a heretic, why not take Canfield and have done with it?

Choate, the *World* reporter who secreted himself in the Flack jury-room, has been indicted by the Grand Jury for criminal contempt of court under section 143 of the Penal Code, tried, and sentenced to the penitentiary, which will be a salutary thing both for him—for it will certainly have a beneficial effect upon him in after life—and for other young men who are now in the schools of "advanced journalism." The *World* endeavors to rid itself of all responsibility for him by saying that Choate was never instructed by his employers to do what he did, and that the "act was his own, and that there was no collusion or understanding with anybody connected with the *World*." But the *World* accepted the results of his act as its own, and expressed its heartiest approval by printing on the following day, most conspicuously on its first page, his own account of his misdeed, under the title: "With the Flack Jury—A *World* Reporter Listens to Their Talk for Two Hours." That was "collusion" after the act if it was not before. The editor who now throws the reporter overboard and washes his hands of all responsibility for his offence, did not think of doing so on the day after it was committed, and did not feel ashamed of him till he discovered that other people regarded his act as contemptible.

The simple fact is, that Choate, who is a young man, is a victim of the vicious school of journalism of which the *World* is the leading exponent. In the very next column to the report of the Grand Jury's finding in Choate's case, it announced that two prizes of $50 each, which it offered to its out-of-town correspondents for the best-written piece of exclusive news or "beat," had been awarded as follows: One to a correspondent who sent from North Dakota an account of the attempt of one man to shoot another; and the other to a correspondent in Pennsylvania who sent a "short but clear description of an attempted assassination of one brother by another." A school of journalism which bestows its prizes upon accounts of crimes discovered in remote corners of the land, must expect to find its own reporters committing crimes. What surer way for a man to get a "beat" which will draw a prize than to commit his own crime, as Choate did, and then tell his own story of it? Choate's imprisonment will do an incalculable amount of good in showing other pupils in the "school of journalism" which every "advanced" newspaper of to-day is keeping, that the penitentiary is the inevitable goal of the ethics which are taught there. A reporter in Buffalo has just distinguished himself by joining a gang of counterfeiters, and distributing their bogus money with them. That is only one step from joining a gang of burglars in "cracking" a bank, in order to get a "prize beat" of their doings.

The fate of Mr. Balfour's Land Bill seems to be already sealed. There is hardly a chance that it can be carried out. Lord Randolph Churchill's trenchant criticisms on it in the three letters he has been writing on it, appear to be taking firmer and firmer hold of the public mind as the measure receives more examination. It is a most complicated measure, but its main feature is the pledging of the credit of the British Government for $155,000,000 to enable the tenants to purchase the fee of such estates as the landlords are willing to sell, the money to be repaid by the tenants in instalments extending over forty-nine years. But, in aid of this, the grand jury of each county is to appropriate such amount of the county taxes as may be necessary to make good any default made by purchasing tenants in that particular locality. This part alone of the arrangement is sufficient to kill it. For, as no tenants can buy except those whose landlords are willing to sell, the majority of the county taxpayers might be persons who were deriving no benefit from the act whatever, and yet they would be taxed to pay debts incurred by other people under the act. Then there is the possibility, if not probability, pointed out by Lord Randolph Churchill, of repudiation on a great scale as soon as the Government came into direct contact with the tenants as a creditor, for to this end the exertions of the political leaders would undoubtedly be directed, and how the Government could meet it it is hard to say. Mr. Balfour's notion, as well as that of most Englishmen, who, like him, have hardly ever been in Ireland, and know little or nothing about the Irish, is that the home-rule feeling would subside if the land question were settled. No competent observers on the spot believe this for a moment. On the contrary, the more independent the farmers become, like those who have purchased under the Ashbourne Act, the more ardently do they throw themselves into the home-rule movement. The hatred of England and English ways and ideas in Ireland, aggravated by the insulting way of the present Ministry in dealing with Irish questions, is too deep-seated in Ireland to be eradicated by any one measure whatever, or, in fact, by anything but prolonged separation of administration. Ever since concessions first began to be made to the Irish, in 1830, it has been the expectation of English statesmen that each one would kill Irish discontent. The fact has been that the more the Irish got the more they have demanded. There is probably nothing which to-day does so much to aggravate the Irish trouble as English manners, which produce even a worse effect in Ireland than they have done in other parts of the world. The Dutch in Africa strikingly resemble the English in temperament and ideals, and belong to the same faith, but they hate them as bitterly as the Irish do, and with infinitely less reason.

THE TARIFF SCRAMBLE.

THE spectacle which has been presented to the country since the unofficial publication of the Ways and Means Committee's tariff bill not only is calculated to give the general public some insight into "tariffs as they are made," but may serve to throw very instructive light upon two stock arguments bearing on the tariff question, one an anti-reform and the other a reform argument.

Whenever a measure of tariff-reduction is proposed, a great cry is raised of disturbance to established industries. Indeed, this cry contains about the only plea that has any real validity, which the advocates of our present tariff can urge. There are thousands upon thousands of voters who would not dream of advocating the imposition of the incongruous and monstrous pile of tariff taxes which we are now living under, if it were proposed as a new thing, but who are convinced that it is better to suffer it than run the risk of the disasters that might follow a disturbance of the established course of industry and trade. To how great an extent this thoughtful and honest body of men hold the balance of power in the present condition of parties, it may be difficult to determine; that their number is very considerable cannot be disputed.

What are these men to think of the security to established interests which the present régime affords, when they see the manufacturers of leather goods and the silk-manufacturers rushing to Washington in dismay at the danger with which their protectionist guardians threaten them? Hides were put on the free list in 1872 by a Republican and protectionist Congress. The manufacturers of shoes and other leather goods have adjusted their business upon a basis of free hides. Nobody has ever pretended that the abolition of the duty on hides caused any considerable hardship to anybody. And now, suddenly, without any change in industrial conditions, without any public agitation, without the assignment of any principle of action, the Committee on Ways and Means propose the reimposition of a duty on hides, to the consternation of the manufacturers, who, if they had a right to expect stability in anything, had a right to expect it in the case of a raw material which had remained eighteen years on the free list, and had been put there by a protectionist Congress. The silver-lead smelters, the rope-makers, the cigar-makers, the carpet-manufacturers are in much the same case, and that of the canners and other users of tin plates is still more outrageous. Who can tell how many small canning establishments, employing in the aggregate thousands and thousands of hands, may have to be closed if the duty on tin-plate, already high, should be more than doubled, as is proposed? We shall not enter upon a discussion of special points; we are now only concerned in pointing out that here are six—and these are not all—important established industries crying out against the disasters that threaten them, not from a lowering of duties, but from a wanton imposition or increase of them, in pursuance of no demand outside of a lobby, for the benefit of industries which cannot claim that any circumstances injuriously affecting them justify a change, and, in the case of tin-plate at least, for the support of an industry which has as yet no existence.

It is at this moment doubtful what impression may be made upon our legislators by the emphatic protests of the great organized interests which are threatened by the proposed increase of duties. If Massachusetts were as doubtful a State as Connecticut, there can be no question that the shoe-men would be able to protect their interests against the assault of the ranch-men. The fortunes of war have been swaying from the one side to the other ever since the first rumor of the Committee's bill appeared. Not the most brazen apologist of our tariff system can pretend that the question with the Committee has been anything but a question of "pulls": the side that has the most complete command of "a long pull, a strong pull, and a pull all together," will win.

And this brings us to the other argument to which we alluded. If organized manufacturing interests—interests in whose behalf the tariff is instituted—find such difficulty in making head against injurious exactions, is it not plain that the great body of the people can make no impression at all upon tariff legislation, as long as it is dominated by the present ultra-protectionist spirit? It is of the very essence of this legislation for special interests that the general interest cannot get a hearing at all. If the shoe-men and the silk-men raise such a piteous cry when it is proposed to put a duty on their raw materials, how many hundreds of thousands of men, in scores of smaller industries, have been bearing like burdens in silence? We are not saying a word about the despised consumer. We are talking about producers, who are hampered in their production by the duties laid on wood and iron, and copper and chemicals, and dye-stuffs and salt, just as the shoe-men would be hampered by a duty on hides. If it was ever difficult to see the absolute hopelessness of the smaller and less organized interests securing fair consideration in the tariff scramble, the blindest must be convinced of it in following the history of this most recent phase.

And, after all, perhaps a word might be said as to the position of those whose interests are affected by the tariff chiefly through its enhancement of the cost of the articles of their consumption. They cannot, in the nature of the case, be as intensely interested in having the tariff reduced as the representatives of special interests are in having it raised. So familiar to our protectionist friends has the idea become that no interest is worth mentioning which does not send a delegation to Congress to insist upon its recognition, that actually it was seriously argued by a member of the House, in the tariff debate of 1888, that the duty on steel pens should not be reduced because the consumers of steel pens had not petitioned for relief! And this pernicious notion, so deeply planted in our tariff legislation since 1861, can never be got rid of except by a radical change of front on the tariff question. Tariff-reformers do not propose to smash the protected industries; we believe we are strictly accurate in saying that not a single important manufacture was threatened by the Mills bill with anything comparable to the injury which the Ways and Means Committee's first proposal as to hides would bring upon manufacturers of leather. But the Mills bill, and the whole movement inaugurated by Mr. Cleveland, do involve that radical change of front which is required in order to give a hearing to the people who have no chance in the present tussle of personal and party interests. No party will be either willing or able to undertake the destruction of the great interests that have grown up under the tariff; but the party of tariff reform is bound, by the very nature of its position, to consider the needs of the whole people first and the claims of special interests afterwards, while the present high-tariff party is irretrievably committed to the policy of dispensing favors to those who have the most, in votes or money, to offer in return.

THE TAMMANY SOCIETY.

ON Thursday last the *Evening Post* printed a collection of biographical sketches of the chiefs of Tammany Hall, constituting what has been called "the new Tammany that people know not of." All possible pains were taken to make it accurate, although, of course, in the case of men leading, as so many of these do, vicious subterranean lives, complete accuracy is difficult to attain, except when they get into the hands of justice and some episode in their career is described in court records. Moreover, a great deal in the history of these men which would be most useful in throwing light on their characters and aims, is absolutely unfit for the columns of a respectable newspaper. One consequence of this is, that many of the sketches present the hero of the tale in a much more favorable light than is justly his due. Moreover, twenty-eight of the Executive Committee whose memoirs appeared in the *Evening Post* are merely the picked men of Tammany—those who have made their way to the front by some display of energy or force, and thus have come under public observation. A similar exploration expended on the "General Committee," which numbers about 3,598 members—the largest committee in the world—would reach still lower depths, and produce much more repulsive results.

On this Executive Committee there is but one member who can be fairly called a man of education, and who has any professional or business relations whatever with the respectable portion of the community and pursues any decent calling. The rest live wholly on the city, and, when thrown out of its service by any turn in the political wheel of fortune, return to some disreputable occupation, such as liquor-dealing or gambling, or else are maintained by "divvies" wrung from men still in office. About nothing is Tammany more particular than the compulsory division of salaries and fees, so as to make the money go as far as possible among the Boys. Nearly

every Tammany official has to divide with others his wages or his blackmail. The deputy sheriffs, for instance, had in some cases to divide their "extra compensation" with four persons, not including the "retaining fee" of thirty-five dollars a month paid to their "counsel," the learned and vivacious Cockran. Where the chiefs have large families, and the "divvies" are inadequate for their support, great pains are taken to quarter their relations on the municipal service. Their daughters or sisters are imposed as teachers on the School Trustees, and their sons get on the pay-rolls as "laborers" or "inspectors" or watchmen. In fact, the art of getting a living out of the city, as practised by Tammany men, is extremely complicated and abstruse, and can only be learned by actual practice in the Tammany ranks. It would furnish abundant materials for a large manual, and is full of amusing and ingenious surprises for any outsider who looks into it. What makes it all the more wonderful as a social phenomenon is, that nearly all those who practise it with most success are illiterate or ignorant men, who have never followed any regular calling. We presume Gilroy and Cockran and Purroy are the only members of the Executive Committee who can write an English note with any approach to correctness.

There is nothing very new about all this, but most of it seems to have been forgotten by the respectable portion of the New York public of both parties during the past year. It was very well known, during the Tweed and Kelly régime, that the Tammany Society had long ceased to be a political organization in any proper sense of that term—that is, an association for the spread of any particular set of political opinions, or for producing co-operation in anything that could be called political agitation. Political ideas utterly perished in Tammany thirty years ago, when Tweed got in the ascendant before the war. All interest in public questions of any description has been extinct in the organization. There is no pretence whatever of keeping it alive. None of the members occupy themselves with any legislation, except what creates salaried offices and contracts in this city, to be got hold of either by capture at the polls or "deals" with the Republican politicians here or in Albany. When such legislation has been successful, the only thing in connection with it which Tammany leaders consider is how the salaries shall be divided, and what "assessments" the places or contracts can stand. If any decent outsider could make his way into the inner conferences at which these questions are settled, he would hear, not grave discussion of the public interests, how to keep streets clean, or how to repave them, or how to light them, or how to supply the city with water, but stories of drunken or amorous adventure, larded freely with curious and original oaths, ridicule of reformers and "silk-stockinged" people generally, abuse of "kickers," and examination of the claims of gamblers, liquor-dealers, and pugilists to more money out of the public treasury. In fact, as we have had of late frequent occasion to observe, the Society is simply an organization of clever adventurers, most of them in some degree criminal, for the control of the ignorant and vicious vote of the city in an attack on the property of the taxpayers. There is not a particle of politics in the concern any more than in any combination of Western brigands to "hold up" a railroad train and get at the express packages. Its sole object is plunder in any form which will not attract the immediate notice of the police.

The nature and objects of the organization have acquired more importance during the past year than any year since Tweed's downfall, for two reasons. One is, that the way in which the "Big Four" got hold of the Mayoralty, the Commissionership of Public Works, and the Corporation Counsel's office last year, and succeeded in imposing themselves on the public as conscientious reformers and Tammany men of an entirely new type, shows that the organization has now in it, or behind it (more probably the latter), considerably more brains and dexterity than has been at its service for a long while, if ever. As illustrations of this we may mention, at the risk of boring our readers with an old story, the remarkable way in which public support was enlisted for their scheme of a World's Fair and their plan of rapid transit, each of which promised an enormous addition either to the prestige or the funds of the Society, and the curious social success achieved for a short time by the Mayor, in spite of his ignorance and vulgarity. The other reason is the greatly increased power lodged in the Mayor's hands since 1884 by the statute giving him the absolute power of appointment. We believed, as did most people at the time, that this act would impress the decent and intelligent voters of this city with the enormous importance of the Mayoral election, and the absolute necessity, therefore, of keeping out of the Mayoral chair any active Tammany politician, in good standing, by the union at municipal elections of all the industrious classes possessing real interest in the comfort, peace, and prosperity of the city. That this expectation was not fulfilled was doubtless due to Republican infatuation about the Presidential election in 1888. Anything to win the Presidency and "keep the party together" in the city, was their motto, and they accordingly put Erhardt in the field as "a running mate to Grant," to use "Johnny" Brodsky's happy simile. We cannot help believing, however, that we are all at this moment learning a great lesson, that the real nature of the Tammany organization is being brought home to the present generation in a way that will eventually work the deliverance of the city from this extraordinary menace both to liberty and property. What to call it one hardly knows. In fact, it is both a social and political novelty.

WHO IS RESPONSIBLE FOR TAMMANY?

It would be nearly as absurd to say that the Paris Commune was a fair specimen of what France can do in the way of self-government as (what Col. Hawkins contends in a letter to the *Evening Post*) that Tammany rule in this city was a fair specimen of what home rule would be in Ireland. The Irish in Ireland have never elected a corresponding class of men to any public offices, and the existence of an association like Tammany would not, we think, be possible in any Irish city. Every city in every civilized country contains a large body of persons, like the present Tammany chiefs, who would, of course, be delighted to get the city government into their hands and gut the treasury. London, Paris, Berlin, and Vienna all contain them by tens of thousands. Why do they not succeed? Because the decent and industrious majority will not suffer it; because, if there were any sign of it, men of all classes and conditions would unite against them *en masse*, all other business and excuses being laid aside, and save their civilization.

In fact, Mr. Hawkins disposes himself of his attack on both the Irish and the Catholics by the account he gives at the close of his letter of the behavior of the rest of this community in the presence of these Tammany exposures. People who cannot be roused into indignant activity by such biographies as were printed on Thursday, and whose whole press observes dead "journalistic" silence about them, must of course bear a large part of the responsibility for the existence of such "vermin" as were described. It is about as foolish to blame the Crokers and Gilroys and Grants for being what they are and doing what they do, as to blame tigers for killing oxen, and foxes chickens. Wise men who find their cattle or poultry disappearing under the ravages of beasts of prey, do not content themselves with saying: "Well, that's just like tigers"; or, "What better can you expect from foxes?" They set traps and they take their guns, lie in wait for the marauders, and polish them off and nail their hides to the barn door. The truth is, that everybody who has paid much attention to the problem of municipal government in this city is thoroughly tired of the "ignorant foreigner" explanation of our troubles. That the presence of a large body of ignorant foreign voters makes good government in New York more difficult, there is no denying, but it does not necessarily or readily hand over the control of the city to such a set of people as compose the Executive Committee of the Tammany Society. If the better class of voters, the industrious, intelligent class, chose to treat city affairs as business in the strict sense of the term, and refused, when dealing with them, to allow their attention to be distracted by Federal or State affairs, this band of pugilists, gamblers, and liquor-dealers would never get near the municipal treasury. Good people, whether native or foreign, Catholic or Protestant, are, after all, in the majority among us, and if they were always sensible as well as good, the gates of hell could not prevail against them.

Let us take as illustrations of this the returns of the three Mayoral elections which have taken place since the Mayor was given absolute power of appointment—which we

consider a turning-point in our municipal history.

In 1884 the Republicans, knowing that Tammany was going to put this same "Hughy" Grant in the field against Grace, who was running as an Independent, nominated the Wicked Gibbs as their candidate. The result was: Gibbs, 44,386; Grace, 96,288; Grant, 85,361. Add Gibbs's vote to Grace's, and we have a majority over Tammany of 55,313.

In 1886 Henry George's candidacy introduced a new element into the struggle, which we may call the socialistic element, to which a considerable portion of the dangerous class rallied. It was plain to all friends of good government that the election of Hewitt, who, though the Tammany candidate, was a distinguished and trustworthy citizen, was very important, and that he was the only candidate who had any chance at all against George. Well, what happened? The Republicans insisted on running a candidate of their own in the person of Mr. Theodore Roosevelt, simply to "keep the party together," and, as he confessed when the canvass was over, without any expectation of winning. The result was: Roosevelt 60,435, Hewitt 90,552, George 68,110. Add the Roosevelt vote to Hewitt's, and we have a majority of 82,877 over George.

In 1888 we witnessed the same process. Hewitt was again in the field as the candidate of the orderly, industrious classes of the community, as opposed to Grant, the candidate of Tammany, with all that the term implies. Hewitt had shown faults of temper and judgment, it is true, but he was well known to the community as a man of high character, of long experience, and of endowments which made him an honor to the city and country. About Grant very little was known, and that little not good. All the presumptions were against him, and he was surrounded and backed by the Tammany "vermin." What happened? The Republicans, well knowing what the risks were, again insisted on running a hopeless candidate of their own in the person of Mr. Erhardt. The result was: Erhardt 73,037, Hewitt 71,979, Grant 114,111. If we add Erhardt's vote to Hewitt's, we have a majority of 30,907 over Grant. Who is then to blame for our shame—the tiger which eats the bullock because it is his nature to eat bullocks, or the farmer who, knowing the tiger is lurking in the thicket, and is constantly hungry, keeps his bullocks constantly exposed in the open pasture, and, when he finds their bones, simply loads the tiger with abuse?

THE COST OF RETAILING FOOD.

In his March report the statistician of the Department of Agriculture enters into a general discussion of the causes of the agricultural depression. Some of the reasons given are true ones and others need closer examination. Towards the end of the report he says: "The increasing swarm of dealers in regular markets and provision stores show that numbers of people are living off the difference between wholesale and retail beef"; and in general terms it is stated that one cause of low prices to the farmer is the exorbitant profits to the middlemen, the farmers being on one page advised to retail their own fruits and vegetables in cities, sell their own meats, and manufacture their own flour.

It is probable that Mr. Dodge, the statistician, wrote his report without a detailed study of the cost of doing the things he advised. As far as the retail dealer in foods is concerned, it is not true as a general statement that he is making large profits. In one place Mr. Dodge gives milk as an instance of this because that article, yielding the farmer but three cents, is sold to the consumer at eight cents per quart. But a knowledge of the cost of distributing milk throughout the city would have shown that a margin of five cents per quart yields but a moderate profit to the milkman. So the assertion that butchers and grocers are growing rich at the expense of the farmer is equally without foundation. As to grocers who deal out sugar and similar articles by the pound, it is found that an average gross profit of 16 per cent. leaves but a small net result, so great is the loss by division of packages into fractional amounts, by the large space of store-room required to do a business comparatively small in the aggregate of the sales, and by the cost of messengers and wagons to deliver at houses the numberless small purchases.

In like manner the retailers of meat are not getting rich as fast as Mr. Dodge thinks. For example, a first-class dealer in Brooklyn furnished to the *American Grocer* the following as the receipts from a steer:

Product.	Pounds.	Price per pound, cts.	Amount
Top sirloin	20	12½	$2 50
Porterhouse steak	45	23	10 35
Sirloin	60	18	10 80
Kidneys	2	12	24
Shanks	28	4½	1 26
Neck	45	6	2 70
Shoulder for soup	18	5	90
Shin	20	3	60
Round steak	88	12	10 56
Rump corned beef	32	12	3 84
Flank	20	10	2 00
Plate corned beef	110	5½	6 05
Rib	60	16	9 60
Chuck rib	106	10	10 60
Cross rib	39	12	4 68
Fat	35	3	1 05

Total amount received, $77.73; cost of steer, 760 pounds, $53.20; gross profit from animal, $24.52. From this gross profit must be deducted all expenses of store and service. The same dealer furnished the following as the average of five weeks' sales in January and February: Amount of sales, $745.14; gross profit, $122.61; expenses of store, $49.76; net profit, $72.85. From this must be deducted the rent and the expenses of delivery. Excluding these, the profit is about 10 per cent., or, with these items, about 8 per cent. upon the gross sales. Neither the risks of the business nor interest on capital is taken into the above account. Statistics of retailing meat will vary in different cities and in different parts of the same city. In spite of Prof. Atwater's scientific demonstrations of the nutritive value of the poorer cuts, it is a fact that butchers often have great difficulty in disposing of the lower grades of meat at any price. Poor people buy the expensive portions, and will take no other, sometimes to please their palates and sometimes from the notion that laborers should have the best of food. All this helps to account for the fact that the prices for the better parts of the carcass do not vary at retail with the fluctuations in the value of the live steer.

As regards our system of distributing food to families, it may be said that the apparent high cost arises from the fact that we are still pursuing the same methods as did our fathers. In every other line of business there have been marked changes reducing cost, but not so in retailing. We continue, as of old, to buy starch, sugar, and beef in small quantities daily from the corner store, and to pay a very large percentage of advance upon the wholesale price of these articles. The report alluded to cites a case thus: "The poor are robbed still further when a commodity costs 25 cents a peck, by a charge of 15 cents for half-a-peck, which is a clear penalty of 20 per cent. for buying in small quantities. Thus by every imaginable trick of trade the cost of buying is increased, while the producer gets less and less for his products." It is not clear how this extra five cents is any loss to the producer whose troubles are under consideration, though the loss to the poor buyer is apparent enough. Yet this case is not as bad as the peddler of coal who buys a ton for $5, and sells to the poor, say, at 50 cents a bushel (80 pounds), thus more than doubling his money. Perhaps we may at some distant day invent a method which will reduce the enormous cost of distributing household supplies to families. But it is not yet in sight. The railroads will carry a barrel of flour from Minneapolis to New York for 65 cents, while the storekeeper adds to his wholesale price the same sum or more for delivering at your door. The one represents a reduction in charges for a long carriage of 1,400 miles which is a modern wonder; the other represents a cost which stands as high as ever it did. Yet the storekeeper is not extortionate; there are too many competing shops to allow that. It is not the man but the method which is at fault. And so Mr. Dodge is wrong in his general conclusion that the retailer is accumulating profits which should go to the farmer.

FIRST IMPRESSIONS OF PARLIAMENT.

LONDON, March 26, 1890.

THE wider interests of the inhabitants of these islands centre so much in the proceedings of Parliament that it is not without a certain feeling of daze that an Irishman finds himself walking up the floor of the House of Commons, pronouncing the oath or affirmation, as the case may be, subscribing the roll, shaking hands with the Speaker, and taking his seat. A few days after my introduction, an ex-

perienced member asked what were my first impressions, and advised me to note them down while still fresh, as they would soon be lost in later associations.

To begin with the chamber itself. At first it struck me as small and sombre; but its appropriateness and beauty have grown upon me from day to day, and my dominant feeling has been that it was designed for, and is fitted to be, an arena for the discussion of more important affairs than those I have heard generally discussed there, and for the display of nobler motives and passions than what usually there find expression. It is panelled throughout in dark oak. The ornamentation is rich and chaste. The pendent posts are particularly beautiful. It is lighted by clere-story windows emblazoned with the arms of the three kingdoms; at night by electric lights through a stained-glass ceiling. The side galleries, usually unoccupied, are reserved for members. That opposite the Speaker is for visitors; above him is one for the reporters (it is interesting to observe the regularity with which they relieve each other every quarter of an hour). Behind and above the reporters a grating conceals the gallery for ladies; you can distinguish here and there a light-colored fan or dress and the notice-papers of the day held by many. Outside the chamber on the ground floor run the division lobbies, and above, on a level with the galleries, are writing and reading lobbies and lavatories, all panelled and ceiled in oak. There are in the division lobbies open fire-places, besides the other means of heating.

It is in keeping with the general inconsistency of the British Constitution and the somewhat "first come first served" principle upon which British society is based, that there are not, nor ever were, seats for more than 450 of the 670 members. Nor are there in the outer lobbies sufficient lockers for holding books, papers, and personal belongings. A new member has generally to wait several months before he can get one. The chamber, the division lobbies, and the gallery corridors constitute the House proper. The stately libraries, the well-appointed refreshment-rooms, the cosey reading and tea-rooms soon become familiar. The appointments are of the completest; every possible place is carpeted, and scrupulous cleanliness and order prevail, without stiffness or constraint. There is not, except in the smoking-room in the basement and in the cloak-room, a trace of the use of tobacco. The cloak-room is an interesting old cloister, in one corner of which Cromwell signed Charles the First's death warrant. Here now fires burn brightly, the latest telegrams are displayed, and civil policemen come forward to take your coat and umbrella, and outside the door a little shoe-black plies his trade. From the Speaker and clerks at the table to the neat girls who wait in the tea-room, I have seen nothing but fair dealing and politeness. The refreshments are good and cheap and well served. There are three dining-rooms opening into each other, overlooking the Thames, with the same tariff and arrangements; one is left by courtesy to Cabinet and ex-Cabinet Ministers, another reserved for members only; to the third you can invite gentlemen for whom you have procured orders. Members can take ladies anywhere when the House is not sitting, and, during sittings, to the corridors, a special refreshment-room and the terrace, all without orders. For gentlemen orders are required, and it is one of a member's trials to be handed, perhaps in the middle of an interesting debate, a card from a friend in the outer lobby, seeking an interview and admission. The dynamite scare led to increased strictness regarding the admission of strangers, but this strictness has so relieved members from interruption that, dynamite or no dynamite, they do not desire to revert to previous customs. You have free entrance to the House of Lords, and it is an anomaly that while there is some trouble in procuring by written order places for your friends, male and female, to hear the debates in your own House, you can, simply by asking leave of "Black Rod," an urbane old gentleman, take them into the House of Lords, where, while ladies are allowed chairs, you and your male visitors must stand. The Lords' chamber is gorgeously fitted up as compared to the Commons; the effect is none the less harmonious and pleasing.

The distinction between the "House" and the premises generally is curiously shown in the stationery of all descriptions with which you are freely supplied. That on the writing-tables in division lobbies and gallery lobby is stamped "House of Commons"; that in the libraries, "House of Commons, Library." On the writing-tables the old and new are mingled: the envelopes are gummed, and steel pens are at hand; but for the most part the pens are quill, there being knives to mend them; trays of wafers are provided, and lighted tapers to enable you to give dignity to your correspondence by appropriate House of Commons seals. There is a post and telegraph office in the centre hall, where you receive your letters. Telegrams are taken to members in their seats. All is stillness and quiet throughout the House and its surroundings; but for the presence of humanity, you could, as it is said, "hear a pin drop." There is nothing to suggest the hidden world below ministering to your health and comfort—a strange, weird, underground labyrinth of passages and halls: the 1,000-horse-power boilers generating steam for heating and cooking; the six or eight steam and gas engines; the furnaces for creating draughts and ventilating; the array of delicate electrical appliances. The same order and cleanliness that reign above prevail in the lower regions. The ventilation is carefully watched and regulated according to the number of members in the House. Telegraphs communicate with the attendants in charge of the openings in the roof. The air is filtered in from below through calico screens; during fog, through a large surface of cotton wool, six inches thick, and imperceptibly introduced into the House through a netted floor-cloth. In summer the air is drawn in over blocks of ice and through water-sprays. The man in charge immediately below can hear every word that is said. I remarked that he had a notice-paper on his desk and a 'Parliamentary Guide' beside him, so that he could intelligently follow the course of the debate and know something of the speakers.

So much for the surroundings. Except to prominent members by courtesy, no one has a place of his own on the comfortable leather "benches." Naturally you fall into a particular seat among your party. It is strange and somewhat provoking that the "Liberal Unionists," ardent supporters of the present Government, continue to sit with the Opposition. If a member wish to secure a seat for the day, he must be a good boy and attend prayers, when he may write his name on a card headed "Prayers," and attach it to his selected place, or he may leave his hat to pray for him with his card on it, and come in at leisure after prayers and claim the seat. The comparatively empty benches in the House of Commons, where all present at least appear to listen, must be more easily addressed than assemblies where members sit behind desks and can, if they like, read or write without heeding you. The respect apparently shown to the table or Speaker's chair is curious. We can understand bowing to the Speaker, or even to the mace, as the emblem of royalty, but it is grotesque to see the Speaker, with his mace-bearer and chaplain, while marching in at the opening of proceedings, repeatedly, as though oppressed with reverence, bowing to the empty chair. The obligation laid on the chaplain after prayers to back out of the House, bowing, cap in hand, is very objectionable.

The proceedings are of surpassing interest. There are often dreary enough days and nights; but you always enter the House aware that perhaps unexpectedly, and on some side issue, an important debate may arise—a question of vital consequence to millions of the human race may be considered. Within the past fortnight there have been some charming interruptions to ordinary debate, such as a disquisition by Sir George Trevelyan on the delights of summer in the country, and one by Mr. Bryce, anent rights-of-way, on Scotch scenery and travel. The chaotic and demoralized conduct of public affairs is striking. That this great empire is carried on even as well as it is under the present system shows the high average capacity and honesty of the workers. As things are, there can be no effectual general inquiry or general control. The most voluminous reports and papers are supplied. You can almost tell the cost to the country of each fresh bolt that is screwed into a ship of war, each brick laid in a Government building, the wages of each scullery-maid and messenger-boy in every Government department. But when actually before the House, the work must be slurred.

The proceedings are utterly disproportionate. I have heard millions voted away for the army, without inquiry, in ten minutes, by a dozen members; I have seen the House crowded and excited and the Ministry defeated in a division on a question as to whether a foot-bridge should or should not be erected over a certain new piece of railway. I have listened to interminable discussions about minute details of Irish prison discipline. Obviously the present state of things cannot continue. The exaggerations and misrepresentations of newspaper correspondents regarding the character and appearance, the speeches, abilities, and intentions of individuals on both sides of the House, recur to me, in face of the reality, as sad and sorry reading. The key of the situation seems to me to lie in the hands of the Irish party. Imbued as they are with intense earnestness and convictions, it would, I think, be impossible for any rules or arrangements to prevent their worrying and paralyzing the House by the discussion of their own needs and reducing all its business to confusion and ineptitude. The House in the attempt has spent some twelve years and abandoned some of its most cherished privileges and customs; in the midst of the change, if not ruin, the power of the Irish party remains practically undiminished.

A word in conclusion as to Mr. Parnell, one of the most interesting figures in the struggle. I had not seen him for many years. He is visibly older. His figure has attained a certain middle-aged heaviness. He looks pale—perhaps hardly delicate. His smile has all its former sweetness. I have seen him only once in the House. He entered quietly, stood for a few minutes watching the proceedings from behind the chair of the Sergeant-at-Arms, and then took his seat. The manner in which he folded his hands and held his head slightly bent forward, his whole pose and demeanor,

were those of a man who had suffered, and endured, and waited, and upon whom experiences had told heavily. D. B.

BARRIÈRE'S BALZAC.

PARIS, March 21, 1890.

I WAS reading a few days ago the new book of Zola's, the 'Bête Humaine,' and after I had gone through it it seemed to me that I had had a long nightmare. This new work professes to describe the railway world from stoker to director; it gives life even to the engine, it takes us, at an enormous speed, through evanescent landscapes and dark tunnels; and darker still are the souls of the men and women who live on the line, or near the line; darker are their loves, interrupted at all times, spasmodic and agitated—darker are their jealousies, and hatreds, and instincts. Never has Zola been so unmerciful to human nature, so severe upon the natural man hidden in each of us, the prehistoric man of the caves, whom he pretends to see still in the modern man.

Is each generation to have now a new "Comédie humaine," to use Balzac's title? If so, what a distance there is already between the world of Balzac and the world of Zola! I made this comparison while perusing a compendious study, by M. Marcel Barrière, called 'The Work of Balzac: a Literary and Philosophical Study of the Comédie humaine.' Here is a real devotee of our greatest novelist. His analysis contains no less than 502 octavo pages; it is a great work in itself. M. Barrière dedicates it to M. Paul Bourget, our most subtle analyzer of passion, a novelist who professes to be a psychologist.

In his preface, which is a long study of the relations of the philosophy of each epoch and its romantic literature, M. Barrière gives us the genesis of his book. On the 3d of November, 1887, he was coming out of the French Theatre, where he had heard Musset's delightful comedy, "On ne badine pas avec l'Amour." His eyes fell, in the great staircase, on the bust of Balzac. "Like the faces of Mirabeau and of Bonaparte, Balzac's face bears the marks of the greatest convulsions of the soul. His forehead and the three vertical lines which separate his eyes, as in a lion's head, show the indomitable energy of genius, as well as the infinite of the human soul." M. Barrière fell into a sort of contemplation, and one by one the familiar characters of Balzac appeared before him. He soon found himself alone, and he had a sort of hallucination: it seemed to him that Balzac's face had become alive, that his mouth was really smiling, that his eyes were really turned on him.

The vision followed him as he found at home the 'Peau de Chagrin,' by Balzac, the "grand homme de province à Paris," open on his table. He began to study Balzac as he would have studied some great philosophical work. The "Comédie humaine" is divided into three parts: "Studies of Manners," "Philosophical Studies," and "Analytic Studies." To each of these groups of stories M. Barrière has added an introduction. The "Studies of Manners" (manners is not the exact word for *mœurs*, but I find no other), are themselves subdivided into Scenes from Private Life, from Provincial Life, from Parisian Life, from Political, Military, and Country Life; and each of these subdivisions has been made the theme of a special study by M. Barrière, who has besides analyzed, with some detail, each individual story. His volume is, therefore, somewhat like a book of natural history, where you find subdivisions of classes, families, genus, and species. The author treats society like a sort of fauna, and he devotes special chapters to the women of Balzac; for he justly observes that the study of woman must complete the study of man, especially with a writer who has created so many and such admirable feminine characters.

Balzac was the true creator of what we now call realism. He always took his characters from real life. His influence in this respect on all modern literature is undeniable. Some modern writers have gone further, and have founded a new school, under the name of naturalism; but they seem to be bent only on describing what is bad, low, repugnant, and hideous in nature. Balzac is nearer the truth: he shows us perpetually the contrast between virtue and vice, between egotism and self-sacrifice, between beauty and ugliness; he may be compared to the sun, which throws its rays on everything. The universality of his observation has sometimes brought on him the reproach of immorality; it never seemed to me that he deserved this reproach. I would not recommend, of course, the reading of Balzac's novels to a young and inexperienced person. The exhibition of many impure pictures, necessary in a "human comedy," might inspire dangerous thoughts and temptations in a young mind. But to a man of the world—one who has already been tossed on the waves of life—the reading of Balzac may be profitable. The author is always conscious of the morality or the immorality of his heroes. He preaches no sermons, but he shows us, in the most dramatic form, the dangers of each passion; he fills us with alarm, with awe, with horror; he touches also with an extraordinary force the chord of pity; and is not pity the last word of the science of life, a science so dearly acquired by all? A supreme and religious pity for all sufferers, whatever be the cause of their suffering, is the lesson constantly taught by Balzac; nobody has ever spoken more eloquently of the sublimity of self-sacrifice; his finest characters are men and women who have completely ceased to live for themselves, who live for another—a father, a husband, a wife, a child—or who live for a mere idea.

How different are our modern "naturalists." Surely, the author of the "Comédie humaine" would disavow many of them. They do not write in the same spirit as Balzac, even as George Sand, Stendhal, Mérimée; they do not even imitate Flaubert and the Goncourts, though the Goncourts and the author of "Madame Bovary" may be called the fathers of the new school. The type of the most modern naturalists is, for instance, this book, 'Nos Sous-offs' (Our Non-Commissioned Officers), by M. Descaves. His work has been prosecuted for immorality and as an insult to the French Army. M. Descaves was acquitted by the jury, and very justly, because his work is no more indecent than a hundred others; but it must be said that the present current of our romantic literature is very muddy. Even the *Revue des Deux Mondes* has been lately publishing novels which its founder, if he were still alive, would have rejected with horror and contempt. The whole tone of society is changed. The illustrated papers, with their engravings; the society papers, with their gossip, have corrupted the public taste. Even our walls, with their flaming advertisements, have been mirrors of immorality.

The naturalism of the present time is not at all the realism of Balzac: his "Human Comedy" shows us all the aspects of human existence. This title was not chosen by Balzac himself, but by his friend the Marquis Auguste de Belloy, who invented it in contrast to the "Divine Comedy" of Dante. The first title given by Balzac to a collection of works which appeared from 1833 to 1837 was "Studies of Manners in the Eighteenth Century." Balzac was, I believe, the first novelist who dared to represent the modern power of capital. The struggle for life becomes in many of his books the struggle for money. How could he have painted his time exactly if he had not shown the increasing influence of Mammon? Grandet, in the 'Scenes from Provincial Life,' and Gobseck, in the 'Scenes from Parisian Life,' are types of misers which cannot be forgotten.

Balzac well understood that the same passion may be inspired by entirely different motives, and I do not think that any moralist before him had shown this truth with as much precision. Avarice may be inspired by the most noble motives, as well as the most ignoble; ambition proceeds also from very different motives. Balzac shows us three types of ambitious young men in Albert Savarus, in Lucien de Rubempré, in Rastignac. The first is ambitious because he wishes to win the love of a noble woman; the second, for love of poetry; the third, who is more of a positivist, for love of money, of comfort, of power. In the 'Peau de Chagrin,' Balzac touches the highest summit of philosophy; he shows us the inanity of all human desire—desire feeding, so to speak, on itself, always satisfied, and always tired of the object on which it has been allowed to prey. It is a long commentary on Solomon's "Vanitas vanitatum et omnia vanitas."

There is a side to Balzac which has always surprised me, and on which M. Barrière has not sufficiently dwelt: it is what may be called the Rabelaisian side—what some would call the *gaulois* side. The disciple of Rabelais does not appear often in the great novels, though you meet him there at times; he is especially found in the 'Contes drolatiques,' which are a clever imitation of the stories of our old *conteurs*, and in the 'Physiologie du Mariage,' which is a long, and, in my opinion, a somewhat monotonous and fatiguing satire on the institution of marriage. The gayety of Balzac—a broad sort of gayety—has left its mark in the conversations which take place during the orgies of his young heroes, his journalists, his poets, his actresses, and courtesans; you can see also a trace of it in the childish pleasure with which he narrates in some novels the practical jokes played by some of his secondary characters.

M. Barrière has many pages on Balzac's style, which has been much criticised. The editor of a paper once said to Balzac, in looking with him over some proof-sheets, "Really, this is not French." "But," said Balzac, "it will become French." It has not become French; and, much as we may admire the power of invention and the genius of our greatest novelist, we cannot much recommend his style. It is too laborious, too intricate. Though few men have written so much, he always wrote with effort. His analyses are often painfully long; but one gets accustomed to these elaborate developments, and one has at times the same delightful sensations as the traveller who has been climbing a mountain, and who finds a beautiful view at the summit. M. Barrière compares Balzac, in this respect, to Saint-Simon, and the comparison is a just one. Who has not been fatigued in reading the memoirs of Saint-Simon, and who has ever regretted having read them? Who has not found himself richer for having gone through them? "Le style c'est l'homme," said Buffon. Balzac's moral nature was evidently very complex; he united in himself, and his correspondence shows it well, an exquisite sensibility and a certain

coarseness; he was humble and proud; he was a man of genius and a child. On the whole, we cannot help loving him, and we must ever be grateful to him.

Correspondence.

REPRESSION OF SOCIALISTS IN GERMANY.

To the Editor of The Nation:

Sir: In your issue of February 27, under the heading "The Aim of the German Socialists," the following occurs:

"The importance of the victories the Socialists have won in Germany can hardly be appreciated without remembering that they have been denied the use of the ordinary electoral machinery; that is to say, they cannot hold public meetings or publicly distribute documents. . . . They have, therefore, been obliged to resort to such odd means of canvassing as writing the names of their candidates in chalk on the walls of houses and on the sidewalks and distributing hand-bills surreptitiously."

This can easily produce a misleading impression of the position of the Socialistic party in Germany. In this city, and, so far as I can learn, elsewhere, this party enjoyed in the recent election all the advantages which their opponents did. Their campaign posters were just as large and their meetings just as public. The legislation against the Socialists by no means prohibits all activity to them, as the score of newspapers and periodicals which they publish in Germany clearly shows. The law provides for the interference of the Government in the case of societies, assemblies, or publications *directed towards the overthrow of the present political or social order*. It fails in giving too wide a scope to the discretion of the enforcing officer. A great variety of interpretations are obviously possible, and this has led in many cases to an over-harsh application of a law which, considering the offences that provoked it, cannot be unqualifiedly condemned. An example of extreme sensitiveness on the part of the authorities occurred here recently, where a meeting was immediately dissolved because the orator, in the heat of the moment, compared the present social régime to that in a house of correction.

The famous Gotha programme of 1875 represents but a milder form of Socialism. It breathes a spirit of moderation unknown to the Socialism against which the law was directed. Those who regard the elysium of the Gotha resolutions as the happy outcome of a gradually effected social and economic revolution, may be classed as bold and harmless optimists. Others, however, bent on a practical and speedy realization of their dreams, form a most dangerous element in a State. At a congress held at Wyden (Switzerland) in 1880, it was decided to strike out the word "lawful," which conditioned in the Gotha resolutions the efforts to be made in realizing the desired ends, asserting at the same time that "this was not to be considered as a change of doctrine, as the great majority of German Social-Democrats had never given themselves over to the illusion that their plans could be peaceably carried out in harmony with the law." A succinct statement of their views is contained in the untranslatable sentence: "Will es nicht biegen von oben herab, so muss es brechen von unten hinauf."

As an excuse and justification for the moderation which, as they asserted, had characterized their conduct in the past, the members of the Congress confess that they regard it as the necessary condition of a successful revolution "that the principles of the party should be inculcated among the people, and these be drawn into the movement as a preparation for the coming world-convulsing change, with all its mighty accompaniments."

One of the chief organs of the Socialistic movement, the *Sozial-Demokrat*, in its issue of May 25, 1880, disposes of religion in the following terms:

"Only in the wholly degenerate condition of mankind which existed two thousand years ago could so idiotic (*blödsinnig*) a religion as Christianity have ever struck root or spread itself at all. Ever since it has directed its efforts not to the extinguishing of want and misery in the world, but to the employment of the same for its own purposes as a cloak to conceal its own sins and crimes."

Still, these are undoubtedly extreme cases. The platform at the recent election, as it appeared in this district, contained nothing more incendiary than that "the socialization of society in place of the ruling individualization, that war of all against all, must be the aim of the State and of legislation."

The present law against the Socialists expires September next, and in all probability it will not be renewed. Whether or no the absence of all restriction will prove the beneficence of the present limitation, remains to be seen.

James Harvey Robinson.

Freiburg, Baden, March 15, 1890.

THE MASSACHUSETTS SCHOOL LAW.

To the Editor of The Nation:

Sir: Mr. Schley's letter in the *Nation* of two weeks ago, and his reference to the Massachusetts school laws, lead me to think that a statement of those laws, in so far as they limit the right of private instruction, may be of interest to your readers.

In Massachusetts all children between the ages of eight and fourteen must receive instruction in the following studies: Reading, writing, arithmetic, English grammar, geography, United States history, drawing, physiology, and hygiene.

The place where the instruction is to be given is not specified—neither are the methods or details of study; the penalty for a failure on the part of a parent or guardian to give instruction in these branches is a fine for the first offence; and the machinery for enforcing the law is the ordinary process of the courts. In case the child does not attend a public school or a private school approved by the local school commitee, the burden (in case of prosecution) is on the parent or guardian to satisfy the court that the child was in fact receiving instruction in these branches.

In 1889 a vigorous effort was made by the set of pulpit agitators and their followers who have become known as the "school cranks," to induce the Legislature to subject all private education, whether given in private unapproved schools, at home, or otherwise, to the control of the local school boards. This attempt met with determined opposition from Protestant and non-sectarian private schools in Boston, as well as from the Catholic or parochial schools, and proved unsuccessful. The Legislature, after listening for weeks to fanaticism and socialism, preached under cover of alleged devotion to our public-school system, declined by an overwhelming vote to make the change in question. This year the attempt was renewed, but the opposition did not think it worth while to notice the effort; and an adverse report from the committee, accepted by the House without opposition, has quieted the agitation for this year.

The State control of private education is one of the worst applications of that vicious paternalism towards which one of the great political parties of the day is rapidly drifting; but it is only fair to that party in Massachusetts to add that, while all the school cranks are Republicans or Prohibitionists, and while the Republican managers in Boston have not hesitated to use this agitation as a means of electing a Republican Mayor, the Republican majority in our State Legislature has, during two sessions, had the good sense to repudiate the socialistic demands of those who pretend to be the friends of our common-school system, but who are in fact its worst enemies.

Boston, April 3, 1890.

COINCIDENCE, IMMIGRANT, AND OUTSIDER.

To the Editor of The Nation:

Sir: "To America we owe" these expressions, according to Mr. Joseph Angus's *Handbook of the English Tongue*, published in 1872.

Yet in none of its various senses has *coincidence* ever been shown to have originated in our country. The word was used by Lord Bacon in 1605, and by the Rev. William Sclater in 1626; and it was freely employed, among Englishmen, almost from their time till the foundation of the United States, as it has been ever since.

Still earlier was the appearance of the adjective *coincident*. From about 1621, under which year I find it in print, its occurrence is by no means unusual. The meaning which it has in my oldest quotation for it is, however, very peculiar: "But there may be an other thing *coincident* to some degree of men, the which, although it be not necessarie for their being, yet it is necessarie for their well being." Nicolas Sander, D.D., *The Rocke of the Church* (1567), p. 216.

As to *coincide*, I believe it to be extremely rare before 1700. Bp. Richard Mountagu, who died in 1641, has, instead of it, the factitious Latin *coincidere*: "With whose severall reignes the principall parts thereof [*i. e.*, of this Prophecy] must *coincidere* and accord." *Acts and Monuments*, etc., (1642), p. 134. Dr. Thomas Fuller likewise writes, in 1650: "Making three members, of his four sore judgements mentioned in the Prophet, *coincidere*, to interfeer, yea run all into one." *A Pisgah-sight of Palestine*, II., ix., § 39. These passages give evidence that a vernacular verb allied to *coincident* and *coincidence* was beginning, about the middle of the seventeenth century, to be desiderated by scholars.

With regard to the substantive *immigrant*, as Mr. John Pickering long ago pointed out, Dr. Belknap, in his *History of New Hampshire*, was, probably, the first to venture it. This useful word, and also the revivals *immigrate* and *immigration*, have since come to be in perfectly good repute. Southey, it may be added, in a letter dated 1805, speaks of "*immigrant* monastics." See the *Life* of him by his son (1850), Vol. II., p. 323. If Americanisms were all as deserving of acceptance as *immigrant*, objection to them would be idle.

Of *outsider* the late Mr. G. P. Marsh was unable to trace the existence further back than 1844. Still, it was, most likely, at least a respectable colloquialism in England some time earlier. So, at all events, I think may be fairly inferred from the fact that it was used in 1833 by Mr. Albany W. Fonblanque, a writer studiously careful to avoid novel phraseology, and especially such as was at all tainted with vulgarity. I find that he writes:

For those he cannot entertain, the *outsiders*." *England Under Seven Administrations* (1837), Vol. II., p. 354.

Your obedient servant, F. H.

MARLESFORD, ENGLAND, March 17, 1890.

"MORALE."

TO THE EDITOR OF THE NATION:

SIR: In reply to the call of your correspondent, in No. 1291 of the *Nation*, for explanations of the use of the word "morale" in the sense of "moral tone," I suggest that the word "morale" in that sense is not French but Latin; adjective, neuter gender, used as a noun.

I have heard the word used in German in the same sense, with the article "das" (neuter gender), for instance: *Das Morale der Armee*, meaning the moral tone of the army, which corresponds with my suggestion.

Yours very truly, A. V. WEISE.

SARCOXIE, MO., April 3, 1890.

CODMAN'S BIBLIOGRAPHY OF LANDSCAPE GARDENING.

TO THE EDITOR OF THE NATION:

SIR: In the preparation of my 'List of Works on Landscape Gardening' which you take the trouble to criticise in your number of March 27, I endeavored to include only books which treated of the subject itself and to exclude gardening and horticultural works. Such a line is a very difficult one to draw, and probably no two persons who undertook a work of this sort would arrive at the same result. I purposely omitted some of the books mentioned in your review, for they did not, according to my judgment, deserve a place in the list. Chambers's 'Plans of the Gardens at Kew,' for example, is simply a description of that place; Taylor's book is architectural, not landscape gardening; and Parey's 'Verlagskatalog' nothing more than a bookseller's list. Lefèvre's 'Les Parcs et les Jardins' I have included, but it was overlooked by your reviewer.

In *Garden and Forest* for March 12 I asked for suggestions and additions to my list, for I realized that it was incomplete (it would be strange if it were not); but, to carry out my original intention, any additions that I may make must treat distinctly of Landscape Gardening. Yours, etc.,

HENRY SARGENT CODMAN.

BROOKLINE, MASS., March 31, 1890.

[In his preliminary remarks Mr. Codman gave no hint of limiting his scope, but said, "The list is as complete as I have been able to make it." This and the frequent insertion of such titles as "Paradise Lost, book iv," and "Rousseau's Héloïse, part iv," led us to suppose that he intended to include all works bearing upon the subject, as, for example, Taylor's, which gives "designs for gates, garden seats, alcoves, entrance gates, lodges, prospect towers," etc.—ED. NATION.]

THE MARYLAND ARCHIVES.

TO THE EDITOR OF THE NATION:

SIR: While thanking you for your very kind notice of the last volume of the Maryland Archives, I will mention that the correction of Leister's name will be found in the "Notes." The index of names contains only the forms found in the original manuscripts.

I am, sir, etc., WM. HAND BROWNE.

THE BOSTON ART MUSEUM.

TO THE EDITOR OF THE NATION:

SIR: I should be sorry to think that what has been said of the distribution of the casts in the Boston Museum would cause annoyance to Mr. Robinson, whose great services to archæology I admire and envy. His report, and even the passages from it which his letter quotes, seem to state all that I have asserted: I have only given details. It is probable that Mr. Robinson regrets more than any one else the admitted lack of perfectly logical arrangement. The critic cannot appreciate the local accidents which have caused this shortcoming; he can only point it out and express his sense of its importance. The grouping of works of art according to their epoch, style, or school is the most important point; everything else—symmetry, convenience, beauty of grouping, and the rest—should give way to that. R. STURGIS.

NEW YORK, April 5, 1890.

Notes.

J. W. BOUTON sends us the prospectus of an illustrated catalogue of the decorative-art museum of Frédéric Spitzer, to be styled 'La Collection Spitzer,' and to fill six folio volumes. There will be 350 full-page plates of a very high order, one-half colored, besides more than twice as many representations in the text from pen-and-ink sketches. This collection embraces from thirty to forty divisions, of ivories, tapestries, terracottas, bronzes, illuminated MSS., Venetian and Bohemian glass, locks and keys, arms and armor, Faïence and Palissy ware, enamels, rock crystals, etc., etc. The execution of the letterpress will leave nothing to be desired, to judge from the sample.

Charles Scribner's Sons will publish 'Personal Creeds; or, How to Form a Working Theory of Life,' by the Rev. Newman Smyth; 'The Nature and Method of Revelation,' by Prof. George P. Fisher; and 'The Philosophy of Preaching,' by the Rev. A. J. F. Behrends.

Porter & Coates, Philadelphia, announce 'Disraeli in Outline,' by F. Carroll Brewster: a concise biographical sketch and a careful summary of Disraeli's novels.

D. C. Heath & Co., Boston, will add the following to their Modern Language Series: 'Practical Lessons in German Conversation,' by Prof. A. L. Meissner of Queen's College, Belfast; 'A Primer of French Literature,' by Prof. F. M. Warren; and a 'Deutsche Literaturgeschichte,' by Prof. C. Wenckebach of Wellesley College, to make three volumes.

Ginn & Co., Boston, will have ready next month a 'Reference Handbook of English History for Readers, Students, and Teachers,' by W. H. Gurney; 'The Nine Worlds,' studies from Norse mythology, by Mary E. Litchfield; and Wentworth's 'School Algebra.'

'Cassell's Complete Pocket Guide to Europe' renews itself for the approaching tourist season. It is no bulkier than hitherto, and we observe no changes except such as pertain to the personnel of our diplomatic and consular service.

Mrs. Clarkson Potter's 'To Europe on a Stretcher' (E. P. Dutton & Co.) has a brief message to deliver, namely, "It can be done." The author cites her own experience on two journeys, and supplies such anecdote and incident as was needed to make a book of her tract.

Mr. W. H. H. Murray, who attained notoriety as a writer by his Adirondack tales, has not gone far afield in preparing a volume on 'Lake Champlain and Its Shores' (Boston: De Wolfe, Fiske & Co.). It is a medley of personal adventure, historic gleanings, and practical directions for sailing and fishing on the waters of the lake. An index was more clearly needed than the author's portrait, but none has been provided.

The Browning Society of Boston has made a pretty brochure of its memorial proceedings in King's Chapel on January 28, 1890. The Chapel itself is freely commemorated in photographs, and there is a portrait of Browning in his latter and grizzled years. Mr. C. P. Cranch, in the course of his remarks, said: "At the time I first knew him [Browning], he was thirty-seven years old. He wore no beard or moustache, and his hair was nearly black."

The Messrs. Appleton have added to their "Town and Country Library" 'Robert Browning's Principal Shorter Poems,' which will be found a convenient selection. It should be noted that the poet's final readings have not been followed, and that the punctuation has not been scrupulously watched, as is more needful in the case of Browning than of any other poet who ever wrote.

'Cooper's Biographical Dictionary' is not one that we should have marked for a fresh lease of life. First, its typography is calculated to deter the buyer and student, being very condensed; and in other respects the work was not distinguished in its class, except in being fuller of the obscurer British names, and in this particular Leslie Stephen's 'Dictionary of National Biography' of course supersedes it. All the faults which we pointed out in the first edition (in 1873) have gone untouched, and, in fact, there is no pretence at revision. The original cumbersome single volume has been split in two, and a supplement brings the work down only to 1882. As we observe no attempt to supply the omissions of the main dictionary (which excludes living men, by the way), we have really in the supplement the dead of a decade, and this narrow survey has at least the advantage of revealing the world's constant supply of great men. The Dictionary, with a change of publishers, now takes its place in "Bohn's Reference Library" (New York: Scribner & Welford).

We have received two new comparative grammars of Greek and Latin, both elementary and avoiding controversy. Messrs. King and Cookson's (Oxford: Clarendon Press; New York: Macmillan) is mainly an abridgment of their earlier work on the same subject. The only part not taken from the larger volume is a chapter on comparative syntax, in which the authors follow Delbrück and Monro pretty closely. But they seem not to be aware that Delbrück has modified his theories on the "wish" meaning as fundamental in the optative. Moreover, the statement that the subjunctive in final clauses is the subjunctive of "will," while the optative in similar clauses is that of "wish," scarcely commends itself to readers of Prof. Goodwin's latest writing on the relations of these words. However, the book certainly gives a fair statement of the main principles of phonetics and morphology, with little discussion, but plenty of illustration, and will be a useful guide to beginners in the science. Its chapters on accent and on strong and weak roots may be especially mentioned as exponents of the views of the "new school" on these topics.

The second edition of Prof. Victor Henry's 'Précis de Grammaire Comparée' has just been translated into English by Mr. R. T. Elliott (Macmillan). The original appeared in

1888, and is therefore known to scholars. The author lays claim to no originality, but simply endeavors to present the latest results of Indo-European philology, and gives us a comparative grammar in the strict sense of the term. Here and there we could wish for less brevity of treatment, as for instance in what is said about accent, which is made to appear too much of a phenomenon. The bibliography of the subject prefixed to the work will be found useful, and there are full indexes of the words treated.

It has sometimes maliciously been said of the New York Chamber of Commerce (considering how little of a representative body it is in action), that the best things about it are its library and its portrait gallery. The Secretary, Mr. George Wilson, has just edited a handsome volume descriptive of this gallery, which now numbers eighty paintings and four busts. As a civic collection it is very notable, as a few names will indicate: John Jacob Astor, Jacob Barker, De Witt Clinton, Peter Cooper, William E. Dodge, Moses H. Grinnell, George Griswold, Alexander Hamilton, and Robert Lenox. But also one finds in their company John Bright, Richard Cobden, Joshua Bates, John Sherman, George Washington, etc. Mr. Wilson furnishes a biographical sketch in each case.

In the *Sidereal Messenger* for April (published at Northfield, Minn.) is an account of the very extensive Wolff-Leavenworth collection of portrait engravings at Syracuse University. Primarily got together in the line of distinguished physicians of all ages and countries, it was increased by absorption of other collections till it numbered 12,000, in which more than 300 astronomers and mathematicians are included. The *Messenger* gives a list of the more distinguished astronomers.

Small notice was taken of the death in May, 1889, of a once famous dragoon, Gen. William S. Harney, as much the typical Indian fighter of his day as Gen. Miles or the late Gen. Crook, but on a lower level of humanity. An early portrait of this rugged character precedes an uncontroversial sketch of his life in the *Journal* of the United States Cavalry Association for March (Fort Leavenworth, Kan.).

A fairly good portrait of Prof. Bryce—a process print—forms the frontispiece of the Philadelphia *Book News* for April. Not a few of our readers might be glad to procure it for their copies of his 'American Commonwealth.'

The *True Commonwealth* is the title of a new monthly quarto journal launched in Washington on April 1. It aims to effect the repeal of all monopolistic and class legislation, and the "nationalization" of railways, telegraphs, and other essentially monopolistic enterprises, along with municipal ownership of street railways, gas-works, etc.

The nineteenth of the Economic Tracts issued by the Society for Political Education, at No. 330 Pearl Street, is 'References to the Constitution of the United States,' by William E. Foster of the Providence Public Library—a new edition of that published in 1881. It is a very copious guide to the influences which resulted in the framing of the Constitution, its actual construction and adoption, and its vicissitudes since 1789. An appendix makes selections from the Supreme Court's decisions and opinions from 1865 to 1889. The student could not ask for better assistance.

The statistics of manufactures in Massachusetts for the year 1888 have been tabulated and are now reported by the Labor Bureau. As these statistics have been collected for but three years, they are to be looked upon rather as a necessary preliminary to valuable results than as of present usefulness. The census of 1885 disclosed the existence of some 23,000 manufacturing establishments, while this report deals with returns from less than 4,000. Still, it is possible to learn something from the experience of three years, and for many purposes it is more convenient to work with a small number of typical cases than to attempt to generalize from them all. Thus, the census shows that about 90 per cent. of the value of manufactures was produced by some 4,500 establishments. On the other hand, the existence of nearly 19,000 establishments, with an average product of less than $4,000 each, is a circumstance that deserves the attention of those who have felt alarm at the supposed swallowing up of the small industries by the great ones. In fact, nearly 7,000 establishments produce on the average less than $1,000 a year. At the other end of the scale there are 66 establishments each producing an average value of over $2,000,000 a year. For most purposes we should prefer to consult the trade journals and market reports rather than this compilation. Statements made to Government officers by private persons about the details of their business are not very trustworthy evidence.

The foreign trade of Persia is the subject of the last of the interesting series of letters from the Hon. George Curzon to the London *Times* on that country. After describing its eleven principal trade arteries, he shows that Russia controls the greater part of the trade of the northern provinces through her rigidly exclusive policy in respect to her railways and the navigation of the Caspian, now merely a Russian lake. Equally supreme are the English and Indian merchants in the southern provinces, Great Britain having the trade monopoly of the Persian Gulf. The great struggle is for the middle region, and here, notwithstanding the strenuous efforts of the Russians, English interests are decidedly in the ascendant. The total volume of trade with the United Kingdom Mr. Curzon puts at £2,500,000 per annum, or more than ten times the amount given in the last edition of 'Whitaker' and the 'Statesman's Year-Book.' One of the great obstacles to its increase is "the difficulty of remittances, arising in the main from the constantly fluctuating rate of exchange—a point in which the institution of banks in Persia may be expected to afford some relief. Another is the utter contempt for the most elementary principles of contract that is freely displayed by the Persian merchant," and the absence "of any tribunal for enforcing legal obligations."

"The Mountain System of the Balkan Peninsula," by a member of the Austrian General Staff, is one of the most noteworthy of the papers in the recently issued volume of *Mitteilungen* of the Imperial Geographical Society of Austria. It is illustrated by two admirable maps, the one hypsometric, showing the relative heights of the region, the other defining the limits of the various distinct chains which make up the whole system. Closely connected with this are papers on the Illyrian and Montenegrin mountains, though the accompanying maps are drawn in a different manner. The former are delicately shaded contour maps, while in the latter the chains are designated by black lines varying in width with the height, the passes and single peaks being very distinctly shown. For engineering and military operations this method seems to possess some advantages. The principal African paper is a description of Count Teleki's journey in the Galla country; but there is a very minutely detailed map of the Congo from Stanley Falls to Stanley Pool, and several of the Rosetta mouth of the Nile, showing its changes during the last two centuries.

In behalf of a syndicate of capitalists, M. Prompt, a French engineer, has submitted to the Egyptian Government a project of prolonging the railroad along the bank of the Nile from Girgeh to Assuan, from which point the river is to be opened to navigation to the confluence of the White and Blue Niles at Khartum, a distance of some 1,200 miles, by means of twenty-two locks to be constructed across it at determined points. M. Prompt's memorial asserts that the railways of Upper Egypt can never be made remunerative until a lively traffic is established with the Sudan. He estimates the cost of the contemplated enterprise at eighty million pounds, or fifteen for railroads, fifty-eight for the locks, and seven for unforeseen outlays. As, in the present unpacified state of the Upper Nile, even a military march from Massowah via Kassala to Khartum is out of the question, the proposal is rather more premature, relatively to existing conditions in Egypt, than it would have been many years ago, when a similar plan was mooted by Sir Samuel Baker.

A number of Italian universities, notably that of Naples, recently suffered an interruption in their courses of instruction through students' strikes and kindred manifestations, for which the local prevalence of influenza was made a pretext. The incident has been of service in attracting public attention throughout Italy to the way in which some of her universities are fulfilling, or failing to fulfil, their high educational mission. Considerable impatience has long been felt with the reluctance the Government has manifested to deal summarily, by cancelling their charters, with those of them that have most notoriously outlived their usefulness. On the other hand, there is also much chafing, both in the universities and in the secondary colleges or *licei* that are tributary to them, under the oppressive uniformity of the programmes of instruction marked out by the central authority of the Department of Public Instruction at Rome. As general editor of the new organ, *La Riforma Universitaria*, published at Bologna, with the coöperation of editorial contributors from all the leading Italian schools, Prof. Tullio Martello solicits contributions from "all scholars and students who are prompted to pass criticisms on our present university organization, or to deplore the methods of instruction prevalent in our universities."

—The April *Century* is unusually varied in its contents. Several of the articles are brief, but they convey a considerable amount of information, and illustrate the ever increasing compactness and condensation of our periodical literature. Especially noticeable for this directness, thoroughness, and grasp is the contribution to the series of social papers, which describes the field and characteristics of the labor problem, with many of its special factors presented with some detail, such as tenements, insurance, Sunday work, etc. As a statement of conditions and proposed remedies from one point of view this paper has much educational value. The description of the African slave trade, with its illustrations, by one of Stanley's lieutenants, is a forcible article which should stimulate interest in the extirpation of this cruel evil in its last stronghold, among the Arab hunters and the predatory tribes; and the means of doing it seem to grow easier. Another humanitarian paper is Mr. Kennan's criticism of the late Siberian outrages. The Director-General of the Paris Exposition makes a number of practical suggestions in regard to the World's Fair. Japan, the Fur-Seal

Islands, and the Shoshone Falls are dealt with in the department of travel; the old Poetic Guild in Ireland is the representative of literature; Prof. Putnam's admirable paper upon the Serpent Mound of Ohio stands for science; and Mr. Cole's engravings after Bellini, as excellent as any in the series, add the art contribution. In addition to all this, there are many poems of facile workmanship, the usual amount of fiction, and other general papers, among which we can note only Col. Higginson's reminder to Harvard of how slight attention is being paid to the art and theory of literature in university education.

—There has been during the last month in France a new outbreak of the old quarrel about cremation. Most people doubtless have thought that this was no longer, at least in any metaphorical sense, a burning question, but they have been mistaken. The subject has been laid before the Pope, and by him referred to the Supreme Congregation of the Holy Office, and the conclusions to which the Congregation came have been embodied in a Papal rescript which the Cardinal Archbishop of Paris has lately promulgated to the faithful. Henceforth it is only the ashes of heretics that will find repose in a columbarium. It is curious to note the reasons upon which this decision may be supposed to rest. Cardinal Richard goes back for them to the Fall of Man and the primal curse. Ashes to ashes is not "dust to dust," he says, and, besides, there is a natural respect for the body which is violated by cremation, and also a Christian respect for it in view of the resurrection. These considerations being insufficient to resolve the mind of the *Figaro* of all doubt in the matter, that newspaper applied to "one of our most distinguished ecclesiastics," the author of 'Bonté,' who gave it a categorical answer under four heads, leaving out, as he says, the merely sentimental reasons. The Abbé declares that incineration is a pagan custom; that it is contrary to the example of Christ; that it lacks the respect for the human body which the Church has always cherished; and, lastly and chiefly, that it has been revived by "nos ennemis les plus directs," the Freemasons, who hit upon this way of disposing of the bodies of atheists and infidels in order to avoid sacerdotal intervention and Christian funeral rites. The force of this reasoning will appear to most people to be less than coercive, but it is safe to say that, backed by the Papal rescript, it will check, at least for a while and among the upper classes in France, the practice that it rebukes. For ourselves, we find something amusing in the sight of our old friend, the *argumentum a gaudio infidelium*, reappearing under Papal sanction, and settling, more or less infallibly, a question of public sanitation.

— Those to whom experiments for a remodelling of society appeal must be saddened by the last phase in the history of the Altruist Community of St. Louis. "We find it necessary," says Mr. Alcander Longley, its late President, in the columns of its organ, the *Altruist*, "to announce to our readers that the Altruist Community is dissolved by mutual consent of all the members. The reasons for the dissolution are some of them as follows: Since Mr. Smith withdrew late last fall, there have been but two male members of the Community, George E. Ward and myself, and our natures and our methods of doing things are so different that there has been more or less discord at different times since, and not at any time real harmony." One of the causes of disagreement was Mr. Ward's ambition to be "appointed or elected as one of the editors and managers of the *Altruist*," which Mr. Longley had decided views about controlling himself, saying that he "would not edit and manage a paper with Mr. Ward or any one else." This led to the calling of a special meeting to elect a President in Mr. Longley's place, and the success of Mr. George E. Ward and two Mrs. Wards, who formed a majority of the Community. Meanwhile, Mr. Longley admits, "I have during our dissensions said some very uncomplimentary and disrespectful things to Mr. Ward, for which I have told him I am sorry. Among them was, I charged him with being an Anarchist and with bullying his wife to get her to vote as he desired in the Community, and with having acted fraudulently in keeping the record of the Community as Secretary, and in the election of himself as President, as well as other reproaches, all of which I hereby retract and apologize for." Mr. Longley, and the remaining member of the pentagonal Community, Miss Travis, withdrew when Mr. Ward's journalistic aspirations were about to be gratified. But we are glad to say that there is still hope for the future of the Community, as the reader will see from the following statement, which appears, under date of March 31, at the bottom of the last column of the same issue of the *Altruist:* "Mr. Longley and Miss Travis have united again under the name of the Altruist Community, with the same agreement, and will continue their business together as before, and receive any acceptable persons as members."

— The forty-seventh report of the returns of births, marriages, divorces, and deaths in the State of Massachusetts brings down the figures to the end of 1888. The tables are numerous and extremely elaborate, extracting from the returns answers to nearly all the conceivable questions that can be asked of them. Most of this information is of value only to the medical profession, but there are some generalizations that are of the widest interest and of the most profound importance, as they seem to establish a practical solution of the "population problem." For the period 1861-1880 the natural increase of population, indicated by the excess of the birth-rate over the death-rate, was smaller in Massachusetts than in any European country except France and Hungary, nor has the rate materially varied within the last decade. It is not far from 63-100 of one per cent., or less than one-half the rate in Great Britain. The rate in Hungary is connected with a very high death-rate, and it may very well be disregarded as relating to a different state of civilization. Excepting Hungary, the number of marriages in proportion to population is greater in Massachusetts than in any European country. We have, then, a society in which marriages are numerous, but in which their offspring is limited, the death-rate moderate, and, as we know from other sources, wealth increasing. The inference is, that the standard of material comfort is rising, and it is clear that, for the present at least, man's command over nature is extending much more rapidly than nature's command over him. There is probably no thriftier or more progressive community than Massachusetts to be anywhere found, and few places where the chances of long life are better than in most of her towns. It is noteworthy that the birth-rate in France is almost equal to that in Massachusetts, while the death-rate is about one-fifth higher. The significance of these figures depends in many ways upon the factors of immigration and emigration, and any statistician who can determine the respective effects of these causes will render a most valuable service.

—It is well known that the greater part of the population of Massachusetts is of foreign origin, reckoning from about the middle of the century, but it is rather surprising to learn that the excess of children born of foreign parents over those of native parentage is about 3,000, and is still increasing. The number born of mixed parentage is more than one-fifth of the whole, and is, of course, increasing. While the birth-rate of the native population is about 18 per 1,000, that of the foreign population is more than 54 per 1,000, which is considerably higher than that of any other country. On the other hand, the proportion of deaths among the foreign-born as compared with the natives is only as one to three. But it is to be remembered that one-fifth of all the deaths are of children under one year of age, and one-third of those under five years. The probability of life in the case of immigrants, who are for the most part over five years of age, is, of course, much above the average. We do not find, however, that there is any satisfactory statement of the rate of mortality among the children of immigrants, although it may be deducible from some of the tables. The returns are edited by Dr. Samuel W. Abbott, and the very useful comments are also by him.

GOODWIN'S NEW MOODS AND TENSES.

Syntax of the Moods and Tenses of the Greek Verb. By William Watson Goodwin, LL.D., Eliot Professor of Greek Literature in Harvard University. Rewritten and enlarged. Boston: Ginn & Co.

EVERY classical scholar in America will welcome this new and enlarged edition of one of his best friends with keen pleasure and genuine pride that the author is one of *us*. About twenty years ago we heard a professor in a large university say that he considered Goodwin's 'Moods and Tenses' the best work on the subject in any language, and no doubt hundreds of others on both sides of the ocean share that opinion. If this was true of "a book written in the enthusiasm of youth as an ephemeral production," as Professor Goodwin says in his preface of 1889, what may we not expect of the work in its present form, revised as it has been by the author "under the greater sense of responsibility which doubled years and more than doubled experience have brought him"? The book itself is more than doubled. Over 4,800 examples are indexed, as against the more than 2,300 of the previous edition. The page (as printed) is an inch longer and a quarter of an inch wider than before; and we have pages xxxii, 464 to offset xv, 264. The appendix has five heads to it now, the former appendix having had only two. It is thus apparent that the book has been expanded in every direction, and we have here the carefully gathered results of the author's mature work in the field in which nearly a generation ago he achieved such brilliant success. What he did then has earned him the lasting gratitude of nearly a generation of students; and this new work, which greatly increases their indebtedness, will, we trust, do even more for the next generation than the smaller book has done for us. But the smaller book is by no means superseded—at least we hope not. While teachers will of course have the new edition for their own study, they will still want the other for the use of their classes. Professor Goodwin himself says:

"It is hardly necessary to remark that the work, in its present enlarged form, is not intended for use as a grammatical text-book in the class-room, except perhaps the portion printed in the largest type. On the other hand, it is hoped that the increased fulness and the greater space given to discussions will

make the work more useful for private study and for reference."

The last thirty years have been exceedingly busy ones in the realm of Greek syntax. The stimulus has been felt over a widely extended area, and one of the chief factors—perhaps the chief one—in educating the English-speaking world to a clear and intelligent understanding of the subject has been the predecessor of the book under review. In the editions of Greek authors for school use it has held the leading place among the authorities referred to. Since its appearance, however, theoretical syntax has become more and more prominent as the study of comparative grammar has advanced; moreover, the foundations are now being laid, broad and deep, for the historical syntax of the Greek tongue. The present is the day of statistics in language study, the chief apostles in this line being Professor Schanz and his trained band of investigators. As *Heft* after *Heft* of the famous *Beiträge* appears, we feel that one more solid pier is sunk for the splendid superstructure that is to span the current of Greek thought from Homer to Aristotle.

A comparison of the new 'Moods and Tenses' with the old shows the difference between 1860 (or say 1865) and 1890 in these two respects. Speaking of his first edition, Professor Goodwin says:

"I then attempted chiefly to 'give a plain and practical statement of the principles which govern the relations of the Greek Moods and Tenses,' avoiding theoretical discussions as far as possible. . . . Something more than mere statement of facts has been attempted in the present work, although nothing has been further from my thoughts than a complete theoretical discussion of all the principles which govern the use of the moods. He who ventures far upon that sea is in great danger of being lost in the fog or stranded; for, while comparative philology has thrown much and most welcome light on the early history of the Greek language, it has also made us more painfully aware of our ignorance, although it is a more enlightened ignorance than that of our predecessors."

Additions or amplifications of theoretical points are found here and there throughout the volume. We note especially the pages (107-112) on the development of clauses with ἵνα, ὡς, ὅπως, ὅφρα, and μή The paragraphs (§§398-401) on the origin of the Greek conditional sentence are added. Remarks (*a*) and (*b*) on pages 95 and 96 of the old edition are expanded to nearly two pages (149-150) in the new. The treatment of the apodosis without ἄν (ἔδει, etc.) occupies nearly four pages in the smaller work; the same topic has eight pages and a half given to it in the large work. "Apodosis contained in the Protasis" is a new heading under conditional sentences. "Consecutive clauses with ὥστε, etc.," are discussed through thirteen pages (221-233). A note ten lines long in the elder book (note 6, pp. 228-229) has swelled to two pages (357-358) in the younger. The potential optative and indicative have a special section of nine pages and a half devoted to them (pp. 77-86).

Statistics of constructions are given in footnotes *passim* and in appendix iii, and form a striking feature of the new book. How many persons will read these statistics with scarcely a thought of the enormous labor required to make some of these short statements! What does it mean to say truthfully that a given construction—*e. g.*, the use of the future participle to express purpose—does not occur in Cicero? It means that through nearly 4,900 Teubner pages of Latin this particular construction has been watched for with close attention, and by at least several readers, or by one reader several times; for even a temporary flagging of the attention from this particular point may cause the reader to overlook some instance of the construction. We assert here, what we believe to be a fact, that as common a construction as ἐλογίζοντο ὡς εἰ μὴ μάχοιντο (or μαχοῖντο), αἱ πόλεις ἀποστήσοιντο, cannot be found in Thucydides. No doubt this statement will cause some who are reading this author to watch for the construction, and after a while one of two things may happen: our statement will be disproved, or this little fact may be added to our knowledge of Thucydides. If any one will turn to page 114 of the new 'Moods and Tenses,' he will find in five lines the proportion of subjunctives to optatives after past tenses in pure final clauses, and after verbs of fearing, given for Homer, Pindar, Æschylus, Sophocles, Euripides, Aristophanes, Herodotus, Thucydides, Lysias, Isocrates, Isæus, Demosthenes, Æschines, Plato, and Xenophon. "In all writers before Aristotle 528 : 894." Evidently, while we have slept, Dr. Weber has been hard at work threading his way across all these multitudinous pages.

Professor Goodwin's work has always been marked by a praiseworthy absence of attempts at super-subtle and metaphysical refinements. While carefully distinguishing things that differ, he does not force useless distinctions merely because there is a difference in the form of expression. He acknowledges his indebtedness to Madvig "for the first conviction that the syntax of the Greek moods belonged to the realm of common sense." The seed thus sown by the great Dane fell upon good ground; and, thanks to Madvig's disciple, the Americans who have grown up on the 'Moods and Tenses' have never had any other idea, we imagine, than that common sense prevailed in Greek as well as anywhere else. The refusal to try to define the moods is one example of this; the treatment of ἄν according to usage and not according to some theory (page 144[1]) is another. The preliminary statements about the different kinds of conditional sentences (Grammar, §220; M. and T. old, §48; new, §§390-395) have always seemed to us to be a capital illustration of reducing a problem to its simplest terms. Nor have we ever been able to think out any better way of giving the distinction between ἦν with the subjunctive and εἰ with the optative in future conditions, than by simply saying, with Professor Goodwin, that the latter is a "less vivid" form of expression. Whatever difference exists between "if you do that, you'll get a thrashing," and "if you were to do that, you would get a thrashing," just that much difference—no more, no less—seems to exist between the two constructions in Greek. On p. 17 (end) occurs a remark further illustrating this common sense: "But the Greeks, like other workmen, did not care to use their finest tools on every occasion; and it is often necessary to remember this if we would avoid hair-splitting."

One of the inalienable rights of a reviewer is the privilege of commenting on points in which he differs from the writer whose work he is reviewing; hence the following criticisms. At the end of §22, which explains the difference between relative and absolute time, occur the words "but not in protasis," which are not in the old edition, and which are too brief, we fear, for a clear understanding of their scope and purport. At least, we confess that we do not understand them, because we doubt the statement in the only meaning we can attach to the words. In §33 the statement about the historic present is enlarged by admitting that it may sometimes be used for the imperfect. This is well, as far as it goes; but we doubt the need of "sometimes." What is the objection to saying that *every* historic present may be replaced by the imperfect? The aorist is the unadorned narrative tense, and the imperfect is the picturesque narrative tense; and admitting that the historic present is the "animated" tense of narration, who is to say us nay if we choose to exchange animation for picturesqueness rather than for mere unadorned statement? This has a bearing on §119. Many so-called imperfect infinitives may represent the historic present just as well as the imperfect; *e. g.*, in the example quoted from Plato, Symp. 175 C, we can imagine no reason why δειπνοῦμεν, εἰσέρχεται, κελεύει and ἐῶ, are not as correct representatives of the infinitives as the imperfects are. We do not pretend in the least that the present has any superior claim; we only contend for full equality. The remarks about the aorist in §58 might well be expanded to take in cases where an aorist indicative is used in generic sentences instead of the constructions mentioned in §§90 and 91. Thus, in Thuc. 2, 35, 2, ὃν ἥκουσε, in connection with a generic present in the main clause. In Dem. 23, 96, ὅτε ἔθεντο =ὅταν θῶνται; and in 23, 97, εἰ ἠγνόησε (=ἦν ἀγνοήσῃ) is followed by εἰ with perfect and present indicative, all three generic. In §103 "very often" might be replaced by "usually," to conform more nearly to Grammar, §118, 2, which, we feel certain, conforms to the facts. In the 'Hellenica,' for example, according to a count made some years ago, ἐν παρέργῳ, there are nine instances of the perfect optative expressed by the compound form (1, 5, 2; 3, 5, 23; 4, 3, 1, and 8, 16 and 8, 35; 5, 2, 32, and 2, 35; 6, 2, 3, and 5, 52), and only four expressed by the simple form (3, 2, 8, and 5, 23; 4, 3, 10; 5, 2, 3), and one of these is τεθναίη (4, 3, 10).

We miss in the new edition, as in the old, and as we miss everywhere, in fact, recognition of the fact that the infinitive, present or aorist, represents the imperative (or, if μή and the aorist infinitive, the subjunctive) of *oratio recta*. This has always surprised us. If in Latin it is a fact that the imperative of O. R. becomes the subjunctive of O. O., it is equally a fact that in Greek the imperative is transferred to the infinitive, as in English. Thus, the first example under §110 would really belong under §123[a], if there were such a section, as the direct discourse is ἡ θύρα κεκλείσθω· §146 brings forward a new point in regard to the aorist participle in connection with the present or imperfect of τυγχάνω, λανθάνω, etc. It seems natural that the point here made should be true where the *present* of these verbs is used; but where it is the imperfect, we confess that we do not feel so certain about it. At any rate, it must often be a mere matter of how one chooses to translate. The example from Thuc., 3, 111, is perhaps hardly a case in point, considering the uncertainties of the passage; and Lys. 12, 27, is paralleled by Thuc. 8, 105 (overlooked by Classen in his *Anhang* to 3, 111). The construction is said to be a rare one, a statement certainly borne out by Thucydides. He uses the present and imperfect of τυγχάνω thirty-five times (see Von Essen), and with the aorist participle only twice, even counting 3, 111, as an instance. (2, 74 is not a case in point, as the aorist participle here is adversative.) The perfect participle occurs three times (3, 98; 6, 96; 8, 105), and the present participle twenty-seven times (§147, 2).

The footnote on page 50 of the old edition is omitted in the new, Professor Goodwin having apparently fully satisfied himself that his principle is in such strict accord with the common sense of the thing as to need no defence. An interesting example bearing upon this point is Pl. Phædo 106 A, where ὁπότε ἀπαγάγοι, seemingly ideal future, is used between the protasis and apodosis of an unreal present conditional, which is immediately followed by the aorist in-

dicative with ἄν. In French, German, and English, unreal present and ideal are so often identical in form that we have at times had a keen suspicion that even in Greek, in spite of the sharp formal differentiation of the two, the distinction was not always plainly felt, especially as Homer's usage (§438) was likely to lead an Attic writer astray, once in a while, at least. It very seldom occurs, it is true; but the combination mentioned in §504, may possibly have some such explanation. To the two examples there given add Isoc. 4, 102, and also Pl. Phædo 108 A, where οὔσης=εἰ ἦν, and Rep. 504 A, where μνημονεύων=εἰ ἐμνημόνευον, the apodosis in both being optative with ἄν. §535 is an addition that we are glad to see, having for a good many years insisted on this limitation in generic sentences, and denied the application of Note 1 on page 131 of the old edition to temporal sentences. We hope some day to see Dr. Schanz's co-workers give us the statistics of Attic prose on this point. We commend it to their attention.

In the treatment of ἕως we note again the absence of a statement to the effect that ἕως in the sense of 'until' regularly has the *aorist;* with any other tense it means 'while,' usually in the sense of 'as long as.' The constructions for these two meanings are nearly paralleled throughout, and why our grammars have failed to notice that it is the *tense* that determines the *sense* of the group of words of which ἕως is the representative, we have never been able to understand. Exceptions occur, of course, but they are not common enough to upset the rule. Kühner's note on Xenophon Mem. 3, 5, 6, is a very striking example of how the distinction is ignored; for he actually tries to justify the meaning 'as long as,' which ἔστ' ἄν must there have in spite of the aorist, by referring to a passage in which ἔστ' ἄν with the same meaning is followed by the present! And Mr. Phillpotts, the editor of an excellent textbook, selections from the 'Hellenica,' in trying to make Xenophon's Greek in 2, 3, 31, a little easier, changed the tense after ἕως, without perceiving that he thereby changed sense to nonsense! The mystery is, that the grammars are so extremely careful to give the constructions in the meaning 'until,' and quietly dismiss the other meaning with the statement that it needs no special treatment, although the two, as we have said, run side by side nearly the whole way, being governed by the same underlying principles. The fullest and best statement of the usage of ἕως that we have ever seen is the one given by Professor Gildersleeve in the *American Journal of Philology*, iv, pages 416-418; but even this summary is so compact as to leave unnoticed the generic constructions in the subjunctive and optative, *e.g.*, ἕως ἄν + present subjunctive, Anab., 1, 4, 8; 3, 1, 43; Dem. 9, 69; aorist optative, Xen. Cyr. 8, 1, 44 (ἕστε). For ἕως ἄν + aorist subjunctive, unless we count Xen. Mem. 3, 5, 6, and ἕως + present optative in generic sentences, we have no examples to give, but we have never made any point of collecting them, as they would simply be illustrations of broad principles of Greek syntax.

Under the head of "Wishes" we wish notice had been taken of βουλοίμην ἄν and ἐβουλόμην ἄν. It happens that βουλοίμην ἄν is not indexed, and § 246 contains no cross-reference to § 236 (end), where we have, in less than a line, all that is said about βουλοίμην ἄν, so far as we have discovered. As to ἐβουλόμην ἄν, we should like to ask if it is not far more common in Attic prose than εἴθε or εἰ γάρ with the secondary tenses of the indicative. We have made no sort of count of the constructions, and speak only from general impressions, and subject to prompt correction. In § 840 there is no statement of the ordinary limitation of the future participle expressing purpose. Except after verbs of motion, ὡς must usually be prefixed (παρασκευάζομαι being a prominent exception, since it may omit the ὡς). For this reason we should be glad to know how far μένουσιν ἀκουσόμενοι in § 187 is upheld by classic usage.

The make-up of the 'Moods and Tenses' is, of course, what might be expected of the house that issues it, and for a first edition it seems to be remarkably free from typographical or other errors. In § 25 πείθουσι ὑμᾶς holds its own with remarkable persistency in the various editions of the 'Moods and Tenses' and of the Grammar, though in the later issues of the latter book the ν has been added. For εἶσι in § 159 (*c*) read ἔρχεται. The example from Ar. Lys. 511 in § 162 appears without the conjunction "that" after "I hear"—an oversight which occurs in the former editions of the book, and also in the Grammar. On page 143 the late form ἐλοῦμαι is twice given, rather strangely. The same paragraph has δῷ three times without accent, and the next page has δῷ twice without it. On pages 150, 3, and 156, 2, we think καί must have fallen out after εἰ; and a brief paragraph might well have been given to εἰ καί and καὶ εἰ, in regard to which we may observe that Jowett, in his volume of notes on Thucydides, insists very rigidly on the distinction between the two expressions, without observing his distinction by any means in his translation—for the very good reason that it cannot be done.

Several excellent features yet remain to be noticed. The cross-references are unusually abundant. The use of "Notes" and "Remarks" has been entirely discarded, the paragraphs being consecutively numbered instead; so that while the preceding edition had only 114 sections this one has 926. This makes reference to the book a simpler matter. Would it not have facilitated reference if the paragraphs of examples had been lettered, so that a reference to a construction might be more precisely given? The frequent citation of authorities is an extremely valuable feature, and one to be heartily welcomed. The aid and stimulus thus given to students who have scholarly aspirations is of very great worth. In future editions we should like to see an index of proper names. This could easily be added at the end, to form page 465. Few indeed are the books that are over-indexed, and we do not think the addition of this page would overdo the matter, or leave much to be desired in this capital book.

FARMER WASHINGTON.

George Washington and Mount Vernon. A collection of Washington's unpublished agricultural and personal letters. Edited, with an introduction, by Moncure Daniel Conway. Brooklyn: Long Island Historical Society. 1889.

THIS volume of letters of Washington to his overseer at Mount Vernon has a peculiar interest both as regards the writer and the period at which the letters were written. It has long been known that this correspondence was in possession of the Long Island Historical Society through the generosity of its former President, Mr. James Carson Brevoort, but access to it has been granted grudgingly, and special care taken to prevent the publication of even paragraphs. Now the Society has seen fit to publish the whole under the editorship of Mr. Conway, who has prefixed an "Historical and Genealogical Introduction," and added some newly discovered letters from other sources.

With all due respect to the zeal and industry of the editor, we find his introduction neither historical nor genealogical. With a fine-tooth comb he has searched Virginia for bits of unpublished matter, stray anecdotes that still exist in the old regions of that State, as rich in lore as it is in imagination, and the gossipy tales of the oldest inhabitants. He has gathered half-a-dozen curious pieces of correspondence, an even less number of valuable documents, and has surrounded them with a mass of guesses, improbabilities, and idle tales. For example, a very early letter beginning "Dear Sally," "may have been" addressed to Sarah Ball, Sarah Jones, or Sarah Conway, but we do not see that the subject is made any the clearer by this triple conjecture, and no interest is added to the letter. Boucher asserts that Washington was taught by a convict servant, which leads Mr. Conway to say, "The sexton of Truro parish in 1747 was a convict, William Grove. It may be that 'Hobby' was this man's nickname, and that he had previously taught the Washington children; or, 'Hobby' may have been another of the 'convicts'—probably political." He then shows that Hobby was sexton at Falmouth, and not at Truro; and yet it is only a tradition that gives to Washington Hobby as a teacher. Such conjecture only leaves the question an open one, and is better calculated to mislead than to confirm.

Were these isolated instances, it would not be necessary to direct attention to them; but they are unfortunately typical examples of the manner in which the editor has prepared his introduction. He takes up the question of seals used by Washington, but comes to no conclusion, and it is difficult to arrange his statements in such order as to show what he wishes to prove. He hazards a new guess at the source whence Washington drew his "Rules of Civility," but the guess throws no light on the matter. The wretched doggerel found in an early note-book of Washington's is boldly attributed to him, twisted into an acrostic, and gravely made the text for some remarks on the early loves of Washington. While it would be equally venturesome to assert positively that Washington did not perpetrate the acrostic, it is reasonably certain that poetry was entirely wanting in his nature. In the genealogical field Mr. Conway's researches have produced better results, though Mr. Waters's discoveries discredit the earlier statements. The letters in the appendix contain some good matter, but they have no connection with the Mount Vernon correspondence, to which we now turn.

Once a week Washington expected from his overseer at Mount Vernon a full report of what was done on the farm, the prospects of the crops, the preparation of fields, and the distribution of labor; and once a week he wrote in full his wishes and suggestions. It is this weekly letter from the President of the United States, in an exciting period of our national history, 1793–1796, that makes up this volume. Not only does it show the intense love of the man for agriculture and his home, Mount Vernon, but it proves his love of minute detail, his mastery of little things, and his capacity for applying general rules—mental habits that had stood him as well in the management of his army as in that of his plantations. He knows every acre of his farms, the uses to which they are to be put, their relations to one another as well as to his general plan of culture; he knows every field-hand and his capacity, and expects the utmost result from his labor; every fine horse or jack is known by name, and he can estimate

what in an ordinary season he may expect from the whole. This is an interesting phase of Washington's character; but the letters are of far greater interest as showing the change that had occurred in Virginian agriculture during the Revolution.

Before the Revolution the Virginian planter raised nothing but tobacco and maize.

"The cultivation of tobacco," wrote Washington to Arthur Young, "has been almost the sole object with men of landed property, and consequently a regular course of crops have never been in view. The general custom has been, first to raise a crop of Indian corn (maize), which, according to the mode of cultivation, is a good preparation for wheat; then a crop of wheat; after which the ground is respited (except from weeds, and every trash that can contribute to its foulness) for about eighteen months; and so on, alternately, without any dressing, till the land is exhausted; when it is turned out, without being sown with grass-seeds, or reeds, or any method taken to restore it; and another piece is ruined in the same manner."

Tobacco was the commercial crop of Virginia, and all the efforts of Parliament, directed by the selfish policy of the mercantile system, were directed to making it the staple of the colony. It was the planter who suffered, for he was obliged to dispose of his product in a monopoly market and buy what manufactured articles he needed in the same market. Even before the Revolution a change was begun, looking to the culture of grains instead of tobacco, and an export of wheat to the West Indies instead of tobacco to Great Britain. The experiments of Bordley in Maryland were beginning to attract attention, and Washington has left abundant evidence of his close study of such agricultural treatises as were published at that time—studies which were later to result in practice. Of live stock almost nothing was known, and horses and dogs were more important items in the plantation economy than cattle and sheep.

All this was changed after the Revolution, and nowhere can the alteration be more closely studied than in the agricultural letters of Washington. The tobacco-planter and shipper of the colonial day has become a raiser of wheat and a manufacturer of flour. He is no longer concerned with the quality of and market for his fine brands of sweet-scented tobacco, with the problem of stemming, packing, and inspecting his leaves, with the extortions of shipmasters, the sales and charges of his factor in London; but he talks learnedly of wheat, flour, bran, middlings, shorts, and ship stuffs. He cultivates only a few acres of tobacco, and the small number of hogsheads that he obtains are kept in the inspection warehouses for years awaiting a fair price, and constituting an unimportant source of revenue instead of the principal income. He no longer exhausts his lands by successive crops of tobacco, wastefully grown and wastefully gathered; but his efforts are directed to preparing his fields for wheat, the arrangement of proper rotations of crops that will keep his lands in heart, and in experimenting with different seeds to obtain the highest returns, and with various fallow crops to insure a proper degree of productiveness. He no longer pays the expenses of his plantation out of his tobacco sales, but out of his sales of wheat and flour. Under this system, even his choice of lands is modified, and a good mill-site is of far greater value than a comparatively rich plain.

In introducing this new system of agriculture, Washington had enjoyed exceptional advantages. He had covered nearly every State in his marches during the Revolution, and had been observant of the methods pursued in each. He was a careful reader of Arthur Young's 'Annals of Agriculture' and an ardent experimenter in every direction. He had seen the importance of live stock in agricultural operations, and not only sought to obtain fine breeds of cattle and sheep, but paid great attention to the sowing of grasses and laying down of meadows, besides making trials of the various root crops that were valuable both as food for cattle and for keeping the land in condition. He was familiar with the efforts of Robert Bakewell to improve farm stock, the pioneer in the line, who believed that "you can get beasts to weigh where you want them to weigh, *i. e.*, in roasting pieces and not boiling pieces"; while from his numerous correspondents, among whom were such agricultural authorities as Young, Anderson, and Sinclair, he obtained many valuable hints and much assistance.

His one obstacle to success was the quality of labor at his command—slaves; and it is an interesting speculation to make, whether slavery in Virginia could have remained had the State followed what was its natural tendency immediately after the Revolution, that of becoming a wheat-growing State; whether this form of labor, wasteful, costly, and unintelligent, would not have been forced out by the same economic conditions that had made it unprofitable in New England and the Middle States. That Washington was conscious of the difference between the results obtained by slave and by free labor respectively, these letters prove. Near Philadelphia he noted and admired the well-kept fields, and recorded with envy the large crops taken from them as compared with the relatively meagre returns made by his own lands, on which he bestowed so much thought, time, and expense. He mentioned again and again the difference in results obtained in the well-conducted flour-mills around Germantown and at the head of Elk, and in his own, where a comparatively small output was obtained. The laziness, neglect, thievish habits, and ignorance of his help bring out a show of temper on his part, and constitute the burden of his complaints. Hardly a letter is contained in this volume that does not convey some idea of the low opinion he held of slave labor, and its incapacity to meet his wants, which in short involved a change from extensive to intensive farming, a revolution in methods. "My great object (more than making crops) is to preserve the land"; but he would use every acre to its full capacity. "Is it not better to get twenty bushels of wheat (and other things in proportion) from one acre of ground, than from two acres?" This was the key of his system, and, with that at hand, these letters open up a very interesting study in American agriculture of the last century; but the editor of them has missed it all.

Clubs for Working Girls. By Maude Stanley. Macmillan & Co. 8vo, pp. 276.

WRONG as the Socialists are in their theories of human nature, they have certainly done a great deal of good in stirring up the tender-hearted to a feeling of the insupportableness of the existing conditions of the very poor, and of the necessity incumbent upon every woman, at least, who has leisure, of doing something to alleviate them. Time was when English women satisfied their consciences by doles of red flannel and soup to the poor people of their acquaintance, but now the principles of political economy have penetrated the brains of women, even, and no one can engage in relieving poverty without much reflection upon the far-reaching consequences of his acts. The Hon. Maude Stanley, in strenuously advocating the formation of clubs for working girls on a large scale, has other objects in view besides furnishing the girls a pleasant evening and some improvement in their manners and their minds. These objects alone would, of course, be very worthy ones, and these objects are accomplished to a remarkable extent by the London clubs which she describes. The girls include those of the very lowest classes (it is required, however, that they should be respectable)—girls, doubtless, lower than any who could be found in this country; girls who, after the day's work, are always on the street, rude, vulgar, and boisterous.

"Many of my readers may never have seen the class of girls I now refer to—girls who will roll about the pavements three or four together, their hair cut straight over their foreheads, shawls over their heads, insulting every decent woman they meet. . . . In one part of London where a club has been established they have been seen on a Saturday night fighting one with another bared to their waists; and yet even there, by the kindly influence . . . of the club, have been, may we not say? tamed and civilized."

One evening two wild girls came to the door, whom Miss Stanley presently recognized as girls she had known some years before in a school. When asked to come in, they said: "No, they are stuck-up things in there: they would laugh at us"; and the girls of the club said: "O those terrible girls! I hope they are not coming in here." But they came in, and Miss Stanley says:

"Around them were girls who had been at the same school, who lived in the same street, who had worked at the same factories: the one quiet, gentle, refined; the other coarse, loud, blasphemous, and rude. Up to thirteen the same teaching, the same training, but since that for the one the education of the streets and of bad companions, and for the others their club, their friends in the club, and the ladies of the club. No instance has ever so forcibly shown me the marvellous good that a girls' club can accomplish as the sight of these girls thus brought together. As children they had seemed alike in every respect; and now how far apart they were!"

But, besides these immediate results, Miss Stanley has no less an object in view than to transform public sentiment among the poor of London in regard to early marriages. Early marriages have not simply the result of unduly increasing population among the working classes; it is the early married who become the parents of children who are improvident like themselves, and who are, in turn, the parents of a constantly degenerating race. The first step towards thrift is to consider whether there are means at hand to bring up a family decently; and when that step has once been taken, it works doubly—by the decent bringing up and by inheritance. But besides these remoter considerations an early marriage entails immediate suffering. Miss Stanley quotes a passage from Judge Chalmers which is so forcible that we must make room for part of it here:

"I find that the almost universal cause of the indebtedness and destitution of the poor is early and improvident marriage. About 90 per cent. of the judgment summonses are against persons in the receipt of weekly wages. If the artisan would, like the majority of the more educated classes, refrain from 'going into housekeeping' till he was thirty, his lot would be an exceedingly comfortable one. For ten years he would have been in receipt of his full wages, and he could have put by a good round sum to provide against a rainy day. . . . I find that more than 98 per cent. of the judgment debtors are married. . . . Day after day I preach the same sermon to deaf ears. The defendant urges the number of his children as his reason for not paying his debts. Is it the plaintiff's fault, I ask him, that you have got seven children? Because you have got seven children, is it any reason that the plaintiff should supply you with goods for nothing? Not long ago a

wretched-looking lad of twenty was summoned for a debt of two pounds. I asked him why he had not paid and he replied, 'All the children have been ill.' . . . The root of the evil lies in the reckless way in which the working classes marry."

Miss Stanley gives two incidents to show how differently the two races that adjoin the English regard marriage. An Irish laborer was asked, "Mike, why have you married when you had not enough to keep yourself, let alone a wife?" "Well, sure," was the ready answer, "for the bite and the sup the crater ates it's no worth being without her." A Scotch woman, asked why she and her brother, middle-aged persons, had not married, replied, "I had to stay and bide with father and mother, and my brother could not have brought a wife in; there would be no room for bairns with the old folks; he must wait awhile." The idea that children who cannot be supported are a reprehensible possession seems to be making headway in London. The wife of a man who had become blind soon after marriage, and the mother of seven children, said: "I was afraid to ask you for assistance, for I was afraid you might say what the other ladies say—that I have too many children." Miss Stanley believes that a thorough-going change may be brought about in this respect in the opinion of girls and lads. She says:

"It may seem a colossal work to change ideas with regard to marriage, but it is not impossible. Have we not seen a great change take place in the views of girls of the professional and educated classes? When they had no other employment but fancy work, tea parties, and walks on the parade or in the park, what could they think of but flirtations and possible marriage? . . . All these occupations and many more that are now opened to women, have created a very different feeling with regard to marriage. Happier marriages are made when the contract is not entered into by the girl merely to secure a home or a large establishment, and she makes a far better wife than if she had had no training or experience of work."

A similar change can be produced in working-girls, Miss Stanley believes, if they can have their evenings filled with interesting occupation during the years when they ought to be postponing marriage.

"We have now to consider how we can create this feeling among the working-girls and lads of our great towns. We can do so by giving them clubs, and letting them see that life has something in it besides mere larking folly. . . . Some of our girls have been with us for seven, eight, and nine years [it should be remembered that among the poor of London there are almost no women who do not marry], and we can say with confidence that clubs will keep girls from reckless and improvident marriages. If a girl remains single till twenty-four, she will be more likely to make a good choice, and not to take up with the first lad who strikes her fancy because he has asked her to walk out with him. Our girls have themselves told me that they consider this postponement of marriage as one of the best results of their club."

For details of management of these clubs, for an account by Miss Grace Dodge of working-girls' clubs in New York, for descriptions by the girls themselves of their clubs and of the country excursions which they make in the summer, and in particular for an account of a week spent in the New Forest by a working-girl, a lover of nature, we must refer the reader to the book itself. It is a book which one cannot read without a feeling of profound admiration for the working and the thinking that is now being done by Englishwomen for the amelioration of the condition of the unfortunate classes.

Old Country Life. By S. Baring Gould. Philadelphia: J. B. Lippincott Co.

If enthusiastic admiration and unwavering love of the subject-matter are the qualities which determine the man best fitted to write any given book, then surely Mr. Baring Gould is the man to treat of old country life in England—or rather Devonshire, for in the main he confines himself to that county. He quotes with strong approbation the remark of a friend that, "as in all the world there is not a type of man nobler, better, more complete in every way than the true English gentleman, so do I think that nowhere—not approachably even, anywhere—is there to be found a house like the old English country house." This being his creed, he cannot regard any of the changes that have taken place in the building of country houses since Elizabeth's day in the light of improvements. He prefers the trim box hedges to the modern gardens; he looks back with something of regret to the old hunting and drinking country parsons—of whom, however, he tells some unpleasant tales; and he believes the great socialistic revolution will not take place in England till fox-hunting, "that great solvent of all prejudices," is abolished. A most enthusiastic fox-hunter, indeed, is Mr. Gould, and he solemnly declares his belief that the conscience of the wretch who shoots a fox must sting him more than if he had committed a fraud!

Readers who have a more or less clearly defined idea that on the whole the world is becoming better rather than worse, may feel disposed to quarrel with the mental atmosphere of the book, and to laugh at the somewhat unscientific view of the social questions with which it incidentally deals; but nevertheless they will find in it much curious and interesting information. How remarkable, for instance, is the absolute disappearance of so many of the old Devonshire families. At intervals, between 1531 and 1620, the heralds visited the county in order to enroll such families as had the right to bear arms, and it appears that out of one hundred and twenty-four names on these lists under the first three letters of the alphabet, only eleven remain in existence. At an assize in Exeter in 1660, when Matthew Hale was High Sheriff, the entire Grand Jury, numbering about twenty, and all men of substance, bore the name of Hale, and yet to-day there is no trace of such a family. Mr. Gould cannot account for the fact, but he refers elsewhere to what is most probably the true reason, namely, the tendency of country people to move into towns in these later days of educational activity. An examination of last year's London directory in support of this hypothesis results in the discovery therein of eighteen out of the twenty-seven names which Mr. Gould mentions at page 9 as having disappeared from Devon.

It is claimed that the English used to be a dancing and a musical people; that in the time of Henry VIII. and Elizabeth England was in advance of the Continent in musical matters; and that while the Puritans tried to stop all music, they did not succeed, for in Pepys's time we find music and dancing on every hand. Pepys, indeed, constantly refers to musical evenings at his house, and to the fact that all his servants were able to take part in these performances. In accordance with his general theory of cause and effect, Mr. Gould considers that the present musical inferiority of England is due to the abolition of the old country church orchestras, and the disappearance of the old village ballad singers; but others, less attached to antiquity, might argue that the English musical taste clings to the simpler forms of harmony, and cannot attain the more complex results of German inspiration.

All who are interested in old houses, old gardens, old furniture, old portraits, and weird stories connected with them, will enjoy this book and most of its illustrations; and they will probably overlook various old grammatical errors that seem to have escaped the attention of the proof-reader.

The Uncollected Writings of Thomas de Quincey, with a preface and annotations. By James Hogg. 2 vols. Scribner & Welford. 1890.

Mr James Hogg, who was an editorial companion and friend of De Quincey towards the end of the latter's life, has collected in these two handsome volumes various miscellanies which have hitherto escaped the *omnium gatherum* of the publishers. They are upon metaphysics, politics, literature, political economy, and education, in the way of criticism, and comprise, besides, some translations of German fiction and a long story by the author called 'The Household Wreck.' This last is the most important piece; it has the peculiar touch of De Quincey, reads like a bad dream, and is noticeable as belonging to a style of fiction which has passed away, resembling the early work of Bulwer and Poe in the handling of word and phrase. The remainder of the collection is of the same stuff as the voluminous works of the author, with nothing new in thought or powerful in expression. De Quincey was already sufficiently represented, and these additions can only burden the weighted shelf; they are in part reviews of not notable works, letters of a controversial character upon questions of the Malthusian and Ricardian economy now exhausted in discussion, or upon Kantian metaphysics elsewhere better explained, or passages upon the English in India or China in which alone we find instances of his impassioned rhetoric. One early paper upon Greek literature maintains the superiority of modern writers, especially of Chaucer over Homer in picturesque and narrative power, and of the English orators over the Greek; in nearly every department the ancients are decided against, and in the case of Pindar the poet is simply critically annihilated. This is interesting, but it is not enlightening criticism. The general qualities of the author, his subtlety, pedantry, and scholastic arrogance, his rambling of the mind, his diseased imagination and meretricious rhetorical style, are all discernible: but the matter was long ago dry and dead. De Quincey seems to us to have been overestimated in his own day, so far as the mass of his work is concerned, and to live now as the typical opium-eater and by virtue of a half-dozen remarkable imaginative tales and splendid "purple patches" of English. In them his fame lies, and none need seek it further in these "leavings" of the complete works.

Emigration and Immigration. By Richmond Mayo Smith. Charles Scribner's Sons. 1890.

The general question which Prof. Smith puts to himself is, What effect will the constant infusion of new blood have upon the American community? In attempting an answer to this question he is led to inquire into our social ideals, and into the effect of immigration on the growth of population, on the economic condition of our laboring classes, and on our "ethical consciousness." His examination is very comprehensive, but he finds it necessary to take into consideration so many limiting and qualifying circumstances that his positive results are not very clear. The end to be attained is such control of immigration "that elements incompatible with our civilization

shall be excluded ; that the defective and delinquent classes, who are only a burden and a danger to us, shall also be excluded ; and that the immigration shall not be on such a scale as to threaten the integrity of our political institutions, or to cause economic disturbances." But we are not informed how this last result can be obtained, and as to the others the only practical suggestions are that the present laws against the importation of paupers, etc., and against the importation of laborers under contract, should be more rigidly enforced, and that the work of inspection should be transferred to our consuls.

We are not prepared to give our assent to this proposal. It would involve a large expense which should hardly be paid by our Government, and which, if collected from those immigrants certified as desirable, would reduce the slender capital which is so essential to a successful start in their new life. Nor, since our consuls would be dependent upon information furnished by foreign Governments, are we satisfied that oppression would not result. The consular inquiry would be notice to the local authorities as to the persons who intended to emigrate, and in fact Prof. Smith declares that it would be our duty to assist foreign Powers "in their efforts to prevent the evasion of services due the State." In other words, we are to coöperate with military despotisms in the maintenance of their oppression. It is obvious that under this system political offenders would find no refuge here, and our Government would be compelled to reverse its traditional and not altogether inglorious policy. To refuse hospitality to a Kossuth or a Garibaldi would rouse the whole country and upset the strongest Administration.

But while Prof. Smith's conclusions are not particularly novel, the information that he has collected is interesting and well arranged. He points out many conditions that affect the problem and are generally overlooked. Thus, it is commonly supposed that emigration relieves over-population; but, as a matter of fact, the natural increase of the race tends at once to expand into the vacuum. Again, the immigrant is looked upon as adding to the wealth of the country because he brings some capital with him; but, on the other hand, he remits large sums to relatives and friends in his native land. Perhaps the most suggestive chapter in the book is that upon the economic gain by immigration, as to which the author is inclined to adopt a very moderate estimate. It may well be, he shows, that such an influx of unskilled labor as we now behold is as injurious in some ways as it is profitable in others. We are unable to determine from the figures presented here that any deduction from the gross number of alien immigrants is made on account of remigration. This is a very material point, and deserves careful study, but it is doubtful if our statistics throw much light upon it.

God in His World: An Interpretation. Harper & Bros.

We have here plenty of loose thinking and of vague expression, and, nevertheless, an interesting book, written, for the most part, in a style that fascinates not only by its pleasant cadences, but also by its remoteness from the common speech of men. In no respect is it more remarkable than in its frequent surprises of good common sense at moments when we seem to be in regions never visited by it. There are floating echoes of Swedenborg and other mystical writers, but they vanish softly and quickly as they came, and leave us still in doubt how we shall class a book that is so striking in its individual quality.

Many will be deterred by the author's assurance, at the outset, that his book has been "written without previous design as to its undertaking or shaping," and is "not the result of any striving after truth." As we go on, however, we are persuaded that the author has been more deliberate than he imagines, though some of his facts are of the genus of the German's camel. Only in Emerson and Marcus Aurelius shall we find so much praise of Nature, and nowhere else the term so persistently used with so little definite meaning. A faith in Nature so ample makes the supernatural impossible, but it does not prevent—suggesting here the naturalism of Dr. Furness and the late Dr. Clarke—a full acceptance of the New Testament miracles as historic facts. Nature is not reversed, but completed, in Jesus; is for the first time fully comprehended in him, and culminates in his resurrection.

Such failure to distinguish things that differ is an evil sign, but the reader who should allow it to discourage him at the outset would miss a very great number of admirable reflections. It is in these that we are to look for such spiritual value as the book contains, not in its general scope, if any such can be discerned. There is also something charming in the author's occasional naïveté, as for example (p. xxviii., Introduction): "The constantly recurring resurrection of the dead would be regarded as natural. How, then, can a single case be called supernatural?" And this on p. xxix.: "The scientific denial of the resurrection of Jesus rests on the basis of its singularity. If in the course of all astronomical observation but a single comet had been observed, and that two or three thousand years ago, the fact would be denied on the same basis." Nothing is said of the quality and contemporaneousness of the evidence in either case. Surely the naturalness of Jesus would smell as sweet by any other name—for it is a name emptied of all its proper meaning—when it is thus interpreted:

> "He was human, but there was no miracle so impressive as the fact that being human he yet reversed all the processes of a universally perverted human nature. He spoke our speech, but in his utterance all the ordinary currents of human thought gone wrong and turned awry were reversed, so that his sayings contradicted every maxim of human experience, even as does Nature when we comprehend her divine meanings."

An introduction in twenty-one sections resumes, as dimly as an overture the following symphony, the three books which follow: "From the Beginning," "The Incarnation," and "The Divine Human Fellowship." The first of these treats with extreme vagueness of the pre-Christian religions. Where least is known, as in the Eleusinian mysteries, the writer is the most at home, valuing these mysteries above all other products of the Hellenic mind. There are many passages in the second part that are in striking contrast with the traditional interpretations. This for one: "It is one of the limitations of the Incarnation that it cannot manifest that wherein our Lord's Sonship differs from ours, but only its likeness; and while this likeness is so fully revealed, . . . the unlikeness is carefully veiled and guarded." The doctrines of Atonement and Eternal Punishment meet with no favor here. But few of our Presbyterian friends have discovered such a short and easy way out as this: "Who shall say that because a few are chosen all will not be saved? Is it not rather true that because of the chosen there is the greater hope for all?" This also is of interest: "The freedom of the kingdom is a freedom from ethical obligations—from what the world calls conscience." But this only means that

> "Love is an unerring light,
> And joy its own security."

In his concluding part, the author's ideal society is based upon the communism of the first disciples. The estimate of modern society illustrates the author's irrepressible inclination to hear the other side. In this "mystery of ungodliness" he discovers some redeeming traits, but the organization of charity is not one of them. Meantime the faith of the kingdom "is not in the strife against worldliness, nor in an amelioration thereof, or in any attempts to reform it." With so much of paradox and futility there is, nevertheless, much of pungent criticism and suggestion for the reader who can keep a patient mind, and all is very sweetly said. That such a book should now appear is one of many interesting and pathetic signs of the immense disintegration and unrest of our time.

The Colonial Copyright Acts. With an introduction by Frederic R. Daldy. London and New York: Published for the Copyright Association by Longmans & Co. 1889. 8vo, x., 135 pp.

The questions arising out of the copyright relations between the British colonies and the mother country are of considerable interest, and Mr. Daldy, who is the Honorable Secretary of the Copyright Association, and who was a member of the Copyright Commission of 1878, and otherwise has had special opportunities for obtaining a good insight into the nature of the difficulties in relation to literary property which have vexed England or her colonies for the last fifty years, was well qualified to give an intelligent opinion concerning them. It is a disappointment, therefore, to find in the book no expression of his own views regarding the copyright legislation of the colonies. He has contented himself with making a bare compilation of the copyright statutes, and with pointing out, in the introduction, some of the discrepancies existing in the various laws authorizing the importation into the colonies of foreign reprints. Such a compilation of colonial copyright law is not unwelcome, however, for these laws are by no means easy to get at, as they were passed at different times during the last fifty years, and are hidden away in the statutes at large of nearly thirty different colonies.

The volume contains, in the first place, the "royalty" laws, as they may be termed, of twenty colonies, providing for the importation of foreign reprints of books by British authors, upon payment of duties, which are, in whole or in part, to go to the authors of such books, to compensate them for the loss of copyright royalty. These acts, which were all passed under authority of the Imperial Act of 1847, 10 and 11 Vict., chapter 95, are printed without other annotation than a statement of the dates of the imperial orders in council under which they came into operation; but, following them, are printed in full four of these orders in council relating to the acts of New Brunswick, Antigua, Saint Lucia, and Trinidad. Just why these four particular orders were selected for printing and the other sixteen omitted, is left to conjecture, no reason being apparent and none being stated.

Some questions will arise, also, in regard to the statutes which have been printed. Thus, the Jamaica act of 1851 is omitted, while that of 1856 is printed; but both these statutes were superseded by the act of 1858, which is not

printed, and to which no reference is made, although this act alone is included in the revised "Statutes and Laws of Jamaica," compiled by one of the puisne judges and the Attorney-General, and intended to contain only such acts as were then (1874–1877) in force; while the acts of 1851 and 1856 are excluded from the book, clearly showing that the compilers considered these latter acts as inoperative. The Saint Vincent law of 1852 is set out in full, but no mention is made or notice taken of the later law of 1864. The Prince Edward Island act of 1848 would seem to have been passed on August 31, and not on May 4, of that year, and it was reënacted on April 29, 1861, and this latter text ought to have had preference. The first Canadian royalty act of 1850 is given, but this statute was reënacted, with amendments, in 1868, and this text, which would be subject, probably, to the provisions of the new customs act, chapter 33 of the Revised Statutes of 1887, is the one which should have been printed.

In the second division of the volume, under the heading "Local Copyright Acts," are reprinted the Victoria statute of 1869, the Canada act of 1875, and the statute of India of 1847; the last as amended by subsequent legislation. In the introduction it is asserted that the laws contained in the book, together with the Imperial Copyright Acts and the Berne International Convention, "are the only acts affecting copyright in the British Dominions." But this certainly cannot be the case, for New Zealand passed a copyright law as early as 1842, which we believe to be still in force; and in 1877 that country enacted an elaborate law for the protection of works of art. Nova Scotia, also, passed a copyright law in 1851, and has reënacted it in 1859 and 1864. The Cape of Good Hope passed a copyright law in 1873, and New South Wales in 1879, and these laws are certainly still in force, though they are all omitted from the book under notice. And as for Canada, the act of 1875, printed at pages 115–124, was superseded, of course, by chapter 62 of the "Revised Statutes," enacted in 1886, and assented to by the imperial act of 49 Vict., chap. iv., of June 2, 1886, to go into force in 1887; and that chapter should have taken the place of the law of 1875 in Mr. Daldy's book.

BOOKS OF THE WEEK.

Allinson, F. G. Greek Prose Composition. Boston: Allyn & Bacon. $1.
Arey, A. L. Laboratory Manual of Experimental Physics. Syracuse: C. W. Bardeen.
Aristophanes. The Birds. Part I. Oxford: Clarendon Press; New York: Macmillan. 90 cents.
Arten, Y. L'Instruction Publique en Egypte. Paris: E. Leroux.
Aunt Nabby, her Rambles, her Adventures, and her Notions. 2d ed. Boston: J. G. Cupples Co. $1.
Beach, C. F., jr. The Modern Law of Railroads. 2 vols. San Francisco: Bancroft-Whitney Co.

HENRY HOLT & CO.,

NEW YORK.

LATELY PUBLISHED:

BALDWIN'S (J. M.) HANDBOOK OF PSYCHOLOGY—SENSES AND INTELLECT. $1.80.

FYFFE'S (C. A.) MODERN EUROPE, Volume III. This completes the work, which is in three volumes. $2.00.

GOETHE'S HERMANN AND DOROTHEA. An improved edition from new plates. Notes by E. C. F. Krauss. 30 cents.

GOODELL'S (T. D.) THE GREEK IN ENGLISH. A new and enlarged edition from new plates. 60 cents.

JAGEMANN'S (H. C. G. von) FOQUÉ'S UNDINE. Edited, with an Introduction, Notes, and Vocabulary. 80 cents.

HOWELL'S (W. H.) DISSECTION OF THE DOG. As a basis for the study of Physiology. $1.00.

JOHNSON'S (S.) CHIEF LIVES OF THE POETS. New edition, with Preface and Notes by Matthew Arnold. To which are appended Macaulay's and Carlyle's Essays on Boswell's Life of Johnson. *The only edition with this appendix.* $1.25.

KNORTZ'S (K.) REPRESENTATIVE GERMAN POEMS. With close English metrical versions. New edition. $2.00.

OTIS'S (C. P.) ELEMENTARY GERMAN. New and Enlarged Edition. Edited by H. S. White of Cornell University. *The book will hereafter be issued in both German and Roman type. If the Roman is wanted it must be specifically ordered.* 80 cents.

OTIS'S (C. P.) INTRODUCTION TO MIDDLE HIGH GERMAN. Grammatical sketch, with part of the Niebelungenlied and vocabulary. $1.00.

PECK'S (H. T.) SUETONIUS'S LIVES OF THE CÆSARS. Edited, with Introduction and Commentary. $1.20.

PACKARD'S (A.S.) ENTOMOLOGY FOR BEGINNERS. For the use of Young Folks, Fruit-Growers, Farmers, and Gardeners. $1.40.

REMSEN'S (I.) INORGANIC CHEMISTRY. (American Science Series, Advanced Course.) $2.80.

REMSEN'S (I.) LABORATORY MANUAL. Experiments in General Chemistry for Beginners. 40 cents.

SEIDENSTICKER'S (O.) GERMAN SCIENTIFIC MONOGRAPHS.
No. 1. Goethe's Naturwissenschaftliche Arbeiten. Von H. Helmholtz. 30 cents.
No. 2. Ueber Bakterien. By F. Cohn. 30 cents.

SCUDDER'S (S. H.) BUTTERFLIES. New and cheaper edition. $1.20.

THOMAS'S (C.) FREYTAG'S DIE JOURNALISTEN. New edition, with Introduction and Notes. 30 cents.

WALKER'S (F. A.) FIRST LESSONS IN POLITICAL ECONOMY. (American Science Series, Elementary Course.) $1.00.

WENCKEBACH'S (C.) MEISSNER'S AUS MEINER WELT. With Vocabulary. 75 cents.

The prices given above are those to TEACHERS, and do not include postage, for which 10 per cent. should be added. Retail prices are about 25 per cent. higher. A sample copy of any class-book sent, post-paid, to a teacher for examination with a view to introduction upon receipt of the price named.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

$2.00.

Copies for examination will be mailed, post-paid, on receipt of $1.50, which is the price to schools. If not approved, these may be returned and the money refunded.

"It is a library of art histories crystallized into a most useful hand-book. The author has made by far the best text-book for beginners in art history that has yet appeared. The book is clear and vigorous in style, and written with a firmness that comes of sure knowledge."—*Literary World.*

"This work is one we cordially commend to all American teachers and students. It contains a brief outline of the origin and development of art, and is the best possible introduction to the many comprehensive standard works on the subject, and specially of Dr. Wilhelm Lubke's well-known 'History of Art,' published also by Messrs. Dodd, Mead & Company."—*N. E. Journal of Education.*

"The author of 'A Short History of Art' has done her work exceedingly well. She has judiciously culled facts and suggestions from the best standard works on the subject, which give a succinct view of the great epochs, schools, and masters, carrying forward in a clear and comprehensive manner the account of the progressive development of art. There is a great deal of information lucidly arranged, and especially adapted as an introduction to this whole department of education."—*Prof. J. M. Hoppin, Yale University.*

DODD, MEAD & COMPANY,

PUBLISHERS, New York.

Good Talking and Good Manners: Fine Arts.

With a paper on the Social Law of Mutual Help, and the Labor Problem, by the Rt. Rev. F. D. Huntington, D.D., Bishop of Central New York. $1.00.

SYRACUSE, N. Y.

MACMILLAN & CO.'S

Text Books in Modern Languages.

BUCHHEIM'S GERMAN CLASSICS. New Editions.

"These editions deserve special commendation for the clearness and copiousness of the commentary, which leaves no verbal or grammatical difficulty unnoticed, and for the genial and sympathetic spirit of the biographical notices and introductions."—*Saturday Review.*

SCHILLER'S Wilhelm Tell. A Drama. With a Life of Schiller, Introduction, English Notes, and Map. Seventh Edition. 16mo. 90 cents.
School Edition of above. With Briefer Notes. 16mo. 50 cents.

LESSING'S Minna Von Barnhelm. A Comedy. With a Life of Lessing, Critical Analysis, &c. *Fifth Edition Revised.* 16mo. 90 cents.

HEINE'S Harzreise. With a Life of Heine, a descriptive Sketch of the Harz, and an Index. New Edition. Stiff covers. 40 cents.

HEINE'S Prosa. Being Selections from his Prose Works. With Life of Heine, English Notes, &c. *Second Edition Revised.* 16mo. $1.10.

CHAMISSO.—Peter Schlemihl's WUNDERSAME GESCHICHTE. With a Biographical and Literary Introduction, English Notes, and a Complete Vocabulary. 16mo, 50 cents.

"The book is very suitable for a student of German who has made fair progress with grammar and exercises. The notes are ample, and, with the index, render too much, rather than too little, assistance to an industrious reader. But the whole apparatus is admirably calculated to smooth the path of those who use it and to increase their knowledge of the language, while economizing both time and trouble.—*London Educational Times.*

GERMAN POETRY FOR BEGINNERS. A Graduated Collection of easy Poems for repetition, from modern German Poets. With English Notes and a Complete Vocabulary. 16mo, 50 cents.

"Well arranged to form a course of early practice in reading the language with a view to gaining a speaking command of it. This valuable hand-book is ably edited."—*Journal of Education.*

MACMILLAN'S PRIMARY SERIES

Of French and German Readings. Edited by Eugène Fasnacht.

FRENCH.

French Life in Letters. By Mrs. Molesworth. With Notes on Idioms, etc. 16mo. 40 cents.

"The letters are written with all the charm and *naïveté* that we should have expected from the author of *The Cuckoo Clock* and *Four Winds Farm.*"—*School Guardian.*

CORNAZ. Nos Enfants et Leurs Amis. With Notes, Vocabulary and Exercises. By Edith Harvey. 16mo. 40 cents.

GERMAN.

GRIMM. Kinder- und Hausmarchen. Gesammelt Durch Die Brüder Grimm. With Notes and Vocabularies. Illustrated. 16mo. 50 cents.

"The notes are plentiful and good. . . . A copious vocabulary makes the work self-contained and complete, and gives the finishing stroke to one of the best text-books of its kind we have met with."—*The Schoolmaster.*

HAUFF. Die Karavane. By Wilhelm Hauff. With Notes and Vocabulary, by Herman Hager, Ph.D. 16mo. 75 cents.

MACMILLAN'S FOREIGN SCHOOL CLASSICS.

Edited by Eugène Fasnacht.

GOETHE'S Faust. Part I. With Introduction and Notes by Jane Lee. 16mo. $1.10.

French Readings from Roman History selected from various authors and edited with notes by C. Colbeck, M. A. 16mo. $1.10.

GOLDEN TREASURY SERIES.

Deutsche Lyrik.—Selected and arranged with Notes and a Literary Introduction. By C. A. Buchheim, Phil. Doc., F. C. P. 18mo, $1.25.

MACMILLAN & CO., 112 Fourth Avenue, New York.

SOME PUBLICATIONS

OF THE LONDON

Society for Promoting Christian Knowledge.

THE DAWN OF EUROPEAN LITERATURE.

A series of books presenting through their literature the chief races of Europe as they emerge out of prehistoric darkness into the light furnished by their earliest recorded works.

16MO, CLOTH, $1.00 EACH.

SLAVONIC LITERATURE. By W. R. Morfill, M.A. 16mo, cloth, 75 cents.

The Slavonic people as well as their literature are here treated of, and from material taken from original authorities and not adaptations at second hand. The accounts of the religious books, the folk-lore and general literature are interspersed with most interesting quotations. An index is added.

ANGLO SAXON LITERATURE. By John Earle, M.A.

"It is the best popular summary that we possess of Anglo-Saxon Literature."—*N. Y. Evening Post.*

FRENCH LITERATURE. By Gustave Masson.

The composite nature of the French language, in which the elements of Celtic, Greek, Latin, Scandinavian, and Teutonic contribute to its unity, and the various stages of transformation through which the language has passed are treated by Mr. Masson in a scholarly and interesting manner.

EARLY BRITAIN.

The presentation of Early Britain at great historic periods is fully set forth in this series. Each volume is the work of an accredited specialist, giving the results of the most recent critical examination of early records.

ANGLO SAXON BRITAIN. By Grant Allen. With *colored map.* 16mo, cloth. $1.00.

This book gives a sketch of Britain under the early English conquerors rather from the social than from the political point of view. The origin of the English, their colonization, their Homes, Heathen and Christian England, the Anglo-Saxon language are some of the more important chapters.

CELTIC BRITAIN. By Prof. Rhys. 16mo, cloth. $1.25.

"Nothing from Prof. Rhys's pen could fail to be scholarly, and for a small book the present volume is as thorough a treatment of the subject as if it were twice as large as it is."—*New York Times.*

ROMAN BRITAIN. By the Rev. H. M. Scarth, M.A. With *colored map.* 16mo, cloth, $1.00.

Mr. Scarth in this volume has placed in the hands of all a work which combines true history with sound archæology, and shows how events that have happened in past ages have been overruled by the Almighty to man's eventual good.

NORMAN BRITAIN. By William Hunt, M.A., with *colored map.* 16mo, cloth, $1.00.

In a series of short essays this volume describes how the Teutonic Northmen were brought under Romance influences before they conquered our Teutonic land, and shows that this foreign element, overwhelming as it seemed at the time, preserved much, destroyed little, but made no violent break in history.

POST NORMAN BRITAIN. By Henry G. Hewlett. 16mo, cloth, $1.25.

The present volume supplements the others of this series by a sketch of the various influences derived from foreign sources which subsequently contributed to modify and develop national character down to the period when the modern history of England may be said to begin.

The Society's Publications may be obtained through any Booksellers, or the Society's Representatives in the United States.

Boston and New York.

Can You Afford Ten Cents a Day

FOR A LIBRARY OF AMERICAN LITERATURE.

In Eleven Elegant Large Octavo Volumes, with over 6,000 Pages, Handsomely Illustrated with 160 Full-Page Portraits,

Compiled and Edited by
EDMUND CLARENCE STEDMAN AND ELLEN MACKAY HUTCHINSON.

This is all this great work will cost you, and it contains the cream of American literature from the earliest writings, 1607, to the present date. Nearly 3,000 selections arranged chronologically, over 1,200 authors quoted, a succinct biography of each author, and an exhaustive topical index. This is a great national work, and in order that it may be in every American home we deliver the eleven volumes on receipt of $3.00 and collect the balance at the rate of $3.00 per month, or

TEN CENTS A DAY.

The press, eminent scholars, and literary men unanimously pronounce this work one of the most interesting and important ever issued for the American public. If you can succeed in interesting five of your friends and send us their orders on the above basis, we will give you

A Set of the Works Free.

BOOKS WANTED — EXECUTORS and others having small or large lots of books for sale, will find cash purchaser at full auction prices. Address F. P. HARPER,
17 East 16th St., N. Y.

"To judge from the volume before us, this great work will be characterized throughout, and in every respect, by a lavish expenditure of labor and capital, of rare ability and technical skill, all turned to the best advantage by careful and capable attention to the uniform realization of a thoroughly judicious plan."
—LONDON "ATHENÆUM," March 1, 1890.

"The dictionary of the century" is how the Rev. C. H. Spurgeon has paraphrased the title of the new dictionary of the English language now being issued by THE CENTURY CO. Prof. Wm. Dwight Whitney of Yale, aided by a large corps of eminent American scholars, has been engaged for the past eight years upon this great work, which, when completed, in 1891, will contain not only the fullest vocabulary of words in common use, but will be also by far the most complete and accurate dictionary of technical terms ever published. THE CENTURY DICTIONARY will include about 250,000 different words and phrases, supplemented by an equal number of quotations and more than 6000 illustrations. The definitions are of an encyclopedic nature, giving much valuable information about the *objects* denoted by the words. In a review published in *The Nation* of May 30, 1889, it was said of this work: "It is the handsomest dictionary that ever was made, . . . and when completed it will be the most comprehensive and satisfactory work of general reference yet produced—a book which every one will want, and which ought to have a place in every public library."

THE CENTURY DICTIONARY is sold only by subscription. A large pamphlet, containing full-size sample pages with complete list of editorial contributors and a full description of the work itself, will be sent to any address upon receipt of five two-cent stamps. Descriptive circulars sent free upon request. For terms, etc., address
THE CENTURY CO. 33 East 17th St. New York.

REED & KELLOGG'S ONE-BOOK COURSE IN ENGLISH. Designed for schools whose curriculum will not allow time for the author's two-book course.

ANDERSON'S (J. J.) HISTORY OF ENGLAND. (Revised edition.)

ANDERSON'S (W. G.) LIGHT GYMNASTICS. (Fully illustrated.) A teacher's guide to systematic instruction in physical training. Price to teachers, $1.50.

THE WORKING PRINCIPLES OF POLITICAL ECONOMY in a New and Practical Form. A Text-Book for Beginners. By S. M. Macvane, Harvard College. Specimen copy mailed to teachers, $1.00.

ELEMENTARY PSYCHOLOGY, with Practical Applications to Education and Conduct of Life. Including also an Outline of Logic. By James H. Baker, A.M., Principal of High School, Denver. Specimen copy mailed to teachers, $1.00.

The publishers would esteem it a favor to correspond with teachers and school officers regarding the introduction of these books, and to send descriptive circulars or specimen pages free on application.

Books by Arthur Gilman, M.A.

Tales of The Pathfinders.

12mo, illustrated by Robert Lewis, $1.00.

Sketches of the thrilling adventures of the early American explorers, told in chronological order, from the discovery of the continent to the time of the Revolutionary War.

Kings, Queens, and Barbarians;

or, SEVEN HISTORIC AGES. 12mo, illustrated, $1.00.

In a series of pleasant family talks, the main facts in the world's history, from the golden age of Greece down to the golden age of England, are skilfully condensed in a way to make young readers long for more.

Short Stories from the Dictionary.

12mo, 60 cents.

The man who was found reading the dictionary, and who said the stories were interesting but very short, supplied the text for a book that has in it a vast deal of interest and information not only for young people, but readers of all ages.

GILMAN'S HISTORICAL READERS.

The Discovery and Exploration of America.... 36 cts.
The Colonization of America..... 48 cts.
The Making of the American Nation..... 60 cts.

"It seems to us that nothing could be better for their purpose than these books, which succeed in an unusual degree in compressing the entire course of American History into a very moderate space, and in telling the story in a style at once interesting and serious. No writing down for children, and no effort to attract by pictures."—*N. Y. Nation.*

D. LOTHROP COMPANY, Pubs., Boston.

Baker & Taylor Co.,

740 AND 742 BROADWAY,

NEW YORK.

Being Jobbers in the Largest American Book Market, carry full lines of the Miscellaneous and Educational Books of all the Publishers, and can furnish them at lowest rates.

They supply Schools, and Public, Private, and School Libraries, and on application send postpaid to any address their General Catalogue of American School Books, with net and mailing prices and Telegraphic Code, and their topically arranged Library List of Standard Publications selected from the Books of all Publishers. Estimates on submitted lists readily furnished.

This house fully meets the convenience of those who wish to obtain on a single order and in one shipment a number of books issued by different Publishers.

THE CRITIC

has long been recognized as "the first literary journal in America." BISHOP POTTER says of it: "One cannot but be proud and glad that so good and helpful a journal is winning its way to the wider recognition and esteem which it so abundantly deserves." $3 a year; 10 cents a copy. Three specimen copies sent to any reader of the NATION on receipt of ten cents.

THE CRITIC CO.,
743 Broadway, - New York.

The Political Cyclopedia,

of which JAMES G. BLAINE writes, "I use it almost daily for reference, and regard it as a model," and which the *Nation* calls "A timely and valuable aid to political education," is fully described in a pamphlet sent free to all who ask for it. We have still unassigned territory for good agents (let such apply at once), and send the books, three volumes, averaging 1,000 pages each, on receipt of the subscription price, only to those to whom our local agents are not accessible.

CHARLES E. MERRILL & Co., Publishers,
743 Broadway, New York.

GINN & CO.'S
Bulletin of New Books.

ENGLISH.

OPEN SESAME!—Poetry and Prose for school-days. Edited by BLANCHE WILDER BELLAMY and MAUDE WILDER GOODWIN. Vol. I. Arranged for the younger children. Sq. 12mo, cloth, xiii.+316 pp. Beautifully illustrated. 90 cents.
Vols. II. and III. completing the series will be published soon.

ENUNCIATION AND ARTICULATION—A Practical Manual for Teachers and Schools. By ELLA M. BOYCE, Superintendent of Schools, Bradford, Pa. 12mo, boards, vi.+88 pp. 35 cents.
This book is directed against one of the greatest faults of our public schools—the failure to cultivate clear-cut speech.

WORD BY WORD: PRIMARY. An illustrated Primary Spelling-Book, showing the structure of English words and training the vocal organs to clear enunciation. By J. H. STICKNEY, author of 'Stickney's Reading Series,' etc. 12mo, cloth, 12 pp. 22 cents.
To be followed by "Word by Word: Advanced."

LATIN & GREEK.

HARVARD STUDIES IN CLASSICAL PHILOLOGY. Edited by a committee of the classical instructors of Harvard University. Professors JAMES B. GREENOUGH, FREDERIC D. ALLEN, and JOHN WILLIAMS WHITE, Editorial Committee.
Vol. I. 8vo, boards, vi.+206 pp. Subscription price, $1.50.
Contains eleven important articles, several "Notes," and valuable indexes.

GOODWIN'S SYNTAX OF THE MOODS AND TENSES OF THE GREEK VERB. By William Watson Goodwin, LL. D., Eliot Professor of Greek Literature in Harvard University. Rewritten and enlarged. 8vo, Cloth, xxxii+464 pp. $2.15.
A notable revision of a remarkable book.

MATHEMATICS.

ELEMENTARY MATHEMATICAL TABLES. By Alexander Macfarlane, D.Sc., LL.D., Professor of Physics in the University of Texas. 8vo. Cloth, iv+106 pp. 85 cents.
These tables are designed to be useful not only in computing and in the graphic method, but also in the teaching of arithmetic and in the illustration of the theorems of algebra. In matter, plan, and arrangement many novel and excellent features are presented.

THE METHOD OF LEAST SQUARES. An Elementary Treatise: With numerical examples of its applications. By George C. Comstock, Professor of Astronomy in the University of Wisconsin, and Director of the Washburn Observatory. 8vo, Limp cloth, viii+68 pp. $1.05.
It has been throughout, the author's purpose to so present the subject that a working knowledge of the method, based upon an appreciation of its principles, may be acquired at a moderate expenditure of time and labor.

FRACTIONS. A Teachers' Manual of Objective and Oral Work. By Helen F. Page, State Normal and Training School, New Britain, Conn. 8vo, boards, iv+47 pp. 35 cents.

Pupils' Edition. Color diagrams for use in connection with the Teachers' Manual of Objective or Oral Work. 8vo, boards, 52 pp. 35 cents.
A carefully worked out method of teaching fractions by means of block and colored diagrams in the form of circles divided into fractional parts.

SCIENCE.

THE ELEMENTS OF ASTRONOMY.—A text-book for use in High Schools and Academies, with a Uranography. By Charles A. Young, Ph.D., LL.D., Professor of Astronomy in the College of New Jersey (Princeton), Author of "The Sun," and of a "General Astronomy."
12 mo. Half leather. x+472 pp. +4 Star maps. $1.55.
It is clean cut, done with a brevity that is both full and lucid. . . . . From the astronomer's point of view, and from the teacher's, the Manual is equally well done, and is a model in both respects.—The Independent, N. Y.

PLANT ORGANIZATION. A Review of the Structure and Morphology of Plants by the Written Method. Simplified and adapted to the use of beginners, either in classes or as private students, in connection with any text-book of botany, however elementary; being equally for use with or without the employment of botanical technical terms. With diagramatic illustrations. By R. HALSTED WARD, A.M., M.D., F.R.M.S., Professor of Botany in the Rensselaer Polytechnic Institute. Second edition. Revised. Small 4to. Flexible boards, 136 pp.+32 blank pp. 85 cents.

HISTORY.

A SHORT HISTORY OF THE ROMAN PEOPLE. By WILLIAM F. ALLEN, late Professor of History in the University of Wisconsin. 12mo. Cloth. xvi+350 pp. With numerous maps and illustrations. $1.10.

MYERS AND ALLEN'S ANCIENT HISTORY. Part I. The Eastern Nations and Greece. By P. V. N. Myers, President of Belmont College, Ohio, author of "Mediæval and Modern History," etc. Part II. Allen's Short History of the Roman People. 12mo. Half leather, 747 pp. $1.65.

Any of the above books will be sent by mail, postpaid, on receipt of the price named.

NEARLY READY.

THE ANNALS OF TACITUS. BOOKS I.-VI. Edited by the late Prof. W. F. Allen.

THE BEST ELIZABETHAN PLAYS. Edited by William R. Thayer.

SIDNEY'S DEFENCE OF POESY. Edited by Prof. Albert S. Cook.

Charles Dickens's
COMPLETE WORKS.

Unquestionably the most superb edition ever attempted in this country.

The type is large and clear, especially cast for this work, the paper is made of the finest materials, and the margins are ample. All the illustrations contained in the original editions (copies of which are now worth $1,000) are here represented. The etchings by Cruikshank, "Phiz," and others numbering over 400 have been carefully retched. Electrotypes from the original wood blocks, which were never printed from, have been obtained from Dickens's original publishers in England. Twelve different portraits of the author, especially engraved, appear on the different title-pages of the volumes. All the illustrations are proofs printed on

Imperial Japanese Government Paper.

The set is limited to 1,000 numbered copies, and will be complete in 45 volumes, bound in smooth vellum cloth, gilt tops, uncut, at $2.50 per volume, and will be issued at about 2 volumes per month.

☞ Issued by subscription only, and no orders taken except for complete sets. Prospectus, with specimen showing type, page, paper, etc., with specimen illustration, mailed free upon application.

☞ *Local Agents wanted.* Address,

ESTES & LAURIAT, PUBLISHERS, Boston.

PLENTY of teachers, is the usual thought, when one considers the number who want to teach but can't find places. And to a certain extent this is true; where a school wants only an "ordinary" teacher, there are plenty of "ordinary" applicants. But the demand grows greater every year for teachers who are not "ordinary"; who have demonstrated extraordinary capability in some direction—who can accomplish as much in a month as an "ordinary" teacher can in a term. Superintendents and principals see such a teacher somewhere and decide they want OF ROOM they apply to our one like her. So Agency, saying: "We have plenty of home talent, but if you can give us a teacher whom you can guarantee to be superior, you may recommend her." Now we have ten such calls for every teacher we are sure of, and over and over again we write, "For the branches you require and the salary you pay we cannot give you the teacher you want." And yet there may be a hundred teachers who can answer all the requirements and would be glad of the place, only they haven't registered. *If you have real ability we can please you.* There is plenty of AT THE TOP. room

MUIR, HAWLEY & MAYO CO., 343 Broadway, New York.

"No man in this country speaks with the same authority, or deserves more earnest attention."

NEW EDITIONS ARE NOW READY OF
PROF. RICHARD T. ELY'S WORKS.

Problems of To-Day.
A discussion of Protective Tariffs, Taxations, and Monopolies. 12mo, $1.50.
(REVISED AND ENLARGED EDITION.)

This work appeals to all classes and conditions of men, "Republicans," "Democrats," "Independents," Legislators, Private Citizens, Merchant Princes, Mechanics, and Day Laborers. All are alike interested in the question of a protective tariff, the nature of monopolies, the welfare of labor, the national surplus, the morality of subsidies, etc.

The Labor Movement in America.
(Revised, with much new and valuable material added). 12mo, $1.50.

"No one who wishes to understand the problems of labor and capital can afford to be without Prof. Ely's work."—*Rochester Chronicle.*

Taxation in American States
AND CITIES. 12mo, $1.75.

A work of immense research, and presents in a masterly manner the whole complex subject of taxation, as well as the inconsistencies which prevail in parts of this country. The volume is made especially valuable by numerous and carefully compiled tables, showing the various methods of levying taxes and the comparative results in every State of the Union, and will appeal especially to taxpayers, lawyers, legislators, and all engaged in public affairs.

Social Aspects of Christianity
12mo, 90 cents.

Prof. Ely has no respect for shams; he shows what Christian socialism is, and how wide the gulf is between the professed Christianity of many churches and the Christianity of the Gospel.

SOME RECENT BOOKS

Translated by Miss Wormeley.

THE BAGPIPERS.

By GEORGE SAND. 12mo, half Russia, uniform with our edition of "Balzac's Novels," price, $1.50.

"George Sand's novel, 'Les Maîtres Sonneurs,' never before translated into English. When it is added that the translator is Miss Katherine Prescott Wormeley, whose translations of Balzac have given her such a high reputation, enough is said to indicate the excellence of the work. George Sand has never been translated by a writer so capable of rendering her spirit and the graces of her style as Miss Wormeley, and a new interest will be awakened in the author of 'Consuelo' by this undertaking."—*Alexander Young, in Critic.*

ALBRECHT.

A Story. By ARLO BATES. 16mo, cloth, $1.00.

IN THE GARDEN OF DREAMS.

By LOUISE CHANDLER MOULTON. Illustrated, 16mo, cloth, $1.50.

THE NEW PRIEST IN CONCEPTION BAY.

A Novel. By ROBERT LOWELL. Revised edition. 12mo, cloth, $1.50.

SONS OF THE SOIL.

By HONORÉ DE BALZAC. Translated by KATHARINE PRESCOTT WORMELEY. 12mo, half Russia, $1.50.

"This volume of Balzac has a timely interest from the prominence of the subject before the public. 'Les Paysans,' rendered in English 'Sons of the Soil,' is a story of the land question in France, and appeals to that sense of the inequality of conditions as illustrated in the tenure of this sort of property, which is excited by writers on the same subjects in this country to-day. The motto of the first chapter aptly suggests the trend of this powerful story: 'Whoso land hath, contention hath.'"

THE
Leading Periodicals.

"To say that these are the most valuable periodicals published in the English language is only to say what every reader knows. A man cannot keep abreast of the times as a reader, abreast of the current of historic research and review, of scientific achievement and discussion, of literary effort and criticism, of political movement and debate, of religious inquiry, progress, revision, and development, unless he is a careful reader of these publications; and they give him all that the general reader can attend to, or, as a rule, desires."—*Buffalo Commercial.*

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

To Library Givers and Trustees of New Public Libraries.

J. S. Lockwood, 146 Franklin Street, Boston, with more than twenty-five years' experience, gives special attention to buying Books for New Libraries, and to orders from persons setting up Private Libraries. Lists of Standard Books furnished patrons. Correspondence solicited.

REORGANIZATION

OF

The Denver Land & Security Company.

This company, originally organized in December, 1887, with a capital of $250,000, for the principal purpose of buying, improving, and selling the Denver real estate known as "Berkeley," has paid 13 per cent. in cash dividends and has capitalized $500,000 of its surplus. The stockholders have voted to issue $250,000 additional stock, making a total of One Million Dollars. The surplus shown on the books February 1, 1890, was $330,287.59, which is likely to be greatly augmented during the year unless reduced by increased dividends. The new stock participates with the old in this surplus, and is, therefore, worth at least $130 per share. Inasmuch as the Board of Directors have authorized its offer at par ($100 per share) for a quick sale, it is deemed only just to the old stockholders that they should have the first opportunity to subscribe for the new issue, and the books will be open for subscriptions by stockholders only until March 1, 1890, and after that date to all who may desire to subscribe.

It is proposed to further amend the Articles of Association so as to change the name of the corporation to

The Continental

Land & Security Company.

Stockholders may send their subscriptions on the blanks furnished them to Jno. C. Avery, President, 115 Broadway, New York, or to S. B. Carter, New England Manager, 209 Washington Street, Boston, Mass. On and after March 1st, 1890, subscriptions will be received at the offices of the Company, 115 Broadway, New York, 209 Washington Street, Boston, and 1700 Curtis Street, Denver, Col., or at the offices of any of its agents, from whom also further information may be obtained.

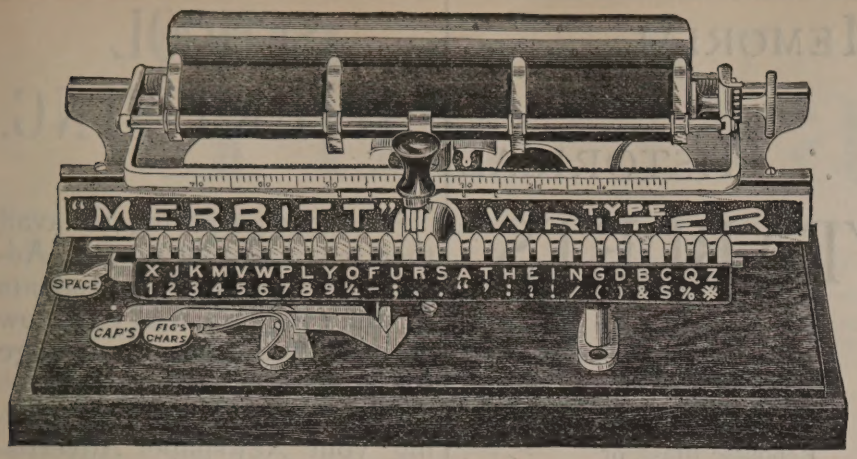
GEORGE P. HUMPHREY, Rochester, N. Y.



ARE WE ON THE EVE OF A REVOLUTION?

This question seems rather startling at first blush. But we do not mean a political or social revolution, ending in blood. We simply mean a revolution of practical usefulness. Is the great commercial and business world about to abandon the old fashion use of penmanship in conducting letters of correspondence and substitute the much more speedy, plain and practical form of type written letters? We must say that it looks very much that way.

Good, careful, neat penmanship requires much time to learn and great pains to preserve, while an ordinary person can learn to use the MERRITT Typewriter in half an hour, and the writing being produced by metal type, is plain as print from first to last—while from forty to fifty ordinary business letters per day may be written.

Why, then, should a poor boy or girl spend from six months to a year to learn penmanship, which bids fair to become a lost art in view of the onward march of the MERRITT Typewriter, costing only $15 complete?

This is exact copy of The MERRITT'S work. It is equal to that of any High Priced Typewriter. Relieves fatigue from steady use of pen. Improves spelling and punctuation. Interests and instructs children. The entire correspondence of a business house can be done with it. Learned in a half hour from directions. Prints capitals, small letters, figures and characters, 78 in all.

Write for Circulars, Voluntary Testimonials and sworn-to Speed Test of 60 words a minute.

THE NATION.—A BOUND SET, also an unbound set; various vols., both bound and unbound; 25,000 odd numbers. Will buy, sell, or exchange. A. S. CLARK, 34 Park Row, N. Y. City

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

HOW IS THIS?

Is there a man, woman, or student in the United States who can do without Webster's Dictionary?

It contains over *1,600 pages*, weighs over *9 pounds*, has *1,500 illustrations*, *15,000 synonyms* and an *Appendix* of *10,000 new words*.

One hundred thousand copies of Webster's Dictionary have been printed for the Texas Siftings Publishing Company, and are now ready for delivery. These books contain every word that the great Noah Webster, LL.D., ever defined, and, in addition to that, they contain tens of thousands of new words that have been invented since Webster produced his Dictionary.

Webster's Dictionary has heretofore been sold for no less a sum than $10 per copy, but, owing to the extraordinary cheapening of paper and wonderful economy in labor connected with the improvements in machinery, that enables publishers to print ten sheets in the same time and at the same cost that they used to print one, we can offer this great and valuable Dictionary at a very much smaller price than it has ever been offered for before.

WEBSTER'S Dictionary FREE!

The price of "Texas Siftings" is $4 a year. "Siftings" and this Dictionary, which in itself is worth $10, will be delivered at the residence of any person who sends us the sum of $5.

To the ordinary reader of this advertisement it may seem rather peculiar that we can afford to do this. Well, that is our business. We think that there are over two hundred thousand people in the United States who would be glad to get Webster's Dictionary, such as we advertise, for $5. We want to catch them, and every one of them will, before they can get a Dictionary, have to subscribe for *Texas Siftings* for one year. They cannot get Webster's Dictionary in any other way. Do you see the point? We may lose a lot of money to get this large number of subscribers, but when we get them we will hold them, or, if we don't the loss will be ours.

Mr. E. M. Pine of the Philadelphia *Inquirer* says "this is the best copy of Webster's Dictionary I ever saw." The editor of the Philadelphia *Times*, who received one of these Dictionaries, writes: "It is immense. Enclosed find $5. Send another copy. We need it in our business."

Send $5 to "Texas Siftings" Publishing Company, New York, and you will get *Texas Siftings* one year, and also will have delivered at your home, either by mail or express, a copy of Webster's Dictionary. A copy of this Great Book can be seen at the business office of this paper.

TRADE MARKS
ON
SOLID SILVER WARE.

There is no branch of industry, except the manufacture of Silver ware, where the maker's name is not used by the merchant as a sure guarantee for good quality of the merchandise bearing the mark; but there has been inherited by the silversmiths of our time a pernicious system of stamping the name of the dealer in the place that properly belongs to that of the manufacturer, as the maker is the only one that can absolutely guarantee the quality of the goods, as that is the important use of any stamp used on silver ware, so that purchasers will do well to look for the Trade Mark of the maker, in addition to the name of the dealer; and if that mark should be the which is the trade mark of the Gorham M'fg Co., it can be relied upon as representing English Sterling **925/1000** fine, as no other quality is used by this firm.

Every first-class jeweller in the United States has the Gorham Solid Silver Wares, and by inquiring for these goods purchasers may be absolutely sure of obtaining reliable goods at no extra cost.

SCHOOL ADVERTISING.

To those purposing to avail themselves of Newspaper Advertising in securing students for the coming school year, now is certainly the time to arrange for it.

That we are capable of placing your Newspaper Advertising TO YOUR ADVANTAGE, rendering best service for the least money for which satisfactory service can be insured, is, we think, proved by the following facts:

We graduated from the school-room twenty-two years ago, and entered the Advertising business in 1869.

Twenty-one years of close application and successful experience has brought the knowledge of both methods and means.

Admittedly doing the largest business in our line in the world, we have unequalled facilities for prompt and careful execution of all orders.

Our Printing Department, devoted exclusively to work arising from our business, and principally to the preparation of advertisements, has attained recognized skill in that line.—Its use costs our customers nothing.

The basis upon which our business has been built up from the smallest of beginnings, has been the making of our customers' interests our own. We desire no orders which do not result profitably to our customers; consequently our constant study is how to make Newspaper Advertising pay the advertiser—for his success assured, an increase of business to us is equally sure.

Before making any contract for Newspaper Advertising, it will pay you to confer with

VOL. L.—NO. 1294. THURSDAY, APRIL 17, 1890. PRICE 10 CENTS.

Money Matters.

CONSOLIDATION OF TWO IMPORTANT INVESTMENT COMPANIES: THE BUNNELL & ENO COMPANY ABSORBS A LEADING NEW YORK CONCERN.

NEW YORK, Tuesday, April 15, 1890.

"In union is strength." This is an era of combination, and the prevailing tendency towards concentration of capital has begun to influence the Western mortgage field. The announcement that the Mortgage Investment Company of New York has been absorbed by the Bunnell & Eno Investment Company of Wichita, Kansas, through whom its transactions in the West have been made, will be read, possibly, with surprise by Eastern readers of the *Nation*, to whom the name of the former has become very familiar during the past two years.

It should be stated at the outset that the consolidation is a complete and thorough one, all the officers of both companies retaining, as nearly as practicable, corresponding positions in the new one. The standing of both companies has been of the very highest kind, and their well-known financial strength, joined to the unquestioned integrity and experience of the respective officers, assured to each company a future of abundant and increasing activity. The union of the two organizations is therefore a measure which appears to spring from the sagacity which has characterized their business operations in the past. In other words, while the safety of investments has been an imperative, controlling principle in the dealings of these companies in the investment field, the consolidation practically makes "safety doubly safe," and entitles the consolidated organization to command implicit confidence to a degree seldom arrived at by an investment company.

The capital has been increased to three hundred thousand dollars (with power to increase to five hundred thousand dollars), and the name under which the business will be done is the Bunnell & Eno Investment Company.

The latter company has for years been one of the safest, most conservative, and most successful of the Western investment companies, its main office being at a point where there have been consummated, during the last few years, some of the soundest investments ever made, outside of Government bonds, in the financial history of the period. In view of the fact that the Bunnell & Eno Investment Company, in carrying on its business at Wichita, had secured valuable European connections, it has been thought best to retain the name of that company. It was, as already stated, through the latter that the Mortgage Investment Company carried on its Western business, and the proposition for consolidation was made by the Bunnell & Eno Company, after several years of mutual business connection. The companies simply join force and forces, not a particle of the elements that made both so effective and successful being lost by either.

The business will be continued in New York City without interruption at the former office of the Mortgage Investment Company, all the offices and connections of both companies, including the main office of the Bunnell & Eno Investment Company at Wichita, being retained, with such extensions of them as may be needed. Under the consolidation William S. Eno is President, Charles R. Otis and G. Livingston Morse are the Vice-Presidents, Luther B. Bunnell is Treasurer, the Hon. Matthew H. Ellis is Secretary, and the Board of Directors is composed of these gentlemen and Sidney E. Morse, Frederick Shonnard, Adam C. Ellis, and William H. Sweeney.

Mr. Eno is the president of the Stissing National Bank at Pine Plains, N. Y.; Mr. Otis is head of the well-known elevator-manufacturing concern of Otis Brothers & Co.; the Messrs. Morse are the owners of the building bearing their name, in which the company's New York office is situated; and Mr. Ellis is ex-Judge of the City Court of Yonkers.

It is in mortgages on Western farms that the two companies have dealt, and on this form of security the Bunnell & Eno Investment Company, with its new scope, largely increased capital, and admirable board of officers, will concentrate its work. It will adhere to the same inflexible principles of prudence which have characterized the record of the two companies, and made the business done so gratifying and satisfactory to all who have made investments on their judgment and guidance. There is no question that Western farm mortgages when judiciously placed have become one of the most satisfactory forms of investment.

The company does not offer to take charge of and invest the money of others, but offers to *sell* unsurpassed securities in which it has already invested its own money, and of the value of which it is so well assured as to be willing to *guarantee*, as it does, the collection of *both principal and interest*. To those familiar with the absence of risk on the mortgages handled by the company, this guarantee is a mere matter of form, owing to the remote chance that the guarantor will ever be called on to make the guarantee good; to others, however, the weight of the guarantee will be evident when the business reputation and financial standing of the gentlemen composing the company is considered.

The latter will send free on application its book on "Western Mortgages as Investments," containing information important to those who are in any way interested in the subject, and giving some of the convincing reasons why, out of all the avenues of investment open to a man with money, the mortgages handled by the company should be selected.

Mr. G. L. Morse will continue in active charge of the New York office, at 140 Nassau Street (in the Morse Building), where the officers will be pleased to receive correspondence relative to this advertisement, or visits from intending investors.

JUST PUBLISHED!

EKKEHARD;

A Tale of the Tenth Century.

By Joseph Victor Von Scheffel. Two vols., paper, 80 cents; cloth, $1.50 per set. Sent by mail, postpaid, on receipt of price.

W. S. GOTTSBERGER & CO.,

Publishers, 11 Murray St., New York.

"The best text-book for beginners in Art History."

A Short History of Art.

Octavo, with 253 illustrations, a chart in colors, giving the relative chronological position of the principal artists, a Full Index, giving the Pronunciation of the Proper Names by Phonetic Spelling, and a Glossary. By Julia B. DeForest. $2.00.

Copies for examination will be mailed, postpaid, on receipt of $1.50, which is the price to schools. If not approved, these may be returned and the money refunded.

"It is a library of art histories crystallized into a most useful hand-book. The author has made by far the best text-book for beginners in art history that has yet appeared. The book is clear and vigorous in style, and written with a firmness that comes of sure knowledge."—*Literary World.*

"This work is one we cordially commend to all American teachers and students. It contains a brief outline of the origin and development of art, and is the best possible introduction to the many comprehensive standard works on the subject, and specially of Dr. Wilhelm Lubke's well-known 'History of Art,' published also by Messrs. Dodd, Mead & Company."—*N. E. Journal of Education.*

"The author of 'A Short History of Art' has done her work exceedingly well. She has judiciously culled facts and suggestions from the best standard works on the subject, which give a succinct view of the great epochs, schools, and masters, carrying forward in a clear and comprehensive manner the account of the progressive development of art. There is a great deal of information lucidly arranged, and especially adapted as an introduction to this whole department of education."—*Prof. J. M. Hoppin, Yale University.*

Complete in Forty Volumes. Price, per Volume, Paper, 40 Cents; Cloth, 56 Cents.

The only *illustrated* school edition of Shakespeare in the world. The only school edition that gives a summary of the various readings, and the critical comments of *all* the leading editors. Teachers interested in the study of Shakespeare's works should send for pamphlet containing Dr. Rolfe's article on "School Courses in Shakespeare," which may be obtained free of cost, upon application to the publishers.

ROBERT BROWNING'S SELECT WORKS.

THE SELECT POEMS OF ROBERT BROWNING.

Edited, with Notes, by WILLIAM J. ROLFE, Litt.D., and HELOISE E. HERSEY.

This volume is prefaced by an Introduction, which includes a brief sketch of the life of Browning, a chronological table of his works, a list of the books most useful in the study of Browning, and carefully selected criticisms by Swinburne, Dowden, Lowell, Morley, Ruskin, Furnivall, and others.

"The volume is a good first book in Browning, and it has the additional merit of being convenient in size. It is eminently suitable for use in schools and private classes."—*Beacon, Boston.*

THE BLOT IN THE 'SCUTCHEON, and Other Dramas, by ROBERT BROWNING. Edited, with Notes, by WILLIAM J. ROLFE, Litt. D., and HELOISE E. HERSEY.

This volume contains A BLOT IN THE 'SCUTCHEON, COLOMBE'S BIRTHDAY, and A SOUL'S TRAGEDY. It is prefaced by a long and valuable Introduction, and supplemented by many pages of elaborate notes, and has the advantage of an interesting letter from Mr. Lawrence Barrett upon the production, under his management, in Washington and other cities in the United States, of the drama which gives its title to the book.

"A volume invaluable to the Browning student."—*Boston Traveller.*

Additional Volumes of Rolfe's English Classics.

Goldsmith. SELECT POEMS OF OLIVER GOLDSMITH. The Introduction to this volume includes Macaulay's Biography of Goldsmith (from the 'Encyclopædia Britannica'), with selections from memoirs of the poet by Thackeray, George Colman the Younger, Campbell, Forster, and Irving.

Gray. SELECT POEMS OF THOMAS GRAY. This volume (revised in 1886) contains the ELEGY WRITTEN IN A COUNTRY CHURCHYARD, with the Odes ON THE SPRING, ON THE DEATH OF A FAVOURITE CAT, ON A DISTANT PROSPECT OF ETON COLLEGE, THE PROGRESS OF POESY, THE BARD, and TO ADVERSITY, with the history of each Poem, and copious Notes. The Introduction includes The Life of Gray by Robert Carruthers (from the 'Encyclopædia Britannica') and William Howitt's description of Stoke-Pogis (from the 'Homes and Haunts of the British Poets.'

Macaulay. THE LAYS OF ANCIENT ROME. By THOMAS BABINGTON MACAULAY. This work contains HORATIUS, THE BATTLE OF LAKE REGILLUS, VIRGINIA, and THE PROPHECY OF CAPYS. The Introduction includes, besides the Author's Preface, JOHN STUART MILL'S review and Professor HENRY MORLEY'S Introduction to the LAYS.

Milton. THE MINOR POEMS OF JOHN MILTON. This volume contains all the minor poems of Milton except his "translations," with biographical and critical introductions, and nearly one hundred pages of historical, explanatory, and illustrative notes.

Wordsworth. THE SELECT POEMS OF WILLIAM WORDSWORTH. With an Introduction, Notes, and many Illustrations. Edited in the same thorough and scholarly manner as the Shakespeare and other volumes of the series.

Price per Volume, Paper, 40 cents, Cloth, 56 cents. Liberal discounts on supplies for introduction.

HARPER & BROTHERS, Publishers,

FRANKLIN SQUARE, NEW YORK CITY.

The Nation.

NEW YORK, THURSDAY, APRIL 17, 1890.

The Week.

We have, during the past two years, at sundry times and in divers manners, asked various Pennsylvania newspapers and other good people of that State to tell us if they knew what the Philadelphia *Press* meant when it said, in 1885, upon Matthew Quay being talked of for the State Treasurership, that his nomination would "take the lid from off the State Treasury, and uncover secrets before which Republicans would stand dumb." This has been an extremely important question ever since Mr. Quay became Chairman of the Republican National Committee and recipient of the vast sums for campaign purposes put into his hands by Wanamaker and others. But we have asked it in vain. The answer, we learned very soon, could have been given by at least 200 respectable men in Philadelphia and by the editors of various papers, including one of such high standing as the *Public Ledger*. But it never came, and Quay kept on growing in power and influence, and Wanamaker in piety, with this extraordinary "secret" in possession of a large proportion of the nominally religious community. The patience of some good men in Philadelphia was, however, at last worn out, and some weeks ago they put the damning facts of Quay's career in possession of the New York *World*, which printed them with substantial correctness. Unhappily, owing to the sensational way in which that paper is edited, its "revelations" do not make the impression on the public mind which in many cases they ought to make, and which in this case they ought to have made. In fact, the story fell rather flat on the public ear. But it ought not to have fallen flat on Quay's ear, or on Wanamaker's, or on President Harrison's. The President in particular ought to have been roused by it into burning activity. He ought not to have delayed one hour after it was brought to his notice in calling on Quay to sue the *World* for libel, or else cease all relations with the White House, and in calling on Wanamaker to say whether he knew of these things, and had reason to believe them true before he took office, and if so to take himself promptly back to his store. The chief charge against Quay, which has not as yet been denied by any one, is that he was guilty of more than one defalcation as State Treasurer, having taken out of the Treasury on one occasion $260,000, and on another $400,000, and used both sums, or a large part of them, in some form of gambling, and that he was helped by party friends, when discovery became inevitable, to make up the amount lost, at least in part, to avoid a great party scandal.

There has not been in the history of reform a happier discovery of a suitable Scripture text for purposes of argument or illustration than that made by Mr. Henry C. Lea in his open letter to the President on the subject of these revelations concerning Quay:

> "The heads thereof judge for reward, and the priests thereof teach for hire, and the prophets thereof divine for money; yet will they lean upon the Lord and say, Is not the Lord among us? None evil can come among us. Therefore shall Zion for your sake be ploughed as a field, and Jerusalem shall become heaps."

Could there be a more vivid description than this of the condition of the Republican Administration? Almost every word of it strikes like the knout and draws blood. Part of its extraordinary appropriateness comes from the fact that the present Administration was really started as a semi-religious enterprise. There was, before the President left Indianapolis, a farewell service in the church of which he was elder, in which the pastor addressed him personally, in the style of Bossuet to Louis XIV., and the audience dissolved in tears. Then there were the family prayers in the parlor-car on the road to Washington, to which Stove-Polish Morse drew public attention as a sign that there was no incompatibility between religion and politics. Then there was Wanamaker's great and much advertised Sunday-school activity in Philadelphia, and numerous newspaper pictures of the good man's rushing home from Washington every week to conduct the Sunday-morning exercises in the institution. Then Private-Secretary Halford started a Bible class, the news of which was telegraphed all over the country, and the New York *Independent* came to the rescue of all these good men, with invective worthy of Tertullian, when any one questioned the mode in which they had won the Presidency, or criticised the way in which they were carrying on the Government. We are not sure whether Clarkson opened with prayer each day in which he decapitated a hundred postmasters in order to show the world the falsity of the President's promises in his letter of acceptance, but we think it very likely. There appears to be hardly any form of hypocrisy in which this venal company have not been indulging, and there was no check to it until Bishop Potter let loose on the President, in Washington's pew, the honest wrath which so many good men were feeling. But it did not affect the President in the least. Why not? Because, like those judges and priests and prophets of whom the text speaks, he leaned on the Lord and said: "Is not the Lord among us? None evil can come among us." But they were mistaken. The Lord will not let people of this sort lean on him.

Samuel J. Randall died on Sunday after a lingering illness borne with great fortitude. He was a man of remarkable ability of the business (as distinguished from the debating or persuading) order. In a committee-room he was all-powerful, as an orator he made no mark. He had a strong character, which impressed itself deeply on those with whom he came in immediate contact, and it was fortified by unblemished personal integrity. Nobody ever accused him of corruption in its minor form. While helping hundreds to make fortunes through the legislation which he promoted, he himself lived modestly and died poor. But he nevertheless set a most corrupting example in politics, for he sat in Congress for years as the Democratic representative of a Republican district, on the unconcealed condition that he should steadily support Republican manufacturers in obtaining profits or in saving themselves from losses in their business through taxation. In other words, he served for years in Congress, nominally as a Democrat, but really as a Republican, doing his best to destroy and bury the old and well-established Democratic tradition touching both the tariff and the limits of the province of government, in the interest of its political opponents. It is difficult to know what name to give to a rôle of this sort without seeming to speak harshly of the dead. If such practices became at all common, they would, of course, not only make party government impossible, but destroy all confidence between man and man in political life. That such rôles are possible is largely due to the great mechanical difficulties in the way of debate interposed by the size and arrangement of the House of Representatives. Speech that will be heard is possible only to the stentorians, owing to the vastness of the space to be filled and noisiness permitted to those who do not care to listen. The result is to give great license to methods which, if they had to be explained and defended in close and sharp debate, would soon be confined to men of less honesty and less ability than Mr. Randall. As matters stand, the Democratic party has not only not lost, but has been delivered from a great hindrance and embarrassment, by his death. But it must be put to his credit that he was the determined foe of corruption and jobbery on a small scale and for individual ends, and he was largely instrumental in bringing about the defeat of the Force Bill; but whether the Republican or the Democratic party profited more by this, it would be hard to say. It would certainly have given the former a deadly blow had it passed.

It is long since there has been a year when the tide set so strongly in favor of one party in the local elections all over the country as has been the case with the Democrats thus far this year. The drift is most strongly marked in the President's own State. In the township elections two years ago, the Republicans secured 514 of the trustees and the Democrats but 490; last week the totals were only 398 Republicans against 608 Democrats. The Republican organs are trying to explain away all these evidences of popular feeling by the claim that, in the words of the Philadelphia *Press*, "local questions are always uppermost in these elections, and this fact was true to an unusual degree in the

municipal and township contests of this year." But this theory is not accepted by such good authority as the Indianapolis *News*, an independent journal which supported Harrison, and which says: "Local questions and candidates were given special consideration, but the general result is due to the prevailing dissatisfaction of the people in Indiana, just as in other States, over a condition of things for which the Republican party, in its heedless adherence to discriminating and monopoly-sustaining legislation, is believed to be largely responsible. The lesson of the election is not alone to be found in Indiana, but it is made equally conspicuous in other States where there was voting yesterday."

The Democratic opponents of the secret official ballot will find little comfort in the returns from the elections in the contested legislative districts of Rhode Island on Saturday. It has been the custom in that State for several years for the Republicans to buy enough votes in these second elections to enable them to secure the Legislature, and thus put in the Governor's chair the man who had failed of election by the people. It is well known that Republican candidates for Governor have been "bled" more generously to carry a few of these elections than they have for an entire State election. The secret official ballot has made further use of this money unwise because unprofitable. It does not bring the votes any longer, for the men who take it cannot be followed to the polls to see if they keep their bad bargain. The result is that Rhode Island is likely henceforth to be permanently a Democratic State.

Ex-Gov. Long, Collector Beard, and other Republican managers in Massachusetts have conceived the idea of making suffrage for women in municipal elections a feature of party policy. In his speech at the conference which brought forward this plan, ex-Gov. Long said that the Republicans had no issue on which to go before the people of the State at the next election, and urged that they would gain strength as a party by taking up this cause. We observe, however, that the Boston *Journal* dissents very pointedly from this theory, and urges the majority in the Legislature not to be carried away by it. The truth is, that experience has shown it to be hazardous business for a party to urge an extension of the suffrage as a party measure. The Republican leaders in Congress gave the ballot to the negro twenty years ago, in the confident expectation that this policy would insure their permanent control of every Southern State; but it was hardly half-a-dozen years before every one of those States was in the hands of the Democrats. It is by no means improbable that if the Republicans in Massachusetts should give women the suffrage in city elections, they would find within a few years that they had only helped the Democrats to recover control of the city government of Boston.

A formidable petition has been sent to Congress from Massachusetts in favor of an increased appropriation for the work of the National Civil-Service Commission. It requests Congress to grant not merely the $53,000 asked for by the Commission, but also the additional sum needed for such extension of the system under the present law as the Commission recommend, and as, with the President's approval, they may be able to effect. The signers, who come from all the cities of the State and 171 towns, number 1,287, and include the Governor and the Democratic candidate for Governor, the Lieutenant-Governor and the Democratic candidate for Lieutenant-Governor, five ex-Governors, the Secretary of the commonwealth, the State Treasurer, the State Auditor and the Democratic candidate for State Auditor, six of the eight members of the Governor's Council, the President of the State Senate and all the Senators, five ex-Presidents of the Senate, the Speaker and 120 members of the House of Representatives, the Chairman and Secretary and 19 members of the Republican State Committee, the Chairman and Secretary and 18 members of the Democratic State Central Committee, the U. S. Collector of the Port of Boston and the ex-Collector, twelve ex-members of Congress, an ex-Secretary of War of the United States, an ex-District Attorney of the United States, and the Chief Justice of the Supreme Court of the State. No one who is familiar with Massachusetts can question the broadly representative character of the petition. If Congress ventures to ignore it, an additional and powerful influence will be added to those which are threatening to make Massachusetts a Democratic State.

The discussion in the United States Senate upon the Montana election contest is one of the most humiliating exhibitions of partisanship which have been made there in many years. Having decided to seat the Republican claimants without regard to the evidence, the Republican Senators take little or no part in the debate on the merits of the case. They absent themselves in a body for the greater part of the time, leaving the Democratic Senators to make their arguments to themselves alone. Probably this is the most agreeable course under the circumstances, for the Democratic arguments cannot be answered by anybody. The simple fact is, that the Republican majority has decided to "go behind the returns" of the Montana election, and seat two Senators who never were legally elected, and who only obtained their certificate by methods like those of the old Carpet-Bag Returning Boards. Day after day the Democratic Senators have set forth the truth in this indefensible performance with unanswerable clearness and force, and the Republican Senators are merely waiting for them to stop talking in order to vote as they have determined.

The country has grown accustomed to reckless displays of demagogism regarding the Chinese question, but the House of Representatives has recently passed a bill which is calculated to startle the most cynical observer. Under the pretence of amending the Census Act, the lower branch of Congress declared in favor of a new system of excluding Chinese more rigorous than anything heretofore suggested. It was provided that each Chinese person enumerated in the census shall be given an engraved certificate, to be duly numbered and registered in the census office, containing all the particulars necessary fully and accurately to identify such person; that this certificate shall be the sole evidence of the right of such person to be and remain in the United States; and that any Chinese person found thereafter in the country without such certificate shall be either imprisoned or sentenced to deportation. In short, under the guise of an amendment to the Census Act, it was proposed to pass an exclusive law of the most offensive sort imaginable—a law which would constitute an insult to the Chinese nation, and which would be admirably calculated to provoke reprisals upon Americans resident or travelling in China.

Fortunately there is hope that the country may be saved from the disgrace of such a performance. The representatives alike of American merchants and of American missionary societies in relations with China have sent to the Senate earnest protests against concurrence with the action of the House, and a brief discussion in the upper branch the other day indicates that they may prove effective. Indeed, the Senate Committee on Foreign Relations has already modified two or three of the most offensive provisions, so that, for example, diplomatic officers, merchants, students, and travellers are excepted from the operation of the law, and so that a Chinaman found without a census certificate may have the right by competent evidence to show that he is entitled to be in this "land of the free and home of the brave," even if the enumerator, through carelessness or design, neglected to note his presence. At the same time the Senators and Representatives from the Pacific Slope are outspoken against these amendments, and declare their firm purpose to secure the final passage of the law in practically the same brutal form that it went through the House; so that there is still urgent need for an emphatic expression of public opinion on the subject.

Efforts on the part of the House and Senate Republicans to come to an agreement in caucus respecting silver legislation are reported from day to day. The failure to reach an agreement thus far is due in part to the fact that the silver question is not suited to caucus adjustment, and in part to the fact that the differences of opinion in the two bodies are very decided. The Republican party has not put itself on any platform respecting silver which can bind the conscience or the vote of

any member. The House members favor the Windom bill, as modified in the Coinage Committee. The Senators favor the Senate bill, or the Jones bill, as it is sometimes called. The former provides for the issue of Treasury certificates to any extent on the *deposit* of silver bullion at its market price. The latter simply continues the *purchase* of bullion on Government account, raising the monthly purchase to $4,500,000, but not requiring the coinage of the same. There is a marked difference between the two plans, although they will surely come to the same thing in the end—*i. e.*, a parting of company between silver and gold coin and a premium on the latter in the market. Which of the two plans would accomplish this the more speedily no man can say. But the Windom plan is, of the two, much harder to understand. It is complicated and obscure to the common mind. Therefore its chances of passing are not so good as those of the Jones bill, which will, however, meet some obstacles of its own in the course of parliamentary proceedings. There is no good reason for the Government's buying one kind of property and issuing paper money against it, and not buying another kind. Cotton, for example, would furnish as good security for Treasury notes as silver bullion. It fluctuates as little as silver bullion. Much might be said at this time in favor of corn in the crib. It is hardly possible that the Jones bill will get through both houses without having some amendment tacked upon it which will make it ridiculous and nugatory.

It appears now that all the talk about reciprocity in the Pan-American Conference—that is, all of *our* talk—dwindled into a general recommendation that reciprccity treaties be negotiated between the several countries of the American hemisphere, each making tariff concessions so that the peculiar products of each may be introduced free into all the others. It appears, also, that the particular negotiation that Mr. Blaine had in hand with the Argentine Republic was only a fishing excursion to see what he could catch. The American delegates, Messrs. Flint and Coolidge, when asked by the Argentine delegates whether they spoke by authority of the State Department, said that they did not; and when asked whether they could promise the admission of wool free of duty, they said they could not. The Argentines then offered complete and full reciprocity on condition that their wool should be admitted free in our ports. All this is so characteristic of Mr. Blaine that we conclude it must be true. He wanted something to show for his winter's work, and he thought that it would be a good thing to show that he had tried to get reciprocity, but had been balked by the Argentines. In order to get reciprocity, two things were needed, viz.: the consent of the South Americans, and the consent of Congress. He fished in both directions at the same time. It would appear that he failed where he wished to succeed, and succeeded where he wished to fail. The Argentines were ready to meet him, but Chairman McKinley was not.

The Committee on Banking of the Pan-American Conference has recommended the establishment of an international bank, under a charter of the United States Government, to exercise all of the usual banking powers except that of issuing circulating notes. One of our morning contemporaries, discussing this matter, says that "the project propcsed by the committee is that the International Conference should recommend to the Congress of the United States the passage of *a general act* under which an international bank can be organized." We do not so read the report. The despatch on this subject in the same paper says: "The Committee recommends . . . the establishment of an international American bank to be organized under a United States national charter, with branches or agencies in the several represented countries, and, as incident thereto, suggests to the delegates of the United States the desirability of submitting this report to the President of the United States with a view that, should he deem it proper, he may recommend to the Congress of the United States the enactment of a charter for an international American bank, for the benefit and enlargement of the commerce of the Americas." This says nothing about a general act, and it is very plain that a general act is not contemplated. What is contemplated is a special charter of an international bank by the United States Government. That Congress will grant such a charter is not to be supposed. It involves a radical change in our theories of government. The National Bank Act was passed as an auxiliary to the financial arm of the Government in the prosecution of the war, and the theory that the lending of money to the Government is an indispensable requisite to a charter under that act has never been abandoned, each bank being still required to have a certain minimum of its capital invested in United States bonds, whether it issues circulating notes or not. Congress might consent to some changes in the present law to bring it nearer to the views of the Pan-American Committee, but that it will give any serious attention to a special charter for an international bank is most improbable. In our judgment it ought not to do so.

An association has been formed in this country to get up a monster petition to the Czar of Russia in behalf of the Siberian prisoners, which, praiseworthy as its object is, is rather unfortunate in its phraseology. It sets out by informing the Czar that the end of his Government and ours is substantially the same—a proposition which, unfortunately, a great many people would dispute. There ought not to be disputable propositions in a petition. But the passage most open to criticism is that in which his mercy is invoked on account of the sympathy he showed the United States during the war of the Rebellion; and it is hinted that it was the presence of his war-ships "in our harbors" which prevented the interference of foreign Powers in favor of the South. All this seems to us sadly out of place. The one ground of interference in Russian affairs at all is our common humanity, which is shockingly outraged in the Russian prisons. All other claims to a hearing from the Czar on this subject are too trivial for mention. It makes no difference what the aim of his Government is, or what his father did with his little fleet during our war. When a sovereign allows a delicate woman to be flogged to death naked in the presence of soldiers, in spite of the protests of the prison doctor, without punishing or disowning the men who were guilty of such frightful barbarity, there is only one argument which civilized men can fitly use to him. If we petition him at all, we ought not to beat about the bush in search of excuses for addressing him, or cover our appeal with a discourse on political philosophy, or with reminiscences of by-gone civilities. It is as a man, and in the name of outraged human nature, he should be addressed by foreigners. He ought to be told, in courteous language of course, that any one who in our time permits, or connives at, or orders such atrocities is considered throughout Christendom an enemy of the human race.

The German Emperor seems to be revelling in the "glorious privilege"—which the French used to reserve for the rulers of their nation—"of astonishing the world." His mental as well as bodily activity is exciting alarm all over Europe, and is increasing the apprehension of some brain trouble which the family history would seem to justify. He has got rid of Bismarck in order to establish personal as distinguished from ministerial government; has stirred up the Socialistic question as it has never before been stirred up in any country in the world; appears to be disgusting his army by means of startling innovations, and sudden and irritating deliverances on questions of discipline and manners; and has managed to offend the Jews by excepting them from the proposal to admit officers of what the French used to call *roturier* extraction, to regiments hitherto reserved for those whom the Germans, by a droll abbreviation, call "born," *i. e.*, of noble birth. We doubt, however, if there is thus far anything in his conduct to inspire doubts as to his sanity. He is, as has been said, simply acting as a young Prussian lieutenant might be expected to act who found himself suddenly raised to a position of enormous power. In the last century his performances would have excited little or no surprise. What makes them seem queer now is the light which they throw on the hereditary principle when embodied in absolutism, and applied to the government of a highly complex social organization like Germany. The attempt of a heady youth to make use of it suddenly brings out all its absurdity, and will probably greatly hasten its abolition. Its only chance of prolonging its existence in any country lies in hiding itself, as in England, behind a responsible Ministry.

THE FIRST AMERICAN CORRUPT-PRACTICES ACT.

NEW YORK has the honor to be the first State in the Union to put a law modelled upon the English Corrupt-Practices Act upon its statute-books. That Governor Hill, after obstinately refusing for three years to allow the State to secure a Ballot-Reform Law, should have consented to sign such an act, is one of the most inscrutable performances of his public career. In spite of his laborious constitutional objections to ballot reform, there is no doubt in anybody's mind that his real reason for opposing it is, that he and his most powerful party followers believe it would be a fatal obstacle to the political methods by which they have been in the habit of carrying elections. Yet the Corrupt-Practices Act, which was designed by its author, Senator Saxton, as a reform measure sequential to his Ballot Bill, is certain to prove to be a formidable if not fatal obstacle to those same methods. If its enactment had been accompanied by that of the Ballot Bill, the two measures together would have completely abolished the most pernicious evils of our elections.

By itself the Corrupt-Practices Act is certain to accomplish most salutary reforms. Its provisions, which are very minute and stringent, are aimed both against the briber and the bribed. The former is forbidden, either by himself or through any other person, to influence in any possible manner, either by bribery, loan, persuasion, promise of money or office or anything of value, the vote of another; and the latter is forbidden to submit to such influence either by voting in accordance with it or by refraining from voting. The specifications are drawn with great minuteness, and cover any possible form of bribery—influence, betting, intimidation, coercion, or restraint, or threats of reduced wages by employers by the use of "pay envelopes," and all the other familiar methods. Every point seems to be carefully covered by specific mention, except that of "assessments" upon candidates. That is not forbidden in terms, but it is not unlikely that the evil will be found to have been greatly diminished, if not practically abolished, by the requirement of sworn publication of all expenditures after election.

It is this requirement which is, in fact, the vital point of the new law. We have had on our statute-books since 1842 a comparatively stringent law against the improper use of money in elections, but it has been a dead letter, simply because there was no means by which a public accounting could be required of the amount of money actually spent. Now, such an accounting can be demanded in a manner which will make the corrupt use of large sums of money practically impossible without peril of detection and punishment, for the Saxton Law says:

"Every candidate who is voted for at any public election held within this State shall, within ten days after such election, file, as hereinafter provided, an itemized statement, showing in detail all the moneys contributed or expended by him, directly or indirectly, by himself or through any other person, in aid of his election. Such statement shall give the names of the various persons who received such moneys, the specific nature of each item, and the purpose for which it was expended or contributed. There shall be attached to such statement an affidavit subscribed and sworn to by such candidate, setting forth in substance that the statement thus made is in all respects true, and that the same is a full and detailed statement of all moneys so contributed or expended by him directly or indirectly, by himself or through any other person, in aid of his election."

These sworn statements must be filed by all candidates for State offices with the Secretary of State, and by all candidates for local and municipal offices with the county clerks. Failure or neglect by a candidate to file them will be a misdemeanor, punishable by imprisonment in a county jail for not less than three months nor more than one year. Any elected candidate who is convicted of using bribery or any form of undue influence mentioned in the law, either through himself or his agent, not only will be punished by imprisonment, but will have to forfeit his office. Any voter convicted of accepting a bribe of any sort will be punished by imprisonment of not less than three months and not more than one year, and will be excluded from the right of suffrage for five years.

It is easy to see that the sworn publication of itemized accounts of every dollar received, the source from which it comes, and the use to which it is put, will be of enormous advantage to the cause of honest elections. These sworn statements will be open to the public, and the politicians may depend upon it that they will all be published in the newspapers. It will be possible, of course, so long as we do not have a law providing for the printing and distribution of the ballots at the public expense, for candidates to use considerable sums of money for those purposes. They can swear that certain sums were necessary for the printing of ballots, and certain other sums for the hiring of men to distribute them at the polls, but they will have to give itemized accounts in both cases. It will be very difficult for a candidate in this city who has been "assessed," say, for $10,000 or $20,000, to account for the use of all that money without making himself liable to some of the penalties of the law for undue influence of one kind or another.

There are several defects in the law which make it inferior to its English model. The most serious, next to not forbidding "assessments," is the lack of a requirement for sworn publication by campaign committees. This was embodied in the law which passed one house of the Massachusetts Legislature last year, and it would have greatly strengthened Mr. Saxton's measure. The Massachusetts bill not only prescribed a penalty for a failure to make a return, but also for a false statement in a return, which we are surprised to see is wholly lacking in the Saxton Law. In other respects, however, the latter is a much stronger measure than the Massachusetts proposal, and we are confident that in practice it will be found to work well in spite of the defects. Publicity of expenditures is a requirement of infinite possibilities for good. It would have been of great additional advantage if we could have had with it, as the English law has, a provision fixing a maximum of expenditure in all cases. In some recent comments upon the operation of this provision in the English act, we remarked that it had proved unnecessary because in practice the maximum had been found to be at least one-third higher than the actual expenditure. A valued English correspondent, who has the best of reasons for speaking intelligently upon the subject, assures us that what has kept the expenditure so low has been the fear in the mind of the candidate, or of his agent, of exceeding the maximum and of thus causing the former to lose his seat if elected. He says the "maximum limit looms largely in the agent's mind, and is the most useful of weapons to keep down expenses everywhere on everything." That is a very strong argument in its favor.

It will be seen that while the Saxton Law is not a perfect measure, it is a most important step in advance. It will be much easier to amend and strengthen it than it was to secure its adoption.

THE PROPOSED DUTY ON FLAX.

THE howl that is now going up from the Republican manufacturers of New England is likely to cause us to forget that the tariff is being revised by and for its friends, but much information is being elicited showing who are the friends of particular duties and the reasons for such friendships. There has been an occasional suspicion that some of these friends were not entirely disinterested in their affection, and the present action of Mr. McKinley's Committee is bringing to light some dissensions among friends that are distressing. The proposal of this committee to double the duty on raw flax is an instance of this kind. At the series of hearings last January, in which the Committee allowed the manufacturers of this country to march up the hill in order to give them the privilege of marching down again, certain linen-manufacturers asked for free raw material, while others opposed any change in the duties, and even asked for some increase. The latter frankly admitted that the lack of any flax grown in this country suitable for spinning into fine yarn forced them to import their raw material, while they gave no sufficient reasons for their demands. As the Mills bill put flax on the free list, while the present Committee proposes to double the duty, a review of the subject will throw light on the character of the arguments that prevailed with them.

In spite of the tariff, no linen cloth, with the exception of a small amount of coarse towelling, is made in this country, and no flax fit for spinning into linen is grown here. Five or six large mills, and as many small ones, engaged in making thread and twine, represent our linen industry. The total capital invested does not exceed ten millions of dollars, and the annual product of five millions is about the same as the sum annually paid in duties on the imports of flax and linen. This meagre showing is not due to any lack of enterprise on the part of our manufacturers, but the historian of the linen

industry can point to some forty or fifty mills that have sunk several millions of dollars in the vain attempt to make a profit in the manufacture of linen. The American Linen Company of Fall River, the Willimantic Linen Company, and the Sprague Linen Company, not to mention others, are monuments of failure, and largely from the difficulty in getting their raw material. The strength and durability of linen, however, make it superior to other fibres, and a duty of 40 per cent. enables a few mills to make shoe-thread and twine.

There is a great deal of flax grown in this country, especially in the Northwest. Considerably more than a million acres are annually sown with flax, and the crop of twelve or thirteen million bushels of seed brings in the market a dollar or more a bushel. The Western farmer enjoys a substantial protection for this crop in the duties on linseed oil and oil cake, the products of the seed. He uses flax as a first crop on new ground, sows the seed thinly, and the plants grow luxuriantly, without cultivation, bearing a heavy crop of seed at the ends of the many branches. When the seed is fully ripe, the flax is cut by a horse reaper, the seed threshed out by machine, and the straw is left in a tangled mass on the field to be burned; and yet fine-dressed flax is worth from five to seven hundred dollars a ton at the mills, and it is estimated that over a million tons of this Western flax are annually burned to get rid of it. The McKinley Committee is ready to be persuaded that a simple increase of the tariff will enable the farmer to market his flax at these prices, but it is no more possible to metamorphose this straw, which can yield only a short, coarse fibre, into the valuable product than it is to gather figs from thistles, and intelligent farmers know it in spite of resolutions by boards of trade.

Fine flax can only be produced by great care in its cultivation and subsequent treatment. The French or Belgian farmer rarely plants more than a half or a quarter of an acre in flax. The ground is thoroughly manured, and ploughed, harrowed, and spaded until the soil is as light and fine as in a market garden; the seed is sown thickly, and the growing plants must be kept free from weeds. This necessary weeding is generally done by the farmers' wives and children on their hands and knees. As the plants stand thickly together, the stalks grow long and slender, without branches, thus giving a fine long fibre and few seeds. Before the seed is fully ripe, the plants are pulled by the roots from the ground and carefully dried and bound in bundles. This much any skilful farmer, who is able to employ the necessary labor, can do, but the subsequent processes necessary to separate the marketable fibre from the woody pith and outer bark require so much technical knowledge and mechanical skill that the preparation of flax fibre is a trade in itself to be learned. The first process of "retting," by which the fibre is loosened, is accomplished by prolonged action of water on the straw. The success of this often disagreeable operation determines the value of the flax; if the action of the water goes on too long, or if it is stopped too soon, the fibre may be seriously injured. The flax must then be "scutched," or pounded, to remove the "shives" or wood, and this dirty process must be performed by the farmer, as the unscutched flax is too bulky for profitable transportation. The flax is then in a marketable condition, but before it is ready for spinning, it must be "hackled," or drawn over a steel comb until the chaff and tow are cleaned out.

The reader will now see why the American farmer does not grow fine flax when he has so many easier crops. The seed crop gives him sufficient profit, and the fibre can be grown only at the expense of the seed and at an outlay for manual labor that he cannot afford, even if he had the time or inclination to acquire the necessary skill to prepare the fibre for market. It is not surprising, therefore, that although the duties on flax have been considerably increased since they were imposed in 1861, the American farmer abandoned flax-growing as soon as cheap cotton fabrics could be had for domestic use. In 1860, with flax on the free list, the census showed a production of five million pounds. In 1870 the war tariff of 1861 on dressed flax was increased nearly 200 per cent., and the census of 1880 gave a production of only a million and a-half of pounds, and to-day we are entirely dependent on the foreign supply.

When, therefore, a manufacturer asks for an increase of the duty on his raw material under these circumstances, there is some other reason than pure affection for the tariff. In this case, so far as we can learn, the laws of trade have not made an equal division of the business of furnishing linen thread to consumers among the competing mills, and a few manufacturers think they see a chance for Congress to help them in gaining an advantage over successful competitors. The American flax-mills use, for the most part, only the "dressed line," and have comparatively little use for the short fibres or tow combed out in the hackling process, which they are sometimes forced to reexport. Certain manufacturers have intimate connections with large foreign mills which, of course, have ample facilities for buying the best flax from the farmers. These mills dress the flax, use the short fibres for coarse goods, and send the dressed product to their correspondents in America. The mills that rely on foreign purchasing agents or on small foreign connections, or dress their flax here, finding a market for the short fibres they are forced to import, seek to neutralize the advantage their competitors have thus by securing an increase of 100 per cent. in the duty on dressed flax, with a corresponding increase on the finished product, sheltering themselves behind the alleged interests of the Western farmer and American labor.

The consumers of linen thread are, however, beginning to cry out, and the shoe-manufacturers throughout the country are protesting against this scheme. This proposal, if it becomes law, will either increase the cost of shoes or the shoe-manufacturer will seek cheaper and less efficient substitutes in the form of cotton thread or metallic fastenings, already used to a large extent. In the latter case these friends of the tariff will have bitten off their own noses, and in any case it remains to be seen whether the new duty will be omnipotent to equalize all advantages in trade. If it does, these manufacturers may well cry, Great is the tariff, and McKinley is its prophet!

A LITTLE STORY ABOUT ORES.

ANY one who has access to the new tariff bill reported by Mr. McKinley will find under the *free list* a little, unobtrusive, three-word paragraph, "ores of nickel." These ores, under the existing tariff, are subjected to duty when imported of 15 cents per pound on the nickel contained therein, which is the equivalent of a little more than 35 per cent. ad valorem. This provision especially commends itself to all advocates of tariff reform, who believe that all crude substances, like ores, for use in manufacturing should be allowed free importation. But the question naturally arises, Why should ores of nickel be given a privilege of exemption from tariff taxes which is persistently denied to ores of iron; although nickel-mining is comparatively an infant industry which might profitably be developed in Arkansas, North Carolina, and other places, where the United States Geological Survey reports indications of ore, if only a sufficiently protective duty on the importation of ores of nickel were given and continued? Why is it, also, that one man from Pennsylvania can get an exemption from duty payments on the foreign ore that he wants, while hundreds of manufacturers in New England have not the ghost of a chance, under a Republican Administration, of getting a like exemption on a much more necessary foreign ore that they want, and are becoming impoverished from a denial of it? The answer is, Because the one man from Pennsylvania—Joseph Wharton by name—who has before openly confessed that he had fixed a former tariff to suit himself, has again, with Mr. McKinley's coöperation and permission, fixed the proposed tariff.

Mr. Wharton is a pioneer, in the United States, in the working and application of nickel. He fixed the tariff rates before 1883 so high that the importation of the ores and alloys of nickel was practically impossible. He has supplied the United States Treasury, at prices thus made artificially high, with metallic nickel required for the five-cent coinage; he has controlled the price in a large degree to American manufacturers who desired to use the nickel for the production of German silver and for nickel-plating; and he has made a large fortune thereby. It was stated on the floor of the United States Senate in January, 1883, that producing nickel for a number of years at from 50 to 70 cents per pound, he sold it from $2 to $2.75 per pound, "because there was then a scarcity of it in the whole world." Against these exactions the Connecticut manufacturers finally kicked, and, through the efforts of their Senators, Messrs. Hawley and Platt, the duties were reduced in 1883 from 30 cents on the ore and 20 cents on the

alloys of nickel to the existing rates of 15 cents. Pending the action of Congress on this subject, Mr. Wharton published and distributed a pamphlet, in which the efforts of those who were attempting to abate the tariff on his pet product were thus characterized:

"It is pitiful," he says, "to think that the industries of our country should be at the mercy of legislators some of whom are actually hostile, and many of whom are so ignorant as to think that any lie of the busy agents of our national industrial enemies—mostly small barking creatures—should be believed when even not understood, and that the statements of a fellow-citizen should be disbelieved and cheapened simply because he is a fellow-citizen. It would be ludicrous, if it were not lamentable, that a tree bearing good fruit should be cut down by legislators" (*i. e.*, the Senators from Connecticut) "who know little more about the subject than a cow knows about Sunday. I have aided and supported the Government more than it has aided and supported me. I am one of the men who create and maintain the prosperity of the nation, and make it to survive the affliction of cranky legislators. We are the toiling oxen who make the nation's harvest, notwithstanding the gadflies."

Congress, however, reduced the duty, and to this extent Mr. Wharton's "tree bearing good fruit" was cut down. But the tree, nevertheless, continued to flourish, and the domestic demand and consumption of nickel has largely increased.

Nickel, however, is not here an abundant mineral. There are many indications of its presence in the rocks of the United States, but the only mine that has ever had any marked commercial value in this country is one owned by Mr. Wharton in Lancaster County, Pennsylvania; and so long as it was profitable for him to work it, he wanted the highest possible tariff on the importation of all competing ores and products, and Senator Platt of Connecticut was wicked enough to say, in the Senate in 1883, that Mr. Wharton closed this mine whenever an overproduction of its ores threatened to reduce the price of nickel to American consumers. The Lancaster mine was, however, a lean mine under any circumstances—its ores yielding only about 2 per cent. of nickel—and the discovery of a richer American mine was something greatly to be desired. This discovery has now been made; but, unfortunately for Mr. Wharton, the new mine is situated outside of the United States—namely, in Canada, at Sudbury, on the line of the Canadian Pacific Railroad—and Mr. Wharton cannot get its ores without paying the highly protective duty of 35 per cent., for the incorporation of which in our tariff laws in past years he has been mainly responsible. The boot being now on the other leg, Mr. Wharton, so far as nickel ores are concerned, has become a rampant free-trader. He has published a pamphlet setting forth in the strongest terms the great benefit that would accrue from a complete reciprocity of trade and a free exchange of all products between the United States and Canada; but as this event is in the dim distance, he has laudably initiated this good work by persuading the Ways and Means Committee to remove the existing duties on the import of the Canadian ores of nickel.

We do not observe, however, that the Committee propose to abate in any degree the protection now accorded to the products which Mr. Wharton will undoubtedly manufacture out of the Canadian free ores; and yet not to do so will result in increasing such protection from 35 to 50 or 60 per cent., with resulting profit to him which the consumers of nickel will probably not share. We have not noticed, either, that Mr. Wharton's voice has been raised in favor of the immediate free importation of Canadian ores of iron or copper in conjunction with the ores of nickel.

In short, what better example could be afforded of the sectional thimble-rigging policy that characterizes the reconstruction of the existing tariff by the Republican party through its representatives in the present Congress? If Pennsylvania wants anything, its demands are laudable and rational and readily granted. If New England asks anything of an analogous character, its requests are sectional, unpatriotic, and sure to be refused.

But perhaps we do Mr. Wharton injustice. If such is the case, we shall expect to see some of his friends in Congress, when the McKinley bill comes up for discussion, and the paragraph placing nickel ore on the free list is reached, rise on the floor of the House and move that ores of iron and of copper be added thereto. But from past experiences we shall rather expect to see Mr. Wharton rise up and in a forcible letter explain why such a motion would be wholly irrelevant, and the act of "the small barking creatures" that represent New England.

CONGRESS AND PATRONAGE.

THE special Committee of the National Civil-Service-Reform League appointed to inquire into the condition of the Federal civil service and the operation of the reform law, has made a report which is full of valuable and interesting information derived from unimpeachable authorities, being no other than the Congressional dispensers of patronage under the spoils system.

The Committee held its first meeting in Philadelphia on the 15th of February, and outlined its general plan of work, deciding to make inquiries, as early as possible, in regard to the system of Congressional patronage, and ascertain to what extent appointments to office were still controlled by members of Congress, and to what degree this patronage interfered with their proper legislative duties. It is in regard to this branch of the investigation that the Committee now makes its report. Mr. William D. Foulke of Indiana, the Chairman of the Committee, addressed to every Republican member of the House of Representatives a set of five questions, framed to bring out the facts. Of course, many Congressmen sent no reply whatever, and a number of others replied that they had not the data at hand to answer these inquiries, but some twenty-four answers were received which gave more or less completely the information asked for. These twenty-four answers constitute the most valuable part of the report.

The first question was, "How many offices are there in your district or elsewhere, where the appointments depend upon you?" The answers ran all the way up from "ten or fifteen fourth-class postmasters" to "about 800," the average giving about 250 appointments dependent upon each Congressman. "How many applications for office have you received during the past year?" was the second question, and here the answers ranged all the way up from "sixty," through such estimates as "about five hundred," "not far from one thousand," "about two thousand," and "at least eight or nine thousand written applications, to say nothing of the verbal requests," to the discouraged Congressman who replies: "It is impossible for me to say how many applications for office I have received during the past twelve months, but they have been almost innumerable." Averaging the reports of those who use figures, the Committee concludes that the number of applications for offices made to each Congressman is something over 1,700.

The third and fourth questions were with reference to the average amount of correspondence required for each such application, and the amount of time required to conduct this correspondence and attend to appointments. The estimates here vary greatly, one Congressman saying "perhaps two letters each," another "probably five letters each," and another "about a dozen letters each." "About one-tenth of my time," is the most favorable report made by any one, and from this minimum the record runs up, through "about half the time" and "eight to ten hours per day," to "all the time I could get." Two or three replies are worth quoting in full:

> "During the past year more than three-quarters of my time in the day was given to attending to appointments, and late every evening (except Sunday) was given to my correspondence, with the valuable assistance of a stenographer, and even then I found it impossible to answer more than half or two-thirds of my correspondence."
>
> "A low estimate of the average amount of correspondence which each of these applications requires on my part would be five in each case, or between four and five thousand letters in all. If it were not for the distribution of these offices, it would be easy for me to conduct my official correspondence personally, but as it is, a secretary is required, and the burden of the office greatly increased."
>
> "One prolonged and continuous correspondence; the constant and entire time of both myself and secretary would not suffice."

The Committee conclude from these answers that it is not an extravagant estimate to say that "more than one-third of the entire time of these Congressmen (time which should properly be devoted to their legislative duties) is consumed in the distribution of offices," and point out that the condition of affairs in this respect does not seem to have changed very greatly from the time when Gen. Garfield, in his speech at Williams College, said: "One-third of the working hours of Senators and Representatives is hardly sufficient to meet the demands made upon them in reference to appointments for office."

The last question on the list was as to

whether any elections had been held in the Congressman's district to determine who the appointee should be, and, if so, with what result. About half of the twenty-four report experiments in this direction, chiefly in the choice of postmasters, but a number of these report as the result "difficulty and dissatisfaction," "increased strife," etc. "They have resulted in bitterness and strife," says one Congressman, "and did more to engender animosities and ill-will between the patrons of the office than any other method I could have adopted for settling post-office contentions; hence I have not favored them, and henceforth shall discourage them where I can." An account of one such election is so amusing that it deserves to be given in full:

"I have held one election only under this Administration, and that had a most disastrous result. It resulted in several men losing their characters, one or two were turned out of church, and all was turmoil and confusion. Carriages were hired to bring voters fourteen miles distant, and citizens of another State voted. The doors of the polling-places were broken in. Democrats were allowed to vote. There were no safeguards about the polls. No oaths were required, and there was no respect for the election. The judges certified the election of one man, but sent a statement with the certification that the election was carried by fraud, the same name appearing upon both papers. The consequence was, I went outside for the postmaster, and chose a man who had not voted and took no part in the fight. He moved into town and took the office (worth not more than $150 per year); but they would have torn the election nominee to pieces if I had recommended him. I look upon these elections as a party disaster."

The Committee found plenty of evidence that Congressmen themselves are sick of the spoils system. "This patronage business is a great nuisance," says one; "I think that during the last twelve months the lives of most of the Republican members of Congress have been made miserable by the post-office controversies in their Congressional districts," writes another; while a third says: "I gave two hours a day to candidates for office all last summer, throwing open a room to them six days out of the week. Of course it was an imposition, but I do not want to be put in the attitude of complaining of my constituents so long as the system exists."

Every such showing as this is of value, because it throws fresh light upon the odious nature of the spoils system. Publicity is the worst foe to this as to all other abuses, and the best service which reformers can render the cause is to lay before the people such facts as this report contains.

FRENCH INTEREST IN BISMARCK'S RETIREMENT.

PARIS, April 3, 1890.

THE retirement of Prince Bismarck is surrounded with so much obscurity that it is hard to foresee its political consequences. For the present, this great event—for it is a great event, the greatest, perhaps, since the war of 1870—strikes us only on what I might call its dramatic side. Curiously enough, the feeling which is generally felt in France for the German Chancellor is a feeling of sympathy—a sympathy which is hardly confessed, as Prince Bismarck was one of the principal actors, if not the principal actor, in the events of 1870 and 1871. At the same time, rightly or wrongly, the French have always thought that, personally, Bismarck was not in favor of the annexation of the French provinces to France; that he would have been contented with a large war-indemnity. It is difficult to say on what grounds this belief has been founded. Bismarck, after Sadowa, did not take a single village from the Austrian possessions; he contented himself with political advantages: he established the Prussian hegemony in Germany, and forced Austria out of the Confederation; he showed no desire to add to the Prussian possessions any part of Bohemia or Moravia.

M. Thiers and M. Pouyer-Quertier, who were the French negotiators of the Treaty of Frankfort, were not unfavorably impressed with Bismarck. Thiers always thought that he had gained an easy victory over him when he succeeded in retaining for France Belfort and its territory, which commands the entrance to Alsace through the Vosges. A sort of legend was formed, in virtue of which Bismarck had, with regard to Metz and even to Alsace, his hand forced by the military party, by Moltke and the Emperor.

Since the war the chief object of Bismarck has been the preservation of peace. He has always shown the greatest courtesy to all the men, whoever they were, who have been in power in France. At various times he has proved his pacific sentiments by acts, for instance, in the case of the unfortunate Schnaebelé incident, when he did not hesitate a moment to give up a Frenchman unjustly and illegally arrested on German territory. A conviction had thus by degrees been formed in all French minds that the policy of Bismarck with regard to France was defensive, not offensive; he was even anxious to soothe the wounded feelings of France: he was desirous of offering to her political advantages, as long as they were not detrimental to Germany. He had played a friendly part in the events which preceded and which followed the occupation of Tunis by France. When King Alfonso of Spain became the object of a scandalous demonstration, on his arrival in Paris from Berlin, where he had been made honorary colonel of a regiment, Bismarck shut his eyes on what he might have considered an insult to his Emperor and to his country.

It would be idle to discuss here the claims and counter-claims of France and Germany to Alsace. Everybody feels instinctively that the settlement of this question is not definitive; it is mere hypocrisy to say that the tremendous armaments of Europe have no other object than the preservation of peace. It used to be said, "Si vis pacem, para bellum"; we can say now, "Si vis bellum, para bellum." At the same time, we should all like to put off the evil day. Precisely because we are so anxiously preparing for war, because we have made up our minds to bear its terrible consequences, we think we can wait for a good opportunity. A man who has resolved to commit suicide may enjoy life for a few hours more, and look eagerly on all he is willing to lose. The preparation for war is not at all incompatible with the love of peace. In our provinces, the peasantry remember well the sufferings of the war of 1870; the deputies who represent our rural population are obliged to express pacific sentiments. It is only in a few cities that chauvinism finds a few adepts. All these considerations will help to explain why Prince Bismarck, who was known to be sincerely devoted to the cause of peace, had gained in France a certain sort of sympathy, which could not be called popularity, merely because popularity is not unattended with a noisy and outward expression.

The French had come to the belief that Bismarck would never abandon power as long as he lived, and his life was in their eyes a guarantee of peace. Looking back on their own history, they had the examples of the fidelity of Louis XIII. to Richelieu, of Louis XIV. to Mazarin. It was only after the death of Mazarin that Louis XIV. said: "I will govern now by myself." The German Louis XIV. has not had as much patience, he has sent his Chancellor to Friedrichsruhe. It is no secret that the retirement of Bismarck is not voluntary; he never expected that his resignation would be definitely accepted—he thought that the young Emperor would, like his grandfather, write on it "Nimmer!" The ovation which he received, on his departure from Berlin, probably did not console him for what he must consider the ingratitude of his sovereign. To one of his friends he said, in a moment of anger (so, at least, I have heard): "The Hohenzollern made Prussia, I made the German Empire." This proud affirmation is justified by the history of the last forty years. History will always look upon Bismarck as one of the founders, if not as the principal founder, of the new empire. He has varied his means, the choice of his instruments, his alliances; he has never varied his object. He has worked, sometimes by diplomatic, sometimes by parliamentary, means, sometimes with "blood and iron," to give the German people the place which they ought to have in Europe, in order to guarantee the new German unity against all its adversaries. He has realized the dream of all German thinkers, what was in the heart of all the representatives of German culture, and his work was accomplished under the greatest difficulties.

Remember the old divisions of the German princes, the impotence of the Diet, the subserviency of so many courts to Russia. Bismarck found his first occasion in the Danish Duchies; he united Prussia and Austria in a common action. But this union could not long be maintained: the Empire of the Napoleons had been reëstablished in France and was a permanent danger to Germany. Bismarck succeeded in gaining the neutrality of Napoleon III. while he established the hegemony of Prussia, established a new confederacy, and excluded Austria from it. He was, however, after Sadowa, unwilling to seize any of the Austrian provinces; he was thinking already of the necessity of uniting some day the old empire and Prussia, so as to make a great Germany, and to preserve its influence in the valley of the Danube and in the peninsula of the Balkans. I will not dwell on the political events which followed the war of 1870. The new German Empire was founded, and Bismarck was employed in organizing it and in securing it against all possible dangers. So long as Alexander II. lived, the alliance called the alliance of the three Emperors was considered a sufficient safeguard. Alexander had remained neutral during the war, and his respect and affection for his uncle were unbounded; as for the Emperor of Austria, he knew that he had to choose between an alliance with the new German Empire or a total disruption of his own States. Austria is a composite empire; the German provinces can now remain loyal only if their German sentiments are satisfied, and they can only be satisfied if the Emperor of Austria and the German Emperor work harmoniously in the field of politics.

Things began to assume a different aspect after the death of Alexander. We have, ever since that moment, seen the development of the strong enmity of Russia towards Germany. So long as this instinctive feeling found expression only in literature, in the universities, in academic circles, it might be considered

harmless; it became dangerous when Russia had for its sovereign a Czar more Russian than all the Russians, a complete incarnation of all the national feelings and aspirations. The Turkish war and the Treaty of Berlin put an end to the old alliance of the three Emperors. Russia thought herself cheated of the results of her sacrifices, not only by the arrogance of England, but also by the treachery of Germany. Ever since, Russia and Germany have been in a state of latent hostility. Russia has been like a sword of Damocles over the heads of the German people. Bismarck felt the danger. He showed great ability in finding a new ally in Italy, and in determining Austria to accept this new alliance. The Triple Alliance became the substitute for the old alliance of the Emperors, and year by year it was made more binding as the preparations of Russia became more visible. Thanks to the Triple Alliance, to the attitude of the Conservative Government of England, peace seemed assured; and now it seems as if a page of the book of history had been turned. Speculations as to the future have become vague and uncertain. Diplomatically, politically, a great change has taken place. If Bismarck had died, this sensation of uncertainty and almost of awe would not be so great, since death must come for every man; but we cannot help saying: "He is alive, and why is he gone—why is he gone?"

ITALY'S BURDENS UNDER THE TRIPLE ALLIANCE.

MANTUA, March 28, 1890.

"THERE is nothing which the European Powers could agree on to help laborers except the reduction of the huge standing armies. These enormous armaments constitute the only burden on labor which it is in the power of the governments to remove. . . . The occasion might be turned to good account if the small Powers were to join in a vigorous protest against the size of the German, Austrian, Russian, French, and Italian armies."

These pithy sentences, culled from the *Nation* of March 6, sum up all that is written or said, in Italy at least, about the Labor Conference now sitting in Berlin. Naturally, the Italian Government sent representatives, all men of profound economical studies—Senator Boccardo, Deputy Ellena, and the indefatigable director of the Statistical Department attached to the Ministry of Agriculture and Commerce, Commendatore Bodio; all equally adverse to State Socialism (Cæsarian Socialism especially), and to truckling by the State to any sort or set of demagogues. But the act is simply one of courtesy to a young and friendly ally, and the instructions imparted resemble those given to us in our youth, "to be seen and not heard."

During the last twenty years, and especially since 1882, some excellent laws termed social have been passed to assist the various attempts of the working classes to help themselves—passed after long debates and careful precautions to avoid any appearance of class legislation. The one question which seems to meet with general affirmative sanction at the Labor Congress—the work of children—was debated for years in the Chamber and the Senate. We remember that Senator Rossi, protectionist, and notable for his industrial schemes for the working classes, was strongly opposed to legislation for the protection of children. But in August, 1886, an excellent law was passed, based on the reports of physicians and commissioners of health, showing that deformity, scrofula, chest and brain affections were greatly on the increase, and especially among the children working in mines and in manufactories. According to the new regulations, no child under fifteen should be allowed to work in unhealthy or dangerous trades or industries. Each parish was to furnish every child under fifteen with a ticket or book, to be filled up by the heads of factories or mines, setting forth the age of the children employed, with the health certificate of the parish doctor. It is shown by the recent inquiry made by the present Minister of Agriculture that of 8,257 communes, only 1,640 have in four years furnished children with these books, and that in unhealthy and dangerous occupations children of all ages are still at work. Night work was forbidden to children under twelve; here the protests of the silk-producing industries prevailed, the age was reduced to nine, and eight hours of work allowed. Other trades demonstrated that to take away the children was to stop the work of the adults. In short, though something has been gained, the law is deftly eluded by the masters of industrial establishments who can get cheap work from children, and by the parents of the same, only too thankful to add their earnings to the scant stock of the family.

Only during the last eight years have the working classes and their friends sought for any assistance from Parliament. Until 1882, the political suffrage was restricted to little more than half-a-million. The reform bill of January of that year extended the political vote to all male citizens who could read and write sufficiently to demand the inscription of their name and age on the parish registers. About two millions and a half were thus registered, more than double that number of male citizens above twenty-one years of age being illiterate. The champions of the temporal power abstained, obeying the order from on high ("Neither electors nor deputies"). In agricultural districts the few new electors took little part in the first general election of 1882; in 1886 they bestirred themselves in some provinces. During both, however, the workingmen of the cities availed themselves of their newly acquired rights, and sent up to Parliament Radicals, Republicans, and some bona-fide Labor representatives. Only one avowed Socialist was elected, by the way, Andrea Costa. In this Parliament we see for the first time the principles of coöperation represented and defended by men of different political opinions. These same men we find again present at the coöperative meetings and congresses, where they explain what has been attempted and achieved, and what they still hope to secure for the future, as, to pass over other essential points, the aid which the Government can legitimately give to the coöperative *laborers*—that new and most hopeful form of coöperation which, during the last few years, has taken such firm root in the Romagna.

The métayer system—that half-profit arrangement so admired by Arthur Young and J. S. Mill, and still prevalent in Tuscany—has rapidly declined of late years in the ex-provinces of the Pope. Whole families of once well-to-do peasants were added to the already too numerous list of day-laborers who, first serving as mowers and reapers, are compelled during the winter months to become hedgers and ditchers, navvies, etc. The enormous public works undertaken by the Government—new railroads, the redemption of the Roman Campagna, etc.—gave them hopes of better times; but the method of Government contracts blasted these. The contractors have a system of their own. When a contract is put up at auction at a certain estimate, one big capitalist often buys off his competitors, and, by bidding at a lower price than the Government estimate, gets the contract. How can he make ends meet? By paying the out-of-work day-laborers to do all the rough and heavy, unskilled part of the work during the autumn, winter, and early spring months, paying them in the Romagna 1 franc, in the Polesine as little as 4 cents per day, for seven or eight hours' labor. The turbulent, intelligent, energetic *braccianti* of Ravenna formed a society, their sole capital consisting in their *braccia* ("arms"), a wheelbarrow, a spade and pickaxe apiece. They were 303 in number, and managed to save a franc per month, forming a capital of $120, so as to pay the deposit for the first work intrusted to them. This they executed quickly and well, waging no war against proprietors or capitalists, nor even against their arch enemy the *appaltatore*—the contractor. Their efforts were admired, then assisted: the savings bank of Ravenna lent them money, then citizens took shares "without dividends"—King Humbert, it is said, to the amount of $6,000—the Government gave them work in the Agro Romano. Having gained net $2,000 by works for the commune of Ravenna, with this they set up coöperative stores, an ambulance, an economical kitchen to follow their hands from place to place where work was given them. During the mowing and reaping season, in order to avoid giving offence to land-owners and tenants who had hitherto counted on their "arms," they detailed off by casting lots as many as were required for these operations. During the winter they earned on an average 3 francs instead of 1 per day, and some saved as much as $40 during the year, after contributing their proper share to the reserve fund.

This special society of Ravenna has now more than $40,000 of capital, and consists of over 2,000 members. Other societies were immediately formed on principles more or less soundly coöperative. That of Budrio has many well-to-do citizens among its members, who lent without interest $8,000 as deposits, so that the laborers could at once undertake contracts for a large sum. But these voluntary loans will not always be forthcoming: they are objected to by many as opposed to the true principles of coöperation. So exertions were made by the coöperative deputies to get a little law ("leggina") passed which should enable the Government to contract with the societies themselves on the same terms as with individuals. An article inserted in the new law of State accounts settled the question. The State, provinces, and communes may now concede to cooperative societies of workingmen, duly registered according to the regulations of the (new) code of commerce, public works to the amount of 100,000 francs ($20,000) without preliminary deposits—the payments to be made every fifteen days, one-tenth of each rate being retained until the completion of the works and their approval by the delegate. Hardly was the law sanctioned when the societies doubled their memberships. In the Polesine, where enormous emigration seems scarcely to have lessened the numbers of the day-laborers, the radical members promoted the societies and obtained work. As in the Romagna, the societies pledged themselves to assist one another, not to wage war on fixed wages, to admit even a third of non-laborers, to elect a technical committee, etc. On the other hand, the distrust engendered by the agricultural disturbances in Mantua and the Polesine in 1886 had left an amount of friction between owners and laborers of the soil which it is well should be removed. The question of finding immediate work was soon

solved by the coöperative society of Adria, which had assumed a Government contract including sundry works to be executed on the banks of the Adige at Ca Morosini in the district of Lendinara. Now to go and come from their work would have consumed the profits for the laborers of Adria; hence they ceded it to the society of Lendinara, sending their own president, a workingman, to superintend the work. Every morning at seven the men go in gangs to the banks; the work is paid so much per square metre; at twelve the work ceases and each man goes home to his dinner; then at two you will find most of them at work elsewhere, generally on contract for cutting and propping vines, digging ditches, felling trees, the ordinary winter occupations. Thus the district has few or no disoccupied laborers, and the weekly wages are often twelve francs, whereas in former winters they scarcely reached the half of that sum. Then, when the work is finished, there will be the 40 per cent. of the profits to be divided.

The country at the present moment is in a dismal financial plight. Land and income are overburdened with taxation: every article of common necessity is taxed. The rupture of commercial treaties has ruined many industries, banks have gone under, manufactories and industrial establishments failed; but, since the famous, or rather infamous, 8th of February outburst in Rome, 1889, there have been no violent disturbances, no demonstrations against the Government, no monster strikes or attacks on property. If Italy could be freed from the burdens of the Triple Alliance, she has uncultivated land enough for her surplus agricultural population, sufficient capital for the development of her industries and commerce. But, as the Prime Minister confessed yesterday in the Senate, more money is needed, more taxes must be levied. Hence his popularity of a year ago is on the decrease. Only when proposing a national monument to Giuseppe Mazzini, "the chief factor of Italian Unity in Rome," did the House vote unanimously. On all questions presented it is a house divided against itself. Possibly a dissolution is close at hand; but the electors well know that the new House must vote new taxes. Should the present Ministry fall, and so a Nicotera-Magliani Ministry succeed, the situation remains the same. Hence the resignation of Bismarck, the Labor Conference, have but one point of interest. The very question of peace or war is subordinate to that other question of general gradual disarmament. This peace armed to the teeth, say many, is worse than a short, sharp war; the present burdens are too heavy to be borne; any slightest addition would prove the proverbial feather on this most patient camel's back. Disarm! disarm! disarm! is the entreaty, the prayer of the people, addressed not to their own Government, which cannot back out of the engagements entered into by its predecessors, but to all the Powers of Europe equally concerned if not equally burdened. J. W. M.

P. S.—Even as I write comes the unwelcome news that the municipality of Rome, unable, as has been declared for months, to make ends meet, disappointed in its hopes of what the Government would (I should say could) do to help it, feeling the utter impossibility of filling up the deficit by fresh loans and still less fresh taxation, has resigned *en masse*. Thanks to the efforts of Baccarini and Menotti Garibaldi, the decision is suspended, but the *aut aut* of the Government is, "You must exhaust every effort to help yourselves before we can come to the rescue." The city of Naples also finds itself with a deficit of over two millions and a half. But how can the State, with its deficit of one hundred millions, with its ever-increasing expenses for war material, assist the provinces, the communes? The city of Milan, one of the wealthiest in the kingdom, has hard work to assist its disoccupied workmen. The entire population, rich and poor, aristocratic and ultra-democratic citizens, are straining their every nerve to help them; the King has just sent 10,000 francs from his own purse. But the fact is, that the utter stagnation in the industrial and commercial world cannot cease as long as the enormous burden of taxation continues to weigh on the entire country. The newly proposed tax on the importation of rice, added to the tax on imported grain, is a direct tax on the food of the very poorest, who, limited already in the quality of their food, must curtail the not too abundant quantity. But no legislation can alter these evils until the expenses are lessened by a third.

TOLSTOI'S 'KREUTZER SONATA.'

NIEDERDORF, TYROL, March 29, 1890.

WHAT are the legitimate bounds of realism? To what point is it permissible to describe in repulsive detail the hideous and unseemly things of this world, simply because they exist, when it is quite impossible to say what the effect will be upon thousands of people to whom such description conveys the first knowledge of the existence of evil? It has been proved that public executions, far from inspiring horror of the deeds which led to them, and deterring others from the commission of like deeds, through fear of the result thus presented, actually give rise to crimes copied after those which are thus brought to general attention. The same thing is true in the case of crimes which are minutely described in the newspapers. But books? On the whole, although a sensational realistic book may never reach as many people as an article published in the popular newspaper, it probably produces as much effect because of the weight and respectability which the binding and comparatively high price give to it.

One has occasion to reflect upon this topic rather frequently in these days of "psychological" romances; but it is not often necessary, I think, to meditate so seriously as one is forced to do over Count Lyoff Tolstoi's last story.

When I first reached Russia, in the autumn of 1887, I heard that Count Tolstoi was writing a new tale: it began on the railway, and a man murdered his wife, and it was to be of the searching psychological type exemplified by 'Ivan Ilyitch.' So much seemed to be known in well-informed circles. I asked no questions when I made the Count's acquaintance a year later. But one evening last July, during a visit which I made to Yasnaya Polyana, at the Countess's invitation, the Count spoke to me of his story as being near completion, and asked me to translate it when it should be finished. I promised, and inquired whether it was in a condition for me to read. "You may read the last version if you like," he answered, "but I would rather have you wait." His wife showed me sheets of the fourth version, which she was then copying, and advised me not to waste time in reading it, as it was quite likely that he might suddenly see the subject in a totally different light, and write it all over again from that point of view. So I read nothing, asked no questions, and waited, being informed from time to time that the book was progressing. How many different versions were finally made, I do not know, but this winter one of these versions began to make the rounds in Petersburg. The solitary manuscript flew rapidly from hand to hand. I was warned, however, that it or any copy from it would be imperfect, incomplete, and not approved by the author, who was at work upon the final version. I contented myself with the verdict of those who were too impatient to wait, and who had not been promised the first complete copy, as I had been. That verdict was, "Shocking!" "Beauties mingled with horrors," and so forth. It was said that it was not allowed to be printed—the usual cry; but, as there is nothing religious or political in it, its morality must have been the cause of the prohibition, if true.

At length I received the first copy of the genuine story (the second went to the Danish translator), with the information that, although the substance was nearly identical with that of the version which had already been circulating, and which was said to be in process of translation into foreign languages, the execution had been so altered that "not one stone was left upon another" in some places, while in others whole pages, and even chapters, had been completely rewritten by the author. My copy was corrected by the author especially with a view to translation, and was, therefore, to be regarded as the only one sanctioned by him for rendering into other tongues, and this version is yet unattainable in St. Petersburg.

Why, then, do I not translate a work from the famous and much-admired Russian author? Because, in spite of due gratitude to Count Tolstoi for favoring me with the first copy, and in spite of my faith in his conviction that such treatment of such a subject is needed and will do good, I cannot agree with him. It recalls the fable of his countryman, Kriloff, anent the man who borrowed his neighbor's water cask, used it for wine, and returned it impregnated with vinous fumes to such a degree that the unfortunate lender was obliged to throw it away, after using every possible means, during the space of two years, to expel the taint so that the water should be pure once more.

"Too frank and not decent," was one of the Petersburg verdicts upon this 'Kreutzer Sonata.' This is so true that, although thus forewarned, I was startled at the idea that it could possibly be beneficial, and, destroying the translation which I had begun, I wrote promptly to decline the task. It is probable that the author and his blindly devoted admirers will consider that I have committed an unpardonable sin. But they must remember that his "comedy," 'The Realm of Darkness,' although it was acted in private, in high Petersburg society, and in public in Paris, has never been translated into English, so far as I am aware, at least. I yield to no one in my admiration for and appreciation of Tolstoi's genius, as displayed in certain of his works. I tried to get American publishers to bring out 'War and Peace' and 'Anna Karenin' in 1881, five years before American readers were treated to the mangled versions of those works through the French. They declined, and one noted Boston publisher said, with great frankness: "No one in Russia knows how to write except Turgeneff, and he is far above the heads of Bostonians." I predicted a change of opinion, and if I am now morally compelled to appear unfaithful to my own former admiration, my regret is certainly more deep and sincere than even the regret of those who merely repent their failure to grasp an opportunity for making money, or of those who, consciously or unconsciously, follow the literary fashion of the hour.

But I will turn to the book. After making

due allowance for the ordinary freedom of speech, which has greater latitude in Russia (as elsewhere in Europe) than is customary in America, I find the language of the 'Kreutzer Sonata' to be too excessive in its candor. At the same time I admit that if that subject was to be treated in that way, no other language would have answered the purpose. I mention this first because it is the first thing which strikes the reader, and because it is also the special thing which hovers over the horrors of the tale with an added dread, and lingers long behind in the reader's mind, like a moral bad taste in the mouth. Next, the style and construction. The construction is good, as is usual with the author. The style errs in the direction in which all his books are faulty, viz., repetition. The unnecessary repetition of words or phrases occurs in his greatest works, while in the later, the polemical, writings, it has become greatly exaggerated. It forms a feature of this book, and although it gives strength at times, it is too marked on the whole. One must think that this tautology is deliberate on the author's part, since he is never in haste to publish uncorrected matter; but the result is harshness, which increases with every fresh work. Nevertheless, the book is well written. And the story? It is that of a man who kills his wife out of jealousy for a semi-professional violinist, who plays Beethoven's "Kreutzer Sonata" with her one evening.

The author begins by narrating how he is making a long journey by rail. In the compartment with him are a lawyer and a lady, masculine in appearance and attire, who converse, and a gray-haired man with brilliant eyes, who avoids all attempts to talk with him and utters a peculiar sound from time to time. A merchant and a clerk enter the railway carriage at one of the stations. A partly inaudible conversation between the masculine lady and the lawyer about some woman who has fallen out with her husband, leads the lawyer to remark upon the amount of attention which is being bestowed all over Europe upon the question of divorce, and to say that there was nothing of the sort in olden days. The merchant answers him that there were cases even in old times, but they were less frequent; and people had become too "cultured" nowadays. In the discussion which ensues, the merchant advocates the old-fashioned arrangement of marriages by parents, and strict government on the part of the husband, as most conducive to wedded happiness, alleging that love will come in due season. The masculine lady argues that it is stupid to join in marriage two people who do not love each other and then feel surprised if discord ensues between them, and that the day for such unions is past. The merchant maintains that the day for obeying the New Testament rule, "Let the wife fear her husband," will never pass away; that although unfaithfulness, which is assumed to be impossible on the part of the wife, may happen in other classes, in the merchant class it does not happen, and that the carouses of married men at the fair, which the narrator has heard him relating, and of which he reminds him, form a special topic which must be excluded from the discussion.

Here the merchant leaves the train, but the conversation is continued by the passenger with gray hair and brilliant eyes inquiring to what sort of love the masculine lady has reference. What is "true love," and how long must it last—a month, two days, or half an hour—when it has been defined as the preference for some one man or woman above all other men or women in the world? He contends that only in romances does this preference last for a lifetime, as per theory; whereas in real life it endures for a year, generally much less, and is felt by every man for every pretty woman; also, that this love is never mutual, and if it were, and if it lasted a lifetime on one side, it would not on the other. Identity of ideals, spiritual likeness, he does not admit as a ground for entering upon marriage. He gives a brief sketch of the manner, in his opinion, in which marriages are entered upon, winding up: "And the result of this is that frightful hell which makes men take to drink, shoot themselves, poison, and murder themselves and each other."

The lawyer, with a view to putting an end to the unseemly conversation, replies that "there are undoubtedly critical episodes in married life." Whereupon the speaker remarks: "I see that you recognize me. I am Pozdnisheff, the man with whom occurred the critical episode of murdering his wife." In fact, no one knows anything of him, but the lawyer and masculine lady change into another compartment as soon as possible, while Pozdnisheff offers to withdraw if his presence is disagreeable to the narrator. Finding that it is not, he offers to while away the night by relating the story of his life. I may remark here, in view of the above, that the author gives not a hint of his own opinion as to which is preferable, a marriage of love or a *mariage de convenance*, and also that some of the points suggested do not seem to be answered thereafter.

Pozdnisheff begins his tale with his introduction to evil at the age of sixteen. Shorn of digressions, his story would be brief. But the digressions attack many accepted views of things—or views which he says are accepted. The present order of society and life, modes of marriage, dress, and so forth, form the topics of these digressions. Pozdnisheff states that he has taken to analyzing the subject since his own life reached a climax in his crime. Many of these remarks I recognize as substantially identical with attacks on those subjects contained in all the author's serious writings. The sentence, "I never see a woman clad in ball attire that I do not feel like shouting, 'Police!' and ordering her to be removed as dangerous," closely corresponds to former utterances upon low-necked dresses and so on. He repeats former denunciations of higher education for women, but, astonishing to relate, instead of winding up with the moral that women should devote themselves solely to becoming the mothers of the largest possible families, he praises the Shakers because they do not marry, and declares that woman will only rise to a higher plane, cease to rule in underhand ways as an offset to oppression, and acquire her full rights, when virginity shall have become the highest ideal of womanhood.

I am tempted to a personal digression at this point. Count Tolstoi one day praised the Shakers in this manner before a table full of people. I was afraid to ask him his meaning, lest he should explain in detail, so I questioned his wife in private as to whether this new departure was not somewhat inconsistent with his previously advocated views on woman's vocation. She replied: "Probably it is inconsistent; but my husband changes his opinions every two years, you know." The explanation which I venture to offer is, that just at that time he was reading Mr. Howells's 'An Undiscovered Country,' and that he is impressionable. At all events, however clearly one can understand from these too frank digressions what a man should not do, it is quite impossible to comprehend how he thinks a woman should dress, behave, and live.

Returning to the thread of his story, Pozdnisheff relates how he proposed for his wife after a very brief acquaintance, fascinated by her jersey, her well-dressed hair, and a boating excursion, and adds that, had it not been for the tailors who dressed her well, and the close jersey, etc., he should never have married. This does not agree with the statement that all through his vicious bachelorhood he had firmly intended to marry if he could find any one good enough for him. An interesting point here is that he shows his betrothed his bachelor diary, just as Levin shows his to Kitty in 'Anna Karenin,' and with precisely the same effect, only less well told. The repetition of this incident and the probable rarity of such diaries seem to hint at a personal experience.

They are married. The description of the honeymoon and of their married life nearly up to the date of the final catastrophe is, like what precedes, unquotable. Suffice it to say that they quarrel promptly and continue to quarrel frequently and fiercely, eventually using their five children as moral battering-rams, so to speak, against each other. This last is very well done. At about the age of thirty, his wife becomes plump and prettier, and begins to take an interest again in pretty clothes. His mad jealousy interprets this into a quest for a lover, though there are no proofs of such a thing even alleged. The description of his jealousy is, however, the best part of the book. Presently the object for jealousy for whom the husband has been on the lookout, makes his appearance in the person of a handsome young man, of good family, who has been educated in Paris by a relative, as he has no money, and who has become a very fine and semi-professional violinist. The young man comes to call on his old acquaintance, Pozdnisheff, on his return to his native land. Pozdnisheff instantly fixes upon him, in his own mind, as the fated lover. Nevertheless, or rather in consequence of this, he is unusually cordial, introduces the musician to his wife (quite unnecessarily), and begs him to bring his violin that very evening and play duets with her. The musician comes, behaves with perfect propriety, as Pozdnisheff admits, but jealousy causes him to see what he expects. He urges the musician to dine and play at his house on the following Sunday, still impelled by the fancies of his own disordered brain. The musician accepts; but, having called in the interim to decide upon the proper music to present to the company, he drives Pozdnisheff to such a pitch of unreason that the latter uses vile language to his innocent wife and throws things at her, whereupon she promptly retires and takes poison.

She is rescued, a reconciliation ensues, the dinner comes off, and the "Kreutzer Sonata" in the evening is a great success upon the violin and piano. But the husband's jealousy and imagination are all alive, and interpret every glance of the players to suit himself. On taking leave that evening, the musician bids Pozdnisheff and his wife a final farewell. Pozdnisheff is going to the country on business, and the musician says that he shall leave Moscow himself before the former's return, intimating that he shall not call upon Madame during her husband's absence. Pozdnisheff goes to the country in a tranquil frame of mind, but a letter from his wife, in which she mentions that the musician has called to fetch her the music he promised, sets his jealousy aflame again. He hastens back to Moscow, finds the musician eating supper with his wife, and murders her. On trial he is acquitted on the plea of "justifiable homicide," and when the narrator of

the story meets him in the train, he is on his way to a small estate in one of the southern governments, his children remaining with his dead wife's sister.

The whole book is a violent and roughly worded attack upon the evils of animal passion. In that sense, it is moral. Translation, even with copious excisions, is impossible, in my opinion, and also inadvisable. The men against whom it is directed will not mend their ways from the reading of it, even if they fully grasp the idea that unhappiness and mad jealousy and crime are the outcome of their ways, as Pozdnisheff is made to say in terms as plain as the language will admit of, and in terms much plainer than are usually employed in polite society. On the other hand, the book can, I am sure, do no good to the people at whom it is not launched. It is decidedly a case where ignorance is bliss, and where uncontaminated minds will carry away a taint which a few will be able to throw off, but which will linger with the majority as the wine of the fable lingered in the cask meant for pure water. Such morbid psychology can hardly be of service, it seems to me, much as I dislike to criticise Count Tolstoi.

ISABEL F. HAPGOOD.

DEMONSTRATION.

TO THE EDITOR OF THE NATION:

SIR: If ever two facts could make up the final arguments to a conclusion, those two facts are the Tariff and the Pension bills. As to the Tariff Bill, there can be no question that it is absolutely a product of the lobby. Not only is the entire mass of consumers deliberately laid under contribution to private interests, but one set of interests—manufacturing and commercial—which does not keep an adequate lobbying force at Washington, is sacrificed to another set which does. And the conditions for lobbying are ideally perfect. The nation, that is, the mass of consumers, is wholly unrepresented either in Congress or in the management of the finances. The whole matter is in the hands of a committee of local representatives, working in secret and perfectly screened from public criticism. The members of that committee would be more than human if they did not keep in view, as their first object, the securing of their seats at the next election. They will do just what promises to promote that end, and they will do nothing else.

It may be thought that this end would be best forwarded by taking care of the interests of the great mass of voters. The Republicans are shrewd managers—probably, with their training of a quarter of a century, much more so than the Democrats—and they have decided the other way. They know that, now that the offices have to a considerable extent been taken out of politics by civil-service reform, money is to play a greater part than ever before, and especially with everything turning on one or two doubtful States. The next election will depend more upon money than anything else. They know, further, that the most certain way to get money in unlimited amounts is to build up an elaborate system of interests based upon artificial privileges, and that when capital in large amounts has been embarked in this, it will pay tremendously, much more than it would at the outset, rather than have the system broken up. With this backing they are prepared to defy any agitation of public opinion, which they know can be frittered away on any number of different issues—civil-service reform, temperance, labor movements, woman suffrage, and so on.

They are quite aware, also, of another result which has followed from civil-service reform, namely, that it is of much less consequence who is President than which party has a majority in Congress. When the President controlled the disposition of the offices, he was an all-important factor in politics, as he still is to the extent to which he controls them. If that power is taken away, as he has no other of any kind, except the veto, which is not of much practical account, it is of little consequence whether he poses as a Democratic or a Republican figurehead. The politicians, therefore, see more of promise in controlling Congressional districts and State Legislatures.

What all these things mean is shown by the fact that the tariff has for twenty years been about as bad it is now, and the only sign or hope of improvement consists in this, that, as it is getting worse almost every year, it may at some future time become so intolerable that the abstract quantity known as the people may rise up and sweep the whole fabric away. The immediate consequence of this would, however, be so disastrous (just as total abstinence is said to be to a man in *delirium tremens*) that no party would dare to undertake it.

The same reasoning applies to the Pension Bill. Close as is the connection between an unjust and oppressive tariff and an equally unjust and dangerous surplus, the public do not see it, because the two subjects are in the hands of different committees, both impersonal, both secret, and both independent of each other. As far as Congress is concerned, both parties must agree cordially in this, that whose turn soever it may be to hold power, it is most desirable to have a large fund disposable for the purchase of votes,and no way could be imagined more perfect than a vast system of pensions. Neither party has, probably, the slightest desire to diminish the surplus except by expenditure, and that expenditure of the kind most effective in local politics.

No kind of agitation of public opinion will be of any permanent avail which does not make as its main object the means of fighting the lobby. And the only means of doing this successfully is to secure the predominance of the public and national over private and local interests; to have in Congress, in the person of Cabinet officials, powerful national representatives who can compel the transfer of business from the secrecy of committee-rooms to an arena where it can be debated upon public grounds and in full view of the public.

O! for some public man of honorable ambition, independent means, and unflinching courage to make himself the Peter the Hermit of a new crusade! G. B.

BOSTON, April 12, 1890.

THE BENNETT LAW.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 10, you state that the recent municipal election of Milwaukee turned upon the question "*whether education in the English language shall be required in the schools of a State.*"

Allow me to call your attention to the fact that this is not an exact presentation of the *status controversiæ*. If the notorious Bennett Law demanded nothing but the teaching of the English language in all public and private schools of the State, there would be little or no opposition to it on the part of the Milwaukee Germans, who are wide awake to the fact that their children need as thorough a knowledge as possible of the official language of our country, and who, therefore, spare no pains to give them, in their parochial and private schools, a good education not only in the German, but also in the English language.

The Bennett Law, however, demands more than this. It says: "No school shall be regarded as a school under this act unless there shall be taught therein, as part of the elementary education of children, *reading, writing, arithmetic, and United States history* IN *the English language.*" According to the terms of this provision, the above four branches must be taught *through the medium* of the English language, or a school cannot be regarded as a school under the Bennett Law. It does not say: "Only those schools shall be regarded as schools in which *English reading and writing*, etc., are taught," but *it forbids the use of any language but the English in teaching reading, writing, arithmetic, and United States history.* A German child which in a German school is taught to read the German language, must, by the terms of this law, be taught such reading *in* (*i. e.*, through the medium of) the English language, or the school loses its right to exist. Is it to be wondered at that the Milwaukee Germans oppose such unreasonable legislation with all the legitimate means at their command?

Again, by what *right* can the State enact that no language but the English must be employed in teaching arithmetic and United States history? Will the English boy who in his school-days learns the multiplication-table be a better and more loyal citizen on that account than the German boy who learns the *Einmaleins?* Or is it impossible to teach the history of the United States profitably in any but the English language?

In opposing, therefore, the Bennett Law, the Milwaukee Germans did by no means fight against the education of their children in the English language, but against a nativistic Knownothingism and an un-American paternalism.—Most respectfully,

AUGUST CRULL.

FT. WAYNE, IND., April 12, 1890.

[We cannot interpret the Bennett Law to prescribe that German reading be taught through the medium of the English language. The clear intent seems to be to compel every child to learn to read English, to write English, to learn United States history from English-written text-books, and to "cipher" in English terms. How German shall be taught is no concern of the law.—ED. NATION.]

THE PAN-AMERICAN COIN.

TO THE EDITOR OF THE NATION:

SIR: Can you not print something severe as to the absurdity and impudence of the United States, or even Pan-America, proposing an international coin, though only for this continent? The text is at hand, in the fact that in the countries of the Latin Monetary Union, France, Italy, Switzerland, Belgium, etc., one sees handbills with cuts of good and bad money. Among the "pièces à refuser" as not worth five francs are the dollars of Mexico, Peru, Chile, Argentine Republic, New Granada, Colombia, Guatemala, and the United States, which last its friends perhaps fondly believe to be worth 5.20 francs. It is rather mortifying for the average-honest American traveller in Europe to see these handbills, of which I have two different specimens.

Yours truly, W. S. A.

BOSTON, April 5, 1890.

THREE MODERNISMS.—I.

To the Editor of The Nation:

Sir: A would-be critic, writing a few years ago, imagined himself borne out in speaking ironically of the "correctness and beauty" of an idiom which Lord Beaconsfield exemplifies in his 'Endymion,' published in 1881, namely: "I *have* never *been* back *to* the old place." That an urchin should say "I *have been to* school," would, accordingly, incur the frowns of this uninquiring fault-finder. The urchin could not have profited by sound teaching, or else such teaching could not have fallen to his unhappy lot. Otherwise, he would have said, "I *have attended* school," or something quite as stately. Though a decemnovenarian, as some would call him, he is not to be allowed to decemnovenarianize in language.

Dr. Murray, under *be*, has, as yet, only just mentioned *been to*, followed by a substantive, in his Dictionary, giving, on his own authority, "*Have* you *been to* the Crystal Palace?" as allowable English; his intention being, doubtless, to return to the point, when he by and by reaches *to*. The present discussion of it will not, therefore, be considered as superfluous.

Among Englishmen, from the highest to the lowest, one now constantly hears locutions like "I *have been to* town," "I *had been to* town," "I *may have been to* town," and so on, with "*Having been to* town, here I am again." In the first of these sentences, the tense is the simple preterite; and, in the others, the last of them excepted, there are modifications of it. And the construction in hand is confined, with respect to tense, within these limits. If, however, a former use of *was*, to be spoken of presently, had survived to us, we might have had "I *was to* town," analogous to "I *have been to* town."

The development of the forms of speech instanced above, "I *have been to* town," etc., can perhaps be made obvious. Of at least somewhat longer standing than Dr. Murray evidences are expressions of the stamp of the following, in which *has been* and *had been*, pointing to motion, precede the infinitive of purpose:

"He *had been to see* the citee of Lacedemon." Rev. Nicholas Udall, *Apophthegmes* (1542), fol. 134*v*.

"He *had been to look* for his Master about Primrose-Hill." Sir Roger L'Estrange, *A Brief History of the Times*, part iii. (1688), p. 172.

"Yesterday in the evening I went to church, and *have been* to-day *to see* the great burning-glass." Dr. Johnson (1783), in Mrs. Piozzi's *Letters* (1788), vol. ii., p. 282.

"My surgeon *has* just *been to look* at my back." Lord Palmerston (1818), in the Earl of Malmesbury's *Letters* (1870), vol. ii., p. 524.

"We *have been to see* the dancing dervishes." Mr. Arthur Hugh Clough (1861), *Letters and Remains* (1865), p. 315.

Much less common, and now obsolete, is the employment, corresponding to that of *has been* and *had been*, just exhibited, of *was*, to signify "went," and also "came." Quotations for it are appended, the second of them being different from anything given by Dr. Murray:

"I *was to see* him this afternoon, & doe fear him." Rev. Philip Henry (1689), *Diaries and Letters* (1882), p. 363.

"Mrs. Wenlock *was to see mee* yesterday, & brought mee a bottle of wine." *Id.* (1685), *ibid.*, p. 341.

(In the first of these two passages, *fear* means "fear for," a sense of it overpassed by the lexicographers. I find, under the date of 1548: "The carefull hen, *fearing* her chickens, dothe clocke them together.")

Nowhere, perhaps, but in America, and among the most illiterate Englishmen, does one hear the like of "I sleep *home*," "I stay *home* on Sundays." Yet, in some cases where, at first sight, *home* may seem to be a barbarism, as it unquestionably is there, the peculiarity lies in the verb which it accompanies. "I *have been home* a year," comparable with "the mercury *is down to* zero," affords afresh an instance of the verb *to be* deflected, unless we suppose a violent ellipsis, from the sense of existence to that of motion. As I proceed to show, this manner of writing and speaking is neither a novelty nor a vulgarism:

"I long *to be home*, and have taken a place in the coach for Monday." Dr. Johnson (1773), in Mrs. Piozzi's *Letters* (1788), vol. i., p. 207.

"Tell him I *am* not *home*." Rev. Richard Graves, *Columella* (1779), vol. ii., p. 103.

"I . . . *shall be home* within three weeks." Southey (1805), *Letters* (1856), vol. i., p. 340. "I *have been home* a few days." *Id.* (1811), *ibid.*, vol. ii., p. 232. "I *shall be home* by the middle of February." *Id.* (1837), *Life* (1850), vol. vi., p. 321.

"I *have been home* two days; but I am not myself yet." Bernard Barton, *Selections*, etc. (1849), p. 73.

"At least when we *are safe home*." Rev. Charles Kingsley, *Hypatia* (1853), p. 267 (ed. 1886).

"Grim and Helgi *will be home* ere men have eaten their full to-night." Sir G. W. Dasent, *The Story of Burnt Njal* (1861), vol. ii., p. 167.

"As soon as Peter *was* well *home*. Paul must set off in his turn." *Id.*, *Tales from the Fjeld* (1874), p. 248.

"Prince Louis-Lucien Bonaparte *is home* again from his long visit to Italy." *The Academy*, October 12, 1889, p. 236.

We also find, where the freedom of conversation is indulged in:

"People *home* on a holiday do not mind what money they spend." Mr. J. W. Sherer, *At Home and in India* (1883), p. 178.

People "that *are at* home" is not to be understood in this place, but people "that *have come* home."

The idiom here touched on is, again, among those which the makers of dictionaries have failed to register, even as they have passed over familiar expressions like "He *is* much farther *into* actual life than I am," "He *was* well *into* the bog,"—respectively from Mr. A. H. Clough and Sir G. W. Dasent—in which, once more, the verb substantive has come to denote motion.

On all fours with "I *have been to* town" is the presumably old "I *have been into* the town"; and so, in one of its senses latterly current, is "I *have been about* the country," with "I *have been across* the street, *among* savages, *before* the magistrate, *down* the river, *over* the mountain, *through* the woods, *up* the tower, *abroad*, *ashore*, *away*, *out*, *farther than* Ipswich," etc., etc. By all these phrases, precisely as in "I *have been to see* the town," good English, at least since the sixteenth century, combined arrival and departure are signified. Nor was less than this formerly intended by "I *have been in* town"; words now, however, generally complemented temporally, and used only by a person who has not yet left town, as in "I *have been in* town *a fortnight*."

In recent times we have thus, to mark a distinction, evolved (and without violation of analogy) a compendious expression the alternative of which could not be obtained except in a periphrasis. We may, therefore, justly give it a welcome, as being equally convenient, on the score of brevity, with *fetch*, instead of *go and bring*.

"He *has been here*"; "I *have been there*"; "No matter *where* they *have been*." *Here*, *there*, and *where* having grown to be often equivalent to *hither*, *thither*, and *whither*, that is to say, to import *to* a place as well as *in* a place, it may be that similar locutions were influential towards engendering those of the type of "I *have been to* town." Quotations kindred to those adduced below might be multiplied to any amount:

"This day I was at Brumm., *where* I *have* not *been* these many days." Rev. Philip Henry (1663), *Diaries and Letters* (1882), p. 144.

"In our return from the Wood, *where* wee *had been* to see your Sister." *Id.* (1687), *ibid.*, p. 356.

"I told Clancy, my landlord, *where* I *had been*." Thomas Amory, *Life of John Buncle* (1766), vol. iii., p. 209 (ed. 1770).

"Returning . . . from Tallow-Hills, *where* I *had been* to see a young lady." *Id.*, *ibid.*, vol. iv., p. 194.

To return to my main subject: wholly untenable, I take it, is the supposition which seems to have been entertained in some quarters that "I *have been to* town," for instance, was suggested by "I *was to* town," an archaism, still existent dialectally and otherwise, for "I *was in* town." Whether invalid historically or valid, that supposition, as in all analogous cases, has no rational bearing, however, on the legitimacy of the mode of expression here discussed, its legitimacy having been determined by a tribunal whose rulings are irreversible. Good usage sanctions it, and, as a consequence, it is safe from all condemnation but that of ignorance or folly.

It is farther observable, that the idiom, an acknowledged modernism, on which I am remarking, where shunned, now-a-days, by the well-informed, is shunned solely on the ground of its being colloquial.

As regards the quotations about to be given, no critical reader of later English literature, especially that dating from about 1830, will require to be told that they might be added to indefinitely:

"The poor thing *has been to* all the baths in the kingdom, you know, except those of Buxton." Samuel J. Pratt, *The Pupil of Pleasure* (1776), vol. i., p. 48.

"After I *had been* up *to* bed"; "Eden *having been to* Shelburne House"; "He *has been to* Christ Church in Oxford." Jeremy Bentham (1781), *Works* (1838–43), vol. x., pp. 99, 101, 104.

"Once I *have* borrowed a horse and *been to* Mr. Dampier's to look at his Devonshire cattle." Rev Mr. Gale (1810), in Southey's *Life of Dr. Andrew Bell* (1844), vol. ii., p. 279.

"After the dancing, the good folks of the cottage sent for a boy out of the village, who *had been to* Malta, which place it was evident, from their manner, that they all looked upon as the Ultima Thule." J. C. Hobhouse (Lord Broughton), *A Journey*, etc. (1812), p. 255.

"Mr. Manning *had been to* the library and consulted the volume in question." *Id.*, *Italy*, etc. (1859), vol. i., p. 222.

"Kinder *had been to* the scene of action, and dined frequently at head quarters." Southey (1813), *Life* (1850), vol. iv., p. 55. And so in letters dated 1815, 1819, 1836, 1838, etc.

"These men were quite persuaded you *could* not *have been to* the top." Rev. Dr. William Whewell (1822), in Mr. I. Todhunter's *Account of Dr. Whewell's Writings* (1876), vol. ii., p. 50.

"I *have been to* several of them, to request," etc. *Id.* (1825), *ibid.*, vol. ii., p. 56. "We *have been to* St. Leonard's." *Id.* (1845), *ibid*, vol. ii., p. 329.

"When he *had been to* court, he drove to the office where his book was printing, without changing his clothes." Lord Macaulay, *Essays*, *Boswell's Life of Johnson* (1831). "This is the first dinner-party that I *shall have been to* for a long time." *Id.* (1833), *Life and Letters* (ed. 1889), p. 243. "I *have been* with George Babington *to* the Asia." *Id.* (1833), *ibid.*, p. 254.

"You know how differently a boy regards home when he *has* once *been to* school." Mr. A. H. Clough (1836), *Letters and Remains* (1865), p. 24. Also *id.*, *ibid.* (1837, 1852), pp. 31, 227.

"A Russian lady who *had* not *been to* the ball." Translation of Custine's *Empire of the Czar* (1843), vol. ii., p. 34.

"I *have been* with Barclay *to* Southampton." Miss Caroline Fox (1854), *Memories of Old Friends* (1882), p. 298.

"*Have* you ever *been to* Hastings, or S. Leonards?" Rev. F. E. Paget, *Owlet of Owlstone Edge* (1856), p. 19.

"I *have* never *been to* Hell in my life." Sir

G. W. Dasent, *Popular Tales from the Norse* (1859), p. 69. "Eric Bloodaxe . . . sailed back from Biarmaland or Permia, *whither* he *had been* on a viking cruize." *Id.*, *The Story of Burnt Njal* (1861), vol.ii., p. 278.

"Tom *had* positively *been to* the house." Rev. James Pycroft, *Agony Point* (1861), p. 91, (ed. 1862).

"Well, I *have been to* Gnadenthal." Lady Duff Gordon (1863), *Last Letters from Egypt*, etc. (1875), p. 268. "As if I *had been to* Lake Ngami." *Id.* (1863), *ibid.*, p. 315.

"He *had been* away *to* Russia to King Jaroslaf." Rev. Charles Kingsley (1874), *Lectures Delivered in America* (1875), p. 76.

"Dolly *had been to* the place." Mr. J. W. Sherer, *At Home and in India* (1883), p. 60. Also at p. 174.

"The Orb of Day has returned. It *has been to* Scotland." Mr. James Payn, in the *Illustrated London News*, vol. xcv., p. 230 (Aug. 24, 1889).

"Hook *had been to* prison *for a month*." So a penny-a-liner delivers himself in a London journal of Sept. 9, 1889. I am not aware that his device for combining what is intended by *had been to* and *had been in* has any authority beyond his own good pleasure. F. H.

MARLESFORD, England.

Notes.

J. B. LIPPINCOTT Co., Philadelphia, have in press 'How to Remember History,' a method of memorizing dates, by Virginia Conser Shaffer; 'Historic Note-Book,' by the Rev. E. Cobham Brewer; 'Gleanings for the Curious from the Harvest-Fields of Literature,' by C. C. Bombaugh, M.D.; 'Economic Basis of Protection,' by Prof. Simon N. Patten; 'Messalina,' a tragedy, by Algernon Sydney Logan; and a novel, 'For a Mess of Pottage,' by Sidney Lyon.

'Silver in Europe,' by S. Dana Horton, will be published immediately by Macmillan & Co.

An historical romance, 'The House of the Wolf,' by Stanley J. Weyman, is announced by Longmans, Green & Co.

A new series of standard classics, "Library of the World's Best Books," is projected by A. L. Burt, 56 Beekman Street, New York city.

'Truths to Live by,' a new volume of sermons by Canon Farrar, will be issued immediately by Thomas Whittaker.

A. C. McClurg & Co., Chicago, will publish shortly 'A Foreign Match,' by Mme. Charles Bigot (Miss Mary Healey), and 'Russia: Its People and its Literature,' lectures at Madrid before the Spanish Athenæum by Doña Emilia Pardo Bazán, translated by Fanny Hale Gardiner.

Mr. T. W. Higginson and Mrs. S. A. Bigelow are preparing a volume of about two hundred and fifty selected sonnets by American writers, Mr. Higginson furnishing the introduction.

Bernard Quaritch, 15 Piccadilly, London, has made a facsimile of the new-found original letter in which Columbus, in Spanish, announced the discovery of America, and for which Mr. Quaritch asks the modest sum of $8,000, whereas any one of the hundred copies of the reproduction "on two square small folio leaves (four pages) of paper, done up in cloth," may be had for $10.

A much smaller sum will procure the reproduction of a revelation of a New World of English poetry, in the shape of Prof. Dowden's reprint of the 1798 edition of Wordsworth and Coleridge's 'Lyrical Ballads' (London: David Nutt). One knows what to expect when Prof. Dowden puts his hand to a task of this sort—learning, accuracy, and scholarly self-restraint. The reprint is not a strict facsimile, but is a close imitation in respect of type and of line for line and page for page. Prof. Dowden goes so far as to retain in the text the errata noted in the original edition, but inconsistently changes or supplies a point and separates two words that ran together—a liberty which would have justified inserting a colon in line three of p. iii. of the "Advertisement." A brief preface and brief notes, with some account of alterations in the subsequent editions of the poems, impart all needful bibliographical information. The little volume, "which opens with 'The Ancient Mariner' and closes with the 'Lines written a few miles above Tintern Abbey,'" is a pure delight, without and within.

M. Guy de Maupassant's 'Pierre and Jean' is the latest volume in George Routledge & Son's prettily printed and illustrated series of translations. The novel is one of Maupassant's stronger ones, and, in the view of some critics, shows the first indications of its author's moving away from realism and towards psychology. The translator is Mr. Hugh Craig, and the illustrations are by MM. Ernest Duez and Albert Lynch. Maupassant, by the way, is a model traveller, in that he sees things with his own eyes and describes what he sees with extraordinary skill. In 'La Vie Errante' (Paris: Ollendorff: New York: F. W. Christern), he tells us how he ran away from the Eiffel Tower and took a little yacht down the Italian coast to Sicily, whence he went to Algiers and Tunis. Especially fresh are his impressions of Sicily, of which island he writes as though he had rediscovered it; and especially frank is his account of his glimpse of the lower side of life in Algiers and Tunis.

The eighth volume of M. Jules Jusserand's series of biographies of "Les Grands Ecrivains Français" is devoted to 'Vauvenargues' (Paris: Hachette: New York: F. W. Christern). It is written by M. Maurice Paléologue. We shall defer criticism until the publication of the American translation, noting now only the fact that the book has appeared in Paris, and that there is no portrait of Vauvenargues extant, so that the frontispiece of this biography is but the facsimile of a letter of his to Voltaire. Among the other volumes of the series announced for early publication are M. Sarcey's 'Corneille,' M. Brunetière's 'Voltaire,' and M. Gaston Bossier's 'Saint-Simon.'

Two little companion brochures belonging in the "Bibliothèque Photographique" of Gauthier-Villars & Fils, Paris (New York: F. W. Christern) deserve the attention of amateur and professional photographers. The first part of M. Moëssard's 'Le Cylindrographe' clearly describes and figures this panoramic apparatus as a camera having a semicircular back on which the image is thrown; an objective, set in black cloth and pivoted so as to move freely in connection with sights or finders on top of the camera, and traversing 170 degrees. The results of this sweep, which takes in the entire horizon, lacking 20 degrees, on two negatives, are surprising. But this camera is as valuable for groups as for landscapes, and is capable of some extraordinary feats of foreshortening ("en perspective fuyante dans les airs"), when hinged vertically. An appliance of scales and levels produces a *cylindrographe topographique*, described in Part ii. Of this we will only say that it is designed to enable a topographic plotting to be made from the scenic panorama. We call the attention of our friends of the Appalachian Club to this camera.

Few things are more interesting than to watch the growth of our national holidays and fête days. It was a long time before the inherited celebration of the 1st of May was felt to be absurd, but the month was in a way to be acknowledged "a pious fraud of the almanac" when Decoration Day was fixed for the end of it, and now Arbor Day carries us back again to the beginning. This last has already a considerable literature, and we have on our table the New York State Superintendent's Arbor Day circular for the coming month (May 2), an 'Arbor Day Manual,' edited by the Deputy Superintendent, Charles R. Skinner (Albany: Weed, Parsons & Co.), and 'Harper's School Speaker,' compiled by James Baldwin, and adapted for Arbor Day and Decoration Day (or "Memorial Day"). The 'Manual' contains selections and original contributions, in prose and verse, music and songs for the exercises, and some historical data, from which we learn that Nebraska invented Arbor Day in 1872, and has planted nearly 400,000,000 trees in consequence in its own borders. Mr. Baldwin's 'School Speaker' meets as well as could be expected the duty of praising militant patriotism while reprobating war. Its third and final section is headed "Peace versus War," and draws largely upon Sumner's famous oration, "The True Grandeur of Nations."

The series of grammars in French, German, Spanish, and Italian, bearing the name of "Hossfeld's New Practical Method," though each has a distinct authorship, have been put on the American market by the New York School-Book Clearing-House of this city. They agree in the general method of instruction, and also, we must add, in being very unattractive in appearance. Their aim is conversational and commercial rather than literary, and if there be any originality in the method of presentation, it is chiefly in respect of proportion. A little 'Spanish Reader' and 'French Conversations' accompany the grammars.

M. Gastineau's 'Conversation Method for Speaking, Reading, and Writing German' (Ivison, Blakeman & Co.) is a well-executed work, beautifully printed. It is allied perhaps most nearly to the Prendergast system, but with a character of its own, and the conversations are natural, continuous, and free from ineptitude. The grammar is taught incidentally, but its summary formal development is reserved for the close of the volume.

Dr. Solomon Deutsch's 'Drill-master in German' (Baker & Taylor Co.) plants itself on the principles of gradation and repetition. As its name imports, it is a teacher's instrument rather than a self-learner's. The conversation method is not employed to any great extent, and the passages for drill are mostly fragmentary. The explanatory and grammatical notes are excellent, and so is the plan of generally using the Roman letter.

Prof. H. C. G. Brandt's 'German Reader for Beginners' (Boston: Allyn & Bacon) is another well-equipped book, with competent notes referring to Whitney's, Joynes's, and the author's grammars, and a vocabulary in which special attention has been paid to the indication of cognates in other tongues. The selections in prose and verse are fairly divided between the elder and the later classics; one section of the prose has an historical complexion and value.

At least a method of doubling one's vocabulary is offered by Prof. A. Muzzarelli's 'Antonymes de la Langue Française' (New York; Wm. R. Jenkins; Boston: Carl Schoenhof). The drill consists in converting every sentence into opposite terms of its leading affirmation or idea. One cannot, if held up by a teacher, fall asleep over it; but a course of two hundred pages of these substitutions has both a dry and formidable look. The author, however, appeals to his experience.

Prof. Shedd gathers together several articles

and addresses of his on topics connected with 'The Proposed Revision of the Westminster Standards' (Scribners) to make a pamphlet contribution to the permanent literature of the subject. His well-known views are here enforced in his well-known style. We must leave it to others to say if his weakest point is not exegesis—both of the Westminster itself and of the Scriptures—and content ourselves with remarking the lodgment which the liberal spirit has made within even his fortifications: we refer to his concession of universal infant salvation, his admission that many righteous heathen may be saved, and his acknowledgment that it would be difficult to work out a theodicy except on the supposition that the majority of the race will ultimately be saved.

We are glad to perceive that House bill No. 7558 and Senate bill No. 2747, taking away the postal premium on the manufacture of dime-novel literature, have alarmed the manufacturers.

The Providence Public Library seems at last to have caught the attention of the city fathers, and to have turned over a new leaf of material prosperity. Mr. Foster's twelfth annual report shows also, on the spiritual side, that the fiction percentage of circulation has now got down to 56, a remarkably low figure when one considers how much good and wholesome reading is included in it. Seven copies of Bryce's 'American Commonwealth,' we are told, were insufficient for the demand, and volume one was taken out 101 times in the course of the year.

Nos. 1, 2, and 3 of volume xii. of the *American Journal of Mathematics* are on our table. No. 1 is adorned with a fine head of M. H. Poincaré, who contributes to No. 3 an elaborate article of eighty-four pages, "Sur les Équations aux Dérivées Partielles de la Physique Mathématique." The three numbers contain seven articles, filling 322 pages 4to. Five of them are in English, two in French. Two of the five are by English mathematicians, three by Americans. Of the former, one—which for convenience is divided between Nos. 1 and 2—covers 106 pages, and is by A. R. Forsyth of Trinity College, Cambridge. Its title would not be understood, even by professional mathematicians, without reference to the explanation of the author given in a note at its commencement. In the other, Maj. P. A. MacMahon, R.A., who began it as Capt. MacMahon in vol. xi., continues the development of his "New Theory of Symmetric Functions." Of the remaining three articles, in one, Prof. F. Franklin, of whom we have before spoken as one of the most promising of our younger mathematicians, discourses of "Circular Coördinates." In another, Mr. H. B. Fine treats of "Singular Solutions of Ordinary Differential Equations." Lastly, Mr. F. N. Cole shakes the dust of the world of sense from his feet, and, soaring into the regions of pure ideality, expounds the principles that govern "Rotations in Space of Four Dimensions." It is here that the motto of the *Journal*, Πραγμάτων ἔλεγχος οὐ βλεπομένων, is especially appropriate.

A report of an expedition sent out last summer by the Bremen Geographical Society for the investigation of the fauna of eastern Spitzbergen is to be found in *Petermann's Mitteilungen* for March. The geographical results only of the expedition are given in this paper, which is accompanied by a remarkably clear map, but there are several interesting references to the bears, of which an extraordinary number were seen. Reindeer were also very numerous on some of the islands, occasionally where they must have been obliged to go enormous distances over the ice. This fact would seem to throw some light upon the vexed question as to the origin of the Spitzbergen reindeer. A supplemental number contains an account of the "Kulturzonen" of Northern Abyssinia by Dr. Karl Dove.

Antonio de Serpa Pimentel was very naturally called to the Prime Ministry during Portugal's recent troubles, as his distinguished public services and special abilities clearly marked him out for the position. Born in 1825, he took his doctor's degree at the age of twenty, and won a professor's chair in the Polytechnic School of Lisbon six years later. Beginning his political career as an editor, he was first elected a Deputy in 1856, and has since been Minister of Public Works, Minister of Finance, and Minister of Foreign Affairs. He was Portugal's plenipotentiary at the Berlin Congress on the Congo territory. As an author, besides some excursions into the fields of poetry and the drama, he has published 'The Eastern Question,' 'Alexandre Herculano and his Times,' and 'Nationality and Representative Government.'

— In the April issue of the Harvard *Quarterly Journal of Economics*, President Francis A. Walker has a paper on "Protection and Protectionists," which deserves to be singled out from the mass of current literature on the tariff. President Walker is always temperate and unbiassed, and the protectionists cannot say that he has failed to treat their cause fairly. Not only does he admit a degree of validity in some familiar arguments on their side, like that for protection to young industries; he notes also for their benefit certain arguments which they have themselves failed to discover, such as the suggestion of the disadvantages which may flow from the indefinite extension of the division of labor. But this very temperateness makes more effective his protest against the protectionist twaddle with which the country has been flooded since the Republicans took up President Cleveland's challenge on the tariff question. Indeed, he devotes his space largely to a simple classification of the protectionists, pointing out how wide is the gap between the Chinese-wall men and the moderate protectionists; and he thinks it "not extravagant to say that there has been more pure Chinese-wall talk in this country within the past two years than during our whole previous history as a nation." In this, and in the presentation and weighing of the arguments pro and con, few sensible men would find occasion to differ with him. The weakest part of the paper, to our thinking, is that which touches the aspect of the tariff controversy now uppermost in the public mind—the pauper-labor argument. President Walker's test as to the validity of that argument seems to be whether an increase of food and luxuries, turned over to the laborers in the form of wages, increases their productive power; whether "niggardliness of expenditure in generating labor power does not meet the same retribution which niggardliness of expenditure generally meets in other directions." To analyze the general reasoning would pass the limits of our space. Some aid in discriminating between what is true and what is untrue in the pauper-labor talk is doubtless got from President Walker's point of view; but we think it an error, looking at the whole field, to consider high wages as the cause rather than as the result of abundant production.

— The New England Meteorological Society has made an arrangement with the Astronomical Observatory of Harvard College by which the tables and discussions resulting from the observations gathered by the Society shall appear in the Annals of the Observatory; and the first product of this partnership appears in a volume for the year 1888. It is chiefly occupied by tables containing a list of observers and stations, with their latitude, longitude, and altitude; then a summary of the records for every month; a table of daily rainfall at a large number of stations; and finally, a series of annual means, normals, maxima, and minima. The tables are preceded by a review of the year by quarters, prepared by Prof. Winslow Upton of Brown University, then acting as Director of the Society, while the tabular matter is the work of several assistants assigned to this duty by the Chief Signal Officer from the men of his corps—Sergt. L. G. Schultz having performed the greater part of this considerable labor. Prof. Upton contributes also a discussion of the cyclonic storms that traversed New England during 1888, and from which nearly all of its rain and snowfall is received. Eighty-eight of these atmospheric disturbances crossed the district during the year, many of them of considerable severity; among the latter being the March blizzard and the November tropical cyclone. Thunder-storms and heavy rainfalls are also briefly discussed. The Society is fortunate in having its records published in so excellent a form.

—M. Lucien Descaves is at the present moment enjoying in Paris the advantages of praise and pudding which come so often to the author of a prosecuted book. About a year ago he published a novel, constructed in accordance with the naturalist formula, called 'Sous-Offs.' This book dealt mainly with the life in barracks of the non-commissioned officers of the French Army, of which it took a very dark view, representing it as sordid and vicious in the extreme. The sub-officers, according to it, "déjeunent de la fille et soupent du soldat"; they are "des proxénètes et des voleurs," as well as a number of other things that are not nice. Touching in this rude way so sensitive a point as the pride of the French in their army, M. Descaves made, what no doubt he sought, a sensation and nine days' talk, and sold enough copies of his rather dull book to bring him in a return of 15,000 francs. It is doubtful if he would have received even so much as this if threats of prosecution had not advertised his novel from the first. These threats have been at last carried into effect, and the cause was tried on March 15, 16, before the Court of Assizes of the Seine. The prosecution was so far under the sanction of the Government as to be conducted by the Advocate-General, M. Rau. The charge against the book was that it was offensive to good morals and insulting to the army. The author was defended by Maître Tézenas, on the ground that he wrote with ample knowledge and in good faith; that his book showed the good side of the army as well as the bad; and that it was a most valuable "document," being the plain truth about the army, told after years of study of it. M. Lucien Descaves was acquitted without delay, and now, as we said, is enjoying a little triumph.

— M. André Maurel makes the acquittal of the author of 'Sous-Offs' the occasion of a brief discourse in the *Revue Bleue* of March 22. He draws from it two morals, or, rather, *moralités*, one addressed to the author, the other to the naturalist school in general. An author who has been prosecuted, he says, runs great risk from the temptation to pose thereafter as

a "martyr of letters"; to act, and perhaps in some measure also to feel, as if his real place was by the side of Flaubert and other masters, who are great not by virtue of the accident of prosecution which he shares with them, but by the production of such books as 'Madame Bovary' is. To the school of Médan he points out that an author ought to have a better excuse for an offensive book than merely to say, "J'ai dit la vérité." That, according to M. Maurel, is not much more pertinent than the child's "I didn't mean to" when he has knocked a grown person's eye out. What is the truth, after all? Do not writers see one aspect of it before breakfast and another afterwards? Is it not contingent upon systems and upon human nature? The truth about the army is one thing to the colonel and quite another to Sergeant-Major Descaves. Which of them has the absolute truth? If the naturalist believes that he has, if he lives by faith, let him not murmur if he has to suffer imprisonment for it, or any other loss, as martyrs and confessors have done in all ages. But the advantage still will lie, in M. Maurel's opinion, on the side of the psychologues. They profess to convey only sensations, and not unchanging truths; and, after all, sensations are about the most certain of the things we know. M. Maurel, it will be observed, joins in the cry that has for some time been increasing in volume against the naturalists.

—We had occasion two or three times last summer to speak of the unhappy differences that had put an end to the long friendship and collaboration of MM. Erckmann and Chatrian. It will be remembered that some delicate questions as to the division of the profits of their work having arisen between the two friends, the private secretary of M. Chatrian, M. Georgel, was so ill-advised as to publish in the *Figaro* an absurd and incoherent attack on M. Erckmann, whom he charged with all sorts of baseness, from cowardice to high treason. M. Erckmann replied by a suit at law, which has just been decided in his favor. M. Chatrian was left out of the case; but M. Georgel is condemned to a month's imprisonment and 2,000 francs fine, M. Pigeonnat of the *Figaro* to 500 francs fine, while the two together are mulcted besides in damages of 10,000 francs. The judgment is also ordered to be printed in ten newspapers in Paris and ten in the provinces.

—The German school-reformers have just scored a great success. It is only five years ago that Prof. Paulsen startled the self-sufficiency of orthodox classicists by advocating, in his 'Geschichte des gelehrten Unterrichts,' the following changes in the curriculum of the German gymnasium: abolition of Greek, introduction of philosophy, increased and broadened instruction in German and the other modern languages. Since then a powerful movement has sprung up directed towards the realization of at least the last point in this programme, which, when effected, will, as a natural consequence, carry the first point with it. Perhaps the most valuable contribution which this reform movement has added to pedagogical literature is the *Zeitschrift für den deutschen Unterricht*, founded in 1887, under the auspices of the venerable Rudolf Hildebrand, a periodical which has already become an indispensable guide for teachers of German, and a most forcible advocate of the claims of native language and literature as a part of national education. The Government until recently maintained a very guarded attitude towards this whole question; but now, it seems, they, too, think that the time has come for decided action. The latest *Armee-Verordnungs-Blatt* publishes a royal rescript, dealing with the instruction in military schools which stand on a level with the Realgymnasien. The rescript announces itself as a forerunner of a decree which is to contain a comprehensive reorganization of the instruction in the e schools. And what this reorganization is likely to be may be gathered from the following passages:

"German is to be the centre of the whole instruction. In every subject the pupil must be directed to make a free and easy use of his mother tongue. In the selection of readings, theses, and other papers to be prepared by the pupils, along with the traditions of antiquity, due consideration is to be paid to the culture and intellectual achievements of modern nations, and special attention is to be given to German folk lore, history, and literature. German history, especially that of modern times, is to take a more prominent part than heretofore; ancient and mediæval history is to be taught in such a manner as to give an idea of the roots and the growth of our own culture."

These are remarkable utterances, and the reported statement of Herr von Gossler, Prussian Minister of Education, that the Government was planning a reorganization of all the higher schools on the basis of this rescript, makes their importance still more far-reaching.

SOME ASTRONOMICAL WORKS.

Azimuth: A Treatise on this Subject, with a Study of the Astronomical Triangle, etc. By Joseph Edgar Craig, United States Navy. John Wiley & Sons.

Old and New Astronomy. (Parts II.–V.) By Richard A. Proctor. Longmans, Green & Co.

Hand-Book of the Lick Observatory of the University of California. By Edward S. Holden, LL.D. San Francisco: Bancroft & Co.

Great-Circle Sailing: Indicating the Shortest Sea-Routes. By Richard A. Proctor. Longmans, Green & Co.

Astronomy Note-Book for High Schools, Academies, and Colleges. By Marion L. Berneike, M.D. A. Lovell & Co.

Astronomy with an Opera-Glass. By G. P. Serviss. D. Appleton & Co.

Star Atlas: Containing maps of all the stars from 1 to 6.5 magnitude, between the North Pole and 34° South Declination. With explanatory text by Dr. Hermann J. Klein. Translated and adapted for English readers by Edmund McClure, M.R.I.A. London: Society for Promoting Christian Knowledge.

THE making of the first book on our list, 'Azimuth,' might well have been omitted—the publication of it certainly ought to have been. It is a laboriously detailed discussion of the problem of determining azimuth from an astronomical observation, and is intended also to point out in some minor respects the false teachings of the text-books. It was an utter mistake, in the first place, to suppose that a subject like azimuth could have a big bookful worthily written about it. A condensed paper in some mathematical journal, or, at the most, a long chapter in a treatise on astronomy, navigation, or geodesy, would meet the necessities of the case entirely, not to say more acceptably. Perhaps this work might have found some use in mediæval times; but, if we do not mistake, our age wants gists, not amplifications. No navigator is going to read such a treatise all through. The results should have been summarized in accessible form; on the contrary, no recapitulation of the work is anywhere given. The learner is warned of a great variety of things he should not do, but it is a day's job to find out from this helpful treatise which one of all the possible things that are left he should do. The book abounds in mathematical platitudes, and the author's style is unfinished and obscure.

In large measure the parts ii. and iii. of 'Old and New Astronomy' are disappointing. They show clearly how completely Mr. Proctor's by-path studies in astronomy and allied sciences have determined his choice of topics and the fulness with which they are discussed in his present work. His pages are, in fact, too readily surrendered to mere discussion, where the bare statement of fact would better have sufficed. It is not implied that his discussion is necessarily uninteresting; but patience and paper will not hold out. Plates iii. and iv. are entire failures—possibly the publishers' fault. The paragraphs on projections are good reading, and perhaps only a little diffuse; but one would like to have seen other subjects have equal chance.

Motions of sun, moon, and planets are clearly set forth, perhaps never in more fascinating form, and Mr. Proctor's interest in cycloids and cognate curves accounts for the full exposition of the epicyclic motions of the planets. His tribute to the astronomers of the earliest times is perhaps fully justified by an examination of the facts in the case. He says:

"It seems impossible to doubt that the keen observers and excellent mathematicians who formed the school of Egyptian and Babylonian astronomers, from which the Greek school derived its chief principles, can have failed to be struck by the exact synchronism between the movements of the five planets and of the sun. It appears probable, indeed, as I have already pointed out, that these old astronomers even adopted the theory that the sun is the true centre of the motions of all the planets, our earth included."

Chapter iv., on the true mechanism of the solar system, is written with discrimination, and sets right many things about the work of the earlier astronomers of the modern era not commonly understood. Now and then an unfortunate slip of the pen occurs, as, for instance, where "square" and "cube" are interchanged in the foot-note on page 184. The story of Kepler's work is neatly told, and Galileo is given all due prominence, while the treatment of Newton is in every way satisfactory and masterful. The attempt at a popular presentation of tidal phenomena is accurate, if not fully successful as such; nutation and precession, too, are explained in Mr. Proctor's original way of looking at things. But fascinating as the proofs of the earth's rotation are, have they not been given too great prominence? And might not the same be said of the complexities of the geometry of the lunar motions?

Coming now to the problems of weighing and measuring the solar system, Mr. Proctor is generally not less thoroughly at home. An occasional digression may be pardoned, even if irrelevant; but not such a palpable perversion of the facts as is implied in the statement that photography was an utter failure in the transits of Venus of 1874 and 1882, "no adequate preliminary experiments having been made by the official astronomers responsible for such service"! Evidently, from what is said later, the author means only the British photographs, and should have said so. The American parties took hundreds of available photographs of these transits by a method distinctly the outcome of the preliminary experiments of their own "official astronomers." All in all, however, such points form but trifling objections to a capitally written chapter on a subject of the highest significance; and one grudges the space which Mr. Proctor offends

good taste by devoting to a last word in his squabble with the Astronomer Royal about the recent transits of Venus. More pages, in fact, are given up to this irrelevant matter than to the entire subject of the relation of the planet Mars to the determination of the sun's distance. The more precise method, by means of the velocity of light, is given due prominence. The methods of weighing the earth are well explained: not only are the older determinations sufficiently recounted, but some useful suggestion and criticism of the newer work are offered. Lunar and planetary masses do not call for special comment. The concluding paragraphs on planetary domain are suggestive and essentially novel. The tribute to the French astronomers and their long labors in the cause of exact astronomy is admirable, and not less just is the slighting allusion to British official action in reference to the theoretic discovery of Neptune. More about this subject, by the way, is promised in subsequent chapters of the work, which it is understood Mr. Proctor had quite completed before his death.

The 'Hand-Book of the Lick Observatory' is a good little manual of information about this institution, and much besides. It tells the little that is known about the strange life of Mr. Lick, and one would naturally expect to find on the most prominent page of the book a fine portrait of this odd and now important personage; but Prof. Holden preëmpts this for a not very good picture of himself. Mr. Lick's remains were in January, 1887, formally deposited in the base of the pier on which the great telescope now rests. The drive to the mountain-top is well worth what it costs, and the guide-book gives an excellent description of it. Following is a concise history of the institution, descriptive notes on the buildings and the water supply, and the instruments, astronomical, meteorological, and seismometric. These last are of Prof. Ewing's design. In a popular and quite readable chapter on the work of an observatory, the sort of work to be undertaken on Mount Hamilton is made plain, as also how the astronomers are to set about doing it. Photographic research will have a prominent place. Telescopes are next treated of historically and otherwise, and a questionable blank-verse apostrophe to the "Unmounted Lens" of the great telescope is allowed the space of a half-dozen or so pages. An article entitled "Photography the Servant of Astronomy" follows, reprinted from the *Overland Monthly* of some years ago, and contains a good historical epitome of the subject, but is unfortunately much rosier as to the outlook than the facts warrant. The remaining chapters deal with clocks and time-keeping, with the Lick Observatory time-service, and with the principal observatories of the world—which latter will bear revising. The illustrations are mostly rather cheap and coarse; but a good index concludes the booklet, which is worth its full cost to any one interested.

Those knowledgeful passengers (and where is the captain who has failed to carry one or two of them on every voyage?) who are so much better informed on navigation than the captain himself, cannot do amiss if they read 'Great-Circle Sailing' on next going to sea. They may then find out one or two things about the apparently erratic nature of great-circle courses, and spare the commanding officer many a needless question, not to say much unearned maligning. It is well known not only that tables have been printed by which great-circle sailing is largely facilitated, but that, by the use of charts on the gnomonic projection, the great-circle course can be indicated by a straight line, just as the rhumb-course is shown on a Mercator chart; also, various approximative constructions have been suggested. But the art of sailing on the shortest courses has made relatively little progress. Mr. Proctor has published charts which are as convenient for great-circle sailing as Mercator's are for rhumb-line navigation; the chief difference is that while the rhumb-line course is a straight line on Mercator, the great-circle course is a circular one on Proctor. It is a matter of high importance. The exposure of life to sea risks and the interests dependent on sea chances are such that a shortening of water routes means diminished danger to life and property and diminished expense of material and labor. For example, take the distance between Cape Town and Melbourne: it is 6,150 miles on the rhumb or usual sailing line, while the great-circle course between the two is nearly 600 miles shorter, meaning a reduction of a voyage by several days. Almost everybody knows that great-circle courses are not always practicable, but Mr. Proctor's charts are quite as useful in selecting the appropriate composite course, and this popular essay cannot fail to serve the interests of all who have to do with long-course navigation.

Little advantage appears from the attempt to teach astronomy in the way dictated by Mrs. Berneike's 'Astronomy Note-Book.' It is only one further effort to make cramming easy and teaching easier; it may be found useful in some high schools and academies, but not elsewhere. The student who wants to acquire a command of the facts of popular astronomy will attain it regardless of the slight obstacles which such a note system is intended to remove, while the pupil not much caring to learn about the stars will derive little assistance, and no incentive, from a system so artificial. The general accuracy of the pamphlet is commendable.

Mr. Serviss some months ago contributed to the *Popular Science Monthly* a series of papers on stellar studies with the simplest of optical apparatus. Those papers form the bulk of the present volume, and it will be found a matter of surprise to many what the capabilities of a mere opera or field-glass are in revealing the more marked objects of the celestial sphere. The author has by no means based his work on mere imagination, but has with his own eyes carefully examined all the objects which his book describes as visible with an opera-glass of good quality. He does not go far wrong in the surmise that the sight of a striking celestial object, even though dimly, will spur on many an observer to become the possessor of more competent optical means. What he advises about the purchase of glasses is well and good, except that we should rather feel disposed to warn the buyer to fight shy of pawn-shops entirely. Being purely arbitrary, the divisions of the asterisms into four classes suitable for observation in the several seasons will occasion embarrassment to the genuine lover of the stars; in fact, almost any other arrangement would have been better. Preferable to a small star atlas, which every one would possess at an early day, would be one of the astral lanterns, several patterns of which are now to be had for a trifle at the shops. The poetic scraps, story-telling, and historic and mythologic padding are a blemish in the working-text; better have relegated them to an appendix or omitted them altogether. The little book is fairly well illustrated, but the pictures of the moon are unnecessarily cheap. All told, the papers on 'Astronomy with an Opera-Glass' are worth having brought together in this more accessible form, but they should have been condensed rather than amplified.

It is an excellent thing to have turned Dr. Klein's capital Star Atlas into English, but it might have been better done than Mr. McClure has done it. The text, which is copious, reaching to seventy or eighty pages, is not always accurate, and betrays a want of familiarity with astronomical investigators and their work. Not having the original German edition at hand, we do not say whose the fault may be—whether author's or translator's; but it is very likely to be the latter's. The elementary concepts and descriptions which precede the charts are well drawn and will be very helpful. The arrangement of the celestial objects in their order of right ascension is good—much better in every way than by constellations, as commonly in works of this sort. The maps themselves are capitally drawn and finely printed. For day-time reference it would be hard to suggest an improvement; but for night use in the observatory, or by any artificial light, the important matter printed in red is legible only with the greatest difficulty, and the strain upon the eyes in consulting the charts seriously unfits them for work at the eye-piece. As a minor matter of convenience, too, it would have been better had these numbers, annexed to the stars and nebulæ in the polar charts, been arranged to read across the page instead of around the pole, about which the book has now to be continually turned in referring to it.

A half-dozen plates of nebulæ and star-clusters follow the general maps of the stars. For the most part these are beyond criticism, and the introduction of the photographic pictures of the more interesting clusters is an especially praiseworthy feature. They show in the most conclusive manner the vast gain to astronomy from the modern applications of photography; and this atlas is in fact the first considerable publication of these results in popular form. All future editions of the Atlas should include the recent photographs of the more remarkable nebulæ as well.

The Life and Letters of Mary Wollstonecraft Shelley. By Mrs. Julian Marshall. 2 vols. London: Richard Bentley & Son.

THE life of Mary Shelley is not wholly new to the world. So much has been written about her unique father and mother and still more unique husband that the reading public has necessarily heard much about Mary herself. But she has always been somewhat obscured by the distinguished personages by whom she has been surrounded. Her pale face and large limpid eyes have looked out at us from the background of the group that fills the family canvas. It has remained for Mrs. Marshall to present us with a portrait of her as a distinct individual, with attitude and coloring of her own.

It must be confessed that her life, looked at from several points of view, was a disappointment. Before her birth she was confidently expected by her parents to be a boy. The letters exchanged at that time by William Godwin and his wife, Mary Wollstonecraft, may be read, by those who are interested in intimate matrimonial chronicles, in Kegan Paul's Life of the former. Mary's birth, when her well-shaped head and delicate frame were presented to the philosopher's eyes, cost the life of her more beautiful and more gifted mother. She could never as a child, in spite of her prettiness and precocious intelligence, win a first place in her father's affections. As a woman, she did not satisfy the expectations that social reformers had formed of the daughter of the

authoress of a 'Vindication of the Rights of Woman.' As a writer, she did not fulfil the promise that Shelley saw in her literary gifts. Godwin pronounced her talents "truly extraordinary," and told her that her novel of 'Frankenstein' was the most wonderful book to have been written at twenty years of age that he had ever heard of. But she never again wrote a book that equalled 'Frankenstein' in power of imagination or in reputation.

One does not feel, indeed, on finishing these two volumes, that Mary Shelley's place is in the literary Pantheon where nicely balanced criticism disputes the claim to a higher or lower niche of the few who find their way thither. She belongs rather to the "choir invisible" of those who have merged their own abilities in promoting the achievements of others. The gift she has left the world is not her work, but the memory of her personality. There is not a page in the whole history of her life that her biographer has had to hurry over, nor an action that she has had to extenuate. Mistakes there were in plenty. She was not quite seventeen when she committed the "imprudence," as she herself termed it later in life, of placing herself in opposition to the laws of society by uniting her fate with that of Shelley, then the husband of Harriet Westbrook. She was not quite twenty-two when, after having been three times a mother, she was made childless by the death in Rome of the blue-eyed boy named William, whose beauty and promise and angelic sweetness had made him her idol. She was not yet twenty-five when the body of Shelley was washed ashore in the Bay of Spezzia, and she was left without money and almost without friends to face the world which had seen in Shelley only an outlaw and a seducer.

The first volume of Mrs. Marshall's ably and graphically written biography closes with the death of Shelley. The second is given to the twenty-nine years of Mary's widowhood, during which she was forced to labor unremittingly with her pen to eke out the scanty sum which Shelley's father, Sir Timothy, reluctantly allowed for the maintenance of his daughter-in-law and grandson. Three novels (not of modern brevity, but of the length of flight expected of a romance of that day), of which 'The Last Man' is the best known, shorter tales and verses, besides innumerable lives of French, Italian, Spanish, and Portuguese Men of Letters, written for Lardner's 'Cabinet Cyclopædia,' attest the untiring energy with which she worked. The money which she thus earned would have been more than enough to meet her own wants had she not had a list of beneficiaries longer than that of most men of wealth. Her celebrated but ever impecunious father was unsparing in his demands upon her purse; Claire Clairmont, her evil genius, was always in need of assistance; there was her father's former amanuensis, Marshall, whom she helped to support in his old age, and there were friends poorer than herself who came in for a share of her bounty. One of the most marked traits of Mary Shelley's character was her generosity. Tested by the extreme of poverty and by the sudden rise to comparative affluence, when her son came into possession of the Shelley estate, she never once failed in the open-handed liberality which was as characteristic of Shelley as of herself.

Since Mrs. Marshall has had access to all the journals and letters belonging to Sir Percy and Lady Shelley, one cannot but wish that she had somewhat altered the proportions of her 'Life.' That the time which Mary Shelley spent with her husband is superior in dramatic interest, in picturesqueness of setting, in wealth of emotion, in rapidity of mental development to the rest of her life cannot be denied; but the external history of this period may be learned from other sources. One cannot help wishing to know more of her relations to some of the literary men and women of her day, with whom her celebrity as an authoress brought her into contact later in life. The individuality of the "famous Mrs. Shelley" grows just a trifle shadowy towards the end of the second volume. There is a sense that the biographer has been betrayed by their charm into lingering too long over the earlier years, and has been pressed by lack of space to scant her portrayal at the end.

But on the whole the figure of Mary Shelley stands out clear and distinct from these pages, a being whom we love and admire, and whose history we are the better for following. Hers was one of those rare natures that are capable of a perfect and unfaltering loyalty. That Shelley sometimes tried it, no one who reads this or Prof. Dowden's book can doubt. But Mary's faith in him and in herself was always equal to the demand upon it. It was not the bent of her nature to press her own claims in any relation of life. She was the most serviceable as well as the most unexacting of friends. More than most people, she was called upon to forgive selfishness, hardness, and treachery, but there dwelt neither bitterness nor remembrance of injury in her heart. In that slight, graceful woman, with the fair hair, sloping shoulders, and exquisite Vandyke hands, there existed a force of intellect which no outward circumstances could overcome. With an easier life and with fewer sorrows, she might have developed a genius which would have justified Shelley's early belief.

She died at the age of fifty-four, and was buried in St. Peter's churchyard at Bournemouth, near the home of her son, in Hampshire.

Three Men in a Boat.—The Idle Thoughts of an Idle Fellow. By Jerome K. Jerome. Henry Holt & Co.

EVERY man who writes a book assumes a certain responsibility, both direct and indirect. Not only is he directly responsible for the goodness or badness of his own book, and for its effect on the minds of readers, but, if his book is remarkable or successful, he is quite certain to cause others to seek success by following in his footsteps, and so he becomes indirectly responsible for all the wearisome failures that result from such attempts. In this sense Mr. Samuel L. Clemens may be said to be indirectly responsible for this and a number of other books published of late years by would-be English humorists. When 'The Innocents Abroad' first appeared, several English critics, entirely unacquainted with its peculiar vein of humor, in good faith and with due solemnity pointed out its defects as an adequate and accurate record of places and people. Since that time, however, English readers have become familiar with the various forms of American humor as exemplified in Mr. Clemens, Bret Harte, Artemus Ward, and others, and one of the results of this familiarity is a crop of books —of which Mr. Jerome's are fair samples— which constantly recall the above-named humorists. But these imitations, while doubtless, as such, sincerely flattering to the originals, cannot truthfully be called successful. The flavor of American humor in them is unmistakable, but the solution or trituration thereof is of the weakest, and a large quantity of current English slang is therefore added to give strength and local color to the whole. What could be more side-splitting, for instance, than the suggestion that something is all "*bally* foolishness"? How exhilarating is this historical observation: "She was nuts on public houses, was England's Virgin Queen"! Mr. Jerome's 'Three Men in a Boat' tells the tale of a week spent in going in a boat from Kingston to Oxford—not a strikingly original subject, by the way—and the author kindly varies the serious business of being humorous by poetic rhapsodies over the beauties of nature, and by a number of references to places of historic interest in the Thames valley. These latter passages smack somewhat of the guide-book, and recall the accounts of the Oxford colleges which a certain undergraduate, who disliked original composition, used to copy out and send in instalments to his venerable and confiding mother in lieu of a weekly letter.

So far, most of the humorists of this new school are adventurous people who like roughing it and camping out, and they evidently regard as irresistibly funny the difficulty of packing their provisions, the mixing of strawberry jam and meat pies, the upsetting of salt over everything, and so forth. It may be that such books will give pleasure to those who go down to the sea in ships, or up the river in boats, because as a rule they are very easily pleased; but the ordinary landsman will inevitably class them as "books one would rather have left unread."

In the same category must be placed Mr. Jerome's 'Idle Thoughts of an Idle Fellow,' although for somewhat different reasons. A dozen essays on such well worn subjects as "The Weather," "Shyness," "Babies," etc., etc., are here brought together, and, as they present but little claim to originality of ideas or style, it is difficult to see why they should have been inflicted on the community. Their humor has a strong resemblance to that of the previous volume, but it is somewhat less boisterous, and is, moreover, varied by occasional passages of pathos and cynicism. Sometimes, indeed, Mr. Jerome struggles with thoughts that seem almost poetic by comparison with the general dull level of the book; but on these occasions he comes dangerously near to burlesque. In the essay on "Being in Love," for instance, the reader is informed that "love is too pure a light to burn long among the noisome gases that we breathe, but before it is choked out we may use it as a torch to ignite the cosey fire of affection." This is what Thackeray used to call "the hoighth of foine language entoirely," but why should it appear in book form instead of in the literary corner of a country newspaper? *That* is the true resting-place for such gems of thought, and the friends of Mr. Jerome who, according to his preface, induced him to print this book, would have exercised a wiser discretion if they had allowed matters to take their regular course.

The Modern Law of Carriers; or, The Limitations of the Common-Law Liability of Common Carriers under the Law Merchant, Statute, and Special Contracts. By Everett P. Wheeler. Baker, Voorhis & Co. 1890.

MR. WHEELER has collected in a compact and useful volume some four thousand cases illustrating the modern limitations imposed upon the liability of common carriers, and has given a concise statement of the law of the subject. One of the first principles impressed in every law school upon the mind of the student is that a common carrier of goods is an insurer, his sole allowable excuse for a loss being that it was caused by the "act of God" or the public enemy. He is taught to admire this as one of those beneficent provisions of the

common law which illustrate its tender care for the weak and unprotected. It is only when the student is launched upon the sea of every-day business and litigation that he discovers that a very great part of the modern law of carriers has been developed through efforts on their part to escape from the onerous obligations imposed upon them by the common law—in which they have been mainly successful. The limitations upon the duty have become more important than the duty itself. Partly by statute, partly by means of the introduction of exemption clauses in bills of lading (even the receipt given by an express company is now usually made to take the form of a bill of lading, *i. e.*, of an express contract between the carrier and his customer), one limitation after another has been introduced, until we find, in the form adopted recently by the New York Produce Exchange, an agreement that the carrier shall not be liable, among other things, on account of losses caused by perils of the sea, by fire, by barratry, by enemies, pirates, or robbers, by arrest and restraint of princes, rulers, or people, by explosion by bursting of boilers, by breakage of shafts, by latent defect in hull or machinery, by collisions, stranding, or other accidents of navigation (*even when occasioned by the negligence, default, or error in judgment of the pilot, master, mariners, or other servants of the owner*, not resulting, however, in any case from want of diligence by the owners, or by the ship's husband or manager). It is the right to exempt himself from the consequences of the negligence of his own servants that the carrier is mainly fighting for now, and Mr. Wheeler's book is a valuable contribution to the discussions of this subject. The decisions are in conflict. On the one hand, we have numerous State courts which see no reason why the carrier should not exempt himself in this way; on the other hand, other State courts, notably those of New York, and also the Supreme Court of the United States, which insist that it is against the policy of the law that such an extreme exemption should be allowed. Mr. Wheeler is a strong advocate of the most extreme liberty of contract, but he gives the argument on both sides with great fairness.

Perhaps an inquiry into the reason why the voluminous exemptions of modern bills of lading do not produce any of the serious inconveniences that the fathers of the common law would probably have anticipated from them, may throw some light upon the point at issue. It is usually said that the rigid rule of the common law originated in times when transportation was insecure, and the risk of collusion between carriers and pirates or thieves was great. But is not this one of those theories which are handed down from text-writer to text-writer more because they sound as if they stated a reason than because there is really any basis for them? What means have we of comparing the risk of collusion between Dick Turpin and the common carriers (*i. e.*, the owners of stage-coaches) of his day, and between Western "road agents" and Jay Gould or C. P. Huntington in our times? We know nothing about it. The real reason, we take it, why the shipper of to-day cares comparatively little about the old liability of the carrier as an insurer, is that he always insures his freight or cargo elsewhere. In other words, the insurance companies assume the risks which the common law undertook (and very wisely, as there was, in the days when the rule was first laid down, no other insurance) to impose upon the carrier. If this view is correct, and the insurance companies are ready to go on insuring on such bills of lading as Mr. Wheeler approves, it may be that the argument derived from the "policy of the law" is not so impregnable as it has seemed to some judges.

Our space forbids us to review in detail the many interesting points raised by Mr. Wheeler's treatise. There are valuable chapters on the Law Merchant, on procedure under the United States Statutes, the Conflict of Laws, and other technical subjects. Numerous as are the text-books on carriers, we know of no other treatise which covers precisely the same ground. It will be found a useful addition to the learning on a subject of constantly increasing importance.

Journal of Researches, etc. By Charles Darwin. New edition, with illustrations by R. T. Pritchett of places visited and objects described. D. Appleton & Co. 1890.

Mr. Murray's preface to this new edition of the 'Voyage of the *Beagle*' bears date December, 1889, but makes no allusion to the fiftieth anniversary of the original edition, which has in fact been celebrated by publisher and artist in the beautiful volume now before us. Nor is it wholly accurate to say that "no attempt, however, has hitherto been made to produce an illustrated edition of this valuable work." Such an attempt, in connection with a classified abridgment, was made during Mr. Darwin's lifetime, and with his hearty approval; and for ten years the youth of this country have (as any public library will testify) been enjoying the handsome volume, abounding in cuts, issued by the Messrs. Harper, under the title 'What Mr. Darwin Saw in his Voyage Round the World in the Ship *Beagle*' (New York, 1879). The number of cuts (upwards of 100) is almost identical with that which Mr. Pritchett has got together, and while the subjects of course sometimes agree, there is a wider range in the American volume, which in particular is strong on the side of ethnology. This branch has been decidedly neglected by Mr. Pritchett, whose non-use of the camera is nowhere so keenly felt. Nor can the English edition be much preferred to the American in respect of zoölogy. Portraits, too, are altogether wanting in the former, Mr. Darwin himself being unpictured, whereas the interesting assortment of naturalists, navigators, and rulers in the Harper edition is led off by Kruell's first (and still admirable) engraving of the beardless Darwin of 1854, made expressly for the work which commemorated the fortieth anniversary of the 'Journal.'

We make this comparison not invidiously, but to claim for Americans a proper share of the world's appreciation of the greatest book of travels yet produced, and one of the most charming; whose observations time has done so little to invalidate, and which will be for ever interesting as the unrecognized herald of the doctrine of evolution. The English publisher has been mindful of what was due to it in the matter of typographical openness and elegance, and the artist has left little to be desired in the care he has bestowed on the natural scenery of the voyage. The rarely visited solitary ocean islands, the banks of the Rio Negro, the waters and mountain barriers of the Straits of Magellan, the raised beaches of Patagonia, the Chonos archipelago, the Uspallata Pass, the Keeling atoll, may be singled out for mention as of prime value. At the same time we should have been better pleased if photography had supplemented the pencil wherever it was available, and if wood-engraving had been employed throughout. Such pains and expense must be, perhaps, reserved for the hundredth anniversary edition, when doubtless mere correspondence will suffice to procure, even from the least frequented regions, authentic photographs of everything delineated in this edition, and more. Meanwhile the public is to be congratulated that the *Beagle* renews its Voyage under such favorable auspices.

Delicate Feasting. By Theodore Child. Harper & Bros. 1890.

This is a very taking, indeed one may say a very appetizing, book. The eye is pleased at the first glance by the pretty yellow-brown cover with its agreeable decoration in silver, gold, and black; and although the print and paper inside do not quite bear out the cover's promise, still they are not wholly bad.

Every man of middle age is less wise than he ought to be if he is not in some degree a cook, or at the least a critic of cooking. Dietetics are becoming more and more every year a recognized department in medical science, while as a fine art cooking won its undisputed place centuries ago. In literature, indeed, its place never has been challenged. There is the record of much good eating, though too little refined, in the Hebrew sacred books, and in fact in world-literature everywhere. The best novels and the best poetry contain much more than mere allusions to it. Not only in the books of earthlier writers, like Dumas and Thackeray, does the charmed reader find records of feasting, but in Scott's novels and in Milton's verse there are precious passages for him who of such delights can judge. As one may say of biographies, so one may say of books on the table, that there never was one written that is not worth reading. If it does not tend to edification, at least it serves for reproof.

Mr. Child has written a good book. One may dissent from him in some points; one may not like his nonsense about "P. Z. Didsbury," the Dryasdust to whom he dedicates his volume; one may hesitate now and then and doubt if he is right about this or that detail; one may reject with horror what he says about the public use of toothpicks and mouth-bowls; but all these are minor matters. He has a firm grasp of the main principles of cookery. He has an intelligent and sympathetic understanding of food. He gives a few admirable receipts, notably those for a *matelote* and for *court-bouillon*. He has much good and sensible advice as to dinner-giving and dinner service. He abounds in interesting quotation from the literature of his subject, and altogether has made a book "full-worthy on the self shelf to be upset" with the best cookery books, with Kettner's 'Book of the Table,' with Thackeray's 'Memorials of Gormandizing,' and with Prof. Mattieu Williams's admirable 'Chemistry of Cookery.'

A Memory of Edward Thring. By John Huntley Skrine. Macmillan & Co. 1890.

It appears that we are to wait somewhat longer for a biography of the remarkable educator who refounded Uppingham School, and gave to it a high place among the public schools of England by dint of his energetic and original individuality. Meanwhile, the present volume is a tribute of remembrance by one of his pupils and sub-masters, who was evidently filled with Thring's spirit and moulded by his influence. The volume is curiously mingled of eulogy and reminiscence, and varies between the fiery declamation of a skald and the tender affection of a disciple. The one thing kept before the reader is the figure of Thring himself; and whatever may be thought of him, there can be no complaint that he is not truthfully and

powerfully portrayed, first as the master among the boys, and afterwards as the man fighting for his own among High Commissioners, Directors, town officials, and all others whom he was compelled to meet with. He was a man who did his own thinking, and reduced the results to explosive epigrams, often worded with a kind of violent felicity. He had a theory of life and duty of a most imperative and energizing sort, and he stamped it upon his boys with all the force he could bring to bear. He was rough in his outward seeming and knotty in inward composition, severe in method and arbitrary in disposition, but thoroughly penetrated by great ends and practical thoughts; with something of the poet also in his madness, a sacred fury coming upon him and expressing itself in rude but genuinely noble ways; an enthusiast, of course, who believed in himself and always contemplated himself as a host militant against the dull, stupid, wrong-headed, and devil-doomed world. So, at least, he is drawn here, in page after page of striking anecdote. After reading, one understands the criticisms of his enemies as plainly as the praise of his "boys"—those who thrived under such vigorous treatment. The volume stimulates interest in Thring's personality, and is an excellent prologue to his promised life by another hand.

Register of the University of Oxford. Vol. II. (1571-1622.) Part IV. Indexes. Edited by Andrew Clark, M. A. Oxford: Clarendon Press; New York: Macmillan. 1889. 8vo, pp. 466.

We have already reviewed this admirable work, in reference to vol. i. (one volume), 1884, and the three preceding bound parts of vol. ii. Nothing can easily be said of an index, except as to its thoroughness, and in the present case too much praise can hardly be given. It is a suitable capstone to the monument raised to the diligence and precision of the editor.

On pp. 36–49 will be found careful tables in regard to the Christian names of some 20,500 graduates, which the editor well terms "more representative of English names than any list yet published." The most used names are:

John	3,826	Henry	908
Thomas	2,777	George	647
William	2,546	Francis	447
Richard	1,691	James	424
Robert	1,222	Nicholas	326
Edward	957	Edmund	298

—a total of over 16,000 names, or 80 per cent. of all. Arthur, Christopher, Hugh, Ralph, Roger, Samuel, and Walter each claim about 200 names, or 1 per cent.

Among the unusual names we find some which have since become favorites, or have been borne by noted men. Alphabetically these are, Aquila 1, Arthur 98, Brian 21, Charles 139, Clement 16, Ferdinando 16, Elihu 1, Frederic 2, Gerard 12, Geoffroy (Jeffrey) 38, Godfrey 8, Herbert 16, Hector 2, Kenelm 7, Lawrence 90, Launcelot 23, Lionel 12, Lewis 78, Martin 44, Michael 103, Marmaduke 18, Miles 24, Patrick 6, Percival 9, Peregrine 5, Reginald 20, Roderic 11, Roland 65, Swithin 3, Theodore 8, Theophilus 19, Tristram 13, Valentine 18, Vincent 15.

There are many names, especially Scriptural ones, not occurring 200 times, and yet not very rare. Then there are family names used as "given" names, and some almost inexplicable. As to double Christian names, six instances are cited, of which four are probably not to be so classed. The other two are Thomas Postumus Hobbie (mentioned in Camden's 'Remains,' p. 49), and Thomas Pope Blunt, in 1573, "in the degree lists given as Pope Blunt, without the Thomas." This Blunt example may therefore fail, as Camden writes, "Two Christian names are rare in England, and I only remember now his Majesty, who was named Charles James, as the Prince, his son, Henry Frederic; and among private men Thomas Maria Wingfield, and Sir Thomas Posthumus Hobby."

As to surnames, it would be impossible to make a selection. Every class in the community is here represented, from the peer to the charity student. Families are often represented in different generations, and certain localities favor special colleges or halls. The whole series will be indispensable in every large library; and we hope a continuation will be made, covering, at least, the remainder of the seventeenth century.

Prominent Incidents in the Life of Dr. John M. Wieting, including his Travels with his Wife round the World. By Mary Elizabeth Wieting. Illustrated. G. P. Putnam's Sons. 1889.

A very large part of Mrs. Wieting's book is devoted to an account of her travels round the world with her husband, and to a second journey in which only Europe was included, and only a very insignificant part to a general account of his life and its "prominent incidents." The journey around the world was of nearly a year's duration. It was a splendid opportunity, but, apparently, both Mr. and Mrs. Wieting brought to it little or no preparation on the æsthetic side. The treatment of art matters is singularly unsympathetic and remote, the writer giving us the opinions of the guide-books rather than her own. Dr. Wieting was intensely practical, and his disposition was dominant in what was most enjoyed. We have here a great deal of useful information, which is probably quite as reliable as the guide-books from which it has been studiously gleaned. The second journey was intended to make up the deficiencies of the first. It is more elaborately described than that, but, as it deals with more familiar ground, and brings to it no special gift of apprehension, the description is less interesting. There is a healthy common-sense vigor in Mrs. Wieting's writing, and a flow of animal spirits that keeps us always in good company, and reconciles us to the absence of any genuine literary touch.

In the few pages devoted to Dr. Wieting's life we are left to infer the date of his birth (1817) from a statement, well along, that in 1837 he was twenty years old. The bantling was early cast upon the rocks, the sickness of his father devolving on the boy the support of his parents, and he grew beneath the burden, as so many boys have done in similar circumstances. He studied medicine and began the practice of it, but in 1843 he resolved to enter the lecture field, and there is an intimation that no American lecturer, not even Beecher, reaped so large a pecuniary harvest. His subject was physiology, and his advertising was after the manner of Barnum and other dealers in unparalleled attractions. The text of one of his big posters is given, and it is a model of its kind. As a citizen of Syracuse, N. Y., Dr. Wieting was evidently much esteemed. Under a rough exterior he carried a warm and generous heart. It is evident, between the lines, that it would have been easily possible for any one, painting him as Cromwell wished to be painted, to make a picture of much individuality. The line engraving of his face suggests no fineness in the intellectual or spiritual man, but plenty of rude force. The Wieting Block, in which was Wieting Hall, the scene of many a political gathering, was of his building. Burned in 1856, he built the first theatre and opera-house of Syracuse upon the lots, and when this was burned, in 1881, under great difficulties and embarrassments he built another larger and finer than its predecessor. These were the most "prominent incidents" of his career, and went far to give him his local standing as a man of energy and public spirit.

But altogether the most interesting incident in the volume is one that illustrates his generosity and divination of character. At one of his lectures in Boston he saw in the audience a tall, lank, awkward-looking man, who soon after turned up at a lecture in Philadelphia, made himself known to Dr. Wieting, and requested a loan of $1,000 with which to go to California—it was in gold-fever times—agreeing to send the doctor half his earnings. The latter consented. After a while came $1,000 back, and then in different instalments $9,000 more, whereupon the Doctor cried, Hold! but the stranger wrote that he did not propose to break his bond. Soon, however, he wrote requesting a fresh loan of $20,000. The Doctor's friends protested that the $10,000 was only a decoy, and that if the Doctor sent the $20,000 he would never hear of it again. Nevertheless, he sent the money, and there was an awful pause; but after a time the returns began, and finally mounted up to $50,000, after which the honest man was never heard of more.

By "Sims, the Pirate," spoken of as sailing the seas in the later course of these events, is the Confederate captain, Semmes, intended? The reproductions of photographs which illustrate the travels are a very beautiful and valuable addition to the text.

Freiland: Ein Soziales Zukunftsbild. Von Theodor Hertzka. Leipzig: Duncker & Humblot. 1890. Pp. 677.

The writer of this stout volume, after many intellectual wanderings, has reached his goal He began many years ago as a member of the optimistic school to which the Germans apply the epithet, now opprobrious, of *Manchesterthum;* he has gradually drifted away from this point of view, and now appears as the guide to a complete and beatific reorganization of society. The root of all evil, we learn, is overproduction; from which arise protective tariffs, Trusts, combinations, and strikes. "All these are but so many phases of the desperate struggle of every class against the inevitable concomitants of the one phenomenon, so anomalous and yet so real, that the steady advance in the facilities for producing wealth has brought in its train ruin and misery."

So far, we hear the old story. Consumption has not kept pace with production, supply has outrun demand; the poor cannot buy commodities, while the rich will not, but heap investment on investment. This is the sort of reasoning which crops out whenever the complicated machinery of production undergoes a far-reaching change. It appeared in the beginning of the century, when the great inventions were transforming the industrial system, and when Malthus, Say, Sismondi, and the rest of them threshed out the discussion as to overproduction with an ardor which leaves Mr. Hertzka and his fellows little to say that is new. But the remedy which he proposes for the evils that are supposed to flow from this one cause, while it has a family resemblance to the schemes which the enthusiastic followers of Mr. Bellamy are pressing on us, has certain features of its own—if in no other way, in that his experiment is worked out in the heart of Africa. Thither, to the mountain region under the equator, goes a band of colonists. They apply

the simple remedy (how simple these remedies always are!) discovered by Herr Hertzka. The result is peace, plenty, prosperity, perfect justice, perfect happiness.

The gist of this latest panacea can be put in a few words. The land and the capital belong to the community : so far we seem to be in the familiar domain of Socialism. But this is *Freiland*, and the land and the capital are not managed by the community; they are turned over gratuitously, without rent or interest, to associations of individuals. Every person is free at any time to join or leave any of these associations. The only thing required by the State is absolute publicity. The hateful element of private and business secrecy must go; your association must tell all the world how much it produces, earns, divides. Thus we have perfect competition, and so perfect justice. Within each association—they are organized somewhat on the plan of coöperative production—the members share their produce according to their works (*Leistungen*); which seems to be a simple principle enough, and enables the author to brush away at once all the difficulties of distribution. Around this kernel gather a multitude of details and episodes, from descriptions of African scenery to considerations of the law of marriage in Freiland ; from accounts of victorious yet merciful wars with the Abyssinians to conversations with visiting Europeans, who are so rash as to suggest possible difficulties, and, of course, are triumphantly refuted. The innocent fiction of the adventures in Africa no doubt was intended to allure readers ; but it has not the spice of reality, and very few, even among those to whom such speculations afford either amusement or stimulus, are likely to read all the pages of 'Freiland.'

On the whole, the sober-minded reader must feel that he is hardly called on to meet seriously the challenge with which the eager author submits his book to "the searching criticism of the professional economists." It requires no great discrimination to see wherein his principles contain "something other than what sound common sense must admit to be self-evident conclusions from justice and from enlightened self-interest."

BOOKS OF THE WEEK.

Medical Annual and Practitioner's Index. E. B. Treat & Co. $2.75.

Walker's Simpler Political Economy

By Francis A. Walker, Ph.D., LL.D. 12mo, $1.25.

PROF. H. I. FOXWELL of *St. John's College, Cambridge, England*, says of it:

"For two classes of readers, the beginners and the busy men who have little time to devote to special studies, it is the best general presentation of economic science known to me. I have not seen and do not expect to see any treatise which, in so simple a manner and so compact a form, gives such an adequate and sensible exposition of just those economic truths which for practical purposes and to practical men are the most essential and fundamental."

PROF F. H. GIDDINGS of *Bryn Mawr College, Pa.*, says:

"To make a clear, simple book on the historical and descriptive features of Political Economy is one thing ; to present with the simplicity that comes of perfect clarity of thought the *logical principles* of Political Economy, so that the bright boy of high-school age can not only grasp them, but really make them a part of his mental equipment, is a totally different and immensely difficult thing. And this is what President Walker has beyond question accomplished. The book is in some ways his best achievement as an economist, and this is saying that it is a very noteworthy piece of work."

HENRY HOLT & CO., NEW YORK.

Seashore Lands.

ON THE MAINE COAST AND OTHER PARTS OF THE NEW ENGLAND SHORE. Having made a specialty of these lands for over ten years, I act as agent for purchasers and for sale. A number of beautiful shore, island, and peninsular properties on Penobscot Bay and other parts of the coast. These ranging from 10 to 1,000 acres, of the best selected frontages of high land, have beautiful rocks, trees, beaches, harbors, and mountain and sea views, and in the rapidly increasing movement to this coast, are almost the only remaining shore lands still purchasable at very low prices and offer exceptional advantages for gentlemen wishing independent estates for summer occupancy or for local colonization or investment. For details address

J. Murray Howe, 27 School St., Boston.

THE WM. H. MOON CO.,

MORRISVILLE, BUCKS CO., PA.,
Nurserymen and Landscape Architects,
Offer an immense stock of all kinds of
Fruit and Ornamental Trees, SHRUBS, AND VINES.
A 48-page descriptive illustrated catalogue *free.*

The Sauveur Summer College of Languages.

(Removed from Amherst, Massachusetts, and Oswego, New York, to Burlington, Vt.)

FIFTEENTH SESSION : July 9th to August 19th.

For board and rooms address Miss H. L. Burritt, Burlington, Vt.

"The Sauveur Summer School of Languages has come to be a recognized factor in the educational work of this country."—*The Critic.*

For Catalogues of the School, and Circulars of Dr. Sauveur's Educational Works, address, DR. L. SAUVEUR, Copley Terrace, Roxbury, Boston, Mass.

Specimen Copies Free.

PHILOSOPHY, PSYCHOLOGY, ETHICS, AND GENERAL SCIENCE.

These topics are discussed in *The Open Court* by the most eminent investigators of the United States, Great Britain, Germany, and France. Questions of Ethics and Religion from the standpoint of Science, form the chief features. Correspondence from Continental critics.

The Open Court, { Subscription one year $2.00. Chicago, 1734 La Salle St.; Brentano's, N. Y. and London.

Anson D. F. Randolph & Co.

OUR INHERITANCE IN THE GREAT PYRAMID, with twenty-five explanatory plates, showing the more crucial parts of this really anti-Egyptian and most primeval structure, in plan, elevation, and section. By C. PIAZZI SMYTH, F.R.S.E., F.R.A.S., late Astronomer-Royal for Scotland. 5th Edition. 8vo, cloth, $5.00 *net.*

HISTORY OF THE WESTMINSTER ASSEMBLY OF DIVINES. By Prof. WILLIAM M. HETHERINGTON, Free Church, Glasgow. Fifth edition. Edited by ROBERT WILLIAMSON D.D., with Notes and Facsimiles of Title-pages of the Original Editions of the Confession of Faith, the Catechisms, Larger and Shorter, and the Directory of Church Government and Ordination of Ministers. Crown 8vo, Cloth. $2.00.

"Will be welcomed by all who are desirous of procuring in a convenient form an account of the labors of the men who framed the standards of the Presbyterian churches."—*Edinburgh Courant.*

SUPERNATURAL REVELATION: An essay concerning THE BASIS OF THE CHRISTIAN FAITH. By Rev. C. M. Mead, Ph.D., D.D. 8vo, cloth, $2.00.

"*This is the ablest discussion of the subject that we know of in the range of American theology.*"—American.

JESUS THE MESSIAH. By Alfred Edersheim, M.A., Oxon., D.D., Ph.D., sometime Grieshield lecturer on the Septuagint in the University of Oxford. *An abridged edition of The Life and Times of Jesus the Messiah*, with preface by Prof. W. Sanday of Oxford. Sm. 8vo, 659 pages, $2.00. Cloth, gilt top, $2.25.

"The characteristics of the larger work are faithfully preserved in this condensation, especially the background of Jewish coloring, which no modern scholar has had so full control of or rendered with so much effect as Edersheim."

THE IMITATION OF CHRIST (*Musica Ecclesiastica.*) By Thomas à Kempis. Now for the first time set forth in rhythmic sentences, according to the original intention of the author, with a preface by the translator, and an introductory note by H. P. Liddon, D.D., D.C.L., Canon and Chancellor of St. Paul's. 320 pages, small 8vo, half cloth, uncut edges. Limited large-paper edition, $3.50; also a cheaper edition, $1.00; cloth, gilt, $1.50.

As only a small number of the large-paper limited edition remain unsold, the price has been advanced from $3.50 to $5.00.

THE OLD MISSIONARY. A narrative in four chapters. By Sir WM. WILSON HUNTER, K.C.S.I. 12mo, cloth, 50 cents.

"*A story as grand, as pathetic, and as inspiring as any in the missionary annals.*"

UNKNOWN SWITZERLAND. By VICTOR TISSOT. Translated from the twelfth (French) edition. 12mo, cloth, $1.50.

A volume that will become a classic, like Kinglake's "Eothen."

IN THE MORNING. (Poems.) By WILLIS BOYD ALLEN. 24mo, cloth, $1.00.

FOUR SONGS OF LIFE—Two of Faith and two of Doubt. By M. ARNOLD, J. G. WHITTIER, ERNEST HENLEY, and LORD TENNYSON. 12mo, paper, 25 cents.

*** Sold by booksellers or sent by the publishers on receipt of price.*

38 WEST 23D STREET, NEW YORK.

MACMILLAN & CO.'S NEW CLASSICAL TEXT-BOOKS.

A SHORT COMPARATIVE GRAMMAR of GREEK AND LATIN for SCHOOLS AND COLLEGES.

By VICTOR HENRY, Deputy-Professor of Comparative Philology in the University of Paris, etc. Authorized Translation from the Second French Edition by R. T. ELLIOTT, M.A., late Classical Exhibitor of Worcester College, Oxford. With an Introductory Note by HENRY NETTLESHIP, Corpus Professor of Latin in the University of Oxford. 12mo, $1.90.

Professor Benjamin I. Wheeler, Cornell Univ., writes: "I am glad it has been translated, for it is the handiest of the manuals that have appeared, presenting the largest body of reliable matter for the given space."

"No better introduction to classical etymology than this has yet appeared. Prof. Henry has the advantage of writing in a language of such unrivalled lucidity that in it the most abstruse subjects seem plain and simple; and he is himself a master in whose hands we may feel safe, who is conversant with the latest philological literature, and can take a connected view of his science."—*Classical Review.*

THE STUDENT'S CICERO.

Adapted from the German of Dr. Munk's 'Geschichte der Römischen Literatur.' By the Rev. W. Y. FAUSSET, M.A. With a frontispiece portrait. 12mo, $1.00.

"Eminently the sort of book that a student will find profitable and stimulating."—*Spectator.*

A COMPANION TO SCHOOL CLASSICS.

By JAMES GOW, M.A., Litt.D., Head Master of the High School, Nottingham. Late Fellow of Trinity College, Cambridge. Second Edition, Revised. With Illustrations. 12mo, $1.75.

"He has made use of the most recent authorities, and the young student will find the pith of many books in the space of less than 400 pages. . . . Much of the information would be sought to no purpose in the ordinary manuals, and what is given is conveyed in its true connection."—*Nation.*

"Excellently planned and admirably executed. The author—for Mr. Gow is more than a compiler—has had a distinct object in view. He is a distinguished student of the classics, and he is an eminent practical teacher. With such qualifications, we turn with confidence to a reliable book."—*Educational Times.*

THE ATTIC THEATRE.

A description of the Stage and Theatre of the Athenians, and of the Dramatic Performances at Athens. By A. E. HAIGH, M.A., Late Fellow of Hertford, and Classical Lecturer at Corpus Christi and Wadham Colleges, Oxford. With Facsimiles and Illustrations. 8vo, $3.00.

"A book more thorough and more trustworthy can seldom have been issued by the Clarendon Press. It is unlikely that for a long time to come so good a book as the present will be superseded."—*The Academy.*

"Mr. Haigh's acute and laborious work is a substantive contribution to Greek Archæology and a very creditable example of English scholarship."—*St. James's Gazette.*

MACMILLAN'S CLASSICAL SERIES. NEW VOLUMES.

PLINY. Letters. Books I. and II. With Introduction, Notes, and Plan. Edited by JAMES COWAN, M.A. 16mo, $1.10.

"We have derived much pleasure and no small profit from the perusal of the book. Mr. Cowan's Notes and critical remarks are the outcome of much research, and the conclusions to which he generally comes are certainly to be trusted."—*Schoolmaster.*

TACITUS. The Histories. Books III., IV., and V. With Introduction and Notes, by A. D. GODLEY, M.A. 16mo, $1.25.

"Mr. Godley's second instalment is marked by same good qualities as the first, and will make a very useful school-book."—*Literary World.*

MACMILLAN'S ELEMENTARY CLASSICS. NEW VOLUMES.

18mo. 40 cents each.

LIVY. Legends of Early Rome. Adapted for the use of Beginners. With Notes, Exercises, and Vocabulary, by HERBERT WILKINSON, M.A.

LIVY. Book XXI. Adapted from Mr. Capes's Edition. With Notes and Vocabulary by W. W. CAPES, M.A., and J. E. MELHUISH, M.A., Assistant Master in St. Paul's School.

"The edition is all that could be wished for to attain its object."—*Literary World.*

CÆSAR. The Invasion of Britain. Being Selections from Books IV. and V. of the "De Bello Gallico," Adapted for the use of Beginners. With Notes, Exercises, and Vocabulary, by W. WELCH, M.A., and C. G. DUFFIELD, M.A.

CÆSAR. The Helvetian War. Being selections from Book I. of the "De Bellico Gallico." Adapted for the use of Beginners. With Notes, Exercises, and Vocabulary, by W. WELCH, M.A., and C. G. DUFFIELD, M.A.

CLARENDON PRESS SERIES. NEW EDITIONS.

HOMER. Iliad. Books I.-XII. With an Introduction, a brief Homeric Grammar, and Notes, by D. B. MONRO, M.A., Provost of Oriel College, Oxford. Third Edition, Revised. 16mo, $1.50.

"Certainly the best school edition of any portion of the works of Homer that has come under our notice."—*Saturday Review.*

HOMER. Iliad. Books XIII.-XXIV. With Notes by D. B. MONRO, M.A. 16mo, $1.50.

HOMER. Odyssey. Books I.-XII. With Introduction, Notes, etc., by W. W. MERRY, Rector of Lincoln College, Oxford. Fifty-fifth Thousand. Carefully revised. 16mo, $1.10.

HOMER. Odyssey. Books XIII.-XXIV. With Introduction, Notes, etc., by W. W. MERRY, M.A. Third Edition. 16mo, $1.10.

ARISTOPHANES—Birds. With Introduction and Notes by W. W. MERRY, D.D., Rector of Lincoln College, Oxford. With Colored Illustrations. 16mo, 90 cents.

CÆSAR. Gallic War VI. Edited, with Notes and Vocabulary for the use of Schools, by C. COLBECK, M.A., late Fellow of Trinity College, Cambridge; Assistant Master at Harrow School. 18mo, 40 cents.

DEMOSTHENES. Orations AGAINST PHILIP. With Introduction and Notes by EVELYN ABBOTT, M.A. LL.D., and P. E. MATHESON, M.A. Vol. 2, Part i. Introduction and Text. (On the Peace, Philippic i; On the Chersonese, Philippic iii.) Vol. 2, Part ii. Notes. 16mo, $1.10.

KING and COOKSON. An Introduction TO THE COMPARATIVE GRAMMAR OF GREEK AND LATIN. By J. E. KING, M.A., Fellow and Tutor of Lincoln College, Oxford, and C. COOKSON, M.A., Late Scholar of Corpus Christi College, Oxford; Assistant Master at St. Paul's School, London, joint authors of 'Principles of Sound and Inflexion as illustrated in the Greek and Latin Languages.' 12mo, $1.40.

LIVY. Book IV. Edited by H. M. STEPHENSON, M.A. *Pitt Press Series.* 16mo, 65 cents.

MACMILLAN'S Latin Course. Second Part. By A. M. COOK, M.A., Assistant Master in St. Paul's School, author of 'Macmillan's Latin Course,' First Part, and 'Macmillan's Shorter Latin Course,' etc. 12mo, 60 cents.

MOULTON. The Ancient Classical Drama. A Study in Literary Evolution. Intended for readers in English and in the original. By RICHARD G. MOULTON, M.A., late Scholar of Christ College, Cambridge University (Extension), Lecturer in Literature. 12mo, $2.25.

PANTIN. A First Latin Verse Book. By W. E. P. PANTIN, M.A., Assistant Master at St. Paul's School. Globe 8vo, 40 cents.

PLAUTUS. Amphitruo. Edited by ARTHUR PALMER, M.A., Fellow and Professor of Latin in Trinity College, Dublin. 16mo, $1.25.

SARGENT. Models and Materials FOR GREEK IAMBIC VERSE. By J. Y. SARGENT, M.A. *Clarendon Press Series.* 16mo, $1.10.

SARGENT. Exemplaria Graeca. Selections from Passages for Translation into Greek. By JOHN YOUNG SARGENT, M.A., Fellow and Tutor of Hertford College, Oxford. *Clarendon Press Series.* 16mo, 90 cents.

THUCYDIDES. Book IV. A Revision of the Text, illustrating the principal causes of corruption in the manuscripts of this author. By WILLIAM GUNION RUTHERFORD, M.A., LL.D., Head Master of Westminster. 8vo, $2.00.

*** *A Special List of New Classical Publications will be sent free by mail to any address on application.*

MACMILLAN & Co., 112 Fourth Avenue, New York.

HOSSFELD'S METHODS FOR THE Study of Modern Languages: A series of four volumes, GERMAN, FRENCH, SPANISH, and ITALIAN. For the use of Schools or for Self Instruction. These books are in no sense patent methods, but are based upon well-established rules for the study of Modern Languages. Their merits consist in the clear and concise arrangements of the sixty lessons, each of which is divided into four pages. The GRAMMAR is followed by Practical Exercises and Conversations, with readings and translations, fully demonstrating and applying the rules of the Grammar. Uniform in size (12mo, about 360 pages, $1.25). Especially adapted to the needs of those contemplating European Travel. KEYS and TASKS for self correction, supplementary to the French and German Methods. ENGLISH-FRENCH, ENGLISH-GERMAN, ENGLISH-SPANISH Commercial Correspondents. Of special value to those interested in International Exposition or Pan-American affairs. Order through Booksellers. For Catalogues, etc., address "HOSSFELD'S," No. 65 Duane St., New York.

MENTAL INVALIDS OF A MILD type, especially those afflicted with Melancholia, sufferers from abuse of alcohol, and victims of the opium habit are offered superior advantages in private treatment and care at the STOCKTON SANITARIUM, in the beautiful village of Merchantville, N. J., five miles by train from foot of Market St., Philadelphia. Absolutely no suggestion of an asylum. The spacious, veranda-surrounded houses in the outskirts of the village, with their twelve acres of grove, garden, and lawn, are precisely like the better class of private country villas. The utmost freedom consistent with security is allowed. Pleasant surroundings, open-air exercise, country drives, cheerfulness, comfort, quiet. These conditions are *demonstrated* by experience to have marked effect on curable cases, and they contribute largely to the comfort of confirmed cases who here find a home, combined with the safeguards of skilled attendance. The proprietor (who was for 20 years in charge of Male Department of Pennsylvania Hospital for Insane) refers to many eminent alienists. Illustrated Circulars by mail. Address, DR. S. PRESTON JONES, Merchantville, N. J.

Little, Brown & Co.'s
NEW BOOKS.

HOUGHTON, MIFFLIN & CO.,
BOSTON.
11 East Seventeenth St., New York.

REORGANIZATION
OF
The Denver Land & Security Company.

This company, originally organized in December, 1887, with a capital of $250,000, for the principal purpose of buying, improving, and selling the Denver real estate known as "Berkeley," has paid 13 per cent. in cash dividends and has capitalized $500,000 of its surplus. The stockholders have voted to issue $250,000 additional stock, making a total of One Million Dollars. The surplus shown on the books February 1, 1890, was $330,287.59, which is likely to be greatly augmented during the year unless reduced by increased dividends. The new stock participates with the old in this surplus, and is, therefore, worth at least $130 per share. Inasmuch as the Board of Directors have authorized its offer at par ($100 per share) for a quick sale, it is deemed only just to the old stockholders that they should have the first opportunity to subscribe for the new issue, and the books will be open for subscriptions by stockholders only until March 1, 1890, and after that date to all who may desire to subscribe.

It is proposed to further amend the Articles of Association so as to change the name of the corporation to

The Continental
Land & Security Company.

Stockholders may send their subscriptions on the blanks furnished them to Jno. C. Avery, President, 115 Broadway, New York, or to S. B. Carter, New England Manager, 209 Washington Street, Boston, Mass. On and after March 1st, 1890, subscriptions will be received at the offices of the Company, 115 Broadway, New York, 209 Washington Street, Boston, and 1700 Curtis Street, Denver, Col., or at the offices of any of its agents, from whom also further information may be obtained.

Reference is also made, by permission, to the following Banks:

The National Bank of the Republic, New York.
The National Bank of Kansas City, Kansas City, Mo.
The Denver National Bank, Denver, Col.
The Merchants' National Bank, Fort Worth, Tex.

The Debenture Bonds issued by the International Loan and Trust Company of Kansas City, Mo., are the direct obligations against its entire capital—$1,000,000.00—and assets, and are FURTHER SECURED by an equal amount of REAL ESTATE FIRST MORTGAGE LOANS deposited with the Boston Safe Deposit and Trust Company, Boston, Massachusetts, as Trustee, each Series of Bonds issued having an INDEPENDENT FIRST LIEN SECURITY on real estate worth more than double the face of the mortgages deposited, making these Debenture Bonds a DESIRABLE HIGH-GRADE SECURITY, free from any speculative element, and consequent fluctuation in value, and at the same time yielding the Investor a Net ANNUAL INCOME OF 6 per cent., payable semi-annually, Mar. 1st and Sept. 1st.

Can be procured in amounts to suit upon application to

NO. 98 NASSAU STREET, N. Y.
10 SILVER ST., LONDON, ENG.

Sister Saint Sulpice.

From the Spanish of Don Armando Palacio Valdés, author of 'Maximina,' 'Marquis of Piñalta,' etc. By NATHAN HASKELL DOLE. 12mo, with portrait of author, $1.50.

This piquant and delightful novel, though written by an avowed "realist," is a prose idyll. The scene is laid for the most part in Southern Spain, and in Seville, the picturesque and poetic capital of Andalusia, so full of Moorish traditions. The heroine is a fascinating nun, not bound, however, by perpetual vows, vivacious, beautiful, passionate, spontaneous, and true. The book is full of color, and abounds in charming descriptions and vivid scenes of high and low life. The story is preceded by Señor Valdés's remarkable prologue concerning the art of the novelist.

T. Y. CROWELL & CO.,

13 Astor Place, New York.

Good Talking and Good Manners: Fine Arts.

With a paper on the Social Law of Mutual Help, and the Labor Problem, by the Rt. Rev. F. D. Huntington, D.D., Bishop of Central New York. $1.00.

TRADE MARKS
ON
SOLID SILVER WARE.

There is no branch of industry, except the manufacture of Silver ware, where the maker's name is not used by the merchant as a sure guarantee for good quality of the merchandise bearing the mark; but there has been inherited by the silversmiths of our time a pernicious system of stamping the name of the dealer in the place that properly belongs to that of the manufacturer, as the maker is the only one that can absolutely guarantee the quality of the goods, as that is the important use of any stamp used on silver ware, so that purchasers will do well to look for the Trade Mark of the maker, in addition to the name of the dealer; and if that mark should be the  which

STERLING

is the trade mark of the Gorham M'fg Co., it can be relied upon as representing English Sterling **925/1000** fine, as no other quality is used by this firm.

Every first-class jeweller in the United States has the Gorham Solid Silver Wares, and by inquiring for these goods purchasers may be absolutely sure of obtaining reliable goods at no extra cost.

GORHAM M'F'G CO.

BROADWAY AND 19TH STREET.

"They bristle with thought and sparkle with wit."

ORATIONS AND AFTER-DINNER SPEECHES
OF
CHAUNCEY M. DEPEW.

One octavo volume, with portrait. Price, $2.50.

Édition de Luxe. Autograph Edition. Limited to one hundred (100) numbered copies signed by the author. With two portraits, and bound in half leather. Price, $6.00.

"A STORY OF REAL LIFE."

Pactolus Prime.

A Novel. By ALBION W. TOURGÉE, author of 'A Fool's Errand,' 'Figs and Thistles,' 'Bricks Without Straw,' etc., etc. One vol., 12mo, new and unique binding, $1.00.

This is perhaps in all respects the most unique, fascinating, irresistible, and yet scathing and profound of all Judge Tourgée's works. It cuts across American civilization in a new place, with a new knife, and will make some people smart who never thought of being called to answer such accusation. Hardly anything this author has written is destined to have so wide an audience.

"Infinite riches in a little room."

Cassell's Pocket Guide to Europe.

EDITION FOR 1890.

Planned by E. C. STEDMAN of New York, compiled by EDWARD KING of Paris, revised by M. F. SWEETSER of Boston. One vol., leather binding, price, $1.50.

"It is accurate, its maps are clear and legible, and its information full and exact."—*Boston Transcript.*
"Its handy form, large type, frequent maps (not folding) and flexible binding are among its meritorious points."—*Nation, N. Y.*
"The best of the kind published."—*Bulletin, Phila.*

The Pope and the New Era.
